# Mark Our \$1250 Six

120-Inch Wheelbase—A Powerful Motor

The Summit Value in the Fine-Car Field Today

**H**ERE is one amazing example of Mitchell factory efficiency.

A result of building complete cars—chassis and bodies—under up-to-date factory methods.

Also an evidence of how we conform to the spirit of the times.

There is nothing like it, nothing approaching it, among cars of like size, class and power.

## A New-Time Car

Among countless people, in the past few years, ideas have changed about quality cars.

Once extra size and over-power were courted. In these ways a fine car seemed to show its supremacy. Impressiveness counted even more than utility.

Then came the Great War, which soon multiplied steel prices. The cost of fuel doubled. Motor car prices soared.

Later, with our entrance into war, economy came into fashion. Moderation is in vogue now—extravagance is taboo. And Mitchell, to meet that new idea, brought out this matchless Light Six.

## No Retrogression

Mark that we did not go back to Fours to meet these new-day ideas. This is the day of the Six.

We made no sacrifice of needed room or comfort. The new Mitchell Light Six has a 120-inch wheelbase—a unique length in this class.

We lessened our standards not an iota. Here is the same Mitchell over-strength. Here are our shock-absorbing springs, our reversible headlights, our power tire pump, our dashboard engine primer, and most of our other extras.

We even added 25 per cent to the cost of beauty and luxury. That out of savings in our new body plant.

Simply through enormous production in an ideal plant we produced this wondrous Light Six to sell at \$1250 at factory.

## No Waste Here

What we have done is to merely eliminate waste. The ablest efficiency experts built and equipped this plant. They have worked here for years to minimize the cost of every Mitchell part.

Resident workmen—men who have homes here—have been trained in efficiency methods. Production has been doubled without addition to the plant. And now famous craftsmen build our bodies under these new-day methods. That is the secret of these incomparable values.

## 19 New-Style Bodies

The Mitchell now comes in two sizes and in 19 new-style bodies. Any fine-car style that's wanted can be found in the Mitchell line.

See these new creations at your local Mitchell showroom. It will bring you a profound respect for the Mitchell idea in car building.

### \$1250

Mitchell D-40—a 2 or 3-passenger Six on similar lines, with 120-inch wheelbase and a 40-horsepower motor.

Club Roadster, \$1200  
Sedan, \$1300  
Coupe, \$1300

All prices f. o. b. Racine, and subject to change without notice.

### \$1525

Mitchell C-41—a roomy 7-passenger Six, with 127-inch wheelbase and a highly developed 48-horsepower motor.

Three-Passenger Roadster, \$1450  
Club Roadster, \$1500  
Sedan, \$2275 Cabriolet, \$2500  
Coupe, \$2135  
Club Sedan, \$2185  
Four-Passenger Survey, \$1625  
Also Town Car and Limousine

# How "Big Business" gets the most out of the Coal Pile

**I**F saving Coal means losing Power, the ultimate economy is doubtful. Getting more heat and power out of less Coal has been the problem that the manufacturing interests of the Nation have had to solve. And in the solving of this problem there is a great lesson to individual coal users.

For the devices and maintenance materials which have conserved industrial coal piles can often be applied, in some measure at least, to smaller coal-saving problems.

For instance, the covering of heat-carrying pipes or surfaces with scientifically designed insulation is saving America's manufacturers millions of dollars' worth of heat each year—coal power that would otherwise be wasted.

Of equal importance, the loss from wear, friction and leakage has been cut to a minimum through the use of specialized "packing" devices and materials that are known to every engineer as maintenance materials—necessities to efficient plant operation.

It is a source of great satisfaction to us to have supplied America's plants with both heat insulations and maintenance materials—to have been for 25 years one of the champions for coal saving—to feel that our commercial efforts to further the

cause of power-plant economy have in a large sense helped in national conservation.

And just as it is your personal duty to use coal carefully—just as it is a national duty to save it—it seems to us our corporate duty to further the gospel of fuel conservation.

## Johns-Manville Coal Conservation Products

Asbestos and Magnesia Pipe and Boiler Insulations, to reduce radiation and heat loss from uninsulated heated surfaces in power plants, public institutions, private residences, etc.; Packings for engines, pump and valve rods and pipe joints, to prevent steam leakage and power loss; Steam Traps to collect condensation without leakage of steam; Refractory Cements to lengthen the life of boiler settings and prevent setting leakage; and many other power plant maintenance materials.

## OVER HERE

BY EARL DERR BIGGERS

DECORATIONS BY HERBERT PAUS

YOUNG Jimmy Gerson came in to see me the other day, wearing a khaki uniform. Big and tanned and smiling, he sat on a chair by my desk, and as I looked at him my mind went back to the old days when we lived next door to the Gersons on a certain street in a certain town out there in the Middle West. Jimmy was a yellow-haired baby of four then, and he used to have a mania for running away. With his head down and his little feet flying, he would slip by our back door on his way to high adventure in the open lots. And if I saw him, it was my duty—for I was many years older than he—to call him back. "Where are you going, Jimmy?"

And back he used to come, a bit impatient at being stopped, but good-natured about it, anyway. And always in his eyes I could see a twinkle of mischief, the outward sign of an inward resolve to postpone the adventure for the moment, but not to abandon it. Never that.

Since those far days Jimmy had worked his way through college, he had begun a career most promising, and here he was, passing my door again, on his way to the greatest adventure of all—on his way to the pier, the transport, the shell-torn fields of France. And, although in those fields a greater peril was waiting for him than ever waited in the back lots of home, this much at least was changed—I could not call him back.

"They've got to be smashed," said Jimmy, referring to the Germans. "I made up my mind to that long ago. Of course I want to help. That's all."

Yes—that was all. I wondered what Jimmy's old German grandfather, who could neither read nor speak English, would say if he could see his grandson now. I wondered what the people back home thought of Jimmy. He had given up his career, thrown aside all his hopes of success, to go abroad and offer his life for them. And while he went they could remain close by their warm fires, counting their profits, eating their food, living their lives as it pleased them to.

Perhaps, thought I, I can get from Jimmy some message for these soft people who are left behind. But I knew better than to ask for it outright, for Jimmy would have blushed and never spoken again.

"What do the folks out home think of the war?" I asked.

Jimmy's smile faded, and his blue eyes were very serious.

"They want to know when it will be over," he said. "That's been their one question ever since we got into it—and they make me sick. That's a fine way to go into a fight—shouting over your shoulder every two seconds to ask if anybody knows how soon it will end. It's all right for the poor devils who have been suffering for three years to wonder about the finish, but for us who haven't begun to suffer—"

"I tell you we need this war. If we'd stood aside and not got into it, we'd have become the greatest nation of softies that ever sat down to a hearty meal. We were heading that way. Who read books any more? Nobody—we crowded into the movie theatres and dulled our wits with the childish stuff. Who stayed at home and talked things over? No-

body—we piled into the car and hit the high spots. Who had time to think about life? Not a soul—we were due for a foxtrot at a road house. We were pleasure-mad. We'd forgot how to live.

"The American people heard about our entrance into the war just as they came out of a movie theatre and were about to step into an automobile to dash off somewhere for a foxtrot. And as soon as they decided that the thing was inevitable, they began to cry aloud: 'How soon will it end? Will it end before we have to make any sacrifices—before we lose our profits, before we know hunger and unhappiness and pain?' That was their first reaction, and they're just beginning to get over it.

"I'll tell them when it will

end—it will end when the men who trampled down Belgium and France, who murdered people like cattle, who ruined the fruit trees and burned the homes—it will end when those men feel the grip of the world at their throats. It will end when the crowd who started this war of lust and loot are in full retreat, when Willie down at Verdun is shouting to papa at Berlin: 'Come, for God's sake!' and papa up at Berlin is screaming to Willie at Verdun: 'Run, for God's sake!' It will end with the siege of the Rhine!

"That's when it will end if it's left to us fellows who are going over. We're ready to stand in ice water up to our waists, to live with the rats in a rain of German shells, to go over the top and be finished. Nobody need worry about our boys over there. But how about the bunch left over here—the crowd that want to know how soon it will end? Are they going to queer us? Will they fall for the German tricks? Will the pacifists turn their blood to water? Only one thing can do for us—and that isn't the German army. It's our own people at home. Maybe some guy in Terre Haute will get tired putting three-cent stamps on his letters. Maybe some fellow in Cleveland will get sick of the graham bread. Maybe some fat little soul in Denver will get to worrying about his profits. And they'll come together and decide that it's no use fighting it to a finish—and where will we be? Done for, licked, finished: thousands of dead for nothing—all because the people at home hadn't the guts to stick it out!"

AND so, all unconsciously, Jimmy Gerson gave me a message for the folks back home. The words in which I have set it down are not his words, for I cannot remember them—I wish I could; they were so much more picturesque. But the sentiment is the same.

Thus, as in the old days, he passed my door on his way to high adventure, and I did not call him back. I promised to write to him, and I will write to him—once every week. And I hope those letters will be filled with good news, stirring news—news that we soft fellows over here have grown hard, that we know now how soon it will end, and that we can stand it as well as he and his crowd; that we don't mind the taxes, nor the falling profits, nor the brown bread, nor the solitary lump in the coffee; that with all our hearts, all our money, all our strength we are behind him: all the way to the Rhine—and over!

# THE PRESIDENT

BY RICHARD WASHBURN CHILD

TWO reasons of self-interest are against writing from Washington about the President.

The first is that, if facts and analysis are not all in the President's favor there will be foaming at the mouth of those who consider him all that is good and great. They will roar out about loyalty to the President and forget a much higher loyalty—the loyalty any citizen owes to the United States. Some of them will be sincere and others will be Democrats.

The second reason is that if fact and analysis show much which is good and great in the President those who want to see in him nothing much of either good or great will gnash their teeth. These other persons will proclaim that the wonderful spell or charm which the President throws over several heads has been thrown over another. Some of them will be honest in this, and others will be those who are not Democrats.

No one will be pleased. The fact that no one will be pleased is the key to the truth about the President. In this crisis it is well that all that is possible to know about his ways should be known by every loyal man and woman who desires to help.

An old story is that of two knights who approached a shield set up in the roadway. It was gold on one side and some other metal on the other. Falling into a controversy as to the metal from which the shield was fashioned, the knights with their lances transfixed each other. But neither was right.

It is like that in the case of the President; it all depends from which side a person approaches him. Therefore it is astonishing how little of a fair balance is ever struck even by those who at close or long range see and feel the President. It has always been so about him; when Wilson was president at Princeton it was no different.

Perhaps it is one sign of a man's greatness that other men in their inmost hearts are for or against him. Cleveland, Roosevelt, and Wilson: these are pro or con personalities. There was something halfway between pro and con in the attitude of men

dent's closest adviser; and it is the men who are close to the President's ear who are his mirrors. Baker, as a mirror and a sincere mirror, has even adopted the President's word "tragical" into his vocabulary.

The thing which Baker says he sees is the thing which Colonel House saw and which Justice Brandeis saw and which many who have the quality of large and humane vision see. They see a man, for instance, who wanted big business to split into small business because temperamentally he was suspicious of big business and considered big business menacing to social justice. They see a liberal. They see a man who desires to express a system of morals, internal and international, for America. They see a man who wishes less ease for the rich and more for the poor, less strength for the powerful and more for the weak. They see a man who struggled to avert war because war was horrible and was a kind of madness and then accepted war because autoocracy, with its abuse of weaker nations, appeared at last more horrible and more of a madness than war. They see a man who has a long and longing sweep of the horizon.

## A "Long-Distance" Man

THOSE who approach from the other side do not see only these qualities, nor indeed all these qualities. Instead they see a man who is impatient with hard, close facts; fretful against organization questions; without great genius for choosing men capable of administration, because his tendency is to like those he considers emotionally good men more and more and to like unremitting, strong men less and less. They see slowness to act and a befogged vision when actual steps are to be taken or could be taken. They see a reluctance to delegate real power, and a method of hiding this by appearing to delegate power to a multitude of advisory agencies. They see his contempt for senators and his distrust of the American business man. They see one who fails to exercise himself much about

personality, never serious enough to cause a breach, but serious enough to cause the President some loss of that comfortable feeling which men like Baker create with their warmth of similarity. For instance, it was McAdoo who poured into the President's ear vigorous urging that America take the lead in forming an Allied War Council. The President was not pleased that McAdoo publicly announced his own position in regard to this.

Able organizers, as distinguished from well-meaning men, in the President's Cabinet have not had the experience of growing nearer and nearer to the President. The subjects which they brought to his attention, their mild insistence that attention be fastened on the task at hand, their occasional unwillingness to agree in a facile manner with him, all contributed to a loss of favor. Lindley M. Garrison, Baker's predecessor, was one, and has gone. Franklin K. Lane, Secretary of the Interior, is another; it is not much of a secret that he is no longer close to the President's ear. It is the Danielses, the Burlesons, and the Bakers who remain.

A tragical result comes from the unequal weight in the pans of the President's scales which are supposed to balance conceiving on one hand and doing on the other. Few are having the same visions at the same time; the "forward-looking" man is usually independent; the "doing" man is not dealing with the things upon which the President likes to feast his being; few are left who have his ear, and this keeps from him much that men think he should know.

The politicians have not his ear. The President is a little shrewder than the "gang" and more sincere, no doubt, and does not need their advice in strategy. In his heart he detests the average senator and congressman. The latter have gathered this impression, and unburden themselves of it when the cigars have burned short.

Says one: "All kinds of appointments and policies are made, and we're not consulted. He seldom calls us in any more for conference or advice. It is only when he wants to line us up that we are counted in."

"There is nothing in being a Democrat any more," is the word. "The President has been our trump card, and he knows it and still cracks the whip. None of us want to make any trick plays. No one wants to become a martyr. Do we vote with him? Of course we vote with him—we take everything and say nothing. The man is a great man, of course, and a senator is a worm, and that's all there is to say."

The men representing the business and financial administration of the country have not his ear. Selfish and scheming, or patriotic and sincere, apparently they are of a kind to the President. His first instinct is to have the same measure of suspicion for the money maker that he has contempt for the politician. A committee of the United States Chamber of Commerce, which had resigned its connection with the Council of National Defense because of the hopeless prospect, wished to see him to present advice on reorganization of the war machine. He said, in substance, "Write it," and the written suggestions went into that yawning hopper in which all are received—and so many disappear forever.

When the politicians and the business men are eliminated, and when his refusal to see newspaper men and publishers has eliminated most of them, when his appointees who have leanings toward administrative efficiency and minds of their own are eliminated, there is not much of an approach to the President's ear except by those who agree with him—and those who agree with him even more, and those who worship him. These are men like Newton Baker and George Creel. And there are men who, wishing to retain his ear, wait for him to ask for advice and who seldom press any opposing views. They believe, perhaps wisely, that it is better to be silent than severed. These are men like Justice Brandeis and Colonel House—two truly great advisers.

## His Narrowing Circle

TIME was when it was common enough to hear from men that they would go and tell their story to the President of the United States; the other day I heard a man of standing boast that he could reach the President's ear because he knew an intimate friend of an intimate friend of Creel's!

It used to be true that he was not accessible nor

Close to the President's ear—Secretary of the Treasury McAdoo and Secretary of War Baker

toward Taft and Hughes, and the moderate, indulgent admissions of their friends that they had faults, and of their enemies that they had virtues, were their undoing. Americans like to have in their leaders something to fight over and to exult over, to idolize and to attack as wolves attack, and about whom in venom they can whisper lies and at whose feet they may grovel in adoration. Change, emotion, drama!

All his life long Newton D. Baker, Secretary of War, has been preparing to approach the President from the right side. He sees a great and good man and nothing else. This is because Baker is an idealist. I saw him some years ago when he was mayor of Cleveland, and when we talked of some of the evils of corporate greed and of the improvement of human opportunity and of human happiness his eyes glistened and he was live and tense. But when I wanted to have some of Cleveland's municipal experiments justified by a look at accounting figures and analysis of management and an inquiry into questions of organization, Baker's interest lagged and the light went out of his eyes.

Here are two men much alike, and they like each other. The Secretary of War just now is the Presi-

dent's closest adviser; and it is the men who are close to the President's ear who are his mirrors. Baker, as a mirror and a sincere mirror, has even adopted the President's word "tragical" into his vocabulary. The thing which Baker says he sees is the thing which Colonel House saw and which Justice Brandeis saw and which many who have the quality of large and humane vision see. They see a man, for instance, who wanted big business to split into small business because temperamentally he was suspicious of big business and considered big business menacing to social justice. They see a liberal. They see a man who desires to express a system of morals, internal and international, for America. They see a man who wishes less ease for the rich and more for the poor, less strength for the powerful and more for the weak. They see a man who struggled to avert war because war was horrible and was a kind of madness and then accepted war because autoocracy, with its abuse of weaker nations, appeared at last more horrible and more of a madness than war. They see a man who has a long and longing sweep of the horizon.

One of the most prominent organizers in the country said to me the other day: "He pastes labels on the bottles, but, alas, he does not fill the bottles!"

One of the so-called "president senators" who votes consistently with the President said: "He is an unequalled maker of policies—the fact that a policy when drawn needs anything more is of great distress and irritation to him."

Because William G. McAdoo, his son-in-law, has a passionate love of the actual doing of things, sometimes too fast, there come moments of clashes of

The men representing the business and financial administration have not his ear

Democratic senators. The President exercised the magic by which he enthalls some men, and in less than an hour the critic, who has since been given important Government assignments, had been turned round and started off in another direction as if it were a touch of the fingers on a mechanical toy.

A few weeks ago a Democratic newspaper sent a correspondent to Washington to investigate the workings of the war machinery. His errand and attitude created some measure of anxiety among the disciples of Things As They Are. But an interview with the President was arranged; the newspaper correspondent went into the door of the White House, was received in privacy, and came out. Although he had to deal with the same set of facts, he began to write defenses of the Administration!

These examples show that the President still sees men, even small men, whom he desires to win over. But it is said that he did not sit down with Elihu Root upon the latter's return from Russia, although the commissioner came back from the scene of the most vital changes going on anywhere. Later when another American, filled with a record load of first-hand information, official and unofficial, returned from the seething of great forces in Russia—forces which may control the world's destinies—he too hung round Washington waiting for the President's call, but no call came. The President used some of the man's written memoranda, but there was no conference.

When R. B. Stevens was starting abroad to represent the United States on the Inter-Allied Shipping Council and was seeking first-hand instructions, he was unable to see the President. Time went by, plans had to be made, policies laid down, but it was only at the last minute that Stevens, by his own insistence, was able to say a few words to the President about a mission which has become the most vital of the war.

#### He Sees the Goal, but—

AMONG those who remain there is, of course, George Creel, who can yield peculiar qualities of entertainment, and who, through the Bureau of Public Information—an institution which some future and unscrupulous power could turn to dreadful and selfish use—can reach the channels of opinion making. And there is the little group of popinjay courtiers always at the White House door no matter who is within; their chief contribution is: "Absolutely right, Mr. President."

The result is tragical because the President is inaccessible and apparently more and more suspicious and aloof. A man whose scales of personal balance have great weight of vision, of policy making, of belief that he can express American conscience, and make extensive plans for the welfare of mankind, in one pan, and in the other pan, it is thought by many men, has much less weight of decision, of administrative order, of organization, of actual doing just underfoot, is not fortunate if he closes the door to the contact of human activity and counsel. It is safe to affirm that President Wilson is not in doubt about the goals he conceives in his wide sweep of vision, but there is a growing belief that he may be in the dark about the method of travel.

"Even his friends would say that he knows more of what we are trying to do than of how it shall be done," said one of these friends.

So it is that his temperament draws him toward policies expressed with power and beauty. If he has to delegate irritating organization questions, it is to good and submissive men only. He writes the formulas; the clerks who are supposed to put up the prescriptions must not differ with the doctor—nor bother him. He writes the labels, the world applauds with reason, and the applause is joined by some foreign statesmen who know that the President holds the moneybags of the war.

warm to those who wanted to see him, but that he was accessible and warm to those whom he wanted to see. But even the latter class is fast diminishing now.

Among the remaining instances of men with whom the President wishes warm moments there are examples of his winning ways. A political critic of a national review, who had been opposed to him, was taken to the White House by one of the

The development of our war machinery is another key to the President. In no one man in any Allied country—democracy, monarchy, autocracy, or revolutionary dictatorship, unless it is Siam—is there as much power centralized and undistributed. Occasionally we forget this extraordinary fact.

#### The Bigger Problem—Correlation

HAS he delegated this power? He has delegated a part of it in separate pieces. Some of it is delegated to McAdoo, Secretary of the Treasury and railroad administrator; some of it to Hoover for food conservation; some of it to Garfield for fuel; some of it, by virtue of regular Government procedure, to Baker for the army, and to Daniels for the navy. Some of the war job is with Hurley of the Shipping Board. But just about there, except for the multitude of advisory bodies, the delegation of war functions by appointment stops. Each man who has any delegated executive power is dependent upon the others for success. All paths of communication lead through the White House. But even if the road were not blocked by presidential inaccessibility, the President, as one man, could not direct the war machine even if he had expert skill in efficient activity. No one man can. And if he could, he would not be able to assign the work fast enough. No one man can. And if he could he would not be able to adjust all conflicts and duplications. No one man can.

There is, of course, George Creel, who can yield peculiar qualities of entertainment

Senator Chamberlain and the Military Committee of the Senate have been investigating the War Department. The bringing out of the errors and the delinquencies, the bringing forth of the somewhat general and appealing statements of the Secretary, who talks of the number of drafted men as if the drafted men were an army, and about transporting an army as if we were not facing an inability to transport it; the sad tales of boys who died of neglect, and all the other things which are bound to issue out of any war department on earth—always have and always will—is

important work. But as compared with the general management of the war these matters are tiddlywinks, because wars are now made by nations rather than by soldiers. It is the bigger problem—the undone task of correlating one part of the work with another—which is running us toward the rocks. We haven't the ships. We have failed and are failing miserably in their production. It is a disaster.

No ships—no army to Europe.  
No ships—no supplies to Europe.  
No ships—terrible congestion of goods at Atlantic ports.  
No ships—a need for decreased production of supplies.  
No ships—industrial disorganization.  
No ships—waste of the vast expenditures.  
Ships are the key.

General management of the war must start on these cold, hard facts. Has it?

But that is not all. The need of general management does not stop there with a ship shortage which spells disaster. That is only where it begins. What use is made of the ships available? Has there been any adequate machinery for handling ships and their use? None. The censorship may object to telling the average number of days steamships of various capacities have been taking for round trips, but the slowness is appalling. Ships are leaving for Europe without full cargoes. In January 167 ships were tied up in New York at one time because unable to get bunker coal, and 116 more were in the same fix at and near Norfolk. Cargoes rendered useless by bad storage and cargoes sent by error have been sent back to America across the Atlantic. Troops sent across the country have been held around New York for long periods because they could not continue their journey abroad.

Between Baker, who sends the men and supplies, and Hurley of the Shipping Board there has been no apparent understanding. The question has been tested by going to the War Department and asking: "Who determines the available quantity of shipping space to be devoted to army supplies?" The answer is: "The Shipping Board." But at the Shipping Board they say: "Ask Baker. He knows what his needs will be." It is so much like the question of which was created first, the egg or the hen!

After nearly a year of war the management of ships was still split up between three different departments—army, navy, and Shipping Board, without cooperation. If we have not provided the ships, there is bound to be an increasing and fearsome piling up of supplies on the Atlantic seaboard.

#### No Comprehensive Plans

HAS any provision been made to distribute the export flood? No! On January 1, when for six months and more the ship shortage had been known, no comprehensive plans were in effect. The various departments which bought and ordered went on regardless, sending the goods toward New York because there was no plan. A corporation run like that would go into the hands of a receiver. New York was the first place which came to mind! And now, after nearly a year of war, some one is trying to please the South by telling it that a new idea has been conceived—supplies can be diverted from the choked ports of the North Atlantic to Norfolk, Charleston, New Orleans! No plans! Has any adequate storage construction been provided? No. Freight stays in the cars or is dumped. Because of this in January there were countless loaded idle, stalled freight cars around New York Harbor. It was like the conditions at Russia's ports when I was in Russia.

It is doubtful whether any department of the Government knows the number of cars tied up. Perhaps more than 50,000 cars were tied up in New York at a time when the transportation system of the country was unable to meet the demands upon it! Until October 16, 1917, no steps had been taken by the War Department to construct storage depots or port terminals! Everybody's business: nobody's business!

On October 16, after months during which the warehousing section of the Council of National De-

In his heart he detests the average senator and congressman. They have gathered this impression and unburden themselves when the cigars have burned short

fense had recommended and recommended without result, and had given an excellent example of the futility of advisory councils, advisory commissions, and advisory war boards, the War Department created a bureau to begin to think about storage. And even then—after the great United States had been caught in this trap of no ships, no ship management, no port-distributing plans, no proper embarkation machinery, and was facing only the beginning of a flood of production which the vast appropriations and expenditures and contracts had created—was there action? Not at all!

It was planned to build port terminals near New York, near Philadelphia, near Norfolk, and near Charleston. It was planned to build storage depots at five railroad centers which had better not be named. But the military commissions for the civilians who were to direct the work and applications for the right to employ men were being manhandled through the antiquated War Department bureaucracy. For how long? For more than sixty days!

In January, therefore, the work near New York had just been begun, near Philadelphia 5 per cent progress had been made, near Norfolk 3 per cent, near Charleston a percentage of zero. In January storage depots in the interior were still on paper. In January 475 cars of canned tomatoes were waiting ready to be frozen a few miles from Washington near the site of a storage depot still in the hands

Batted back and forth, from bureau to bureau, without an answer!

of draftsmen! And hundreds of cars loaded with destructible food for the army were due there.

Are any of these oversights chargeable to departmental inefficiency? No. They are chargeable to a lack of management at the top.

Fuel orders from Dr. Garfield are intended as a concealed effort to cut down production; they do not remedy the lack of depots, terminals, and ships.

even get in each other's way.

In actual purchasing there is no center. One department corners the supply and leaves another helpless for want of some necessity. When the Cantonment Division of the War Department needed creosoted piles in January, it was another bureau of the War Department which had the avail-

Such mistakes can only be stopped by foresight at the top.

Top-planning is the way for the country to avoid the absurd situation in which production overtakes transportation and chokes it—in which there is too little saving, to be sure, but a ghastly deficiency in sending.

People are told that we must adapt ourselves to purchasing nothing nonessential, but manufacturers making nonessential goods come to Washington and can find nowhere anything more than an advisory department. We are busy building new factories, and at the same time factories built and equipped so that they can turn out war supplies are standing idle. The only machinery existing, at this writing, to correct this waste at the bung-hole while there is exhortation to save at the spigot, is an advisory bureau of the War Industries Board which is as powerless to order anything done as I, the writer of this, and you, the reader! In the absence of any efficient planning body at the top, the separately working departments not only fail to provide for needs but

# A SHIPBUILDER ON THE JOB

BY EDWARD HUNGERFORD

"HE is the most human shipbuilder in America—and one of the ablest."

The shipwright of the North who told me this was himself a builder of no mean ability, but did not hesitate to refer me to Homer L. Ferguson as a man who could and would tell me of the vital problem of the ships—from the practical point of view of one who had spent his lifetime in the profession—and from a point of view of heart and of mind as well.

"He is the most human thing in the business," the builders kept telling me. And I knew that the great yard upon the James which he headed was not alone a huge and successful business enterprise, but that in the long years that the building of ships was not a particularly popular or profitable business, the Newport News yard had kept the flame of an ancient American profession alight—and honorably burning.

"We shall build good ships here, at a profit if we can, at a loss if we must, but always good ships."

These are the words on the founder's monument in the center of the yard, and this spirit seems to have been inherited by his successor.

## Black and White Work Side by Side

NEWPORT NEWS differs from most Virginia towns in the fact that it has no fine streets shaded with old trees, no Christopher Wren architecture, no ancient families, and no old colonels. When the late considerable drought spread across Virginia it found few sideboards in Newport News to empty. For the place is new—comparatively new, at any rate. It is a made-to-order town, and looks it. For even though it long ago reached its thirty-fifth birthday, it still has some of the raw newness of pioneer communities.

It was founded by the late Collis P. Huntington as a tidewater terminal for the Chesapeake & Ohio Railway, purchased as the Eastern link of the ocean-to-ocean transcontinental system which he planned definitely, but was never quite able to consummate. And because a tidewater terminal means a real seaport and a real seaport in turn means dry-dock and ship-repair facilities—then almost entirely lacking in the neighborhood of Hampton Roads—the California millionaire bethought himself of establishing a shipyard at Newport News. Another factor there at Hampton Roads changed the idea into determination. His friends and advisers argued against the enterprise—but wasted their efforts. Huntington did not then lay stress upon his commercial reasons for building the yard. He merely pointed toward the tall tower of a great school

for negroes a bare half dozen miles distant and said: "I am going to try and give the black man the same industrial opportunity that Hampton has given him educationally."

And to-day fully one-half of the 7,800 men and boys who work under Homer Ferguson in the Newport News shipyard are black-skinned. The promise of Collis P. Huntington has been fully kept—with generous interest. White men and black men work not only in the same yard but in the same buildings. And this is the South—the Old Dominion, if you please. On a huge traveling crane that runs the length of the yard's biggest erecting shop a white man operates the motors overhead; a negro on the floor minds the grips. In the yard outside on a huge ship coming into being white painters work upon the upper side of the deck; black painters upon the under surfaces of the same deck.

Do you get me? Something must be conceded to the traditions of the South. But—Ferguson swings quickly in his chair and levels a long finger at you:

"Don't you dare come down from the North to this yard and tell us that the black man in the South is an industrial failure—you who only use him as an elevator boy or a parlor-car porter or a chauffeur and refuse to give him an equal industrial opportunity with white labor. How long would one of our expert machinists last at Taunton or at Paterson or at Schenectady? What opportunity would the unions give him? Can one of our good riveters go north and join the union? He cannot. And otherwise he cannot drive a single rivet."

When efforts once were made, he tells you, to form a union of his colored riveters, skilled orators from the North ad-

dressed them in a big hall. But the colored workmen were singularly indifferent. And finally one of the largest and lankest of the riveters unfolded himself from his chair and began: "Our fren's remarks remind me of a right fine Virginia gen'man, Culnel C— of Richmond, who died a few years ago and went straight to heaven. An' when he interdoosed himself at the pearly gates, St. Peter, he says to him, he says: 'Oh, go 'long wi' you, white man, you ain't Culnel C— of Richmond. You ain't on a hoss. An' I ain't never seen the old culnel afoot.' So there was the old culnel wid dose pearly gates closed in front of him an' harp music driftin' out to him. Finally he sees a little bit of a way to do it. Down in the line behind him was his ol' cullud servant, Sam. An' he goes to Sam an' lets on to him as how they cud both get into heaven together sure 'nough if Sam'd drop down on his han's an' knees an' be the culnel's hoss. Ol' Sam, he does it, an' Culnel C— rides up to the pearly gates again. St. Peter sittin' back of the

ticket office only sees the culnel's head an' says: 'That's better, sah. You hitch youh hoss outside here an' walk right in.'"

The audience "got" the riveter. There has never been a negro union, and in the entire history of the Newport News yard only one strike—of but three and a half days, last summer. And the leader, ashamed, quit his job and enlisted. Ferguson would like to get him back.

Ferguson was reared in the service. He was born in North Carolina fully forty-five years ago, and is not only a graduate of Annapolis, but he spent a dozen successful years afterward as a naval constructor. He bears no grudge against the army.

His face is lined with fine lines, his hair is graying a bit, but he is actually the personification of youth

He is an American of the very best sort and he knows well the enormous problem to-day confronting it. But he has seen the army descend upon the little city of Newport News, with its camps and cantonments, and in a little time not only increase its population from 30,000 to 50,000, but add so vastly to its housing and living problems that his best, his most skilled, and most experienced workmen have been literally forced out of their homes and out of town. One of the clerks in his office, proud owner of a \$3,000 house, has rented it to an army officer for \$100 a month. And while the best grade of milk was selling in New York City at 14 cents a quart, the milkmen of Newport News demanded—and received—20 cents. Some of Ferguson's negro riveters make as high as \$90 a week upon occasion, but these are the exception. And it almost takes \$90 a week to bring up a family in decency, to say nothing of comfort, these days at Newport News. But its invasion of the shipbuilding town with its vast raids upon the scant stores of houses and labor reserves is not Ferguson's real complaint against the army. Its invasion of the shipbuilding forces, not only of his own but of every other yard, is his chief cause for protest. He will tell you so in the frank and direct way that is so characteristic of him.

"Every man building a ship for a year means five other men transported to Europe in that year. It is useless for us to talk of winning the war as long as we fail to transport our men or our munitions overseas. It is my honest belief that until the nation really realizes this—until it quits talking about the necessity of providing a bridge across the Atlantic while failing to provide it—we might as well continue the production of the non-essentials. There is no use whatsoever in manufacturing essentials—munitions, I mean—and then having them rot or rust or otherwise spoil, while they spend months awaiting transportation across the ocean. I will venture the prediction that, unless we quit talking about ships and begin producing them (of good size, for I cannot see the 4,500-ton or even the 6,000-ton ship as compared with the 10,000-ton or the 12,000-ton craft, and in good numbers), a year from now, if the war continues, you'll see our munition plants on half time. And all because of the glut at our embarkation ports; a glut from lack of ship tonnage."

"How many tons of ships can the United States produce in 1918?" we ask him.

#### Half of Them in the Draft!

HIS reply is direct: "Based upon Mr. Hurley's estimate of 150,000 men working in all our yards a very few weeks ago, I should say that 3,000,000 tons was a fair estimate for the present year. We shipbuilders figure it out on a basis of about 20 tons per year per man; that is under ordinary conditions. The Union shipyard of San Francisco has produced as high as 23 tons per man. But the climatic conditions out there are better suited for shipbuilding than most of our Eastern yards and the force was made up of thoroughly trained men. It may be that by this time the working forces in all our yards have been brought to nearer 200,000 than 150,000 men. But, on the other hand, the new men we get are not skilled in this work. They may be good machinists in other lines, but still they'll require much training. In fact, with a large proportion of newly recruited shipbuilders we might see the average output go as low as 15 or even 12½ tons. It certainly wouldn't be anything like 20. And the men who might have helped this yard come to that average have gone to the army. . . . Shipbuilding is a young man's business." (It is, Ferguson's face is limned with fine lines, his hair is graying a bit, but he is actually the personification of youth, a curious blend of a light heart and a serious mind, of laughing eyes and a determined mouth.) "In this plant more than 3,300 of our 7,800 employees are inside the draft age. These men, the skilled shipbuilders upon whom the army's very existence, to say nothing of its ultimate success, de-

pends, were taken away from us, both by voluntary enlistment and by the draft. As one even pretending to be a good American, I could not raise the slightest barrier against the recruiting officers coming within our yard, but I knew what it meant when I saw our shipbuilders, trained and skilled, go marching out after them.

"The army has now agreed to return the drafted men to the shipyards. It is highly necessary that they should be returned. But as yet it hasn't been willing to give us back our young men who went out and volunteered. We need them now; never so much as right now. What's more, the army needs to have them here more than to have them in khaki."

#### Houses—There's the Rub

ON the February days that I visited the plant an English recruiting captain was also there, seeking out British subjects under the new international-service convention. The English draft is far more inclusive than ours; it takes in all able-bodied men from twenty to forty. Ferguson's yard has many of these.

"We haven't a very large percentage of foreign labor here," he explained. "Only about 25 per cent as compared with between 65 and 75 per cent in many other yards. The most of our alien-born are English and Scotch—the product of a land no part of which is more than half a day's ride from the sea,

"Don't you dare come and tell us that the black man in the South is an industrial failure!"

where the taste for shipbuilding is almost inborn—and a large part of these are inside the British draft limits. One might think that England would see the necessity of leaving these men undisturbed and hard at their jobs. But if she doesn't, I will go to the Secretary of State, to the President himself, before I'll give them up."

"Are you in the market for labor?" I asked him on the last of those February days. I had heard of Creel's Four-Minute Men, standing upon the stages of movie houses all the way across the land, begging workmen to enlist for the building of ships and then had heard how these men applying to the yards had found them not ready.

"We're not ready to take on men at this time," Ferguson replied, "although we always are glad to get their applications and when the opportunity comes—as it certainly will come—we shall be glad to send for them. We are greatly expanding this plant, both upon the shore front and back inland. We also are getting rapidly ahead upon our housing facilities."

"There is the hub of the proposition—at this moment not only in this yard but in many others—housing. That, you will recall, was my first complaint against the army choosing this as one of the prime centers of its activities. We were just catching up with the problem when it descended upon us. And now we are away back again—our oldest and best men, as I told you, leaving us because of the living costs down in this neck of the woods. But we're not going to sleep on the problem. Within a few weeks we shall hope to be coming up even with it once again."

I remembered seeing when I first came to the main entrance of the plant a huge wooden barracks opposite; just adjoining the town's "community canning center." Not a gaunt and ugly structure, like the typical cantonment barracks, but trim and trig and neatly painted. The Navy Department, which has

a record for prompt action in these matters, loaned \$100,000 which went into the putting up of the barracks upon land owned by the shipyard company. For about \$2 a week a shipworker gets a clean room, well heated and well lighted, and a service that roughly approximates that of a hotel. The meals are served on the cafeteria plan, are good, and cost from 15 to 35 cents each. These prices, at the present time, particularly in Newport News, spell no profit to the shipyard company which operates the enterprise.

This barracks is for white men, unmarried, only. The black workers of the plant are pretty well absorbed within the colored section of the town as well as in a special cantonment with a hut of the Y. M. C. A. there. The black shipyard workers are not only welcomed in the Darktown section of Newport News; they are aristocrats. A boss riveter means about the same to a negro church as a congressman does to a white one. But as to where Ferguson stands, listen to Aunt Sally, the cook. She got him to forego golf and give a talk one Saturday afternoon: "Boss, you shuah was worth \$17.90 to the North Side Baptist Church yestiddy en'nin'. We ain't never had no such collection as that afore."

To house the married folks who come to work in his great and growing plant, Ferguson has far more elaborate plans. A model community on the high bank of the James should be completed

before midsummer: more than 500 houses, with capacity for at least 1,200 men and their families. Expert landscape engineers are laying out their environment; some other eminent architects are completing their design. The entire effect gained is similar to that of the model workingmen's villages of England. The high-pitched roofs of the little houses, which are not monotonous in effect, are new to a manufacturing community in America.

Close to the plant four large apartment houses are already under construction. These are to be four-story brick buildings—slow-burning construction—and it is estimated that together they will house some 650 more workers.

Ferguson has arranged for the building of a trolley line to serve his community. "You can't keep peo-

ple happy in their work unless you keep them comfortable in it," he says.

Early this year, he saw the menace of a coal famine, and purchased fifty carloads of anthracite, which already were rolling down toward the South. When the 2,500-ton shipment came to the yard it was distributed in one-ton lots to the workers who needed it. Not one of Ferguson's workers lived in a cold house this winter.

His men adore him. He knows more than half of them personally, and when he knows them he calls them by their first names. Sometimes when he notices things he makes little memoranda about them, and perhaps the next morning Junius Jones, boss riveter, gets a letter of praise—a precious document to be framed and kept between the life insurance policy and the photograph of Abraham Lincoln.

#### 13,000,000 Rivets a Year!

IT is in terms of riveters, of rivets, if you please, that Ferguson and Powell and Weaver—all the other great shipbuilders of America—make their predictions for the shipping output of 1918. The unit of production of a ship 1,000 feet long, and with the housing accommodations of the Waldorf Astoria, is a bit of heated metal the size of the index finger of your hand. A riveting gang, consisting of two men and two boys—the riveter, the holder-on, the heater boy and the passer boy—will drive from 300 to 375 rivets in the course of a ten-hour day. If the passer is omitted, production is slowed proportionately.

Now, it takes some 650,000 rivets to make the average 10,000-ton ship. In Ferguson's yard the average is about 250,000 a week. In the Union shipyard of San Francisco—until recently at least the largest in the land—300,000 was a fair average, although in a record week this figure went to 411,000. According to these figures a yard such as the Newport News plant will drive,

(Continued on page 25)

# IS THERE A UKRAINE?

BY ARTHUR RUHL

COLLIER'S STAFF CORRESPONDENT

IN Kiev last autumn—a golden Little Russian autumn, with sun and fruit, and the Dnieper sands dotted with bathers soaking up all the summer they could before the winter came—I spent a fortnight finding and losing the Ukraine.

By day I would find it—or nearly so. The Ukrainian Rada, a congress of delegates from the Little Russian provinces roundabout, were sitting then in Kiev's fine new museum building. Nobody knew just what they represented nor what their authority might be. They were tolerated rather than recognized by the almost equally vague and shaky central government in Petrograd, and flatly repudiated by a considerable portion of the educated people in Kiev. Yet here they were, and they chose a Cabinet and discussed and passed legislation as if they really had the right to do so.

I would spend the day here, or tramping up and down the mighty Kiev hills, which are like those of San Francisco, hunting up various sorts of Ukrainians—and charming and intelligent people many of them were—and listening to them burrow back to the days of Bogdan Khleminitski and the Treaty of Pereyaslav and prove that they were and always had been a people distinct from the Great Russians, and tell what their "nation" had been, and what they hoped it yet to be. It was all real enough to them—as real as an independent Ireland is to the Sinn Féin.

Fortified by their arguments and enthusiasm, I would trail back home at dusk, wilted and weary, and in the cool of the evening, with the long windows open on the garden, and the samovar steaming cheerfully, we would eat purple plums and bread and honey and drink endless glasses of tea, while my Russian friends, with equal enthusiasm and conviction, would proceed to demonstrate that the Ukraine never had existed and never would.

For they were "Great" Russians—Moscow Russians, as they sometimes say in the south, following the speech of the days when their ancestors were ruled by the Czars of Muscovy—and believed in a strong central government and Russia's territorial unity. To them the Ukrainians were cranks, if they were not traitors, and their point of view was that of the Russian Minister of Instruction, back in the sixties, who declared that "there is not, never was, and never shall be, such a thing as a Ukrainian language and nationality." And they too had their facts and figures.

I did not agree with them, nor, on the other hand, with the more chauvinistic Ukrainians, and in the midst of their arguments the Kornilov "counter-revolution" broke, and I hurried northward. The Ukraine was a "question" then, and I cannot feel that it is much less a question now, even though a treaty of peace be signed between something called the "Ukrainian Republic" and the Austrians and Germans. For in Russia's present state of demoralization, what is such a republic, or what could it be? What has become of all the quite real people in Kiev who were, only a few weeks ago, so vehemently opposed to it? Or of all the Great Russians—even liberal-minded men like Miliukov, who, while frank to admit that there was something in the Ukrainian case, yet were opposed to separation? They are all in Russia still, and sooner or later must be reckoned with. In short, the Ukrainian question, like that of Finland, is something to be settled in the open and by all those interested, and not between German generals and more or less self-appointed delegates at Brest-Litovsk. This settlement must be just to the Ukrainians, and just to Russia, and satisfactory to the common sense of the rest of the world. And

such a settlement must be based on the real and more or less permanent facts, which a few weeks or months, or the eccentric happenings of the moment, are not likely greatly to change.

The Ukraine is a name applied to southwestern Russia, very much as the word Provence is applied to southeastern France. The analogy is closer than

have been written by Great Russians to prove that Ukrainian was merely a dialect and not a separate language. When, as a matter of fact, it is a separate language now, just as Bulgarian is, although the Bulgars used to have their headquarters along the middle Volga, in what is now the center of Great Russia. Without venturing into etymological gymnastics, it may at least be said

that the two languages sound differently, and I know that when, during my visit to a Little Russian country place in Poltava, the young man of the family spoke Ukrainian, as he always did when he spoke at all, he might, so far as I was concerned, have been talking Choctaw or Sanskrit. How generally Ukrainian is spoken in the Little Russian provinces, where every effort was made by the old government to suppress it, and where there are a good many Great Russians, is a more difficult question.

The Ukrainian assertion, on the other hand, that they are a separate "nation" has also seemed far-fetched, inasmuch as the Little Russian provinces have been "Russian" ever since Russia's modern history began, and before the revolution seemed as much a part of Russia as our own South is a part of the United States.

## Russia's Wild West

THREE centuries ago the Ukraine was a sort of Russian "Wild West"—the word means "extremity" or "borderland"—where Cossack tribes lived a more or less freebooting life, varied by serious fighting with the Mohammedan Turks, south of them, and the Catholic Poles to the north. One of their chiefs, or hetmans, Bogdan Khleminitski, cut a wide swath in the first half of the seventeenth century. He punished the Poles severely, but they finally pushed him so hard that he was obliged to swear allegiance to Czar Alexis of Moscow, and join forces with the growing

central Russian kingdom. This union is one of the points of dispute between Great Russians and Ukrainians. The latter, who look back to the distinguished barbarian as a national hero—you will find him on picture post cards in Kiev—view the Treaty of Pereyaslav more as an alliance than as a surrender, and they point to the fact that the Ukraine was practically autonomous—for a time even having the right to its own foreign ambassador—until the end of the eighteenth century. The Great Russians, on the other hand, hold that since 1654 the Ukraine has been an integral part of Russia.

The strong arm was in central Russia, at any rate, and from that time on it kept reaching out farther and farther. There was a ukase against the Little Russian dialect in 1690. Peter the Great, in his mission of pounding Russia into an empire, abolished the office of hetman. The prohibition against Russians acquiring land in the Ukraine was done away with—one of the causes of Mazepa's uprising—and Catherine II, when she came into power, toward the end of the eighteenth century, established serfdom in the Ukraine and addressed a manifesto to the Little Russians, in which she declared her determination "to destroy the idea according to which they think themselves a different nation from Russia." When Poland was divided in 1793, and Galicia went to Austria, the west bank of the Dnieper—hitherto the boundary—also went to Russia.

Whether the absorption of the Ukraine was conquest or what is more politely termed "expansion" had come to seem, as I have said, rather an academic question—almost as much so as to ask whether Texas is American territory or really Mexican. A foreigner coming down to Kiev or Poltava on a Petrograd express is not aware of leaving Russia, as one

It is all "black earth" country, rich and fertile as our own Middle Western black earth, and a Middle-Westerner feels decidedly at home in these broad rolling prairies

one might think at first, but I shall speak of that further on.

The region is also called Little Russia—a title some Ukrainians rather resent—to distinguish it from White Russia, farther north along the border, and Great Russia, which centers around Petrograd and Moscow. It is all "black earth" country, rich and fertile as our own Middle Western black earth, and a Middle-Westerner feels decidedly at home in these broad rolling prairies, with their cornfields, and wide, slow-flowing streams. The Dnieper River flows through the heart of the Ukraine, and the word refers especially, generally, to the provinces or "governments" of Kiev, Poltava, Chernigov, and Kharkov. But the frontier between Russia and Austria-Hungary is a political rather than natural barrier; the Ruthenians of Galicia are, racially, Little Russians, who merely exchanged masters when Galicia fell to Austria at the partition of Poland, and in its widest signification the word "Ukraine" includes them as well. The catchword of the more extreme Ukrainian dreamers has been, indeed, "From the Carpathians to the Caucasus"; and they have planned a new and independent nation which should extend all the way westward to Przemsyl.

## A Separate Language

WHEN people speak of the Ukraine as "a beautiful country which doesn't exist," or deny, as the Great Russians are likely to do, that the Ukraine as a separate nation ever did exist, they mean, of course, that its reality as a nation lies either in a past or a future too remote to be worth discussing now. And, of course, much of the argument on both sides has had an interest rather more academic than practical. Hundreds of thousands of words

as the instant one crosses the frontier into Finland. There are differences of scene, but he does not know, as he does on setting foot in Helsingfors, that he is among a different people who have built up a culture of their own.

But the stupid Petrograd Government succeeded in creating differences, making ordinary people martyrs, and turning what might have been natural local pride into hostile national patriotism. It was forbidden, in 1876, to print any scientific or historical work—innocuous fiction had a certain liberty—or give a sermon or lecture in the Ukrainian language. The importation of Ukrainian books published abroad was prohibited.

Although the Ukrainian peasants spoke their dialect at home, teachers were forbidden to use it, and in the primary schools, when there were any, the peasant children had to learn from textbooks in which three-quarters of the words for common things were different from those they had learned at home. The teachers felt that while the learning of Russian might be made compulsory, the elementary teaching—which was all that most peasant children would get anyway—ought to be in the language they spoke at home, but teachers who tried this were put in jail for it. Petty offenders were tried and sentenced in words they couldn't understand. Plays in Ukrainian—and the Little Russians are immensely fond of plays, and will tramp twenty miles to see a piece in their own tongue—were forbidden.

The treatment of the poet Shevchenko was characteristic. He was a headstrong, untutored youngster, a sort of "natural-born" genius, who, more than anybody else, has put into words the Ukrainian spirit, the beauty and freedom of the steppes and the Dnieper country. Other writers have been born in the Ukraine, but, like Gogol for instance, have generally written in Russian. Shevchenko used his native dialect. Under an enlightened government, or any government with ordinary horse sense, Shevchenko would have become a picturesque local figure, like the Frenchman Mistral, and the other poets of the Provençal movement, who have devoted themselves to expressing in Provençal French the atmosphere of their corner of France. He might have been criticized for his revolutionary sentiments just as the Provençal poets have sometimes been accused of stirring up dissension between north and south France. Shevchenko, however, was sent to Siberia, and on his prison commitment was written the order "he must not be allowed to paint or write."

A few years ago the Petrograd Government forbade the Ukrainians to celebrate the anniversary of Shevchenko's birthday; priests were forbidden to read Masses for him in the Russian church. One of the results of this repression was that hundreds of thousands of copies of Shevchenko's poems were privately printed and distributed throughout the Ukraine, and that Shevchenko himself, who might otherwise have been a real and interesting if somewhat minor poet, is now regarded as a great genius and a national hero.

### The Muddle of Motives

AFTER the revolution in 1905, Ukrainian newspapers were theoretically permitted, but just before the war in three of the Little Russian provinces twenty-one editors were arrested in one year and twenty-six papers confiscated.

As soon as the Russian armies invaded Galicia in 1914 the Russian authorities promptly closed the Ruthenian (Ukrainian) schools, and shut up the Ruthenian bookstores in Lemberg. Meanwhile—and this, of course, is one of the most embarrassing complications of the Ukrainian movement—the Austro-Hungarian Government had done a good deal to encourage the Ukrainians. Ruthenian is still one of the eight languages officially recognized in the Dual Monarchy. In contrast to forbidden Ukrainian schools, Austria established 2,500 primary schools in which the teaching was in Ruthenian. There were several Ruthenian chairs at the University of Lemberg, and the center, indeed, of the whole Ukrainian literary movement shifted, as a result, to Lemberg, where it was carried on, ironically enough, by the Society of Shevchenko.

Austria's encouragement on the one hand and Russia's stupid persecutions on the other have, naturally, given both sides a case. The Ukrainians could always point to the central government's injustice; the Russians, lumping together all sorts of Ukrain-

Vinnechenko, so-called Ukrainian "Secretary of the Interior," who writes books in Russian, and then has them translated back into Ukrainian

The Kiev Museum, now the Rada Building, where Ukrainians were discussing—now that teaching in Ukrainian is possible—their plans for the new school year

ians, from Little Russian intelligentsia on country estates in Poltava, cherishing the Ukrainian language and customs as people cherish ancestral silver or furniture, to Austrian propagandists, working in Switzerland or London or New York, for the dismemberment of Russia, could always accuse the other side of disloyalty. Here, as in all similar separatist movements, there are two kinds of values,

From the long windows—a Kiev garden

the sentimental and the political, each real, and the task is to find some just and common-sense way to reconcile them.

The Great Russians have not been all merely stupid reactionaries. There were liberals like Miliukov, for instance, who sympathized with the Ukrainian desire for home rule, yet were convinced that complete separation was undesirable. Miliukov, speaking in the Duma, early in 1914 before anyone thought of war, said:

"The Ukrainian movement was not invented by anyone. It exists, and will exist, and attempts to deny it will be fruitless."

He believed, he said, in the sincerity of the chiefs and the federalist movement, and asked why Russians were so afraid of giving the Ukrainian language a chance and yet welcomed in Russia French, English, and every other sort of culture. Yet Miliukov, speaking to me last autumn, was opposed to Ukrainian independence. He believed, he said, in all the "ethnological autonomy" possible; let the Ukrainians speak and write their own dialect if they wanted to, but the Ukraine must, nevertheless, be politically a part of Russia.

There were plenty in Kiev, in those interesting autumn days, to uphold the Russian point of view, both in the conservative press and out of it, even though the Rada was in session and there had been more or less definite assertions of independence. For

while the Little Russian country population is said to be about 80 per cent Ukrainian, Kiev itself is rather cosmopolitan, and almost as much Polish and Great Russian as Ukrainian.

### Little Russians

THE wife of a former Russian diplomat summed up her impressions of the Ukrainian question with the advice to talk with Little Russians who were not Ukrainians—for there were such. "After all," she said, "does it seem just the time to insist on independence—when Russia is so threatened from without and within? And, really, the interest Austria has taken in this agitation ought to make one rather careful."

A Russian officer, mobilized at the moment, but an engineer and architect by profession, and a resident of Kiev, gossiped at length to me in his bachelor quarters one evening. "It's really a sort of

cult or fad," he said, "worked up by some of our intelligentsia. The peasants, who, after all, make up 90 per cent or more of the Ukrainians, don't think about it one way or the other."

A Polish landowner, a plump, suave, little man, who in peace times divided his time, as so many of these Polish gentry do, between Petrograd and Paris, wasn't interested in the question of independence, though he had some rather quaint observations to make about his Ukrainian peasants. They used to do his work for one-tenth of the crop. This summer they had demanded a third of it. He refused—"It simply couldn't be done!"—and of course it couldn't, and give him the care-free, absentee landlord's life he was used to leading. This notion of dividing up the land was absurd. Suppose it were divided up. In a few years the clever ones would have it all, and they would have to divide it all over again.

"The notion seems to be," he said, "as near as I can make it out, that we are to return to a sort of pastoral state, where each individual will have just enough to exist on, and no more. For instance, I told my peasants that if they didn't work more than they were working this summer, the sugar factory which we supply with beets would be ruined. And what do you suppose they said? They said they could get along just as well without factories—sugar wasn't a necessity!"

A professor of international law in the University of Kiev, a sanguine, emphatic gentleman, talked, or rather poured words on me, for an hour and a half one afternoon, beginning with the Aryan migration and coming down with scarce a pause for breath. Every few minutes he would stop short, lift his eyebrows and a forefinger, and say: "You follow me? . . . Ah!"—and reel on again.

There were some ten magazines in England and America, he said, all urging Ukrainian independence. The assertion of more tactful Ukrainians, that they merely wanted a federation and not complete independence, was disproved by the coat of arms printed on much of their propaganda, and the watchword, "Free and independent from the Carpathians to the Caucasus." Even a federation would be a difficult thing because of the heterogeneous make-up of the different Russian prov- (Continued on page 26)

## SHIPS AND THE SUBMARINE

IT was stated in this paper two weeks ago that during the year 1917 the submarine had destroyed more than two tons of ships to every one ton built. In the light of revised figures to which we have recently had access, we know now that the case would have been more accurately stated if the proportion had been given as *nearly three to one*. In making this statement we include even the new tonnage built by Japan, although, up to the present, Japan's ships have not been in the Atlantic Ocean and have not been subject to the submarine's attrition. To be concrete and specific, the shipping destroyed directly by the submarine and indirectly through mines which the submarines laid, and by other hazards, was nearly three times the total amount of new tonnage built by all the Allies and all the neutrals. To put it broadly and simply, so that the public may as easily as possible grasp its grim meaning, *the shipping of the world, which is an essential to the Allies as the throat to human life, was destroyed nearly three times as fast as it was renewed.*

We have spoken of the year 1917. For that year the figures are in, and the sinister superiority of the submarine is a matter of history. We wish we could say it is a matter of history only, that it is no longer true. But, although the figures are only partly in, the facts which were so true and so sinister in 1917 continue to be true and sinister to the same degree in these early weeks and months of 1918. None of the figures for February and not all of those for January are available at the time this editorial is written and will not be available for some days after this is printed; but we know the conditions well enough to predict that these two months will show about the same balance in favor of the submarine as the year 1917. The official promisers may contradict us, but the facts, when they come out, will not.

For a single week in February the British Admiralty gave out this official statement of submarine sinkings:

LONDON, February 12.—Nineteen British merchantmen were sunk by mine or submarine in the last week, according to the Admiralty statement issued to-night. Of these, thirteen were vessels of 1,600 tons or more, and six were under that tonnage. Three fishing craft were also sunk.

ROME, February 13.—Four Italian steamers of more than 1,600 tons were sunk by mine or submarine during the week ended February 9, according to an official announcement to-day.

The cryptic form of this official statement is such that to nine hundred and ninety-nine out of a thousand readers it means nothing at all. But the reader who is familiar with shipping, who is able to piece out the official report with his own technical knowledge, understands that during the week for which this is the official report about 110,000 gross tons of British and Italian shipping were sent to the bottom, to say nothing of French ships, and other Allied ships, and the neutral ships of Norway, Holland, Sweden, and Spain. All told, it is fair to estimate that during this one week in February the submarines accounted for about 150,000 gross tons.

Now compare this record of a single week's sinkings with another figure. The figure of which we are about to speak is not cryptic; it is not a guess or an estimate; it is a figure of exact and official record, although not, so far, given to the public. It is the most ominous fact that has come to our attention in connection with the whole shipping situation. It is this: During an entire month, the latest month for which the returns are in—*during the month of January, this year, the aggregate of all the ships turned out by all the yards in the United States was only 79,500 dead-weight tons, or about 52,000 gross tons.* To the reader who knows nothing of shipping, this figure, standing alone, will mean little. But he will understand if we point out that right now, during these early days of 1918, the United States built in a month only about one-third as many ships as the submarine sunk in a week. And the United States is relied upon by the Allies to furnish the bulk of the shipping for all the Allies during the remainder of the war. Actually our production for January represented, not an increase, but a decrease. We have not remedied the situation, nor improved it.

It is true that an estimate of ultimate production cannot be based upon these figures, for the ways are hardly completed in many yards. Yet the simplest process of arithmetic shows that

March 16, 1918

if the proportion of sinkings in the week ending February 13 is continued, the total for the year will amount to approximately 7,000,000 tons. Mr. HURLEY, the very able chairman of the Shipping Board, has said that "our program for the year 1918 is 6,000,000 tons." But this is a program, not an estimate, a hope rather than an expectation. Mr. HURLEY knows that the production will be much under 6,000,000 tons. At the present prospective rate of production the amount of new tonnage created will be in the neighborhood of 3,000,000 tons.

That is the diagnosis. The case is desperate. Is there a remedy? In attempting to find one we must look into the causes of the breakdown. One of them was unavoidable by human agency. If the Kaiser had willed the winter weather which has gripped the northern part of this continent for four months, clogging transportation, freezing waterways, and slowing down labor, he could not have done better for his own side than the elements have done. The Hun has had all the luck of it. But human agencies were also at work. The extraordinary irruption of Bolshevism in Washington last summer delayed the effective work of this and every other part of the war-making machinery of government by precious months. There has been more than a little lax and amateur management of the shipyards, and possibly some attempts at profiteering. Strikes have been called by "leaders" who ought to be in the hands of the Department of Justice for calling them. There has been a bewildered lack of cooperation between the heads of departments at Washington. We may hope, if not expect, that these conditions will be altered. They cannot go on in the presence of so great a danger. They must not go on.

There is reason to believe that the naval authorities in Great Britain and this country are cheerfully expectant of greatly reducing the number of sinkings by submarines through devices now in preparation. It is pretty safe to say that the U-boat will not have it all its own way from now on. Better weather will bring about a higher production of tonnage. But the great task is still to build enough ships so that no matter how aggressive the U-boat warfare may be, it will still be possible for us to send enough men and material and food to Europe to make a victorious war. And into this great effort the country must put all the might it has. Nothing that Americans are doing, not even the training of soldiers and the fighting in the trenches, is so important as the building of ships. There never has been such a challenge to the American spirit as this. Every employer of labor must make sacrifices of personal profit in this enterprise. Every mechanic or laborer must feel that on his individual effort depends the safety of democracy. It might well be said that a better proof of our will to beat our enemy would be found in the number of rivets driven by a gang of riveters than in the number of rounds fired by a battery of 75's.

### A Minister Does His Bit

A MINISTER of distinction furnishes us with a charming example of army red tape. He writes:

Yesterday morning I received an urgent call from one of the directors of religious work at Camp Blank asking me to preach to the men in one of the huts in the place of Dr. John Doe, who had been obliged to cancel his engagement on account of death in his family. My friend stated that it was a matter of some importance, as several companies had been ordered to attend that service—which had never been done in Camp Blank before—so that he felt that it was imperative to provide an outside speaker for the occasion.

This morning when I presented myself for the service the director in charge informed me that the military authorities preferred that no mention of Dr. Doe's absence and my substitution should be made, if I were willing to act under such an arrangement; because, as he explained, the men were present under orders to listen to an address by Dr. Doe, and any change would require new orders and give no little trouble. I good-naturedly assented to the proposal; was introduced, without name, as "the speaker of the hour," and throughout the service there was no intimation that I was not Dr. Doe.

Of course the men could not obey an order to hear Dr. Doe, because Dr. Doe was in New Haven; but so long as the fact of his absence was not recognized the order was regarded as obeyed, and the discipline and dignity of the service were duly maintained!

We might draw some weighty conclusions from this incident—conclusions about the military mind; or, more precisely, the mind of our army. But—well—no lives were lost.

## Woman Power and "The Next War"

TO the familiar and convincing reasons why this war must not end till it is ended right, with the extirpation of the causes that have forced the sword into the hands of democracy; add the following consideration: If there is to be a next war, the women will be in it to a degree that we have not really visualized in spite of all our talk about women in the war. If there is to be a next war, women in war work will mean not only women in the munition factories and the shipyards and on the steam threshers; it will mean women in the trenches.

Is that a horror which the mind rejects as impossible? We have learned in the course of three and a half years to accept horror almost as commonplace, certainly as inevitable. The war has directly laid its hand upon the women. Death has rained on them from the skies over London and Paris. In the superwar, which the next war must inescapably be, the skies will be thick with battle, and armadas of super-Gothas and Aviatiks will slay their tens of thousands of women where their feeble predecessors now kill women by the score. Logic will then ask why women should be the only ones to go into battle unarmed, why they should wait helplessly for death in Whitechapel and the Faubourg Saint-Antoine instead of manning the first lines on the frontier.

Necessity will reenforce logic. Is there any reason to suppose that when the supply of men between the ages of sixteen and sixty has run dry there will be any serious hesitation to call out the women? The tragic beginning has already been made in crucified Serbia. The hint has come from Russia's Battalions of Death. Conscription will not be necessary. The women will demand the agonizing duty and privilege. *Quand même*, the mother seizing the rifle from the hands of her fainting sons will come true.

The step from the munition factory to the dugout will be a shorter one than the step from the home to the munition factory for a world facing the implications of "the next war." That next step is implicit in the jaunty girl postman who brings you the annual bill from the Minnewaska Golf Club and the girl in natty paddock coat and leggings who swings open for you the car doors on the subway. Welcome, by all means, these manifestations of woman's advance, so considerably accelerated for us by WILLIAM II. But consider also what a super-Wilhelm will do some day for the progress of woman. He will point to her the way of the communication trench.

It should be a solemn reflection for the good people who would have this dreadful war end anyhow—until "the next war."

## How Wide Is an Oil Well?

OUR belief is that no one ever drove very far with a piece of a horse. You must have the whole animal or nothing. Modern industry, growing under the inspiration of science, is not so simple a matter, but it is equally important that we find out the scale on which things must be done in order to do a good job. That point seems to have been overlooked in framing the Ferris Bill (H. R. 3232) and the Walsh Bill (S. 2812), which provide among other things for leasing public oil and gas lands. These measures limit leases to 640 acres each, a man or a corporation can have only one such lease and cannot own more than a one-tenth interest in any oil-selling or oil-refining agency. Unfortunately nature did not create petroleum in parcels of such small extent. The effect of the 640-acre limit would be to fill every newly discovered oil field with numerous competitors, each hurriedly sinking wells to drain off the crude before his neighbor could snatch it from under his derrick. The result, only too familiar in the history of the industry, is wild waste, oversupply, and then exhaustion of the field. American practice, as stated by the Bureau of Mines, is to lose from 25 to 85 per cent of the oil in the ground, to lose 2 per cent more by fire while in storage, and to evaporate 25 per cent more of the remaining values before the oil is made use of. It is just about as sensible as savages gorging and destroying whale blubber on the beach. They'll need it all before the winter is over. The Department of the Interior now permits a holder to have leases amounting to 4,800 acres in the Indian lands of Oklahoma. This principle should be widely applied so as to limit the development of a field to responsible operators controlling these units of production. Furthermore, these men must be allowed to

break into the selling and refining end of the business on a scale large enough to compete with the Standard and others now operating. JOHN D. and his friends are not alarmed by any prospect of hordes of small producers competing to sell their crude to the few big refiners! If the public oil and gas lands cannot be opened in such a way as to prevent waste and monopoly, they had better be kept closed. Projected legislation of this kind should be radically amended or voted down.

## Grunting High at Monte Vista!

TWO of our Western friends, L. B. SYLVESTER and H. E. LAGUE, Mayor and Red Cross chairman respectively, have wired in claiming a place on the roll of honor for their town of Monte Vista, Colo. It appears that this farming community raised \$11,576.46 for the American Red Cross work at the local agricultural and stock show held last month "under the auspices of the High Order of Grunts." (We like that name and are thinking of organizing a Low Order of Grunts among the subway riders of our metropolis.) Well done, Monte Vista! We wonder if any other such locality in the United States can touch that record of \$3 per capita given this year for the Red Cross? If so, we have yet to hear of it. Secretary of the Treasury, etc., McADOO had better get the H. O. of G. to go out in front and set an example on the next Liberty Loan.

## Where the Movies Are Real

THREE robbers surged into the place late on Saturday night and ordered the proprietor to throw up his hands, but he snatched a trusty revolver from his hip pocket and started the shooting himself. When law and order got to the scene one villain was dead on the floor with a bullet through his brain, another was lying in the street shot through the chest, and the third was hiding, mortally wounded, under a bed in his lodgings near by. This typical old-time Wild West scenario was not enacted in the Lone Star gambling house at Wolfville, Wyo., nor in any Golden Nugget joint on the Klondike trail; the participants had no "chaps," no sombreros, no mustangs. It all took place in the ordinary everyday butcher shop of WILLIAM J. KIEB at 369 Bramhall Avenue, within the peaceful and dingy limits of Jersey City! If passion and sudden death are romantic, three hundred years of civilization have not tamed their violence out of our Atlantic seaboard. Compared with the mystery of these teeming cities, the modern irrigated regions of Montana and Arizona are commonplace to a degree. Just think of KIEB's battle next time you are tempted to sneer at an exciting film which you feel sure was staged in some back lot of the Bronx. Very likely the real thing had happened just around the corner. It may any day.

## Skippers

SHE was a broad-shouldered comely conductor, clothed in knickers, spudges, and an air of authority. He watched her handling the besieging mob at Forty-second Street. She was as fully in command of her Eighth Avenue car as is the officer of his trench or the skipper of his brig. He remembered that MARGARET FULLER, EMERSON'S friend, had said in her courageous way concerning women: "Let them be sea captains if they will!" If MARGARET FULLER, he thought, might only have lived to hear this member of her sex shouting in a firm, unharried voice: "Let 'em off, please! Watch your step! Move up front! Don't lean against that door! Move up front, please!"

In the lull between boarding parties, as the skipper sorted transfers, a woman beside her ventured:

"How do you like your new job?"

"Fine."

"Don't you get tired?"

"Sure. But will you tell me where you'll find a job that ain't tiresome sometimes? This is a good deal better'n washing dishes. Yes," she repeated pleasantly, sweeping with impersonal glance the group of men penned in by her iron rail, "I'll do this any day before I'd do washing for any man alive!"

He glanced from the wedding ring upon the conductor's left hand to the row of sheepish grins before her. "Let them be sea captains if they will!" The phrase echoed through his brain to the accompaniment of a strange thrill. Was it admiration or was it primal fear?

# CAN THESE BOXES BEAT THE U-BOAT?

They are buoyancy boxes. Twelve thousand of them are being installed experimentally aboard the "Lucia," once an Austrian liner, now a transport. They are placed just inside the skin of the ship, below the water line. Each box is of wood covered with galvanized iron, and is absolutely air- and water-tight—a miniature bulkhead. The inventor claims that even if the ship is torpedoed the boxes will have buoyancy enough to keep her afloat.

*Photographs by Bain News Service*

William T. Donnelly, inventor of this latest nonsinkable device, is a well-known marine engineer

The buoyancy boxes in place. A ship thus fitted is unsinkable, the inventor claims, even when filled with water

## TREMENDOUS TRIFLES

The war is not all big things. Behind the barrage fire, back of the thousands of guns and millions of men are the little things, the half-forgotten trifles that go to make up the web and texture of war, that torment or comfort the soldier. The sandbag is one of them. This dirt-filled sack has saved more lives than anyone can estimate. Lacking sandbags, the Germans might not have made their stand after the Marne, the French might have been driven back at Verdun.

A cigarette is a small object, but the humble "makin's" are food and drink to the fighting man.

Then there is the "scrap of paper" that guaranteed Belgium's neutrality. By tearing it up, autocracy committed suicide.

Another scrap of paper. A letter from home doesn't bulk large, but asks a soldier what it means to him.

As a ceremony, an antityphoid inoculation isn't impressive. But think of the lives it saves.

One of the hardest things to get is a good full-length portrait of a potato. Too bad, too; for the worthy tuber does its bit, especially when it's bit.

He isn't seeing. He is hunting down one of the most tremendous truffles of this war.

# THE ADVENTURES OF COLIN O'RELL

BY ARTHUR SOMERS ROCHE

## THIRD ADVENTURE—THE INTERRUPTED TEA

ILLUSTRATED BY HENRY HALEIGH

FERNALD looked sleepily about the room. It was a full minute before he recognized his surroundings. Then he remembered everything, from the moment yesterday afternoon when Bigbee, city editor of the "News," had sent him, on a tip from "Snap" Berwind, to the Grand Central Station, until now when, with the police of the city upon his trail, he awakened in a luxurious room at the Biltstone, not as Jimmy Fernald, newspaper man, but as Jacques Cunard, accomplice of the mysterious Marquis, and associate of the adorable Colin O'Rell.

Colin O'Rell! The sleep left his eyes. He reached for the telephone beside the bed.

"Listen, lady," he said after a moment, "ten dinners equal five luncheons; five luncheons equal one breakfast; for purposes of business and love. I mean business, Colin, and I am most gorgeously in love. How soon can you join me at breakfast?"

A very sleepy voice, through which, nevertheless, ran a ripple of mirth, answered him.

"Sudden beginnings make for sudden endings. You must go slow, and I must go warily. The morning is no time for romance; and, besides, you are my brother Jacques, and the ardor of a brother should be negligible. Please, Jimmy"—he thrilled deliciously—"I'm terribly tired, and I want breakfast in bed, and I'll meet you at four o'clock sharp in the tea room."

"Why not say next year?" grumbled Jimmy.

"Would you like me to?" she asked sweetly.

"For you to meet me at four o'clock is to be the most gracious lady in the world," he declared.

"Your apologies are instantly accepted, Brother Jacques," she told him.

Fernald smilingly hung up the telephone. After all, it was eleven now, and he was tired too. He rang for a waiter. Then he rang for a barber and the morning papers. Then he looked again at his luxurious bed. It was exactly a quarter to four when he entered the tea room of the Biltstone.

Tea is a little matter, but when one is ordering tea for the lady of

one's desire for the first time one cannot take too many pains. The head waiter recognized the Fernald symptoms. He was a very old head waiter, and he knew that there are nicer niceties about tea than even about dinner. He almost purred over such momentous decisions as the buttering of the muffins and the exact amount of cinnamon on the toast.

It would be a highly successful affair, Fernald decided. The table was secluded enough and yet commanded a view of the room. Though the Lord knew that the only view that meant anything in Jimmy Fernald's life was the view, shortly to be afforded him, of the face of Colin O'Rell.

At least so he believed at three minutes before four. But ten seconds later he changed his mind. Other faces meant something in his life: an unpleasant something—the face of John Hassager.

For the wastrel son of Richard Hassager, the multimillionaire to whom Colin O'Rell had been private secretary until yesterday, stood in the doorway. His eye picked out Fernald with a certainty that sent a chill through the heart of the young man behind the tea table. John Hassager, alone, was privy to the fact that Colin O'Rell was neither a thief nor a traitor. But that the Marquis and those engaged with him in plotting against the Government should believe in the dishonor of Colin O'Rell, it was necessary that no bungling, clumsy pursuit of the girl should be set in motion. Therefore the police, many high officials of the Secret Service, and even Hassager's own son, believed that Colin O'Rell was a thief.

Richard Hassager was, barring perhaps Lieuten-

ant Davids and "Snap" Berwind and English Fred Jevons, who now languished in jail as Jimmy Fernald himself, the one man Fernald would have preferred not to meet. But there was no chance to avoid the young rake. Though his walk was unsteady, his intentions were quite obvious. He was in that mood between exhilaration and intoxication that demands a recipient of confidences.

"Lo, Fernald," he greeted the newspaper man. Without waiting for invitation, he sat down in the chair that had been made ready for Colin O'Rell.

Nothing less than murder was in the heart of Jimmy Fernald. But he smiled. "Afternoon," he said.

Hassager looked at the table. "Tea," he said disgustedly. "That stuff never gets a man anywhere with a girl. Lemme join your party, and I'll show her a regular time. They have a champagne down cellar that'd melt the heart of a marble image. Lemme order a quart. No, no, don't refuse. 'S my pleasure."

Beyond Hassager, Fernald looked. Colin O'Rell was entering the room. He stared at her with a blankness that would have been rudeness to a stranger even. Then he looked at the man who sat opposite him. When he raised his eyes again Colin was gone.

What a wonderful wife she would make! She could take a hint. He wished that Hassager could. "Where is the lady?" demanded Hassager. "I've been up all night, driving down to Montauk Point, and I want some one to cheer me up."

"I think she's delayed," said Fernald. "Wait here just a minute while I phone."

"That's all right," said Hassager magnanimously. "Wait an hour, if you want; wait two hours; wait all night. Got time to burn. Jussa minute, though."

He snatched at Fernald's sleeve.

"You're a nice chap, Fernald. That time I smashed my car you wrote decent story. Never forget it. Give you good yarn now."

THERE was a silver cloud to every lining. Hassager had broken up what had been destined, without a shadow of doubt, to be the most marvelous and satisfactory tea party ever given. But if Hassager had anything of news value to say, it was probably about the activities of Fernald and Colin O'Rell. Fernald paused.

"Father's secretary ran away yesterday," said Hassager. "Police caught her, but some man helped her get away. Somebody sent me chasing down to Montauk Point; just got back. Learned that police have arrested one man, but he isn't the right one. At least, he isn't the right right man. But they're holding him, and I'm going down to Headquarters

His eye picked out Fernald

to see if I know him, soon's I get a little nourishment. Keeping it out of the papers; but you're a good fellow, Fernald, and I want to see you get along. I'll take you with me."

So Berwind's mistake in thinking English Fred Jevons to be Fernald had been discovered! Well, that was to have been expected. But that Jevons should be still held prisoner was important news. For while Jevons was a prisoner, he could not very well get in touch with the Marquis and expose Fernald's pretensions at being the international crook that he professed to be. The ice was very thin, but if it would bear his weight a little longer, Fernald might be of some value to the Government that had rejected his services because of a weak heart. That same heart was beating rather rapidly now.

But he maintained his calm. "Much obliged, Mr. Hassager," he said, "I'll just telephone and be right back."

"Right," said Hassager.

Fernald did not hesitate. He knew that Colin would have too much sense to wait around any of the parlors. She would have gone directly to her room to await word from him. From a booth he called up the apartment of Mlle. Amélie Cunard.

"He's a persistent beggar," he said. "He's come to visit."

The best thing—among a few hundred best things—about Colin O'Rell was her undaunted humor.

"Poor lonesome little man!" she said. "It's a shame to neglect him. But there are other tea rooms. Suppose you meet me at the side entrance in two minutes."

Fernald walked to the coat room and got his hat. Running away from a dining-room check was not the nicest thing to do, but that was a minor matter compared with rescuing prisoners from the clutches of the police. Having swallowed the camel, he could not very well strain at the gnat.

But John Hassager, wastrel though he was, was the son of one of the keenest business men in America. Dissipation had not entirely dulled the brain that was his by right inheritance. Back in the tea room he looked up at the head waiter.

"Monsieur Cunard?" he echoed the head waiter's words.

"Oui, monsieur. The gentleman who just left you—he was so particular—he will be back immediately?"

"You say his name is Cunard?"

Hassager was exhausted from an all-night wild-goose chase to Montauk Point. Further, he had drunk rather heavily. But the voice of the man who yesterday afternoon had sent him to Long Island had been elusively familiar. He had not been able to place it; even talking with Fernald had not jogged his memory. But memory is a peculiar thing, and suspicion is even more odd. Both slumber very uneasily. The hint that Fernald might be some one other than merely a newspaper reporter was enough to jog the mental elbow of Hassager.

Fernald, turning away from the check room, saw Hassager coming. Brief as was his newspaper experience, Fernald knew the outward characteristics of a plain-clothes man when he saw him. The man with Hassager was a house detective. There was no opportunity to escape. The coat room was in a corner. His way was blocked.

But twenty-four hours of association with Colin O'Rell had tended to quicken wits naturally alert. He smiled as he met the two men.

"Sorry, Mr. Hassager, but the lady—"

"Forget it!" snapped Hassager. "I didn't get you at first, but now—"

Fernald's face hardened. "You've been drinking, Hassager," he said, "but at the same time—" The fingers that gripped Hassager's wrist forced a release of the grip on Fernald's sleeve.

Hassager rubbed the bruised flesh. "That's all right, my man. They'll take care of you downtown."

Fernald looked at the house detective. "Because

a man happens to be rich, does the Biltstone permit its guests to be annoyed?" he asked icily.

The plain-clothes man shifted nervously. Hassager spent a small fortune every month in the Biltstone grill or dining room, but the young man eying him was unmistakably a gentleman.

"Probably a little mistake, sir," he said. "But Mr. Hassager says that your name is Fernald, while the head waiter says you gave him the name of Cunard."

"Well?" Fernald's eyes were as cold as his voice.

"If you'd just step over to the desk, sir," suggested the detective, "we could straighten the matter out."

"But I'm in a hurry," said Fernald.

The detective looked significantly at the hat on Fernald's head. His tone lost its courtesy.

"In so much of a hurry, you were forgetting the check for the lunch you ordered, eh?"

Fernald glanced beyond the detective. But the lobby was crowded, and uniformed employees of the hotel were watching the scene. He could not break away. Further, important as his own freedom was to him, the freedom of Colin O'Rell was much more

*She stood in the center of the dining room, her hand at her heart*

important. Every moment that he could delay the crystallizing of suspicion into certainty meant another moment for the quick-witted Colin to further her own escape. For, if he did not arrive at the side door, she would know what had happened and would make good her own safety.

"When a lady telephones, one forgets such things as checks," he stated. "Being a guest here, I did not give the matter a thought. Certainly, if the gentleman has made an honest mistake, it is only right that I show him his error. If the fact that I am registered here—"

"We'll go to Police Headquarters," asserted Hassager.

"The Biltstone, if it listens to drunken men, must be prepared to stand a suit for damages. Please do not forget that," Fernald told the detective. He walked, outwardly calm, but within him a turmoil of rage and alarm, to the office of the manager of the hotel. A moment later the manager bustled in. The detective explained.

"My name is Jacques Cunard," said Fernald. "With my sister—"

"Who does not answer her telephone, and who left the hotel almost at the moment you were leaving yourself," said the manager coldly.

"Nevertheless, I protest against detention," said Fernald. But his heart felt free. There was little chance of escape for himself, but the manager's statement that Colin had got away was enough. He listened quietly as Hassager talked. The head waiter was called. The manager twisted his watch chain. It was true that this Frenchman and his sister had arrived late last night and engaged rooms, and that his employees had reported that they brought with them little baggage. It was also true that this prisoner had apparently attempted to evade the payment of a luncheon check. It was further true that the head waiter had seen the prisoner greet Hassa-

ger as though they were acquaintances. But then, too, Hassager had been drinking. On the whole, the manager decided to telephone Police Headquarters.

"I am sorry," he said, "but Mr. Hassager would hardly make charges without substantiation."

Fernald shrugged his shoulders. When there was nothing for one to do but be resigned, one might as well practice resignation.

"SNAP" BERWIND'S face was devoid of all recognition as he entered the office. Fernald was dazed. He listened calmly while Berwind questioned Hassager.

"His name is Fernald; he's a reporter on the 'News.' He's the man who sent me out of town last night for some reason or other that had to do with helping my father's private secretary escape from the police," Hassager finished.

Berwind turned to the manager. "This man's sister," he said questioningly, "what does she look like?"

"Tall, slim, black hair, blue eyes," said the manager. Fernald mentally commended the night clerk for

his good taste. Evidently it was he who had given the description to the other employees. A man never is offended at learning that the only girl in the world can fill other masculine eyes. Colin had evidently impressed the night clerk, for many women must have registered at the Biltstone last night, and only a beauty's features impress themselves upon the sophisticated eyes of the men behind the desks.

"She's gone?" asked Berwind. His eyes gleamed as he spoke. It was the first hint, even, that he had given of interest.

"Of course she's gone," cried Hassager. "When he left me he probably telephoned her to get away."

Berwind yawned. "You hotel people never seem to use no caution," he told the manager severely. "I don't see no reason for annoying Mr. Cunard."

"Are you crazy?" almost shouted Hassager. "Hasn't he described Miss O'Rell?"

Berwind shook his head at the young millionaire. "You want to be kinda careful, Mr. Hassager. This tryin' to have people arrested because you think something won't do anything but get your father's bank roll tapped."

The manager looked his relief. Hotels do not care for the sort of publicity that arrests bring. His tone showed as much rebuke toward Hassager as it dared. "I regret exceedingly this annoyance, Mr. Cunard," he said. "I trust that your patronage—"

Fernald waved aside apologies. Finding that he was free, his one desire was to get out of the hotel. He replied to the apologies offered him, and left in the middle of a speech wherein Berwind was insisting to Hassager that the young millionaire was not the only person on earth who had seen Colin O'Rell, and that he, Berwind, knew the man who had rescued Colin O'Rell, and that Mr. Cunard was not that man.

Outside the hotel the daze that had enveloped Fernald's brain from the moment that Berwind failed to show recognition of him began to evaporate. Had the detective summoned from Headquarters been anyone other than the gorilla-armed "Snap" Berwind, Fernald would have put his escape down to sheer detective stupidity. It would have been an incomprehensible stupidity, considering the fact, which Berwind had apparently not considered worth arguing, that Amélie Cunard's description answered that of Colin O'Rell. But still stupidity might have been the explanation.

But Berwind! He knew Fernald! Only last night, thinking that he had captured Fernald, Berwind had arrested English Fred Jevons, the crook who looked, at first glance, so much like Fernald, and whom Fernald was now impersonating in his relations with the Marquis, chief spy and plotter in the United States of the Imperial Government of Germany.

Why? Berwind was a crook; that was the answer. Berwind

# GOD GAVE THEM YOUTH

BY DANA GATLIN

ILLUSTRATED BY WALLACE MORGAN

ONCE when the flying moth of life caught, for a second, in the web of spring, it enmeshed there with it two eager young hearts. They, like the wind from the south, sought some golden thing as yet unnamed, and laughed to be happy an hour; and a poet, observing them, sang:

*I saw them kissing in the shade,  
And knew the sum of all my lore:  
God gave them youth, God gave  
them love—  
And even God can give no more!*

TO little Phoebe Lanter big Jim Sponable—Judge Sponable—was above all people a man to be admired. Judge Sponable was not only one of the most important men in Cherryvale, and one of the richest as well, but, besides, he had a heart of gold. Little Phoebe Lanter had good cause to know that. Five years before, when it was time for Phoebe to go away to college as other girls did, and her father's law practice was ailing in sympathetic correlation with his ailing health, it was his good old friend, Jim Sponable, who had made it easy for him to accept a worry-easing loan.

And then when Phoebe, almost ready for graduation, was called home to her father's deathbed, and when the alarming deposit of knowledge in her pretty head failed to show her which way to turn, it was Judge Sponable who took all her worries upon his own capable shoulders. He looked after the funeral details, insisted that delicate Mrs. Lanter should have the Colorado trip which the doctor advised; and, after the mother and daughter returned, made a place for Phoebe in his own office.

Judge Sponable's law office was one of the most important in that part of the State; it controlled the affairs of the bulk of the prosperous agricultural community, and guided the legal destinies of its best citizens; it became a sort of royal palace of local jurisprudence during the years Jim served as county attorney and then as district judge. It already had a staff of very efficient stenographers—one young man and two not-so-young women. When Phoebe appeared the young man smirked, the not-so-young women sniffed, and the rest of Cherryvale lifted their eyebrows and gossiped. But the gossip was kindly, for everybody loved Phoebe—even the competent not-so-young women after a time.

No one could claim Phoebe was competent, however. Despite her struggles with Isaac Pitman's admirable handbook, her dictated pothooks continued to defy her own interpretation. But she continued to struggle, for Phoebe was as brave as she was lovable, and into the late night she chastised with pothooks those deep-blue eyes behind which the fairies lived.

Phoebe's face was not one of purely perfect beauty according to ancient Greek standards—but a fig for perfection if there's a halo of tawny gold, a soft curve of cheek, an odd, wide smile, and a sudden splendid mournfulness in eyes and mouth!

Apparently that was the way Judge Sponable felt about it, as all Cherryvale soon surmised. And the romance of it delighted Cherryvale.

Once before, years and years ago—more years than young Phoebe had lived—when Jim Sponable's hair still was black and thick and his deep-set gray eyes still could flash an eager light, he had loved a girl. What was her name or what her looks does not concern us here, for she passed out of Jim Sponable's life. He hadn't made the effort to clutch her for his own—he couldn't, he thought. He was a struggling youngster reading law then, and already had his mother and a brood of young sisters to provide for. So he said not one word to his love; only looked his heart out of his eyes. But looking alone never won a woman. The girl married some one else and moved away; and, after a while, Jim Sponable forgot his bitterness in the battles and victories of life. For victories came. Long before he became

She was late at the office and was walking rapidly

Judge Jim was able to build the big "Sponable house," on the eastern outskirts, which is still one of the show places of Cherryvale. It was there his mother died in tranquil pride and dignity; it was there that, one by one, his sisters were married under the celebrated colonial staircase, so "embowered" as to win a full column in the Cherryvale "Beacon." And it was there that Judge Sponable, hair now turned gray and eyes eternally calm, lived in affluent solitude. No one ever thought of pitying him—pity "the judge"?—absurd!

Probably he never thought of pitying himself; of lamenting the trick life played on him at the spring to bring him to a barren autumn. He thought he had forgotten the way of love—and then, suddenly, the sober curtains of October pulled apart to disclose, ashine, a tingling bit of May! And it was a slip of a girl who taught him, who thought himself so old and wise, how very young forty-eight can be. Oh, little Phoebe, with your eyes and lips and hair, what a teacher of wisdom are you!

It seemed to him unbelievable, quite unbelievable, that she should love him too. All his after life Jim Sponable, by just closing his eyes, could revision that magical February afternoon when Phoebe put her arms round his neck to receive his first lover's kiss.

IT had all happened unexpectedly. The rest of the staff had left the office, but Phoebe loitered late over her correspondence, and so long as Phoebe loitered the judge now could not forbear loitering also.

The big front office was in shadows, graying dusk painted on the windows—everything gray save over there where, bent over her typewriter table, Phoebe's head drew dazzling glints from the shaded light.

The shining head was a magnet; he simply wondered at himself, when he finally crossed over to her, that he could keep his hands off it. But he spoke casually: "Isn't it time to shut up shop, Phoebe?"

She glanced up and smiled her odd, wide smile. "These letters must be mailed to-night, judge—everything seems to have gone wrong!"

As her smile faded he thought he could detect a

tired, pathetic droop to her mouth. "What's gone wrong, Phoebe?"

The blue eyes looked up at him again, now slow and mournful under the long lashes curling up; eyes to draw anything—anyone—to them.

"I shouldn't bother you again, judge—I'm always bothering—"

"Phoebe!" His tone was the gentlest of rebukes. He laid his hot hand against Phoebe's cool one.

She impulsively caught his hand and bent her cheek against it—a childish caress. Suddenly she gave a little suppressed sob.

THROUGH his brain went a jumble of phrases with which we soothe children who are hurt, but he couldn't voice them; he felt strangely shaken, uncertain of himself. At last he asked: "What is it, dear?—surely you can tell me."

"It's mother—her cough again. The doctor says she mustn't stay in this climate through March."

"Well, then, we must send her away—and you too if you'd rather be with her." The judge spoke in a calm, matter-of-fact way as if this solution were a very simple affair.

Her eyes were swiftly swimming with a thousand emotions, but she shook her head. "No—you've done so much for us already. We can never repay you."

"You pay me by letting me do it, Phoebe. If only I could keep you from ever having a worry in the world! If only—"

Those swimming, mesmeric eyes were still fixed upward on his, drawing him, drawing him. Suddenly he turned away and walked to the window. He stood there, staring out at the street lamps which glowed like brilliant beads against the velvet dusk.

He heard her rise and move toward him. She paused a moment, timidly; then in a small voice: "You mean—you're fond of me?"

Still keeping his eyes away from her, he answered: "Yes, Phoebe, I'm fond of you."

Another pause; then in a smaller voice: "Very fond?"

"Yes, very fond." What an idiot he was to be trembling like this! He mustn't take advantage of her gratitude, of whatever deceptions her inexperienced youth might be playing her—God knows what are the dreams of romantic youth! Even as he told himself this he heard her draw a little breath of satisfaction.

"I thought so—I've thought so a long time. And I—I'm fond of you too."

With a sensation of limpid weakness pouring through his veins he saw her swaying toward him. He gave way then; before he realized it he had kissed her. From that too fervid kiss she shrank back; but at once, as if to atone, crept close again.

But that instinctive recoil brought the judge to his senses. He took his arms gently away.

"Forgive me, my child." (He must cling to that thought—she was just a child.) "We're neither of us quite ourselves to-day."

She drew back, aggrieved. "Then you're not really fond of me?"

That was his chance to save her from himself, who was too old. But with her eyes so close to his, those hurt and doubly alluring eyes, he could only say: "Yes, I'm fond of you, God knows! Fonder than of all the rest of the world!"

She was silent a moment, intensely still. Then she spoke in a very clear, distinct voice: "Well, if you feel like that, and I feel as I do, why do you act so—so unhappy?"

He tried desperately to pull himself together. "I'm too old for you, Phoebe, dear."

She caught his hand—Heavens, how electric hers!—and cried quite fiercely: "No! You're not too old! You don't seem very old!"

"I'm forty-eight, Phoebe."

She was silenced a second at that; but then she

said defiantly: "Well, forty-eight may be old sometimes; but you're not!"

He couldn't help a smile, though his heart contracted at the little proof that forty-eight was "old" to her. But he was speedily losing the power, the desire, to argue with himself. Suppose—perhaps—such a thing *could* be; had been. He could not hold his heart from hard beats of exultation.

"Are you quite sure—you really love me?" he asked hesitantly.

She nodded. Then, as he still stood apart from her, gazing with he suspected not how much of his heart in his eyes, she quickly ran to him, put her arms round his neck, and nestled her face against his rough cheek. "How could I help it?" she whispered. "You're so good and kind and strong—the most splendid man in the world!"

"And you'd be willing to marry me?" he murmured against her hair—how had he, for so long, kept from pressing his lips to her hair?

She nodded to his sleeve.

And thus little Phoebe Lanter became engaged to big Jim Sponable—Judge Sponable.

**W**HEN the judge reached home that night—the imposing, lonesome Sponable mansion—he regarded himself in the mirror with unwonted attention. Yes, the gray was coming fast, and no one could longer call that baldness a "tendency." There were undeniable wrinkles about the eyes too—though those eyes now had lost the dead calm of middle age; the eyes reassured him most of all. The close-clipped mustache concealed whatever story the mouth might tell, but there was a sagging of skin about the bones of cheek and jaw. It was, he supposed, an honest face, a dependable face; but what in it to gain the love of radiant one-and-twenty?

Yet this marvel had happened; all things were indeed possible in this wonderful world. The judge began to whistle as he dressed—for his first lover's call on Phoebe. He couldn't remember the last time he had whistled. But his unaccustomed lips produced cracked caricatures of the sounds he heard in his mind, and, half ashamed, he desisted.

Phoebe's mother was delighted at the news. With a lightened heart she packed for a trip to California; she went alone, for at the last minute Phoebe decided to remain in Cherryvale. She wanted to stay on in the office a while, despite the judge's protests; and then, later, there was the trousseau to be got ready. She was to be married in June, her own birth month.

Phoebe thought that never was there a girl so happy as herself during those days. The judge now showed even a tenderer solicitude than before. He took her to the big house, to discuss renovations and new decorations; to plan a garden of flowers and gravel paths and a fountain—to be the loveliest garden ever seen in Cherryvale. All for her! Those days there was ever a laugh just behind her silences, and melancholy shadows forgot the way to her eyes.

And was the judge happy too? He felt himself growing younger by the hour. He tried to work as zealously as usual, but did not begrudge his failure. What must one expect when Life, suddenly, comes knocking at the door?

All this Cherryvale observed, of course. Cherryvale, as said before, dearly loved a romance—and loved Phoebe and the judge besides. So it smiled sympathetic smiles when, every day, the judge tucked Phoebe into his new automobile, and her blue veil streamed out as a bright emblem of their happiness.

March with its fierce gusts and chilly rain sped quickly past. Then came the season of bud-spangled trees and moon-haunted nights, of song and hearts that won't sit still—Apriltide, the gossamer time of year. And, like all the birds in all the trees Phoebe's heart was calling—calling—and thought it heard the answer.

**A**ND then it was, as if hot on the trail of spring, that young Valentine Brookling came to Cherryvale. Young Val had lived there years before, when he was of the mischievous age to pull little Phoebe's curls. Nor had the years yet burned out the mischief, as Phoebe discovered that first brilliant morning she encountered him in the little park that sits surrounded by the Public Square.

She was late at the office, and was walking rapidly when she noticed some one was whistling—whistling softly but in time to her own hurried steps.

Instinctively she slowed her pace, but the whistling then slowed too. With a frown she glanced in the direction of the sound; there on a bench by the fountain sat a young man; she could see he was young, and in an olive-drab uniform, before she quickly glanced away. The soft, teasing whistlings continued. She knew they were for her—"Won't you look?" they said. She resolutely kept her head turned, but as she passed the bench she couldn't resist saying, as if to herself: "What an impertinence!"

Immediately the culprit jumped up and dashed after her. "You were speaking to me?" he asked.

"I was speaking to myself," said Phoebe.

"But you didn't speak till I whistled—I thought it must be for me."

Phoebe made no reply as she hastened on. But he kept beside her. "Now I see you're angry with me," he said sadly. "Is it because I whistled? Do forgive me for that dreadful deed!" Phoebe's expression figuratively put her fingers to her ears. "Please!" he begged. "Please, Phoebe."

At that she gave him a startled glance. Despite his tone, he was looking anything but contrite; he was smiling mischievously, boldly, with his bright, dark eyes as well as his lips.

"Don't you remember me?" he asked.

She shook her head.

"I recognized you at once—I'm Val Brookling."

"Val Brookling!" Phoebe gave a little cry of welcome and extended her hand.

"I recognized you at once," he said again with half-reproachful emphasis. "Even though you have grown prettier."

"Do you really think I'm prettier, Val?"

"I wish I could say what I think of you!" But, despite any verbal reticence, young Val's eyes, those bold, dark eyes, succeeded only too well in telling her what he thought.

**P**HOEBE blushed, but laughingly met his eyes; even looked him up and down with gentle daring. "I can return the compliment, Val—you're awfully handsome in that uniform."

And, indeed, young Val was handsome: tall and

"And you'd be willing to marry me?" he murmured

with the slender lissomeness of youth, and something startlingly alive in that swift, eager smile and in the eyes which shone out so boldly under their black lashes.

"The uniform's why I'm here," he explained to her. "I've been down in Louisiana—Camp Beauregard—engineers; and we got orders to report at New York in ten days. That means France at last."

"Oh, Val!" Her voice held quick concern.

"So I beat it up here. Aunt Sallie's my only close kin left—father and mother are both dead, you know."

"Oh, Val! I didn't know." And her voice now took on an inflection of infinite sympathy. Then she went on: "We must try to make your little visit here pleasant—how long can you stay?"

"Not quite a week—worse luck!" And his eyes once more amplified the meaning of his words.

Phoebe felt herself blushing again; and, in a little silence that fell between them, remembered she must be getting on to the office.

"I'm working for Judge Sponable," she explained.

"I'll just walk along with you, if I may," said young Val. "Old (Continued on page 32)

He dared not touch her, but he grasped the boat edge either side of her, his vivid, dark face close to her own

# FROM BASEBALL TO BOCHES

BY H. C. WITWER—FOURTH INNING

ILLUSTRATED BY F. B. GRUCER AND ARTHUR WILLIAM BROWN

VIVELA, FRANCE.

DEAR JOE: Well, Joe, we are finally lookin' at the war from the orchestra. Our outfit went up last night to relieve them French birds in the front-row trenches, and they all went out like guys at intermission to get a smoke, or a glass of cracked ice, or somethin'. The only difference is, they don't figure on comin' back right away to see the rest of the show, havin' give their door checks to us.

No doubt you got the idea that we shook hands and cheered each other and prob'ly drank toasts and the like, but such was not the case. I don't see how nobody can drink toast anyways, unless maybe milk toast; heh, Joe? However, that ain't here or there—the idea is, we went in and they went out without so much as a grin bein' exchanged between us. The relief come off at night, and it was as dark as a club flush and rainin' as usual. They's one thing you can always figure on in France, and that's rain. They may be short of everything else, Joe, but they's always plenty of that. Sometimes in the restaurants over here they try to pass it off as soup, or coffee au lait, or vin ordinaire (a burlesque on wine); but, Joe, it's rain all right, no matter what they call it! I have drunk it and had it pour on me in the streets, and I know what I'm talkin' about, Joe!

Well, we relieved these guys one by one and I says to the bird I relieved: "How far away is the Germans, kid?"

"I no speak not the Américain," he whispers. "How many soldiers from the *Etat Unis* are there now in France?"

"Eleven million!" I hisses back, seein' he wouldn't tell me nothin'—"not countin' me."

"*Sacrebleu!*" he remarks, and went on his way.

Well, Joe, as a matter of fact, they ain't over thirty cents in a taxicab distance between us and the Germans. The space that keeps us apart is called No Man's Land, and from where I sit it looks more like one of them Long Island real-estate swindles than anything else. You know, them places where the agent meets you at the train in a rowboat and takes you out to see the plot they have awarded you for your subscription. "Buy a plot of ground here and own your own home—somewheres else." One of them kind of things; get me? They is young mountains of mud, barbed wire, used bullets and shells, lakes, helmets, horses which died game and is still the same way, and holes known to the trade as shell craters, which is deep enough to bury the German army in and sooner or later will do the same.

We eased into them trenches as quiet as possible, so's the Germans wouldn't get wise to the fact that they'd go to bat against American doughboys the next time they got to mixin' it. We was to be in the nature of an unpleasant surprise. We hadn't been in there five minutes, Joe, before Hades bust loose! They must of doped it out in some way, because shells come over by the barrelful for about an hour. They give us everything they had from soup to nuts, and the noise would of made a boiler factory sound like a deaf-and-dumb prayer meetin'. As far as I could find out, none of our outfit got beaned, but whilst none of us was scared, Joe, I must say we realized we had come to the war at last. Yes, sir!

We come back at 'em for a while, playin' trump every time they led it, and pretty soon they called it a day and laid off. Us doughboys naturally thought the next thing on the bill of fare would be one of them grand, smashin' dashes over the well-known top, but such was not the case. We was all set for

the charge of the light brigade and so forth, but instead we was each presented with a pick and shovel and put to work on the thrillin' job of repairin' trenches, where they had been knocked out of true by shells.

Joe, we been doin' that ever since we been up here, and they is certainly a lot of sore guys in our outfit which is champin' on the bit to be heroes and they is nothin' stirrin'.

We was give a supply of gas masks and steel trench helmets before we come up here and also a

looks on without lendin' a hand to either of us. Instead of screamin' and faintin' like the ordinary dame would do, they is some more roses come into her cheeks, and her eyes sparkles till you could of set either one of them in a ring and hocked it for a million francs. This guy was willin', but what he knowed about box fightin' could of been wrote on a gnat's ear, and in about three minutes, French time, I knocked him kickin'.

"I ain't no pig!" he exclaims from the floor. "I know when I got enough. I'm through!"

I help him get up, and Jeanne went so far as to wipe off his face with the smallest handkerchief in the world. We shook hands all around, and he bought a deck of lemon drops and beat it.

"Ah, but you are of the very brave!" says Jeanne to me. "You are of the hero, *mon chéri*, you—"

"I admit it," I says, cuttin' in. "Listen—I don't know if I'm of the hero or not, but I'm gonna get a chance to find out right away. We go up to the front to-night!"

Joe, she gets as white as a pint of milk for a second, and I seen one little hand grip the counter till you could see the white bones through. Like ivory under satin, it looked to me, Joe. Then—zip!—back comes that complexion which would make her a million a week if she'd sign cans of it—and she's grin-nin' at me.

"Ah!" she says, "for three years we wait for this! the *bon Dieu* has hear France—" She grabs up a little American flag I had give her and waves it. "*Vive la*

*Etat Unis!*" she hollers. "*Vive la France!*"

I'm tellin' you right now, Joe, and I ain't ashamed to admit it, that the way she said that made me tingle all over, like when the leadin' man throws the villain over the cliff in the movies; get me? I felt like I could lick the German army all by myself but give a chance, and when Jeanne leans over that counter and kisses me, I knowed I could lick 'em!

"Jeanne," I says, "I ain't got much time. I come up here to ask you a favor before I go away to make the Kaiser sick and tired of the war. It ain't very much I'm askin', but it means a whole lot to me. Will you do it?"

Joe, somebody must of tipped her off. She gets as red as a four-alarm fire and examines a box of matches like it's the first one she ever seen in her life. She says nothin'.

It's gettin' late.

"Well," I says, usin' nerve I never knowed I had in me and puttin' my arm around her—"what d'y'e say, Jeanne? Will you do me the favor?"

"For you, *mon chéri*," she says, turnin' that million-franc smile on me—"for you I give—what shall I say to you?—I give my right arm!"

I took a long wind-up and put everything I had on the ball.

"It ain't enough!" I says. "Jeanne, what d'y'e say if we get— Say, listen! I ain't no J. P. Morgan or nothin' like that, but I got a roll stuck away, back in the dear old *Etat Unis*, that would make the national debt of Portugal sound like the score in a no-hit game! When the war's over and I go back to baseball, I can drag down six thousand berries a year for pitchin'. If you don't like that, we can open a delicatessen or somethin'. I—you—well, this ain't gettin' me nowheres. To get right down to it, what I want you to do is— Say, Jeanne—let's get married, heh?"

Oh, boy! Now that I have got it off my chest, I feel like I have been bearded by Johnnie or somebody.

"I ain't no pig!" he exclaims. "I know when I got enough. I'm through!"

complete outfit of winter scenery to keep us good and warm. Joe, it gets as cold as a half a dollar's worth of ice in these here trenches after a day's rain, but we are fixed up now so's that even if a blizzard come along we could laugh at it. To show that our heart's in the right place, we make it good and hot for the Germans too, this chilly weather, by throwin' shells over at 'em, day in and day out.

Nobody knew we was comin' up to the front, with the exception of everybody in the camp, until almost the last minute. The first real tip off was when they served out the identification tags. These is little lead medals which you wear around your neck, and on 'em it's got your name, outfit, nearest relative, and why—and a lot of other interestin' facts and figures about a guy, so's that in case you accidentally bump into a bullet you get due credit for same. Then they was a lot of orders give out which it's no use repeatin' here because none of the censors is blind.

Well, Joe, of course the first thing I did was to sneak over and tell Jeanne fare-thee-well, for the time bein'. I must of wrote about this dame before, Joe, because she's better-lookin' than Alexander's in-shoot in August, and ever since I got my first flash at her I wanted to give her the honor of openin' my mail and stallin' the landlord for me. I hustled over to the little grocery store she runs in this French burg where we was stoppin', and there's one of our doughboys standin' there kiddin' with her. "I wanna speak to you in private, Jeanne," I says to her. "Give this hick the gate!"

"It has come the time for you to leave, *mon ami*," she tells him, presentin' me with a smile that would make anything in the Follies quit.

This big stiff turns around and gimme a sneer. "First come, first served!" he says. "I'll leave when I'm good and ready!"

"I don't know how good you are," I says, "but you're ready right now!"

Well, Joe, we went to it, whilst the fair Jeanne

and my heart's tryin' to climb right out through my ribs. All Jeanne did was to drop the box of matches on the floor and put both her hands on my shoulders. She's gotta stand on tiptoe to do it, Joe, and she looks at me like I'm New York and she's gettin' her first peep.

"But yes!" she whispers—so low that I gotta bend down to hear it.

Well, Joe, there we stand! My head's goin' around and around, and I'm shakin' like a steam drill. I feel like I have fanned Cobb with three on in the world series, and they ain't no eighty-six Germans livin' that I couldn't of cleaned up right then and there! I seen it was up to me to break the embarrassin' silence. "Thanks!" I says. Joe, it was the only thing I could think of.

Jeanne drops her hands and turns away, and I seen in some way I had made a wild pitch, Joe, without knowin' just how I did it. "You—you love me?" she says.

"Oh, fluently," I tells her; "I'll tell the world fair that—"

"But—but you do not tell me that!" she whispers. "You—"

Joe, I went over the top for the first time! I'm back of that counter in one jump and—well, Joe, what we did and said ain't no man's business, but speakin' of me lovin' Jeanne, we got that all settled, anyways!

Joe, you can mail me your congratulations and tell the world I'm a married man. Father McCarty, our chaplain, did the trick five minutes before we marched away to the trenches, and the whole outfit seen us get wed. They certainly was a lotta soreheads in our midst when them guys seen what I had grabbed off for myself, when they might of done the same thing, but they choered up and made the best of it. Windy Haskins wanted to kiss the bride, and in fact they was a general epidemic of wishes along them lines, but Jeanne seen that it wasn't goin' big with me, and she ducks into the house, blowin' kisses at 'em with her hand instead.

Our captain is an ace, Joe, and he sends for me about ten minutes afterward.

"Harmon," he says, "I have good reports about you from Sergeant Wayne, and I'll keep an eye on you from now on. You have something to make good for now, and I hope you'll take advantage of the incentive. When we take over the trenches at — there will be a vacancy for a corporal in your company. The promotion will come strictly on merits, and it's up to you!" He looks at his watch. "You have fifteen minutes before it will be time to fall in," he remarks.

"Yes, sir," I says. "Is they somethin' you want me to do?"

He gave a snort, Joe. "Don't you think you can say good-by to your wife in fifteen minutes?" he yells.

"Oh!" I hollers, "I got you—I mean, excuse me, sir—I'll be right back!"

Joe, wasn't he a regular guy to gimme a chance to have a fond fare-you-well with my newly made bride?

I never would of thought of it!

Yours truly,  
ED HARMON.

(Don't forget to tell the gang I'm wed—we could use some silver when I get back.)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, who do you think I met up with here yesterday? No less than Slim White, which only a couple of years ago the Cubs give five thousand berries and three outfielders for. Remember how he used to slam the old pill all over the lot and how he could beat a telegram goin' around the bags? Well, he's in the aviation now, and we had a great little fannin' bee. I reminded him of me bein' the first pitcher he went up against in the big league and how I made him fan on three pitched balls, and he remembered how he nicked me for a triple in Chicago when they was a runner on each bag. Neither of which things ever happened, as you know, Joe. He says bein' in the Aviation Corps is great because it keeps a guy out in the open air. He also claims he knows every bolt and nut on his machine personally. He says the wings is made in one place, the motor in another, the wires somewhere else, and so on. He ain't sure, he says, but he thinks the propeller is made in Russia, because it certainly reminds him of it, anyways.

I fell. "What d'ye mean the propeller reminds you of Russia?" I asks him.

"Two thousand revolutions a minute!" he says.

Joe, can you imagine that guy tryin' to kid me?

I asked him how he come to get in the army, and the big hick says it was on account of the raffle they had in Washington last summer.

"Raffle?" I says. "You mean the draft, don't you?"

"I thought it was a raffle," he says. "Anyways, Ed, my number was 258, and I won it! I drew a free trip to Europe for the first prize, and that's the only raffle I ever won in my life!"

I got to tell you about Father McCarty, Joe, which same is our chaplain and the guy which married me and Jeanne. He is one regular guy, and the whole outfit would go through Hades to get him a light if he asked it. It don't make no difference what religion you use, if any; you can't help likin' this guy. We got all kinds of nationalities in our company too, and the roll call sounds like takin' inventory at Ellis Island. Father McCarty pulls one at mess this a. m. that the gang is laughin' about yet. You know, Joe, it is Friday, and that is meatless day for the Catholics. Well, we ain't got a thing for breakfast but bacon, and they's a young Jewish guy named Marcowitz—which is an ace himself—watchin' the cooks throwin' this bacon up and down in the pan. He's standin' there all gloomed up, when along comes Father McCarty and gets a flash at him. They both look at that bacon in the pan, and then they look at each other.

"Is that bacon all we have for breakfast to-day?" says Father McCarty to Marcowitz.

"Yes, sir," says Marcowitz, turnin' away from the pan in disgust.

"Hmph!" grins Father McCarty, alappin' him on the back. "Well, son, it's a tough mornin' for both of us, eh?"

Well, Joe, we are still performin' with the pick and shovel, repairin' trenches and the like. The whole outfit is crazy to go to the mat with these here boches, as they call 'em here, and every time an orderly comes along with an order from the post commander, we all jump up, hopin' that he's bringin' the word for us to go over and chase them guys all the way to Berlin. Even the officers is sore, though of course they don't show it out loud like us doughboys does.

It's a funny thing, Joe, but you hardly ever hear the word Germans over here. The English call 'em 'Uns, the French call 'em boches, we call 'em square-heads, and what the Belgians call 'em would never get past no censor, but I will say that it's nothin' that would make them Germans stuck on themselves.

We got a little excitement last night when a squad of us went out in No Man's Land to repair some barbed-wire entanglements. The Germans is always entertainin' us by sendin' up rockets and star shells, which make it like broad daylight when they bust in the air. Well, we ain't been out there a minute when them birds spots us and cuts loose. Joe, it rained bullets for about five minutes, and we all laid flat on the ground and hoped for the best. Windy Haskins sticks his head up for a look, and away goes his hat full of lead. We couldn't even come back at them, because they was only a dozen of us against half the German army for all we knowed, and if we had fired a shot, it would of showed them exactly where we was and then we'd all of been prob'ly sayin': "So this is the Red Cross?" in the mornin'. After a while we crawled back like snakes to our own trenches, and they wasn't nobody got hit. They was four holes in Windy Haskins's hat, and he claims he wouldn't take five hundred bucks for it.

"With evidence like this here," he says, holdin' up the hat, "I can make the boss liar of the village quit like a dog when I go home!"

Yours truly,  
ED HARMON.

(Have you got a uneyform on you yet?)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I suppose by this time the papers over there has been full of it and the good old *Star*

## Know Your Seeds Before You Plant Them

When peas are fat, tender and sweet; radishes firm, crisp, and spicy; when corn has full ears of even, juicy kernels, then you know you planted good seed. But why not be careful before you plant?

## FERRY'S SEEDS

are pedigreed seeds. They come from plants with long histories of perfect production, vigor, unsurpassed quality. We select the seeds of each crop and then carefully test them out in our great trial gardens and greenhouses. This is done every year to see that the quality strains are running true.

Doubtful seeds are dear at any price. This year plant Ferry's Pedigreed Seeds.

Send us your address and we will send you the Ferry Seed Annual. Dealers everywhere sell Ferry's Seeds.

Unit knows we are in the war, sure enough. You know what I mean; I mean that raid which them Germans pulled off on us, takin' twelve dough-boys prisoners and removin' three others from the pay roll. Joe, one of the guys they captured was Windy Haskins, and I'll betcha before they got him licked he put a good dozen of them squareheads under the lilies. That bird never give up while he could stand on one foot, and when he comes to life again, wherever they took him, he'll make 'em wish to Heaven they had let him go his way in peace!

They ain't no use moanin' over spilt milk, Joe, but them guys simply caught us nappin' and worked the double steal on us—that's all! As long as it must of been in the papers, I'll tell you how it come off, or as much of it as the law allows, anyway.

The night this thing is pulled, it's pourin' rain as usual, and on top of that they is a fog so thick that you couldn't see your hand in front of you if you had an electric light on each finger. We get orders to move up into a new trench which is much further towards the Germans than we been yet and relieve the French guys there. The thing is pulled off as quiet as a church funeral, and we are just gettin' acquainted with our new home when, Joe, Hades busts loose!

Them Germans put everything they had on the ball, and I'll betcha for an hour they throwed each and every kind of shell they had in stock right into us. They banged away in front of us so's we couldn't come over the top and run 'em ragged, and they throwed shells in back of us so's the rest of our guys and the French couldn't come to the rescue. They was a curtain of fire all around us, Joe, that no livin' thing could get past, and from then on we are on our own, with nothin' but a chance to show the world how an American doughboy can scrap!

WELL, Joe, there we are like a guy on an iceberg floatin' around in the middle of the ocean and night comin' on. Our officers, which has never been under fire before any more than we have, is as cool as the middle of February, and we are ordered to take cover in the dugouts while they try to get word through to the French to open up with them 75-centimeter habies. A shell hits under the observation post, and good-by telephone. The next thing we knowed the Germans is jumpin' down into the trench, yellin' like maniacs to keep up their nerve.

Joe, this was our dish, and we went to it—every man for himself and the guy that goes down loses. You wanna remember that it was pitch dark and you couldn't tell one guy from another. Them yellah squareheads cashed in on this by yellin' out every now and then in first-class English that they was Americans, and when a doughboy would lower his baynet, thinkin' he was up against one of his own bunch, them German tramps would let him have it.

Well, I don't think the whole brawl lasted over ten minutes, but take it from me, Joe, while it was goin' on we was the busiest guys in Europe. It was our first time up against the real thing, and every doughboy was in there tryin', now, believe me! Right from the go in, Joe, we all knowed we didn't have a Chinaman's chance, because we was cut off from all outside interference, and the best we could do was to die game, and take as many of them Germans along with us as possible.

One of them hand grenades makes good in back of Windy Haskins and me and he both went down cold. I got a splinter in the back, and when I come to life I found I couldn't get no further than my knees for quite some time. A guy takes a dive beside me, and I grabbed his automatic which made a pair with my own, and, Joe, I just cut loose with both of 'em until I run outa ammunition.

Windy is only shook up a little from that bomb, and he gets to his feet yellin' like a bat from below. They was three Germans come at us, and Windy drops the first with the prettiest left hook to the jaw I ever seen. He didn't even have a gun, it havin' been blowed outa his hands by the bomb, but a little thing like that don't slow Windy up a foot. He dives into the other one, grabbin' him by the throat. I dropped the third with a lucky shot, but the guy Windy bounced comes to and hands a gun over his head. Then some more squareheads comes

rushin' up and drags Windy away. That's the last I ever seen of him, Joe, because from then on I was busy lookin' after the health of George W. Me.

Me and a couple of other guys beat our way back to a dugout. We ain't no more than crawled in it when a shell hit it and blowed it all the way to South Bend, for all I know. We was all knocked flat, and one of these guys got his in the arm. He throwed his gun away, not bein' able to use it, and, grabbin' off the baynet, he used it like a sword. Makin' our way along the trench, we run across some more dough-boys; and, seein' me leadin' the way, they took me for an officer, and, Joe, I didn't correct 'em, but took charge instead.

One of these birds is a kid about nineteen. I never seen a guy so mad in all my life. He says they have took his pal prisoner, and he suggests that half a dozen of us charge the German trenches on our own hook and after killin' a few hundred of 'em bring back some generals as pets for Pershing. I had my hands full keepin' that kid from goin' through with his scheme, too, Joe!

WELL, we hear a lot of guys climbin' down over the top of the trench, and we don't know whether they're Americans or not. I challenge them, and their answer is a shower of them hand grenades which same reduced our party by four. The rest of us dropped to our knees and opened fire with rifles, and, Joe, they is at least two of them squareheads which will never go around braggin' about that raid, in the streets of Berlin. We kept pourin' good old American lead into 'em for a couple of minutes, and pretty soon they got enough and went away from there, draggin' their wounded with 'em.

We went on further up the trench, firin' as we went, and finally an officer comes along and orders us back in the dugouts.

This guy was a first lieutenant and he wasn't a minute over twenty-one years old at the outside. He's been banged on the head, and one arm is hangin' very stiff; but, Joe, he's as steady as if we're on dress parade. He sees that we all get in the dugout first, and he's just startin' after us when a shell hit about ten feet away.

Joe, that was the last I knowed until the next mornin' when I found I had been hit in the back and shoulder, and also I was a corporal!

I guess that's poor, or somethin' like that, eh? Can you imagine me with stripes on my arm and guys under me, Joe? Why, say—them Germans can come every night and welcome if I'm gonna get promoted on each visit; eh, Joe?

The medico says I'll be all right in a couple of weeks and ready to take another crack at them Germans; and Joe, believe me, I certainly will do the same!

All us guys which come out of the raid is simply nutty to get back at 'em. We ain't moanin', Joe, over havin' lost the first pot—we're as good losers as anybody on earth. They stuck one over on us, and we hand it to 'em for doin' it; but, Joe, believe me, they'll be a different box score when we go up against them guys again! They had the edge on us forty ways, and you know it, because they been in this quarrel for four years and we just sat in the game. They had this thing doped out for months, and they was four Germans to every one of us when they come jumpin' in that trench, but at that we put up an argument that I'll betcha they won't forget over Sunday! I'm glad I was in it, because I'm a better soldier than I was before.

And I'm out for blood now, Joe, and so is all of the gang that was in the thing. It was better for us than ten years of this trainin' thing where the battles is all faked, and I guess it was pretty near worth what it cost us. It was hot stuff while it lasted, but when you figure what it did for us in experience—why, we took out a lot more than we put in, Joe.

FOR every doughboy that them guys took we'll take twenty Germans, Joe, and we won't stop tryin' till we lead the mob into Berlin!

Yours truly,

ED HARMON.

(Married, wounded, and a corporal so far.)

(To be concluded in an early issue)

# The World's Time is Waltham Time

## Why Your Watch Selection should be a Waltham

**S**TEADILY, persistently, patiently — round and round go the hands of the world's watch. Whistles blow and industries leap into action. Trains rush through space, ships sail the seas, people eat, work and play, and the tick of a timepiece guides them all.

How important, then, in the scheme of life is the watch. How necessary to the smooth-running schedules of efficiency that the watch should be accurate. How easy for you to secure, when buying a watch, the world's master timekeeper — a Waltham.

By merit only did Waltham win tributes from the nations of five continents. Horological experts select official watches without fear or favor. Calmly and scientifically they test and compare, looking through the surface of a watch into its works. It is there they find their answer.

But they discovered at Waltham their true ideal of what a perfect timepiece should be — a watch that outclassed in precision and reliability even the finest offerings of Switzerland, England or France. And with their verdict, "the world's time became Waltham time."

COLONIAL A

Reverie movement 19 jewels

Visit a jeweler whose name stands for the utmost in quality. That is the man you desire to patronize, because you can depend on the value of any article he suggests or recommends. Ask him to place in your hand for inspection the Waltham Colonial A, illustrated on this page.

Here is a watch as precise as it is rich in the simple beauty of its refinement. Colonial A is an example of those methods of manufacture that have brought the world to Waltham for time. Could you ask for better reasons why your watch selection should be a Waltham?

# WALTHAM

THE WORLD'S WATCH OVER TIME

The Food  
Of Foods

## 7 Breakfasts

Of Luscious Quaker Oats

At the Cost of One Bacon-and-Egg Meal

Compare Quaker Oats—the monarch of grain foods—with other foods, in nutrition and in cost.

Say a breakfast of 750 calories. In Quaker Oats that amount of nutrition costs less than 4 cents. In other foods those same food units cost about as follows:

In Eggs . . . . .	37c	In Ham and Eggs . . . .	27c
In Meat on the average . .	30c	In Halibut . . . . .	25c
In Broiled Chicken . . . .	85c	In Bread and Milk . . . .	8c

So Quaker Oats—with twice the food value of round steak—costs one-tenth what eggs cost—and one-eighth what meat costs—for the same food units.

Six big dishes of Quaker Oats cost no more than one egg. A week of breakfasts on Quaker Oats costs no more than one breakfast of ham and eggs.

Serve it liberally and often. Make it the full morning meal. Use it also in your baking. It is the greatest of grain foods. And every serving cuts down your table cost.

# Quaker Oats

Flaked from Queen Grains Only

Quaker Oats stand supreme among oat foods because of their wondrous flavor. They are flaked from queen grains only—from the rich, plump, savory

oats. We get but ten pounds from a bushel.

You get these exquisite flakes, at no extra price, when you ask for Quaker Oats.

12c and 30c per package in the United States, except in Far West and South where high freights may prohibit

### Quaker Oats Bread

1½ cups Quaker Oats (uncooked)  
2 teaspoons salt ½ cup sugar  
2 cups boiling water 1 cake yeast  
½ cup lukewarm water 5 cups flour

Mix together Quaker Oats, salt and sugar. Pour over two cups of boiling water. Let stand until lukewarm. Then add yeast which has been dissolved in ½ cup lukewarm water. Then add 5 cups of flour.

Knead slightly in a warm place. Let rise until light (about 2 hours). Knead once more. Form into two loaves and put in a greased pan. Bake about 45 minutes. A sponge cake may be used, a sponge cake may be used, a sponge cake may be used.

### Quaker Oats Sweetbites

1 cup sugar, 2 cups, 2 tablespoons baking powder, 1 tablespoon butter, 1 teaspoon vanilla, 2½ cups uncooked Quaker Oats.

Cream butter and sugar. Add yolks of eggs. Add Quaker Oats, in which baking powder has been added, and add vanilla.

Beat whites of eggs stiff and add last. Turn on buttered tin with a fishbone, but very firm on each side, as they spread. Bake in slow oven. Makes about 30 cookies.

### Quaker Oats Muffins

½ cup Quaker Oats, 1½ cups flour, 1 egg, 1 cup sugar, 1 cup milk, 1 cup butter, 1 cup baking powder, 1 cup salt, 1 cup vanilla.

Turn scalded milk on Quaker Oats, let stand five minutes, add sugar, salt and melted butter. Sift in flour and baking powder, mix thoroughly and add salt well beaten. Bake in buttered or greased tins.

# THAT MAN HURD

BY WILLIAM SLAVENS McNUTT

"DOES anybody here speak English?" The tall man who asked this question stood hat in hand in the staff quarters in one of the great Russian forts in the fall of 1914. He received no answer.

A number of Russian officers were standing stiffly at attention, eyes fixed on an open door. The newcomer noticed the focus of eyes on the open door and decided rightly that the general was probably in the room beyond.

He was a man who believed in dealing always with the "main squeeze," so he made for the room. A skivvichy chorus of Russian protest followed him over the threshold, but failed to halt him. He found himself in the room with a Russian general so done up in dewdabs that he looked like what we think a Russian general did look like.

"Morning, general," said the intruder in a cordial manner. "Speak English?"

The general evidently did not. But he spoke Russian—a lot of it in a hurry. The intruder listened. Not being able to understand, he could take no offense.

"Send for an interpreter," he suggested when the general ran out of breath. "Somebody to speak English. I'll wait. Smoke?"

The general did not take one of the proffered cigarettes. The newcomer lit one and sat down. The general had a sunny bone, and at about that point in the proceedings it began to itch. He laughed and spoke to an orderly. A few minutes later an interpreter who spoke English entered.

"I'm Dr. Hurd of Seattle," the big man in the room with the general introduced himself. "I came over to help out."

"To help out?" "With the war," the doctor explained. "Lots of the fellows I knew were going to France or England or Serbia, but nobody was going to Russia. 'Shucks!' I says to myself, 'I reckon Russia needs help as much as any of the rest,' so I just got on a boat and came on over."

"You mean you want to fight?" "Sure. Anything to help out. I stopped in Petrograd and saw some of your people there. They fixed me up and were going to send some one down here with me after two or three weeks, but I got tired hanging around town after a few days, so I just got on a train and came along. I didn't know just where this place was, and I don't talk any of your lingo, but I figured I'd get here somehow—and here I am."

There he was—Dr. Eugene T. Hurd of Seattle. Fiction would ban the story of his service and rise in the Russian army as too improbable for use. For three years he was the only American doctor at the Russian front.

### Helping Out

HE was battle surgeon with the Second, Third, Fourth, and Tenth armies on the central Russian front, operating immediately behind the front-line trenches. He became colonel of the Twenty-ninth Flying Surgical Corps and won a favorable mention from his chief, General Sokalev, for his surgical skill. He was in ninety-two large battles, was decorated both by the Czar and Kerensky, and mentioned time after time for bravery under fire and twice recommended for promotion to

general. He attended personally to over 31,000 wounded and performed 6,700 operations under fire. He was with General Brusiloff in the final offensive last summer, then having the direction of thirty-two field hospitals. Twice he was cut off by the Germans and escaped capture only by good luck and hard riding. He was once a cowboy, and he won the Cossacks he commanded because he could outride them. Hurd is over six feet four, weighs 230-odd, and looks like Jess Willard's only logical opponent. He resigned his command while Elihu Root was in Russia and returned with the American Commission to help out at home as he had helped abroad. He now holds a captain's commission in our army. Hurd knows more at first hand of the Russian soldier than any living American.

### Russia Will "Come Back"

"THE Russian muzhik is the bravest fighter in the world, and the most ignorant," he told me. "He's a wonderful bayonet fighter, and a man who fights well with a bayonet is no coward."

He attended personally to over 31,000 wounded and performed 6,700 operations under fire. In General Brusiloff's final offensive he had charge of 32 field hospitals

In three years at the front I treated hundreds of Germans who had been cut up in bayonet fights, and only one Russian. The Russian's through for this war, but his quitting is due to ignorance, not cowardice. He fought for the Little Father and Holy Russia. The Little Father's gone, and Holy Russia's gone with him. After the revolution the priests told the soldiers they needn't include the Little Father in their prayers any longer. The soldiers prayed minus the Little Father for a few days, and nothing happened, so they decided they wouldn't

pray at all. As long as they weren't going to pray, they figured the priests were a drag on the market, so they canned them. In place of the Little Father and Holy Russia they've got Liberty. They've got it, but they don't know what it is. After the revolution a wounded peasant under my care said to me: 'I want to go back to the trenches to-day; I can walk.'

"But you're not fit to go into the trenches," I told him. "Why are you so anxious to go back?"

"My comrades in the trenches are getting liberty," he told me, breaking into tears. "I'm not getting any. I want to go to them and get my share."

"They're a brave, fine people, and no man who knows them can doubt that they'll right themselves in time. But they're out of it for now. The Germans couldn't lick 'em with bullets, but they did lick 'em with literature. They couldn't make 'em quit by fighting, but they finished 'em with propaganda. The German's a good fighter. I've been against him for three years and I know. Good as he is, I'm not afraid of him as a fighter. But I'm scared of him as a propagandist. He'll never win this war with bullets, but watch out for the other thing. I saw it work."

"Do you think the Germans will dominate Russia?" I asked.

"They may for a time," Captain Hurd said regretfully. "But not for long. The Russian peasant is no coward, and when he understands the right thing to do he'll die cheerfully trying to do it. The Russian's gone to-day, but he'll come back. I put in three hard years of fighting with him, and I think I know."

## A Shipbuilder on the Job

Continued from page 9

even at its present size, 13,000,000 rivets a year, which reduces to twenty cargo ships of 10,000 tons each—a total of 200,000 tons. As a matter of fact, it did turn out 130,000 tons of new ships in 1917, in addition to making repairs upon some 650 vessels. This last is an important shipyard feature. The British figures of ship sinkings not only fail to give the total tonnage of the vessels that are gone, they ignore the vessels that are torpedoed and by good fortune or by extra good construction manage to limp into the nearest friendly port. Repairs to these engage the services of many skilled shipbuilders. Repairs and renewals to our present American merchant marine of 11,500,000 tons—without taking mines or submarines into account—is a real problem too. But it is not beyond solution. Do not forget that. At first Ferguson and his fellows worried for fear that they would not get the raw materials rapidly enough. That problem solved itself. Steel mills, rolling mills, etc., were able to work three eight-hour shifts if necessary. But a shipyard, because of the vast proportion of its intricate and accurate work that necessarily must be done in the open, cannot often work after dark, or to any large degree. To-day it is the labor problem—primarily the housing problem—that is troubling them. We have seen how they are solving it. When they have decent housing facilities they will be in a position to seek their workmen and to train them. Only it takes time. Safely to speed the entire mechanism, in its full routine, is the thing Homer J. Ferguson is trying to do and, in my opinion, actually is accomplishing.

Ferguson refused the position vacated by Goethals. When he accepted full responsibility he was used to having full authority. A little later he was offered a bigger Government post. Again he declined, and to the man who had offered it to him he wrote:

"My country spent seventeen years educating me to build her ships. Now when she stands in need of them it seems best that I should continue—building ships."

When he had finished the letter he turned to one of his assistants and said: "Sid, I guess we're ready to take up that problem of the new launch ways." The builder of ships was still on his job.

## Is There a Ukraine?

Continued from page 11

inces and the different basis on which they would have to come in. There was Finland, and Poland, and the Tatars, and the Asiatic tribes.

"In America," he said, "you proceeded from federation to union. You said: 'We, the people of the United States, etc.,' but it now proposed that we proceed the other way, without the consent of 'us, the people.' There is no precedent for a successful going backward from union to federation."

The most interesting among the anti-Ukrainians of Kiev was Mr. Shulgin, a conservative member of the national Duma, proprietor of the conservative newspaper, "Kiev-Lanin," and generally spoken of by the Ukrainians and Kiev radicals as a sort of political Bluebeard. I found Mr. Shulgin a most engaging gentleman, one of those who give autocracy its excuse. Slender, aristocratic-looking, smooth, witty, and acute, his mind was as keen and logical as his manners were perfect. If he were cruel, one felt that he would have the courage of his cruelty, and, all in all, he gave one that pleasant waked-up feeling which comes from having met a real person. My Ukrainian friends hated him cordially, but spoke of him with respect, and they told with some amusement how, the Provisional Government having stopped his paper for a time, the instant the ban was lifted he went after the Government, hammer and tongs, again. A young Ukrainian socialist described him as a sort of monarchical Don Quixote born out of his time.

Once in our conversation, after Mr. Shulgin had spoken bitterly of Ukrainian disloyalty, I mentioned having met a young man of the same name, Mr. Alexander Shulgin, Ukrainian "Secretary for International Affairs" in the Rada's Cabinet—a title given him because Petrograd objected to "Foreign Minister." He did not move an eyelid. In the same cool tones he said: "I do not think that my nephew is a traitor. He is young and ill-advised."

# HEINZ Vinegars

In bottles filled and sealed in the HEINZ establishment

You put vinegar on food to give it zest—to make it more appetizing. To do this, the vinegar itself must have flavor and aroma. Heinz Vinegars, because of choice materials and long and careful aging, have a flavor and aroma that are delightfully apparent in the food.

To make sure of getting Heinz Vinegars, buy them in glass, bottled and sealed in the Heinz establishment, distinctly labeled with the Heinz name. They are as good as vinegars can be made.

## "Yale"—and home defense

If duty calls you away, nothing will more certainly assure the security and protection of those at home than to give them the safeguard of Yale locks and builders' hardware

In millions of homes the duty of protecting life and property against intrusion is entrusted to the enduring, staunch, dependable products that bear the trade-mark "Yale".

That trade-mark "Yale" is an ever-present assurance of inbuilt quality that proves itself in long and satisfactory service; superior material and mechanical excellence in design and construction

Yale products are made to serve. And every Yale product bears that trade-mark "Yale" as a guarantee that it will give you the greatest measure of unflinching service and security

See the trade-mark "Yale" on night latches, pad locks, door closers, cabinet locks, trunk locks, builders' hardware and chain blocks.

## Special Patented Feature

**H**ERE is pictured the mighty Shoulders of Strength—the special patented feature that enables AJAX TIRES—Guaranteed in Writing 5,000 Miles—to outlast their guarantee and outwear other tires.

These Shoulders of Strength are built into Ajax Tires on both sides of the tread—add strength along its entire width—give more tread on the road—more rubber where it should be.

Shoulders of Strength distribute road friction evenly over the tread, thus preventing wear from centering in one spot and going through to the fabric. That is why Ajax Tires are the long-lasting tires for all roads, with extra life to take up the shocks of the road.

### 97% Owners' Choice

This exclusive feature most of all makes Ajax Tires 97% Owners' Choice—that means all save 3% of our total output is the individual choice of car owners to replace other tires first on their cars.

## AJAX ROAD KING

"More Tread on the Road"

Because of these supporting Shoulders of Strength the tread of AJAX ROAD KING is given greater play—more powerful purchase—more contact surface on the road than other tires.

Ajax Road King is designed, built and guaranteed to uphold Ajax reputation for service and endurance under maximum road stress.

On the road in competition with other tires Ajax Road King proves its superiority. Built for city streets or farm highways. Truly a monarch in quality, a democrat in service. Note its triangle barb tread—an added safety factor.

Locate the Ajax Tire Supply Depot in your neighborhood. Ajax Tires and Ajax Inner Tubes give real service.

Write for new booklet, "Ajax Shoulders of Strength"—more convincing information for tire buyers.

"While Others are Claiming Quality, We are Guaranteeing It."

If, said Mr. Shulgin, you went into a Little Russian village and asked the peasants what their nationality was, they would reply "Orthodox!" If you asked them what language they spoke, they would say: "The language of the simple people," for, throughout the Ukraine, Ukrainian was the speech of peasants, while Russian, in the Russian Ukraine, and Polish in the Galician provinces were known as "the gentleman's language." The peasants actually objected to being taught Ukrainian—they feared that there was some trick about it, that the landlords were trying to keep them down by not permitting their children to learn the talk of gentlemen. I asked him what he thought about teaching the peasant children in Ukrainian—wouldn't that save a good deal of time? There might be something in that, Mr. Shulgin said; it could be left to the separate villages.

But why, he asked, must this question be settled at once, and at so difficult a time? There were Great Russians and White Russians. Why must the Ukrainians object to the phrase "Little Russian" and insist on the word Ukrainian? They were always talking about what the people wanted, yet if you suggested to these intelligentsia who were doing the agitating that the question of independence be left to a vote of the people, they would draw back and say: "Oh, the peasants are too ignorant for that—they wouldn't understand the significance of what they were doing!"

### Home Rule

**MR. SHULGIN** seemed to see no reason now why Little Russian shouldn't be allowed to flourish as a local dialect, but political separation was another matter. The Ukraine was too big for one province—it was as big as France, or perhaps France and England together. The ideal solution might be to divide the whole district into four provinces, putting the more homogeneous districts, like Kiev and Poltava, together. Let them have all the home rule practicable and cultivate their language if they wanted to, but be controlled in international and the broader matters from the central government.

We had all these arguments, in more intimate and personal shape, round the samovar each evening. Marya, the maid, a shy, slim slip of a girl, who had tried to go away and be a woman soldier, but was refused because she wasn't yet seventeen, would patter in and out, in her bare feet, with her tea things, just as the mestizo servants do in Mexico and Central America.

"There!" they would say, "she can understand Ukrainian—they talk it in the kitchen sometimes"—but were they to give up the language of Tolstoy and Turgenev for that? It wasn't a language. It was either a peasants' patois, where it was real, or, where it was a language, an artificial one invented in Lemberg to make dissension between north and south Russia. "Why!" they said, "they have had to construct a grammar half full of German and Polish words so that people can learn this so-called language, as they would learn Esperanto!" Where was its literature? Even Shevchenko had had to use Russian words to express himself. As for this fellow, Vinnechenko, their so-called "Secretary of Interior," he had actually written his stories—which nobody ever heard of—in Russian, and had them translated back into Ukrainian.

Who were the Rada statesmen? There was old Professor Grushevsky, the president, who had been conducting literary propaganda from Lemberg for the last ten years—an erudite old bookworm, no doubt, they said, in Austrian pay, and all right in a library, but what sort of a man to lead a new nation? Young Shulgin, their "Foreign Minister," was a boy—a mere *hors d'œuvre*! They were very sly, these Ukrainians, very *rusé*, like all Little Russians. They said to the rich: "Come with us, for we are not socialists," and they said to the peasants: "Come with us, and you'll get the land. How can we have two mother tongues growing up side by side in this same country?"

### A Democratic Movement

**T**HERE was a good deal in what they said, of course. They had the case which standpatters always have in such disputes. It was, indeed, difficult to reconcile Ukrainian aspirations with Russian policy, but when they went on to say that the Ukrainian case was all treason or bunk, and the Ukrainians disloyal conspirators, they were wrong. There was reality on the Ukrainian side, and it was not entirely made up

of the desire for separation. The movement for independence was a democratic movement as well, and it brought about, in a sense, a sort of line-up between humanitarianism and the "best people."

I found this in almost the first Ukrainian I met—a professor of chemistry in Kiev University—and continued to find it. He was a near-sighted, very modest, very earnest man, with that naive sincerity often found in men of science. He and his French wife lived in a little apartment on one of the *peroulonks*, or side streets, and as soon as they learned what I wanted, they sat down on either side of me and began to explain. Both spoke English. After giving their side of the story from the Treaty of 1654, and telling how the Russians used to apply the word "*khokli*" to Little Russians because of the tuft of hair the Cossacks left on top of their shaved heads, and how the Ukrainians called the Russians "*katsop*" (goat) because of their beards, and how even to-day the Ukrainian peasants spoke of the Russians as "*Moscovaki*," he told how they had collected their funds—ten kopecks for every *desiatin* of land and twenty kopecks on every ruble's profit—and how the peasants gave open-air plays and turned in the proceeds, half to the Rada and half to the Ukrainian schools.

"They complain in the north," he said, "that we are wild radicals, but while the Petrograd Government has been doing nothing but talk, we have been establishing schools here in the Ukraine"—and he promptly put on his hat and took me over to the Rada Building and a convention of Ukrainian school-teachers, who were discussing—now that teaching in Ukrainian was possible—their plans for the new school year. We sat on the stage with the chairman and listened to several speeches, and looked down on an unusually interesting lot of faces—dark-skinned, black-eyed southerners, with a great air of alertness and "temperament." More than half were women, and many, although plainly of the intelligentsia, wore the Ukrainian peasant costume—loose, white sleeves of homespun linen, with dark red embroidery, and loops of colored beads hanging round their necks, a gypsylike dress which seemed to fit their sunny country, so close to Rumania and the Turks.

### The Rada

**T**HE Rada suggested the Workmen's and Soldiers' Congress in Petrograd—that is to say, it had the same air of something unofficial and amateur—but there were fewer soldiers and many more women and educated men: it was more like a teachers' or a Christian Endeavor Convention, more "*bourzhoi*," as they would say in Petrograd. Typewriters were going it in the corridors; there were many bright-looking young women, busy about something, one couldn't tell just what, and before one table a line of peasants, just in from the country evidently, giving their names and getting some sort of receipt or slip. The democratic nature of the whole enthusiasm was plain, and I did not cease to feel its sincerity even when, at one of the evening meetings, some one pointed out as an object of special interest two or three Austro-Hungarians sitting as spectators. They had been gathered up as civilian prisoners in the first offensive in 1914, shipped to Siberia, and released with the political prisoners when the revolution came.

The Rada president, Professor Grushevsky—an erudite-looking old gentleman, with a long white beard, who reminded one of the more impressionable lady delegates of Moses—flitted in and out, and was all but impossible to talk to. They had had, indeed, an embarrassing experience with a French correspondent, who had, they said, misquoted Mr. Vinnechenko, and were, at the moment, correspondent-shy. Mr. Vinnechenko I found one day in his top-floor apartment near the British Consulate, just after he had temporarily resigned his job. He said that he had left because he didn't want to go so far as some of his associates, but there was a notion about that his interview with the French correspondent might have had something to do with it. He was a swarthy, youngish man, with a short black beard, and made one think of a Bulgarian. I asked him what he was going to do now, and he said, with a friendly grin, that he thought he'd go down into the country and write stories again. I felt, as he said it, that he would be a good deal

## Dependable Spark Plugs

**T**HINK of the tremendous and constantly varying pressure which the spark plugs must stand in the engines that drive the war tanks.

As it rears and plunges over trenched and shell torn ground, the load which the motor must pull is terrific or negligible in rapid succession.

The spark plugs in that motor must be a rare combination of efficiency and durability—must exhibit unfailing dependability.

The world holds no finer example of utter de-

pendability than Champion Spark Plugs which supply the spark of life to an overwhelming majority of all the gasoline motors in use in the world today.

It takes over a million Champions every ten working days to supply the world-wide demand for dependability in spark plugs.

When you want to equip your motor dependably, see that the name "Champion" is on the porcelain—not merely on the box.

This is a HOME Year—

A year for recreation beside your own fireside. Then make your home as attractive as you can—*economically*.

Nothing is more friendly than the charming whiteness of enamelled rooms and furniture. Nothing is more economical if Enamolin is used. One coat of Enamolin covers as well as two coats of ordinary paint. Enamolin is practically indestructible on inside work. It lasts for years outdoors. It does not chip or crack.

Housewives find that they can wash Enamolin surfaces as easily as their china. And long after paints or ordinary enamels need renewing, Enamolin's smooth whiteness still delights the eye. That is how Enamolin saves you the cost of relining.

As for your floors—there is NAME AC FLOOR FINISH—waterproof, heel-proof, mar-proof—worthy to be used in homes busied with Enamolin.

Ask for "The White Star Brand" Enamolin and Name Ac Floor Finish at your local hardware store.

ENAMELIN CO. (INCORPORATED) 125 N. W. 10th St., New York, N. Y.

more in his element on some Poltava estate than up here playing the statesman in Kiev, and when a week or so later I saw some snapshots of him in Ukrainian costume, taken in just such a place, I was sure of it.

The Ukrainian "Secretary for International Affairs," young Mr. Shulgin, proved to be a tall, very courteous, and very serious young man, with a black coat and a solemn black beard which had the air of having been grown to increase his dignity. He reminded me of those occasional radicals at home who break away from their conservative relatives to become what are sometimes called "parlor socialists." He talked very modestly and sensibly, and denied that they wanted complete independence—he believed in a Russian federation with the Ukraine as a self-governing state. I saw snapshots of Mr. Shulgin later, also in national costume, and was struck with the interesting political adventures offered by the demoralization of the revolution to young intellectuals, who in ordinary times might have made merely a sort of personal hobby of their Ukrainian enthusiasm.

## The Spirit of the Revolution

AMONG the most active supporters of the Ukrainian cause were a Little Russian family of the "noble" class, who devoted themselves not only to Ukrainian home rule, but to improving the condition of the Ukrainian peasants generally. The present head of the family, the editor of a Ukrainian paper in Kiev, was absent on an estate of his near Odessa, and it was while looking for one of his sons that by chance I met one afternoon the latter's wife. Although expecting no one, and much occupied with an addition to the family who had been facing Ukrainian problems for only a few months, she received me with that charming hospitality which the stranger so often finds in Russia and tried to answer the stranger's usual questions about the Ukraine. Her face had the delicate contour and wistful, almost plaintive beauty of a Rafael Madonna, and beneath it, as one felt at once, was humor, courage, and a keen and well-poised mind.

She drifted from Little Russia to the revolution in general, and it turned out presently that she herself was not Ukrainian at all, but a Great Russian of Petrograd. Her aunt was the famous revolutionist Vera Figner, and both her father and mother had been revolutionists of the days in which Kropotkin lived and George Kennan has written about. They had joined in the "return to the people," had been arrested and sent to Siberia and had met there, as prisoners, for the first time. Her whole life had been lived against a revolutionary background, and fate had now rather quaintly linked it with the fortunes of those whom many of her Great Russian friends would consider rebels against Russia itself. But the striking part of this chance acquaintance came later in Petrograd, when I met Vera Figner herself and saw in the face of this one-time prisoner in the old fortress of Schlüsselburg (the island prison on the Neva, not far from Petrograd) a tragic reminder of the face of the young mother in Kiev. It was one of the saddest faces I have ever seen—none of that unquenchable, almost masculine optimism of Brezhnevskaya, the "Grandmother of the Revolution"—but a face in which something seemed to have been crushed out and killed—turned to stone. There were instants when she would smile, and suddenly, as something coming from afar off, one caught a family likeness, that lady's look of something wistful, plaintive, and amused—but the next instant it was gone and her face was stone again. It needed things like this, perhaps, to remind one of what that Old Russian had done in its day, and what the revolution really meant in spite of its surface dirt and disorder, and aimless talking. . . .

## Women of Ukraine

THERE was one of these militant women among the Ukrainian workers, an elderly lady, whose years of service to an idea might be compared with those of Vera Figner, although her experience had been infinitely less tragic. She was Mme. Sofia Roussova, a school-teacher by profession, and chock-full of courage, humor, and optimism, which years of government opposition and persecution seemed only to have made more tireless. She was at the Rada, at the teachers' conven-

tion, at committee meetings, here, there, and everywhere, and as hard to catch as a prime minister.

I pursued her up and down Kiev's mountainous hills for several days as she flitted from one appointment to another, and finally overtook her at home one rainy morning when she had scarce finished coffee. She lived in a room or two, in a queer old house which seemed to shelter not only several families—a new face came to the door each time I rang—but to act as a temporary lodging for any friend or relative who happened along. Material comforts—or, at any rate, niceties—were sacrificed to work, as they should be in a revolutionist's quarters, and the papers, pamphlets, and even dishes lying about suggested a band of intellectual gypsies.

Rocking back and forth on a ramshackle old sofa, above which was a portrait of her husband, surrounded by a funeral wreath, Mme. Roussova talked in English for half an hour or so, and then, as there was much yet to tell, brought in from some other nook in that elastic curavansary a younger woman, a teacher of literature, just up, as I understood it, from the picturesque old town of Kamenets Podolsk, where I myself had been a fortnight before on the way from the front.

The younger woman spoke French, but no English, and with such a lively warmth and charm, such common sense and wholesomeness, that one seemed to have known her for years. To both of them the Ukraine was something close and personal, and it was plain that they thought of independence not so much in terms of politics as an opportunity vaguely to enlarge and brighten something they had long dreamed of and cherished.

The windows were open, and through them from the garden and the fine mist falling outside came a smell of wet leaves and grass—the warm moist breath of the late Ukrainian summer. It was the air of the south, of the Russian "Midl"—indeed, Mme. Roussova used that very word in telling how she had been arrested for having in her possession "Robinson Crusoe" and children's fables about the fox, in Ukrainian, and how, as she said gayly, "she knew the inside of every jail in the Midl." When the Russian police discovered that a teacher had spoken to her pupils in Ukrainian, she became at once a "nichlagorazomni," an "indiscreet" or "imprudent" person, and once the police had you down as that, jail followed very easily. I asked if she had been sent to Siberia. "Not yet," she laughed, "but very likely they'll send me there now!"

## The Day of Little Nations

THEY smiled a little at Rodzianko—also a Little Russian, as his name in "nko" would imply—who "thought he was of superior clay and that the people should be kept in their place," and at Tereschenko, the young Petrograd Foreign Minister who didn't care a rap for the Ukraine, although he came from Kiev. And they spoke bitterly of Kerensky, who had been friendly to the Ukraine at first, but cooled as he got more power, and now talked of treason and thirty pieces of silver. They talked of Shevchenko's poetry, and his exile, and told of a composer—Lessenko, I think it was—whom the Russians wouldn't admit to the conservatory because he was Ukrainian; and, gifted as he was, he had to give ordinary piano lessons to make a living. Then there were various gossip little anecdotes, which may or may not have been true, of how the Russian teachers had gradually been brought back from the front while the Ukrainian teachers were kept fighting, and how telegrams sent to the Rada took several days longer than ordinary messages, and so on.

Mme. Roussova produced a scrapbook and told of a wonderful pilgrimage of hers to the south of France, nearly twenty years ago, by way of Odessa and Marseilles, and a convention she had attended in Provence. The Ukrainians, who felt that their position was something like that of the Provençal French, had sent a greeting "from the Steppes of the Dnieper, and from Poltava," to the delegates, in which they told how the Russians "make fun of our language and treat it as a vulgar idiom, good only for ignorant peasants and incapable of expressing high thoughts and noble sentiments. They prohibit us from speaking it and condemn our poets to silence. . . ."

Mme. Roussova showed this and the newspaper reports of the speeches and (Continued on page 30)

## Keeping Out the Cold

Look at the radiator on this car.

Notice the tightly closed shutters barring out the cold, helping to keep the engine and jacket water warm.

This car is equipped with a Harrison Radiator with automatically controlled shutters.

The Harrison Radiator Shutter saves gasoline and oil — increases engine efficiency — makes starting easier.

It saves wear by eliminating the racking of parts from imperfect carburetion and ignition.

Every car is "a car for any climate" when equipped with a

## Wages of Greater Production

The advantages of dependable motive equipment are marked and manifold—in the finished product, in maintained production, and in the good-will of every man behind the work.

Employees do not welcome loss of time and money due to faulty equipment shut-downs. In like measure they welcome full wage for full time, with a little extra now and then as a result of greater output.

Because of the good-will they establish in the front office and on the pay-roll, Robbins & Myers Motors have rightly won their reputation for day-in-and-day-out dependability.

No establishment is better than its men, and men cannot attain their highest efficiency when impeded by faulty operating equipment.

Big machine or portable drill—whatever the equipment calling

for a motor of from 1-40 to 30 horsepower, its operating efficiency is enhanced by a Robbins & Myers, the result of 21 years' experience in the building of dependable motors.

Manufacturers of the better electrically-driven devices equip their product with R&M Motors for the self-same reason of reliable performance. A Robbins & Myers Motor on a vacuum cleaner, washing machine, addressing machine, mailing machine, coffee grinder or meat chopper is a sure sign of unusual quality throughout—a guarantee of better service.

Power users, makers of motor-driven devices, and electrical dealers find the wages of better production, better performance and better sales in the Robbins & Myers line.

the group photographs, and showed the bill of fare of their banquet luncheon with "filet de bœuf de Lyons aux primeurs" and plenty of good Burgundy.

She had to excuse herself presently, but the young lady from Kamenets talked on. She felt that the day of big nations was past—all these patches of pink and green on the maps that looked so solid and final, how false and meaningless they often were!—and that in the future the world would be made up of many little nations.

"All these little movements," she said, "they are repressed, and you think they are dead. But they belong to the class of things that cannot be killed. They come creeping—creeping back, and suddenly spring up—like champignons!"

### The Real Ukraine

SHE talked of the Little Russian love of music, and how the peasants were always singing at their work—as, indeed, they are—and how the Ukrainian farmer, plowing the wide steppe, tramps slowly along behind his oxen, singing as he walks. There was a great deal of melody in their make-up, she said, a great sense of beauty. Their clothes and houses showed this—they were not so somber and heavy as those of north Russia. And, indeed, one felt this even in the city streets at the time. They were full of girls in the national costume—not all of them peasants—the wide, white sleeves with their red embroidery, the strings of beads. Their favorite colors seemed to be dark red and blue, purple and gold—colors that made one think of sunshine and crushed grapes. The Ukraine might be, though it isn't, a great wine country. And as she talked on, with such enthusiasm and evident feeling, about what they had been and hoped to be, with the mist sifting down outside, and the warm, wet smell of leaves and grass coming through the window, it all seemed real and rather reasonable—this was one of the times when I found the Ukraine.

It is of stuff such as this, it seems to me, that the real Ukraine is made, and less of things which create or compel a separate nationality. It was absurd to say that all the Ukrainians were disloyal or that there is nothing in their case. Most of these Little Russians I talked with were no more disloyal than the young Provençal poet who, when he found that his old mother couldn't understand some of his fine French verses, forthwith dedicated himself to cultivating his native provincial dialect and expressing the local feelings and atmosphere of his corner of France.

At the same time their case was very different from that of Finland. Finland is, plainly, a conquered and unassimilated province—one feels that the instant one crosses the frontier. The differences between Great Russia and Little Russia are, on the other hand, more the differences between north and south everywhere, between Paris and Provence, between New England and Louisiana. There is no such irreconcilable dispute as there was once between our own North and South—it is a little as if the South should demand separation to-day on a basis of "I reckon" and corn pone and johnny-cake. It did not seem to me, in short, that a liberal and sensible government would find it impossible to satisfy the Ukraine's perfectly natural desire for freedom and yet retain the Little Russian provinces as part of Russia.

### Russia's Future?

I SPEAK, of course, as if Russia were going to rise from her present disorder, and of natural and more or less permanent conditions and not of momentary military successes. There are certain national facts which cannot be denied without sooner or later making trouble. One of these facts, for instance, is Russia's need of an easy outlet by way of the Black Sea and the Dardanelles. It needs only a glance at the map to show that. The map answers in a similar way the question of the Ukraine. If the dream of "the Carpathians to the Caucasus" were literally carried out, European Russia would be walled in almost completely, and reduced to a neighborhood radiating for a few hundred miles out from Moscow. Such a notion does not appeal to common sense—unless we assume, as I take it, we are not yet prepared to do, that Russia, in its old territorial shape, has ceased to exist.

This is the fifth of Mr. Ruhl's new series of articles on Russia and the Great War. The sixth will appear soon.

## The Adventures of Colin O'Rell

Continued from page 17

some way still hoped to profit, as he had hoped to profit yesterday afternoon, from Fernald's relation with Colin O'Rell. And yet, even as this understanding came to him, he knew that it was false understanding. Berwind must realize that once Hassager had talked with men higher up in the police force than the plain-clothes man, would be known most positively that Fernald was the man for whom the police were in search, the accomplice of Colin O'Rell. Berwind, for the sake of a graft, would take no such risks as this. He must give credit to the plain-clothes man for being sane.

But the fact remained that Berwind had let the captive Fernald go. And Berwind was not the sort to do things without a reason. The reason came to Fernald before he had walked a block. Colin O'Rell! He remembered the man that had been in Berwind's eyes when he discovered that the alleged sister of "Monsieur Jacques Cunard" was not in the hotel. Colin O'Rell! He was the one that Berwind wanted! He himself had been let go because he might lead Berwind or his fellows to Colin. It was clear enough; he understood now the queer feeling that had possessed him as he walked away from the hotel, the feeling that eyes were upon him.

THAT feeling, in view of the predicament from which he had just escaped, was so natural that he would have dismissed it from his mind but for his sudden clear understanding of the Berwind purpose. Now he knew that it was not imagination and excitement; he knew that it was because he was followed, and followed because it was believed that he could lead the police to Colin.

If only it were possible to stop, turn, and explain to his followers that the girl whom they desired to capture was not really a criminal. But already he understood the various deadly ramifications of the net of treachery which the Marquis had spread over the city, and, for that matter, so far as he knew, over the whole country.

If anyone in the wide world could penetrate to the center of the web woven by the master spy, that one was Colin O'Rell. And the safest way, absurd though it might sound, was for him to be sought by the police; and not sought negligently, but by the best brains of the police, in order that suspicion, always merely dormant in the heart of a man like the Marquis, should not be aroused. For one does not suspect an ally when one's own enemies hate that ally.

No, he could not throw off the pursuit by a word of explanation. And he realized that his own freedom must depend upon his own quick wit. Berwind had been able, unsuspected, to shadow him yesterday. No one must be permitted to shadow him for long to-day. For he realized that those who trailed him would not withhold their hands from him very long. Something is better than nothing. Berwind had disdained to arrest him just now; but when Berwind should discover that Fernald had no intention of leading his pursuers into the presence of the girl, they would arrest him.

He could almost have smiled. They were so certain that he knew the whereabouts of Colin! He only wished that he did. But they had made no rendezvous beyond the side door of the Biltmore. He had not kept the rendezvous. Colin would not have waited for him.

But it would be time enough to think of rejoining her when he had thrown off those who hung at his heels. Yesterday had taught him something. He descended into the subway. Somewhere in the crowd about him on the platform were associates of Berwind. A train drew up to the platform. It was crowded. Fernald entered. Quietly, as though unsuspecting the presence of followers aboard, he rode downtown. At Brooklyn Bridge he left the subway. He knew of but one place where he might be certain of eluding his followers. That he might, by going to this place, invite recognition and consequent trouble, was a risk that must be run.

He entered the News Building. Of course it must be known to his city editor and to others that he had helped a girl to escape from the police yesterday. Hassager's statement that the right man had not been captured was evidence that Jevons had soon been

discovered not to be Fernald. Fernald's newspaper connection could not have remained hidden. Men on the "News" must know that a man had been arrested because he was thought to be James Fernald. But—who risks nothing gains nothing. To escape from Berwind's men was worth a great deal of risk.

Luck was with him. None of the editorial staff was in the elevator that he entered. He got off at the "city" room. Unchallenged, he passed the door tender. But once through the swinging doors that would retard, for a moment at any rate, whoever followed him, he turned away from the city room and mounted some circular iron stairs that led to the composing room. And here fortune smiled on him again. A freight elevator had just discharged huge rolls of paper.

He descended in it, unquestioned by the operator, to the basement floor. He emerged upon a side street. A minute later and he was again in the subway, and had not been seen by any members of the "News" city staff. It was possible that Berwind's men still traced him. But he had done his best.

At Twenty-third Street he left the subway. He must find Colin. What had been the address where the Marquis had got in touch with her he did not know. But Colin would not desert him. She would know that the Biltmore, no matter how he might have emerged from his predicament there, would be unsafe for him. She would make no effort to reach him there. And the only address of his that she knew was his apartment near Gramercy Park.

IT was dangerous, would perhaps be fatal, for him to approach that apartment. If the police used even ordinary caution, his rooms would be watched. But his rooms offered the only chance of communication with Colin. He might be arrested the moment he crossed the threshold, but—of what use was he to Colin wandering around the city? Happy accident might bring them together, but there was about one chance in several million that the time, the place, himself, and the girl would coincide during such wandering.

Granted that Colin would endeavor to find him, whither he was heading now was the one place where that endeavor would be made. But it was a pretty hopeless Jimmy Fernald that approached by many turnings the neighborhood of Gramercy Park. Not only might policemen be waiting outside or in his rooms, but there was the ever-present possibility that the men who had undoubtedly traced him as far as the News Building were still close behind him.

He reached the corner of his street. Well, he had taken a great many chances thus far; what mattered one more or less? He started toward his apartment.

A taxi turned the corner behind him. He heard his name called by a voice that he would always know. He stopped; the taxi swerved in to the curb; he dived headlong through its open door. They were around the corner and racing up Third Avenue before he had regained his breath.

"There is no question about it, Colin O'Rell," were his first words. "As a lover of the truth, you must admit it. We belong together. When two people can read each other's minds, they are affiliates. Colin O'Rell."

"If a man in love could only be a wee bit original!" sighed Colin.

"Then he wouldn't be in love," said Fernald.

He brushed his knees and straightened his collar. The girl stared through the rear window of the taxi. She turned back to Fernald, relief on her face.

"We've lost them," she announced. "But if I'd circled that block one more time, I think they would have been suspicious. How did you get away from the Biltmore?" she asked.

He told her. She listened, nodding gravely. "That means that we can never go back there."

"And the Marquis? How can he get in touch with us?" asked Fernald.

"He has already done that," she told him. "Just before I was to have joined you this afternoon a note came from him. There was an inclosure of money and certain specifications. I am to deliver them to Blackmar & Reardon."

He whistled. "The military tailors!" he exclaimed.

"You see it," she said.

## Better Breakfasts Sunnier Days

### Brought by a Bran-Flaked Dainty

Countless people start the day with a bit of bran in a luxury dish. It solves the good-cheer problem in a welcome way. No other morning dainty combines such goodness with such good effects.

### The Supreme Food Laxative

Bran is Nature's laxative.

At the instance of physicians, thousands of articles are being published to impress its need.

It supplies the needed roughage. Without it, fine foods clog.

Most folks who omit it pay some penalty. It may be dull days, headaches, bad complexion. It may be low spirits or irritability. It may be lack of fitness, or a laxative habit.

To keep at his best one must keep clean inside.

### You Don't Need Much

You don't need much bran if you eat it regularly.

You don't need clear bran—that is unpalatable.

The right form is flake bran—it is doubly effective. The way to serve it is to hide it in some inviting dainty.

That's what we do in Pettijohn's, under medical advice. We hide flake bran—25 per cent—in savory, soft-wheat and oat flakes.

The dish is delightful. Everybody likes it. Nobody tires of wheat. Yet it brings to everyone his daily need of bran.

### Make a One-Week Test

The way to know this is to make a one-week test. Note how folks like Pettijohn's—note its good effects.

Mark the better spirits, better health. Not through habit-forming laxatives, but in Nature's gentle way.

Then you will know why every authority urges the use of bran. And you will never again omit it, we believe.

55% Wheat Product—20% Oats—25% Bran

A breakfast dainty whose savory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per

cent Government Standard flour with 25 per cent bran flakes. Use like Pettijohn's flour in any recipe. Both sold in packages only.

## Fatimas in France

"—and when a package of Fatimas reaches camp we feel as if we were on a big party."

(Extract from a letter from L. A. Collier, Per B.C.M., an American ambulance driver with the French army.)

Fatimas have long been a standby with both the Army and Navy. The men want Fatimas because, even though they may occasionally smoke more often than usual, Fatima's well-balanced Turkish blend leaves a man feeling just as before. Fatimas never disturb. You will find this true as surely as you try a package.

*Exquisite Mypointe*

ALSO THE BOX OF Mr. Fatima are now packed in metal boxes of 100. If your dealer cannot supply you, we will send a box prepaid to any address in the U. S. (training camps, etc.) for \$1.00. Liggett & Myers Tobacco Co., 212 34th Avenue, New York.

You know how the young folks just love a good story—

How they'd rather listen to one than eat, or play, or sleep—how they beg you, sometimes, to tell them a story—to read to them.

They will read something, you know, and it's what they read now that determines what they are to be. It's their heroes, their ideals, the men and women who are made to seem to them wonderful and worthy to pattern after, that form their characters.

It is in appreciation of this truth that we have published—

## The Junior Classics

Edited by famous educators and containing the 846 best stories for young folks from all the literature of the world.

Dr. Charles W. Eliot, President Emeritus of Harvard, says of these books:

"The boy or girl who becomes familiar with the charming tales and poems of THE JUNIOR CLASSICS will have gained a knowledge of literature and history that will be of high value either in school or home work. Here are the real elements of imaginative narration, poetry and ethics, which should enter into the education of every English-speaking child."

### A FREE BOOKLET

A wonderful little book has been written about the act. It tells how all the heroes and heroines of literature have been gathered together in ten beautiful volumes—how you may have them for your own young folks—just the stories and poems that are best adapted to form character, to make school work easier, to insure success.

Use the Coupon—NOW

"Rather! Spies in United States uniforms. Aqueducts, bridges, tunnels—protected by the uniform—it's ghastly, Colin! But you won't deliver the order."

"Jimmy," she said earnestly, "don't you realize yet the terrible of the forces we fight? Only last night we were at the headquarters of the Marquis. And yet, because he does not trust us fully, we rode in a closed and curtained car. We don't know where we were. Don't you suppose that he will know whether or not Blackmar & Reardon start work upon this order?"

"I see," he said thoughtfully. His face brightened. "But the uniforms will never be turned over to him, will never be worn. Why, will military tailors make United States uniforms on the order of a stranger?"

"They will this time," she said. "You see, Jimmy, if they should refuse, some crooked firm might take the job. Somehow or other, if the Marquis wants uniforms, he'll get them. I myself may be the one to deliver them. Sometimes, to avoid great danger, one risks great danger. It will be some weeks before the uniforms are finished. In those weeks we must catch him."

HE reached out and touched her hand. She drew it gently away. "Not now, Jimmy. I haven't the heart—" For a moment her hands hid her face. But when she looked at him again, her eyes were free from tears. Her features were not hard; they could never be that, but they were firm with purpose.

"I won't again," he promised, "not until— But I have to talk to you, Colin; to tell you that you're the bravest, most wonderful— You don't mind that, do you?" he asked anxiously.

She swept him with a smile that made him ache for her. She leaned mischievously forward. "Do you know, Jimmy Fernald, I rather like it."

And then the machine in which they rode stopped before the tailoring establishment of Blackmar & Reardon.

"Wait here," she told him.

"The driver?" Jimmy motioned toward their chauffeur.

She nodded reassuringly. "If anyone searched him, a silver badge would be found on him. I haven't worried about being followed since just after I picked you up. He's a genius that way."

She entered the building. Jimmy lighted a cigarette. He looked curiously at their chauffeur. It was good to know that he, Jimmy Fernald, was not the only reliance Colin O'Rell had in her battle with the Marquis. For he was afraid that he was not a very efficient aid. And as he looked at the immobile face of the Secret Service operator, the faintest tinge of jealousy colored his thoughts. It was unworthy, but—he wished that he alone might be Colin's reliance. And then the unworthy thought left him. For he wasn't simply the reliance of Colin O'Rell; he was the reliance of the Government, and there must be no jealousy among those who served their country.

Colin was gone less than ten minutes. She gave a word of direction to the driver and entered the machine.

"We can't go to the Biltmore," she said. "But if the Marquis fails to get in touch with us there, he will try my apartment."

"And the police? Do they know of it?" asked Fernald anxiously.

She shrugged her shoulders. "Hunting with the hounds and running with the hares— What else can we do? It is one more of the chances that we must take."

Fernald spoke thoughtfully. "And the Marquis—he does nothing apparently without reason. If he intended to build up identities for us as the

brother and sister Cunard— How can we explain our failure to maintain those identities? I can't very well say the Hassager recognized me."

"But I can say it, that he recognized me," said Colin. "As for his reasons I was tired this morning because I lay awake wondering why he should want us to go to such a conspicuous place—and I think I know. The wider the net the more cumbersome it becomes. Suppose the Marquis wishes at any time to get rid of some of the no-longer-useful, worn-out strands? Suppose he suddenly become of no further value to him? Suppose the police are informed that Monsieur and Mademoiselle Cunard are two elusive criminals? Suppose many people around a great hotel would see us, would know us, it would be even more difficult for us than it is now to avoid arrest."

Fernald whistled softly. "Oh, what a tangled web we weave, and all the rest of it," he said. "But the police wouldn't hold us very long."

"And our usefulness would immediately be ended either way," said Colin. "Ended to the Government the moment we seemed valueless to the Marquis."

"Then my encounter with Hassager was really fortunate," laughed the young man.

"Unless the Marquis knows of it," said Colin.

She could not wholly hide her alarm when, the automobile dismissed, she entered the tiny apartment near Riverside Drive. Fernald found himself treading softly. It was her sanctuary the place that was her home. At immediately he felt that it reflected the personality of the girl. For, efficient, brilliant, daring though she was, he had known that there was in her not the least trace of masculinity, and the living room into which he followed her proved that he had not read her wrongly. It was a girl's room.

"Anything wrong?" he asked.

For she stood in the center of the dainty room, her hand at her heart, her nostrils the least bit distended, her lips slightly parted.

"I—don't—know," she said in a whisper. "But I had the things on that desk arranged differently, I think."

"Your maid?"

"No one comes in here while I am away," she said. The telephone rang. She started, breathed heavily, then walked to the instrument.

"Yes," she said. Then again: "Yes." She hung up the receiver and turned to Fernald. Her face was white and her lips quivered.

"The Marquis," she breathed. "He warned me against you. He does not believe that you are English Fred. He wants me to tell you to go to Burnham's Restaurant on Fourteenth Street to receive a message from him. But you mustn't."

"And if I don't, he will know that you have warned me. Won't he?"

She avoided his glance. The color swept into her cheeks.

"I must go, Colin," he said gently. "Otherwise all your work will have been in vain."

"But it isn't fair," she cried. "You mustn't risk—I drew you into this."

"But I wanted to," he told her.

HE rose and looked at her. Her face was pale now, but her lips were sweet and her eyes were brave.

"I said," she whispered, "in the automobile—not until— But now—oh, my beloved—"

He felt her frightened tears upon his own cheeks.

The fourth adventure of Colin O'Rell will appear next week.

## God Gave Them Youth

Continued from page 19

Jim Sponable—I remember him; just like old Jim to become a judge."

"I'm engaged to him," said Phoebe rather quickly.

"What?" Val stopped and stared at her. "Why, he's an old man by now, isn't he?"

"Oh, no! He's only forty-eight."

"Forty-eight!" From Val's tone that might have been the age of Methuselah.

"He's perfectly splendid, Val. I'm a luckier girl than I deserve."

Val didn't answer at once, and when he spoke it was on another subject.

Phoebe insisted on leading him into the office.

"Here's Val Brooking, judge—he's on his way to France! You remember him, don't you?"

"Yes, oh, yes—surely," said the judge

in a kindly tone, meant to cover the fact that he didn't recall this dashing youth at all.

"I remember you all right, judge," said Val with a rueful smile. "You had me on the carpet once, when you were president of the School Board, for decorating the school tower with war paint. I got canned for a month—you were pretty stiff, judge."

The judge wished this attractive-looking young man had chanced to remember him in a less tyrannical guise, but he said: "Well, you've put me where I can't be 'stiff,' as you say, any longer. Got your commission, I see."

"Yes, he's going to France!" chimed in Phoebe. "Isn't that perfectly splendid of him?"

(Continued on page 34)

*"We've Created A Body Of  
Master Tire Builders"*

# Uniform Tires or "Lottery" Tires?

**Decide Between Them Now—Once For All**

Tires contain much handwork. Hence they must always differ in mileage as the men who build them differ. To make tires uniform—as Miller has done—"human variables" must go. This explains why *all* tires of a given brand are not so good as the best that the factory makes. Until now there has been no way (in buying) to tell the "lucky" tire from the faulty.

**A**T one time Miller Tires varied as the others do. Now 99 Millers in 100 exceed the standard guarantee. Less than one per cent ever require adjustment.

And in Akron, Ohio, where seven-tenths of all tires are produced, the Miller outsells at retail every other make.

## Built By World Champions

To make uniform tires requires uniform tire builders. It is not enough to drive out mechanical variables. Other good producers can do that—for the tire-making methods are known to all.

What Miller has done is to bring the workmen on line.

Today these Miller masters are the champions of the industry.

Each one is rated on his personal efficiency. Each tire he builds is counted for or against him.

If ever one comes back, his standing is penalized.

Yet under this searching system these men average 96 per cent perfect.

More than that—not one in a hundred of tires that

they build ever falls below our mileage mark. Records on thousands and thousands of tires prove this conclusively.

## Geared-to-the-Road

Don't trust to luck when you buy new tires.

Miller insures a full return of your dollars in miles.

It also gives you the tread that is geared-to-the-road. The ratchet-like tread that engages the ground as you go. Thus slipping is largely prevented. And the wheels can't spin and scuff the tires in starting.

## Only 1 in 50

## Can Get Them

Uniform tires can't be made at high speed.

Picked men are rare. And thousands of workmen cannot all be

champions. The more the men, the more the variables.

Hence Miller Tires must always fall short of demand. Only one dealer in each neighborhood can be supplied. And only about one motorist in fifty can get Millers. So don't put off. Order a pair of these team-mate tires now—today.

When you can get certainty, why trust to luck?

*If you want the utmost air capacity—size for size—ask for Miller Cord Tires. They are truly luxurious—yet not a luxury, because they cost less per mile than any other type.*

# YANKEE TOOLS

Make Mechanics

"Splendid!" acquiesced the judge.

"He's with the Engineers," proffered Phoebe further.

"Oh, you're an engineer, then?" queried the judge politely.

"Yes, sir—civil. Got my degree four years ago."

"Ah, four years ago. Been putting your knowledge to practical use since, I suppose."

"I don't know whether you'd call it practical, sir." Young Val gave a little laugh. "I never stuck to one job very long."

The judge shook his head. "Stick-to-it-iveness is a good thing to learn, my boy. It's the corner stone of success."

"Well, I'm not sure I want to be a 'success,' according to the usual standard," returned young Val.

"Why, aren't you ambitious, then? Don't you want to get on in the world?"

"I'd rather get something out of the world," said Val. "Now you've 'got on,' but what have you got out of it yourself?"

"What have I got out of it?" repeated the judge, somewhat taken aback by this youthful frankness.

"Yes. You've made money, live comfortably, and are respected. But you've probably lived your life in a rut without knowing it. Did you ever walk into a strange camp, penniless, knowing it was absolutely up to yourself whether you lived or starved?"

"No," admitted the judge; "I can't say I have."

"Did you ever boss a gang of Dagos," went on Val, warming to his theme, "and get the thrill of being a captain of men? Or did you ever stand up to a Mex's knife with your bare hands and find out what the zest for living really is? Or ever see the beauty of a sunrise over a mountain peak—and experience the independent feeling that comes when you cook your own bacon over the fire you've built yourself from wood you've chopped yourself? Did you ever stand off and look at a bridge that you helped build? Did you ever swim in the Amazon? Or skate on the Yellowstone? Or get lost in a desert? Or ride the bumpers?"

"No," repeated the judge; "I can't say I have."

"Well then, sir, excuse me for saying you don't know what real living is. Give me life to live with, I say, not to rust away making dollars and cents. Life's too short and the world too big!"

"But there are responsibilities," argued the judge rather weakly. He felt somewhat at sea in the face of all this eloquence—the inspired, unthinking eloquence of youth.

"Well, I'll try not to shirk them when they come, sir," said young Val more soberly. "They're in a fair way to come right about now. But I refuse to worry over 'em—most folks worry too much, anyway. That spoils life."

PHOEBE was watching Val with shining eyes. The judge could understand what appeal this sublime assurance, this dash and ardor, must make to her. He realized that he himself, in contrast, must present a rather stodgy spectacle. He felt the contrast himself. Yet he couldn't help being attracted to this bold-eyed, bold-speaking youth, and despite the quite evident unsoundness of his doctrine. But, oddly, he had no desire to confute that doctrine. Instead he said hospitably:

"Well, we must see something of you during your stay. Brooking, I wonder if you couldn't dine with Phoebe and me to-night?"

"To-night? I'm sorry, sir" (if only the youngster wouldn't "sir" him so constantly!), "but some of the fellows spoke of an impromptu dance for me in the Masonic Hall. I'll have to go. I'd been hoping Phoebe— But, of course—"

It was quite clear, that little hesitation. The boy had intended asking Phoebe to his dance before he learned of her engagement. The judge didn't know exactly what it was that prompted him to say, with a forced smile: "Why, of course, Phoebe can go with you. I can do that much for my country. That is, if she wants to go."

A glance at Phoebe told whether or not she wanted to go. Phoebe wasn't yet old enough to know how to curtain her eyes.

"Oh, that's bully of you, judge!" Young Val took a swift step toward Phoebe. But she now remembered to send a questioning look toward her fiancé. "Wouldn't you enjoy going too?"

"Yes, you must come too, judge," invited Val in a generous afterthought.

But the judge shook his head. "I'm afraid my dancing days are over."

"Oh, no!" protested Phoebe. "You'll find you'll like it—I'll teach you all the new steps!"

"No; dancing's for the young," insisted the judge.

"Then, I don't know if—" Phoebe hesitated; but the judge noted that some of the shine had deserted her eyes.

"Why, of course you can go, my dear," he reassured her. "I want you to go; to be nice to our soldier—he deserves it."

The judge smiled. But his heart felt strange, very strange indeed, when without further urging, and those tell-tale orbs entirely recovering their shine, Phoebe agreed to go without him.

PHOEBE was very gay over her toilet that evening. She called in Miss Nettie Litchfield, the amiable spinster who was staying with her during her mother's absence, to help decide between the blue crepe and the white mull. The decision finally rested with the white dress—never a wrong one.

She had scarcely finished dressing when Val called for her. How handsome he looked so alert and tall and slender in his uniform! With a childish desire to "show off," she almost regretted it was too dark for Cherryvale to see her walking along beside him—for they elected to walk, through the warm late-April dusk, the few blocks to the Masonic Hall. But Cherryvale was showing only the myriad lighted windows with which men try to put away the dark. The lamps of heaven were lighted too—there seemed to be little glows of light everywhere that evening.

They came to the tiny city park, where the gas lamps circled in a sparkling chain.

"See!" said Phoebe. "The park looks like it's wearing a diamond necklace!" "I wish I were a magician," said Val. "I'd take it and clasp it around your throat."

He laughed audaciously. Phoebe drew a deep breath and laughed a little, excited laugh.

And then, when they cut through the park, taking the same path on which they'd first met that morning, Val suddenly pulled her to a stop beside the fountain. "Look, Phoebe! There's a star fallen in the water! Shall I fish it out and put it in your hair?"

Again he gave his low, audacious laugh; and again Phoebe drew a deep breath and laughed a little, excited laugh. It was delicious to have such beautiful things said to you.

"You'd have me all dressed up in diamonds?" she said.

"Yes," he answered. "But you don't really need them—you have your eyes."

When they entered the Masonic Hall the orchestra was already playing—a waltz, with a bizarre melody underrunning its pronounced triple beat. The waltz—a rhythm expressly made for young hearts that ask only to be happy an hour!

Val and Phoebe swung into the measure. Their steps fitted admirably.

"You're sure some dancer!" he breathed down to her.

"You too!" she breathed back.

The orchestra stopped; there was a breaking-up of couples, a shifting of the crowd, a movement of youths toward the corner where the music had left Val and Phoebe.

"See here," said Val swiftly, "let's understand about this—every other dance is mine!"

"Oh, no! That's too many."

"It's not enough!" He held her with that clear, dark daring of his eyes, with something electric, vibrant. She herself felt vibrant; her feet still tapped time to the measure just danced, and her soul within her seemed to be keeping time too.

SHE had promised him his desire by the time the approaching phalanx closed in. Val had to fight a good-natured opposition, for Phoebe was too good a dancer not to be sought after, and, besides, she was popular for her own sake—more than one young Cherryvale heart had burned when the judge's good fortune was made public. But Val held his ground against the importunants. And Phoebe couldn't help feeling a proud little thrill each time he came, so handsome and soldierly, to claim her; nor help noting the glances of admiration, even of longing, cast after him by the other girls. Yet he preferred to dance with her! And, even when he was dancing with another, his eyes kept openly searching her out.

# How I Found Edgeworth

Like many other pipe cranks, I used to think no one tobacco would do. Tried them all from the 5-cent "plank road" mixture to the imported fancy tins costing as much as 70 cents for a few pipefuls. None had the exact taste, aroma or whatever you call it—not one of them had what I desired which I couldn't for the life of me describe, yet which I knew I would recognize when I had found it. Then I tried my own blending—every pipe crank does that sooner or later in his searching for "the thing"—but no use. An ounce of this, a pinch of that—blending and mixing tobaccos of high and low degrees in various proportions and blendings—but again—nothing doing. Could it be the pipe's fault? I tell for that idea, too, and tried out others—corn-cobs, meerschaums and those rich, dark-colored briars—severely plain, don't you know—but as pretty as ever was polished in a man's palm—it wasn't the pipe's fault.

Then one day a distant relative from distant Virginia blew in—one of those chaps who doesn't let you know when he's coming, who finds you on a busy day and insists on taking two hours for lunch, after which he takes the most comfortable chair in the office, lights his pipe, picks up the morning paper, and in a comfortable, all-afternoon-attitude tells you to go on with your work and not let him interfere; he'll wait until you are through for the day. Now and again he wonders how in heaven a sane man can stand the noise, wear and tear of New York.

But the smokes!—I didn't see what he filled his old brain with, yet I caught presently a delicious whiff. I looked up to see my friend buried behind page 2 of the *Times*—reading how there was "nothing of interest to report from the West Front." Finally, when the office had enough smoke in it to advertise unmistakably there was something real good burning behind that newspaper, I demanded, "What's that you're smoking?" Without any undue haste he reached in his hip pocket (Southerners and Westerners can always produce something uninteresting from the hip pocket) and in a drawling voice said: "There it is. Try it." I took the neat blue tin and filled my favorite pipe with his good feeling, correctly moist tobacco and lighted up. I didn't even read what was printed on that tin. But after a few delightful draws, followed by more delightful inhales, I knew at last the end of my pipe-smoking rainbow had come.

Without losing any time, I pushed the nearest button for a boy, handed him that tin and told him to see how fast he could go to the nearest tobacco store and return with half a dozen just like it. Didn't even ask the price—just gave him a bill and told him to beat it.

That was how I got introduced to good old Edgeworth. It suits me to a T and I never have the desire to switch to anything else. Incidentally, I've told a lot of my friends about it and they have thanked me in a way that really spells *thanks*.

This is, as near as we can remember it, the story told us by a faithful New York man as to how he became acquainted with Edgeworth Smoking Tobacco. To make it easy for other pipe smokers all over the land whom we can't very well meet personally, and who are not fortunate enough to have a distant relative from distant Virginia, we will send generous free samples of Edgeworth Ready-Rubbed and Edgeworth Plug Slice—enough for several pipes. Write for the samples. Edgeworth may not suit you, but the chances are it will.

Edgeworth is sold in convenient sizes to suit all purchasers. Edgeworth Ready-Rubbed in pocket-size package is 15c or two for 25c. Other sizes, 30c and 60c. The 16-ounce tin humidifier is \$1.15; 16-ounce glass jar \$1.25. Edgeworth Plug Slice is 15c, 30c, 60c, and \$1.15. If you like Edgeworth, or if you would like to know if you would like it, write to Larus & Brother Company, 3 South 21st St., Richmond, Va., for the free trial smokes.

**To Retail Tobacco Merchants**—If your jobber cannot supply Edgeworth, Larus & Brother Company will gladly send you a one- or two-dozen carton, of any size of the Plug Slice or Ready-Rubbed, by prepaid parcel post at same price you would pay jobber.

She was Val's partner when, chancing to glance toward the doorway, she saw Judge Sponable standing there, watching herself. She felt a swift stab of remorse that she could have got so carried away by gaiety as to so completely forget the judge.

She pressed Val's arm. "See, Val! there's the judge! Let's dance over and speak to him."

"Oh, yes—sure," answered Val, following her eyes; but, as no one likes an enjoyable dance to be interrupted, you couldn't expect him to sound too enthusiastic. However, as the two stopped before him, the judge waved them away.

"Go on and finish your dance. I can talk to you later."

They nodded; and he stood watching them as they swept away. In sympathetic rhythm, across the polished floor.

Some youth standing by, unpartnered for this dance, remarked: "Phoebe and Val dance awfully well together, don't they, judge?"

Rather abruptly the judge answered: "Ah! I suppose they do."

Directly the dance was finished, Phoebe came rushing back to him, dragged him to a seat, urged him to try just one one-step with her. But the judge demurred; in his heart he had no wish to match his unpracticed steps against the agile grace of her last partner.

THE music for the next number began; an impetuous young man dashed up to claim Phoebe. She offered to "sit out" with the judge, but again he insisted she should go on with her fun. So once more she glided away from him, but turned her head to heed young Val's adjuration: "Next is mine—remember!"

So the next was Val's. But before that time should come, before he must again view her in the arms of the youngster with whom she danced so "awfully well," the judge unobtrusively departed. Phoebe was terribly upset when she discovered his absence. For, to make up for something, she didn't know just what, she'd resolved to make him "sit out" the next with herself and Val.

It was long past midnight when the dancers clapped the last encore out of the musicians. As Val and Phoebe walked back to her home, again deciding against a cab on so fine a night, Cherryvale had put out all its window lights. But the stars, those faithful lamps of heaven, were still on duty. There was a moon now, besides—a lazy, effulgent, full-bodied moon, striving, as it were, to hide her rounded contours with misty folds of cloud.

Through the moon's pale radiance they walked, rather silent at first—which was in contrast to their earlier chatter. And when Phoebe at last felt the need to make talk, her speech, for some reason, centered about the judge.

She wondered why he had gone so quickly. She was terribly disappointed. She'd wanted Val to talk to him—to know him better. He was so splendid.

"Yes, he seems nice," acquiesced Val. "Oh, he's perfectly splendid! I couldn't begin to tell you how good and kind and fine he is!"

"I suppose you're tremendously in love with him," said Val.

"Of course," said Phoebe.

There was another little silence after that. It was Val who broke it, an unwonted tentativeness in his voice: "Of course—then—I couldn't expect to see you to-morrow?"

Phoebe didn't hesitate a second over her reply: "No, I'll probably sleep late; and then I'll have to stay in the office in the afternoon to get the week's work finished. And in the evening there's choir practice. I always go to choir practice Saturday nights."

"Oh," said Val.

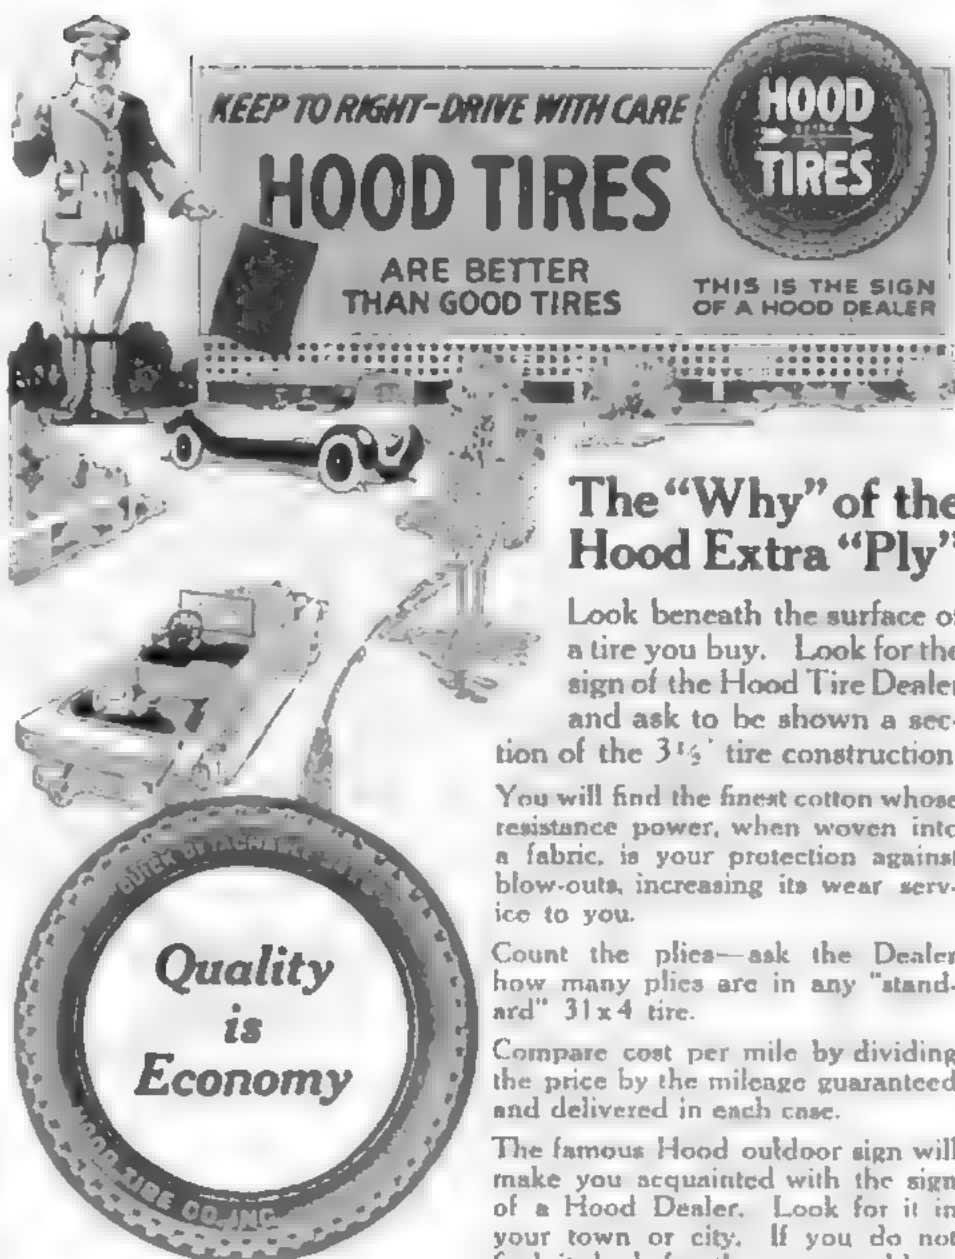

THERE was another silence, and he began to whistle softly. How Val could whistle! But this was not the impish, gay refrain with which he'd teased her that morning. (That morning—it seemed ages ago!) This was a plaintive, almost tuneless, little melody, caught now and then under his breath; little silvery ghosts of sound attuned to the high, quivering stars, to the wistful gossamer clouds which caressed the moon, to the drowsy stirring of the leaflets asleep.

When they reached her door, he loitered. "Sure about to-morrow?" he asked.

"Sure, Val."

"Well, anyway, you won't mind if I come to church Sunday to hear you sing?"

"Of course not!" she replied, laugh-

KEEP TO RIGHT-DRIVE WITH CARE

**HOOD TIRES**

ARE BETTER THAN GOOD TIRES

THIS IS THE SIGN OF A HOOD DEALER

**The "Why" of the Hood Extra "Ply"**

Look beneath the surface of a tire you buy. Look for the sign of the Hood Tire Dealer and ask to be shown a section of the 3 1/2" tire construction.

You will find the finest cotton whose resistance power, when woven into a fabric, is your protection against blow-outs, increasing its wear service to you.

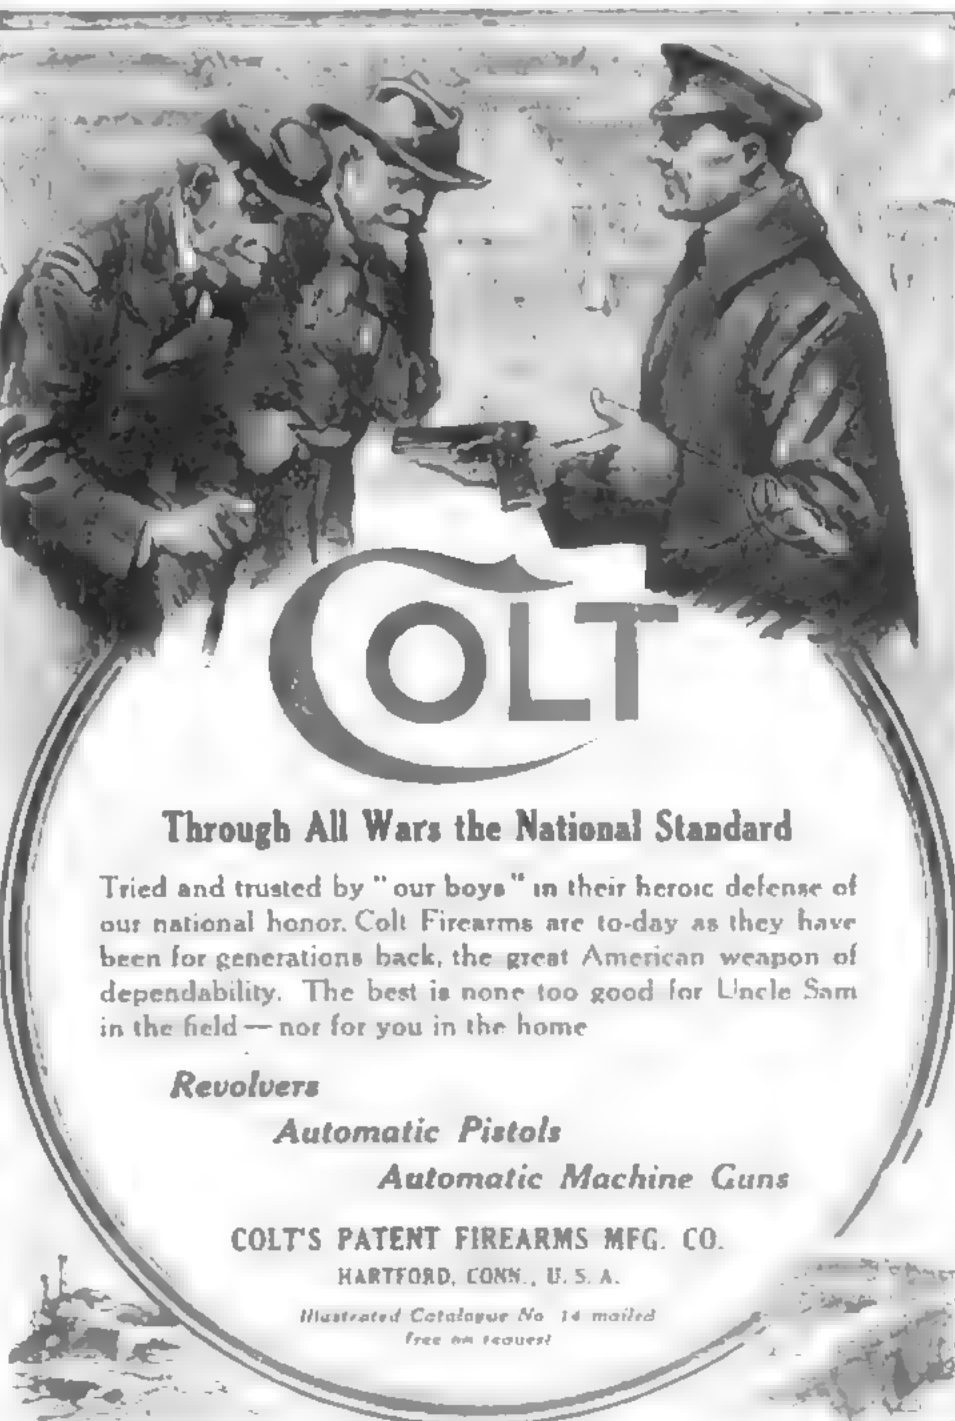

Count the plies—ask the Dealer how many plies are in any "standard" 31 x 4 tire.

Compare cost per mile by dividing the price by the mileage guaranteed and delivered in each case.

The famous Hood outdoor sign will make you acquainted with the sign of a Hood Dealer. Look for it in your town or city. If you do not find it, look for the nearest address on the page opposite the contents page in the 1918 Blue Book. This dealer will be pleased to show you the "why" of that extra "ply."

## We Are in This Big Fight—

Our men are "over there," our ships are patrolling the seas, our industries are working day and night turning out the necessary supplies, but it is only by knowing what has happened in the Great War thus far—what is the lesson of each campaign, each piece of strategy, each type of weapon, that we can make effective to the greatest degree our offering of the lives of our soldiers and the wealth and resources of our country. Where can we find all this? In

## "The Story of the Great War"

—historical perspective, expert analysis, vivid description

**T**HIS work digs out the roots of the war shows its true origin.

It gives a thrilling narration of the war—an outline of the plans behind the great German offensives against France and Russia, the Gallipoli affair, Verdun, the 1917 offensive, the entry of the United States into the war; a vivid account of the fighting, an analysis of each campaign, with the causes of its success or failure, a résumé of the net results. There is a full discussion of how science has revolutionized the actual fighting. Just

what fighting means in the Great War fully explained.

An accurate account of the industrial and social factors, the financing of the war, etc.

Our own relations to the belligerents overseas from the beginning impartially narrated, and the stirring messages of President Wilson given in detail.

In short—a real history written to keep pace with the conflict—a work every American should read, now, for his own sake and that of his country.

pon—Don't Delay.

ing; she herself didn't know what made it hard to keep that laugh from quivering.

Val turned to go; yet, going, turned to stay—till, suddenly, without another word, he walked swiftly to the gate.

Phoebe was so tired that, as soon as her head touched the pillow, she fell asleep, but throughout the night she lay enmeshed in dreams as fragilily iridescent as the clouds beglittering the moon. Throughout the night she danced to delicate, fairy-sweet music, and when she awoke to brilliant sunlight those glamorous strains still seemed to sound in her inner ears.

But she shook off the spell, brought herself back to the realities of every day. At the office the judge scolded her for coming at all, tried to send her home again, but she wilfully insisted on staying till the last letter was sealed.

**T**HAT night the judge, as was his custom these days, called at the church for her after choir practice. He had a surprise waiting for her in his car—an enormous box of her favorite chocolates and an enormous box of her favorite long-stemmed roses. He had wired to Macon City for them that morning. Phoebe kissed him in tender gratitude—there was no end to his goodness to her.

But, though it was still early, she didn't ask him in that evening. She said she was tired from last night, and wanted to get to bed early. However, when she went up to her room, she didn't go to bed. She drew a chair up to the open window, and gazed out at the lazy ivory moon, at the drift of white radiance it spread over street and lawn and trees and shrubs to make them things of beauty.

She wondered what Val was doing to-night. Then she reminded herself it was foolish to keep thinking of him this way. Yet why shouldn't she think of him? He was just a big, brave, beautiful boy on his way to war. It was quite right that he should make an appeal to her sympathy, to her liking.

And then, as she communed thus, from somewhere down below, she heard an elfin flood of sound. That was Val whistling! It sounded as if he might be down on the lawn seat, in the shade of the lilacs. She leaned forward to look, then quickly drew back out of the revealing moonlight. The whistling continued—high, piercing-sweet notes, subtle little swirls into minor; gay, wistful, haunting; resolving into sound those April nights when gladness and sadness get so strangely intermingled.

The gladness and sadness penetrated into Phoebe's being. She wanted to laugh and to cry. She shut her eyes, and saw the bold, bright pleading in the dark pools of his own; opened them, and saw the stars beseeching in the pools of heaven. Oh, if only he would not whistle that way to her—if only he would not whistle!

Phoebe's dreams that night were mazed ones and disturbed.

Next morning she almost hoped Val wouldn't hold to his plan of coming to church. But he came. Throughout the service she felt his gaze fixed upon her, in the choir gallery, more than upon the minister in the pulpit, and self-consciously kept her own averted. She divined he would wait to walk home with her, and didn't know whether she was more glad or sorry. But she did know she wished the judge were there; but Judge Sponable attended church very seldom.

Val did wait and ask to walk home with her, and she could think of no good reason for refusing. But for the first block or two she was rather distraught. "What's the matter, Phoebe?" he asked at last.

"Matter? Why, nothing."

"Yes, there is too. Are you angry with me for serenading you last night?"

"Oh, was that you whistling?"

He gave her a reproachful look. "Oh, so there are other fellows who whistle to you, are there?"

Phoebe did not reply.

"Well," he said after a pause, "if you're feeling this way, I guess there's no use mentioning what I was going to ask."

She glanced up at him then; his profile showed a moody expression.

"What were you going to ask, Val?"

"It's such a bully day I thought maybe I could get you to go out to the Waterworks for a sort of little picnic. I thought I could get a little lunch put up, and maybe go out in a boat. It's such a bully day."

"Yes, it is—glorious!" She glanced upward at the brilliant sky; tilted her

nose as if to sniff in the fragrant air.

"Maybe—"

"Maybe what?" he demanded quickly. "Maybe I could phone the judge and ask what he thinks."

"Do you have to ask him already every time you come and go?" There was a note of impatience in Val's voice.

"Of course not. He always wants me to have a good time."

"Then why— See here, Phoebe!" He turned to her with an eager flow of words. "This is my last real Sunday. I have to leave Thursday or Friday. Is it wrong for me to want just one sweet, comradely day—a beautiful memory to carry with me during all those heaven-knows-what kind of days over there?"

She didn't reply at once.

"Just one beautiful, comradely day," he repeated. "Surely there's nothing wrong in that, is there?"

And Phoebe, moved by the boy's pleading in his voice, by the menacing aspect of those "days over there," answered slowly: "I don't see how there could be, Val."

So Val had a lunch put up at the Commercial House, and hired a roadster from the livery garage; and they drove out to the Waterworks over the road which, in spring, is an avenue of beauty between hedges of new-spangled trees. That year spring had come with a riotous rush of life: life quickening everywhere—in sun and air and growing things and the ceaseless calls of birds. So how could two in a roadster hope to ignore the tremors of a universe?

But for a time, somehow, things did not go smoothly between them.

"I wonder," pondered Phoebe, "if it be really warm enough in a boat?"

"Of course it will! Anyway, who cares?"

"I don't want to take cold, even if you do," she retorted.

"I believe you're already sorry you came!" he accused.

Phoebe meditated. "I don't know, exactly, whether I am or not."

"Well"—a trifle testily—"it's not too late to change your mind! Shall I turn around?"

"Just as you prefer."

"It's evident enough what you prefer," mumbled Val. "And when it comes to such open hints, I guess my manners—"

"Oh, if you're going to lecture on good manners," begged Phoebe, unexpectedly mischievous, "don't do it, please. Don't, and I'll give you a present!"

She withdrew a rose from the cluster at her belt—the judge's roses!—and, like one who had found a cure for lecturers, smilingly proffered it to him. And Val, instead of swinging the car about, reached out his hand.

"But no," she decided, even as his finger touched the flower, "I must not allow you to take bribes." And she carefully tucked the rose back among her companions.

"Why are you so perverse to-day, Phoebe?"

"Why are you so cross?" she countered.

"I'm not cross."

"Well, then, I'm not perverse!"

But she knew she was perverse; just as Val was really cross. But she didn't know the reasons—didn't comprehend those unseen forces which, leashed and straining, can so mysteriously ruffle a surface calm.

**T**HAT mysterious sense of strain endured between them while they ate their sandwiches on the pump-house lawn; and after they'd selected a boat at the pier and rowed far up the winding curves of Bull Creek. Val had taken off his cap, and the breeze played games with his crisp black hair. Phoebe felt a strange impulse to reach her fingers on those rumpled locks, all the more because he still was moody. Odd how his moodiness seemed to make an even stronger appeal than did his merriment!

He fell to talking about those imminent "days over there."

"I'll send you some souvenir of my first bout," he said. "By that time you'll be Mrs. Sponable. How funny that'll seem—musingly—you, Mr. Judge Sponable."

"Yes, and you must bring me a German helmet," she said, swiftly reverting to the original subject, "when you come back."

"I'll certainly do that," he promised—"if I come back."

That was a terrible thought—that

NATIONAL BISCUIT COMPANY

## Oatmeal Crackers for Breakfast

Variety gives zest to any meal. One soon tires of the same food morning after morning. N. B. C. Oatmeal Crackers offer you a delightful change.

Try them for breakfast with milk—or half milk, half cream. You will find them delightfully good and satisfying.

N. B. C. Oatmeal Crackers are very nutritious. They contain oatmeal in its most delicious form, slightly sweetened so that no additional sugar is required—thus assisting in the national economy of this article of diet.

Keep a few packages of this wholesome food on hand for breakfast.

life along those lines; you realize that, don't you, dear?"

She lifted, then, her tear-washed face to his.

"Oh, judge, I know what you mean, but that makes no difference. I know that—that other men are wiser, more dependable. That—that other men may be kinder. But—I can't explain it, judge! It just seems to make no difference. Oh, judge, can't it be that a person's faults just make you love him the more?"

"I see." In the judge's voice was a note more grim than perhaps he realized. He was silent a second before he went on.

"Then too, my dear, even if you'd been free to marry him, you'd have to consider that he's going far away, on a hazardous venture."

At that she gave a little inarticulate sound; then said in a half-choked voice: "Oh, wouldn't it have been enough just to be on the same earth with the person you love?"

"I see," said the judge again slowly.

He gazed over her head, upward at the heavens. Just then, as if catching the tricky ways of prankish April, the moon pushed her smiling face through a rift of darkling cloud. It was as if she were making halcyon promises to all lovers. The judge stifled a sigh; love comes in April—but to the young.

How young, how terribly young those two had looked that night at the Masonic Hall—dancing, living, to the music's rhythm! He could never recapture the light their shining eyes had worn. Until then he had thought she came into his heart to reteach him the world was young. Well, she'd reminded him the world still was young—but that he was very old! Well, thank God, he had learned to look life squarely in the eyes: life which had given him Truth—but taken Youth.

HE brought back his gaze from the now triumphant moon, from the emerging stars more shy: the world-old flowers of night—the world-old allies of love! And he gave those fingers still lacing restlessly among his own a gentle squeeze. "I release you, dear," he said. "He'll be here till Friday, you say. I see you're meant for him—I give you up to him—and may God bless you."

Then Phoebe, as she had done on the day of their betrothal, impetuously flung both arms about his neck. "Oh, judge! There never was anybody like you! I can't bear to hurt you!"

"Then do as I tell you to do, dear." For a long moment, as he had done on the day of their betrothal, he rested his face against her hair.

"Oh, child, child!" he said at last, "love while you can. Never fear it or deny it, though it breaks your heart. Love while you can—for it's the only thing in the world that makes life real."

MARCH 16, 1918

supply and would not give them. These cases are legion. In Washington everyone is tired of hearing of them.

The housing capacity of the region and Norfolk was so crowded by the War Department, owing to a lack of ships, that housing was not available for shipbuilders. In spite of cases like this, and cases where one shipyard stole from another, the Shipping Board is trying to pin the blame on labor for its troubles.

A man with a contract to build ships came to Washington from the Pacific at because he was looking forward to launching some of his vessels and to know whether the engines and boilers had been ordered and when they would be delivered. When last he was being batted back and forth in a bureau without an answer to his question?

These are the signs of an absence of general plan. There is no coordination or clearing house for various departments. Much big planning is no responsibility. Planning slips through the yawning gaps between departments and is lost.

It is the result of the President's feeling out responsibility—separate by separate piece. No one man can do it. I repeat, can do a job of planning, of assigning work, of adjusting one process to another, of making a smooth-acting war machine.

## War Cabinet—with Power

These are the considerations which lead men to suggest a war cabinet—a small body of the best-fitted men in the country, who for at least eight of the twenty-four may plan the job, check up the work of the various departments (which may be left as are now unless there is a need for it), who may adjust differences, conflicts and demand action, who gather all the facts and all the possibilities in one place to which the country can look for driving power, clear answers to questions, and accountability for bringing the results of the country, human and material, into the powerful blow which must develop for delivery against any.

A Cabinet must have power to give it, just as the war boards which Britain and France have developed after bitter experience, have to give orders. The British and French point out that their experience indicates that a war cabinet or must not be made up of the men who have the separate jobs to do.

Because then it becomes, as the sh say, "a groaning board." Each with a job to do would try to favor his job rather than the general nor would any man among them enough hours in the day to attend conference war board and also do his allotted to him and to his department.

Such a plan would be so foolish that it would please Von Hindenburg," said a representative to me.

Alternative to the present system under which the President keeps himself the central war machine is no one man can handle, or to the idea of mixing functions in a "groaning board" made up of executive heads, a real war board which shall have authority of planning the war, control the different departments, and end the absurd oversights and snarls which might waste the lives of American boys and waste the dollars of their parents and threaten a economic jam.

In the beginning the attitude of the President toward this suggestion was worthy of study. To put down any deduction to be drawn from facts may be unfair, but it is not to put down the facts.

## Advice—Advice—Advice

The fact that since the war came in numerous agencies which were to look like a war-planning board, have the appearance of authority, have been created one after another, that one after another these have faded away into the background of the picture. These have always been advisory. The ponderous machinery of the National Defense has been in. In spite of the vast task it accomplished in securing the cooperation of producers and in rounding up supplies, it has had no power, and

most of the advice it has given has never reached execution. Men who have worked on it until nerves were on edge and voices grew thick were aghast at their own uselessness in this squirrel cage of advice.

The War Industries Board, the next development, has been advisory. Its experience was like that of the larger advisory body. It had information; some departments availed themselves of it. It had plans; after the slow processes of sending them for consideration, little was done with them. It is on the edge of disappearance or of rebirth.

When Daniel Willard of the Baltimore & Ohio Railroad was drafted for work as the head of the War Industries Board, from which he has resigned, he conceived the idea of bringing together the heads of the departments of the war machine at a dinner in October. If this dinner had taken place, it would have been the first time that the heads of departments had ever met at one place! The dinner was not given, but within a few days the President announced a plan of a weekly conference of the heads of departments. I believe this was to be called a war council, but everyone has forgotten it. It had no power. It was not a war board.

There began to be agitation for a director of munitions, who, like the British Minister of Munitions, would represent a central purchasing agency and would accomplish something toward determination of what the country needed to buy, what should be paid for it, what department needed to have its necessities met first, and bring purchasing order out of purchasing chaos. The man whom some of those who believed in the plan suggested for the place was Stettinius, a partner of J. P. Morgan. The President and Baker opposed the director-of-munitions idea, but they gathered in Mr. Stettinius, gave him the title of surveyor general of supplies, put him under an army officer, and made his recommendations subject to War Department red-tape procedure. The result is something which looks like a director of munitions. It is not. Merely another advisory agent without power.

When the organization within the War Department was criticized because of the lack of any adequate centralization of directing power, Baker created a supreme war council—made up of men some of whom had just been relieved of duties because of a lack of any conspicuous success. It looked like a little war board within the War Department, but it was not. It was another advisory agency without power.

## Passing the Buck!

A MEMBER of Congress laughed when I spoke of these litters of advisory kittens and said:

"I have had a little experience myself with them. They create the great game of buck-passing. For instance, I went to Barney Baruch of the Council of National Defense about the price to be fixed on metals. He told me I must see the President. I wrote to the President, and the President replied that this was all in the hands of Barney Baruch. I understand now that Baruch has not been closeted with the President for six months.

"A little later I wanted the head of one of the Government departments who was serving in advisory capacity to take action on a serious matter in my own State. I telegraphed him. He replied that he was doing only those things the President wished him to do. I wrote the President, and the President replied that he was wholly subject to the recommendation of the other man!"

The result of all this powerless advice is to swash back on to the President, provided he is accessible, a million details for decision—which he cannot decide. But if he is not accessible, it is to leave thousands of decisions hanging in the air and thousands of questions which no one can answer.

Does the President realize the condition? Some say he does, and some that he does not. At any rate, he opposes the suggestion of a war board with powers, which could do what no one man could do, which would plan, act as a clearing house for conflicts, and be accessible. His opposition discloses something of the President.

The President's enemies, for instance, say that this opposition to creating any war-planning machine will show obstinacy. It is a matter of opinion, but the facts which show

## The Men Who Serve You

THE Pullman car employees are in a distinctive sense the representatives of the Company. They are continually on dress parade; their conduct is a matter of supreme importance.

Each Pullman car has its porter, and on every train is a Pullman Conductor, in charge of all porters on the train. Either is at your service throughout the journey for information or to supply any special wants within his power.

Courtesy and thoughtful attention are among the most important things that the Pullman Company has to sell; and they must be of high quality. A careful record is kept of the manner in which each employee does his work; and rewards of extra pay are given for perfect records.

It is noteworthy that twenty-five per cent of the eight thousand porters in the Pullman employ have been for over ten years in the service of the Company; and some have been in its employ for forty years. Pensions are provided for men retired from active service and provision is also made for sick relief for all car employees.

There are no rules for passengers save those which conduce to the comfort of all travelers; but the rules for employees, made in the interest of the passengers, are many and minute.

## ISN'T IT WORTH A TRIAL?

We do not claim that Nujol is a  
cure for all ills.

But many people have told us  
that it is.

Why?

Because most human illness is  
considered to be directly or in-  
directly caused by constipation.

Nujol relieves constipation.

It may help you. Try it.

*It is absolutely harmless.*

Nujol is never sold in bulk. Send  
50c. and we will ship new kit size  
to soldiers and sailors anywhere.

## Jenny Lind is only a memory, but the voice of Melba can never die

Two voices of finest, purest gold.

One is gone forever.

The other lives for all time.

There was no Victrola to capture the fleeting beauties of Jenny Lind.

But Melba's voice will still be heard in centuries to come.

To-day Melba herself thrills and entrances vast audiences throughout the world. Happy singer and happy public, that her flawless, limpid notes will flow forever in undiminished beauty from her Victor Records!

Practically every great singer and instrumentalist of this generation makes records only for the Victor—thus perpetuating their art for all time.

Victors and Victrolas, \$12 to \$400. Victor dealers everywhere.

New Victor Records demonstrated at all dealers on the 1st of each month.

"Victrola" is the Registered Trade-mark of the Victor Talking Machine Company designating the products of this Company only. The use of the word Victrola upon or in the promotion or sale of any other Talking Machine or Phonograph products is misleading and illegal.

Important Notice. Victor Records and Victor Machines are scientifically coordinated and synchronized by our special processes of manufacture, and their use, one with the other, is absolutely essential to a perfect Victor reproduction.

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on all genuine products of the Victor Talking Machine Company.

More than a Million Every Week

# What would the oil in your engine show?

For years, no one, not even the leading automobile engineers, could tell how much sediment is formed in the average motor oil or how much oil is lost by evaporation.

Both motorists and engineers were in the dark as to the amount of friction and consequent wear due to this sediment.

Today over a million motorists are keeping their engines running like new by using a lubricant that resists heat.

## What sediment means to your engine

It was the Sediment Test that first brought home to motorists the two logical reasons why it is false economy to use ordinary oil.

Inferior oil breaks down under the terrific heat of the engine, forms voluminous black sediment, and much of the oil turns into a steam-like vapor and is lost through the oil-filler pipe.

This sediment causes rapid, irreparable wear of the working parts of an automobile engine because it crowds out good oil at points where friction occurs, thus preventing it from forming a protecting film between the metal surfaces.

## Airplane engineers discover important facts about lubrication

During the past two years, airplane engineers have learned that their greatest problem is lubrication. Because of the intense heat of airplane engines, the lubricating oil breaks down very rapidly, forming sediment. Their discoveries prove the great value of the Sediment Test and the necessity for a lubricant that resists heat.

## A practical proof of superiority

This heat-resisting quality of Veedol that reduces sediment 80%, as compared with ordinary oil, is due to the Faulkner Process, used exclusively by the manufacturers of Veedol. Besides minimizing sedimentation, the heat-resisting quality of Veedol reduces losses by evaporation to a negligible quantity, thus greatly increasing the mileage obtained from Veedol, as com-

pared with the average motor oil.

More than half of all the motorists who buy oil by name, buy Veedol.

## Make this test for yourself

Drain the oil out of your crankcase and fill with kerosene. Run the engine very slowly for 30 seconds and then clean out all kerosene. Refill with Veedol and make a test run over a familiar road, including steep hills and level straight-aways.

You will find that your engine has acquired new power, hill-climbing ability and snappy pick-up. It will run more smoothly and quietly and will give greater gasoline mileage.

## Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he will not, write us for the name of the nearest dealer who can supply you.

## An 88-page book on lubrication for 10c

The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

Sectional view of a popular type of motor, showing high operating temperatures that cause rapid destruction of the average automobile oil

In the right-hand bottle is a sample of ordinary oil taken from the crankcase of an engine after 500 miles of running. The left-hand bottle contains a sample of Veedol obtained under identical conditions. Note that the ordinary oil contains over five times as much sediment as Veedol

Millions of tiny teeth cover the apparently mirror-like surface of a bearing or other working part of an engine. These teeth tear and grind each other unless kept apart by a protecting film of lubricant

General Contractors - Marx Koblitz & Son, New York.  
Roofing Contractors - T. New Construction Co., New York.

Copyright, 1916, International News Service, Inc.

## A Severe Test—A brick-surfaced Barrett Specification Roof being used as a Drill-Ground

Hundreds of marching feet—a regiment in action with a roof for its drill-ground—that's what you see above.

You couldn't use a roof much more severely than this.

And that's what happened almost daily for months on top of the big Altman Department Store in New York City, where several hundred members of the Home Defense League have learned to do their "bit."

Barrett Specification Roofs contain a larger amount of waterproofing and protective materials than any other roof-covering.

That is why they give such wonderful service.

And not only do they give longer service than any other type, but they cost less per year of service.

If you want this kind of a roof on your building, the way to make sure of getting it is to insert in your building plans the following:

"The roof shall be laid according to The Barrett Specification dated May 1, 1916, and the roofing contractor shall secure for me (or us) the 20-Year Guaranty Bond therein mentioned."

Only competent roofers can obtain the Bond, and the roof is constructed under the supervision of a Barrett inspector, who sees that the Specification is strictly followed.

### 20-Year Surety Bond

We now offer a 20-Year Surety Bond Guaranty on all Barrett Specification Roofs of fifty squares and over in all towns of 25,000 and over, and in smaller towns where our Inspection Service is available.

Our only requirements are that The Barrett Specification of May 1, 1916, shall be strictly followed, and that the roofing contractor shall be approved by us.

### Barrett Specification Waterproofing

The foundation of this huge structure is also kept dry with a great seal consisting of alternate layers of Specification Pitch and Felt. This is the standard type of waterproofing for all important underground construction.

A copy of The Barrett 20-Year Specification with full information will be sent free on request. Address nearest office

Selling over \$1000.00 Annual Income. \$250.00 a month, \$500.00 a month, \$1000.00 a month, \$1500.00 a month, \$2000.00 a month, \$2500.00 a month, \$3000.00 a month, \$3500.00 a month, \$4000.00 a month, \$4500.00 a month, \$5000.00 a month, \$5500.00 a month, \$6000.00 a month, \$6500.00 a month, \$7000.00 a month, \$7500.00 a month, \$8000.00 a month, \$8500.00 a month, \$9000.00 a month, \$9500.00 a month, \$10,000.00 a month. Address: Dept. C, New York.

**We Establish You In A Business For Yourself** that should pay you \$2500.00 yearly. Exclusive territory contracts for selling our Visual Instruction Equipment to schools. High-grade, educated men with references; each detail given in prospectus. California and Underwood, 107 Fifth Ave., Dept. B, New York.

**Side Line Salesman Selling Premium Amort-** wide. Get our New Line of Premiums. Write today. Confess Bldg., Co., 240 2nd St., Chicago.

**Salesman: Get Our Plan For Monogramming** Art. traveling bags, etc., by transfer method. Very large profits. Monogram Agency, Inc., Mansfield, Ohio.

**Stickers Pay Many Commissions. Thousands of** people are buying stickers. Write for sample. Sticker Agency, Inc., 107 1st St., St. Louis, Mo.

## Invention—Patent Attorneys

**Wanted New Ideas. Write For List Of Patent** buyers who wish to purchase patents and what to invent with list of inventions wanted. Send sketch for free opinion as to patentability. Write for our four Guide books sent free upon request. Patents advertised free. We assist inventors to sell their inventions. Victor J. Erno & Co., Patent Attys., 411 Ninth, Washington, D. C.

**Your Idea Wanted—Patent Your Invention—FD** helps you market it. Send for 4 free books with list of patent buyers, hundreds of ideas wanted, etc. Address free. Patents advertised free. Trade Marks registered. Richard B. Owen, Patent Lawyer, 17 Owen Bldg., Washington, D. C., or 274K Woodworth Bldg., New York.

**Invent Something. Your Ideas May Bring** wealth. Send Patent for Free Book. Tell what to invent and how to obtain a patent through our credit system. Talbot & Talbot, 644 Talbot Building, Washington, D. C.

**Don't Lose Your Rights. Before Proceeding Further** send for our blank form "Precedence of Invention" to be signed and witnessed. Book, suggestions and advice free. Lancaster & Allwine, 864 Dury Rdg., Washington, D. C.

**Patents On Easy Payments. Send Sketch For** free search. Free book gives ideas and full information. Liberty Bonds accepted. Hines & Co., 440 Linn & Trust Bldg., Washington, D. C.

**Inventors Should Write For List Of "Needed** Inventions." "Patent Buyer" and "How to Get Your Patent." Send Free. Randolph & Company, Dept. 135, Washington, D. C.

**Patents That Protect—Write Us For New Book** Patent Shows worth more than all patent books combined. Free. Lacey & Lacey, 1711 Spring St., Washington, D. C. Est. 1878.

**Patent What You Invent. It May Be Valuable.** Write us. No attorney's fee until patent is allowed. Estab. 1881. "Inventor's Guide." Free. Franklin R. Hough, 240 Linn & Trust Bldg., Washington, D. C.

## Motorcycles

**Save 50% On Your Motorcycle. Get Our Price** list of winter bargains in guaranteed reliable machines. \$25 up. It's free. Extra special bargains now. Western Supplies Co., 179 Raynolds Bldg., Denver, Colo.

## Of Interest to Women

**Women Have Your Opportunity To Become** one exclusive local representative and make big cash profits, selling stylish "National" dress-gowns, wash-labors, etc. etc. Splendid sample outfit brings profitable orders. No experience needed. Spare-time work made a steady income for you. Write for generous selling plan. National Dress Goods Co., Box 25, North St., N. Y.

**Five Bright, Capable Ladies To Travel. Dem-** onstrate and sell. \$25.00 to \$100.00 per month. Railroad fare paid. Universal Drug Company, Dept. 12, Omaha, Neb.

## Information for Policy Holders

**Life Insurance Policies Bought. We Can Pay Up** to \$100,000.00. Send us your policy. We will pay you the full amount. Write for booklet. Charles K. Howard & Co., Inc., Est. 1888, 34 Liberty Street, New York City.

## Personal

**Old False Teeth Wanted—Don't Matter If Broken.** We pay up to 15 dollars per set. Also cash for old gold, silver and broken jewelry. Check sent by return mail. Goods held 10 days for return of our offer. Major's Tooth Specialty, 205 E. 7th St., Philadelphia, Pa.

**Free To Writers—A Wonderful Little Book Of** money-making hints, suggestions, ideas. The A. B. C. of successful writing and play writing. Absolutely free. Just address Writers Service, Dept. 21, Astoria, N. Y.

**We Buy Men's Slightly Worn Clothing, Odd Job** lots of new clothing, dry goods, shoes, etc. Ship with our check. We will send you our return check. David C. Rosenberg, 308 South St., Philadelphia, Pa.

## Agents Wanted

**Agents To Travel By Automobile To Introduce** our best selling, popular, pocket-sized, new-style. The greatest line on earth. \$250.00 a day. Complete outfit and automobile furnished free to winner. Write today for complete particulars. American Products Co., 1005 3rd St., Cincinnati, O.

**Agents We Have One Of The Best Paying** agencies in the U. S. If you are not making as much as \$100 a month write to Shirley Cady Co., 40 Park St., Chicago, Ill.

**Agents A Live Wire Agency For Ford Cars.** Sell on sight to dealers and car owners. Nothing else like it. No competition. Get full details today. Ford Manufacturing Co., 1200 Oak Court, Chicago, Ill.

**Hosiery And Underwear Manufacturer Offers** permanent position supplying regular customers at low prices. Large monthly income. All expenses paid. Credit. C. Parker Mills, 275 N. 12th St., Philadelphia, Pa.

**A Cash Business Of Your Own. Automatic** vending cabinet. Men or women dealing in real big increase on moderate investment. Write at once. White Crane Perfume Co., 100 Kemper Bldg., Kansas City, Mo.

**Agents Wanted—Sell Pure Food Products & Pop-** ular Household necessities. Easy selling articles, big and quick returns. C. H. Stuart, 3 E. 10th, New York, N. Y.

**Agents Make Big Money Selling Portraits And** portrait pictures. Simple and quick free. Universal Portrait Company, Dept. 2, Chicago, Ill.

# THE TWO GANGS

## BY PIERRE HAMP

Here is an etching of war-time France. The artist is a former railway employee, a man of modern ideas who has made himself a power in industrial France by intelligence and conviction and also, one may add, by command of the word that serves as only soldiers and workers serve to-day in France and America. Pierre Hamp was prominent in M. Albert Thomas's Ministry of Munitions, and is to-day a chief inspector of the French Ministry of Labor. His duties take him all over France, and here he registers a vision at once actual and symbolic. We look forward to publishing more of M. Hamp's writings in the near future. THE EDITOR

BRUAY, a mining town, is the refuge of 15,000 souls, evacuated from that part of the country which is under shell fire. Everything possible in the way of lodgings is utilized; they sleep in barns, in stables, any place where a bundle of straw can be laid sheltered from the rain. Here is the first long halt of those who have had to yield their place to the men who kill. They have come from the whole line of bombarded villages; those whose fears lessened as they ran, those who walked with the aid of a stick, robust women with a bundle or an infant in their arms, a crowd in which grated the wheels of children's perambulators. Old women groaned in wheelbarrows, their heads trembling. Wagons drawn by cart horses carried, sleeping among their bundles, the fortunate women who had been able to save all their linen and much of their goods. Others, in kitchen aprons, duster in hand, had fled by the back door, as the Germans entered by the front, crying: "Fly at once, madame. A bombardment!"

The town of brick houses, dominated by the black cinder heaps of the mines, is invaded by the fugitives. Work is in full swing. Gangs of workmen in blue caps or leather hats pass at regular hours the grated windows guarded by men in escutcheon caps and patient sentinels leaning on their rifles with crossed hands. A few kilometers from the mine the English batteries are replying to the German gunners. In all this region, where the realm of Labor joins up with that of Battle, in its fixed position behind earthen embankments, the soldier coming out of the trench and the workman coming up from the mine meet. There is a line where men, face to face, kill each other; but beneath the noise of the cannon is heard the noise of the tools. The short strip of abandoned ground between the combatant army and the working industries can be covered by a man in an hour. Humanity is becoming accustomed to live and work so near to massacre. The German gunner lengthens his range and reaches Labor, which does not recede; he fires on the trench, on the mine, on the factory. The Army, posted in front of Labor, shelters it by its sufferings. The miner is at the first stage of the work. He extracts the coal to melt the steel, which the soldier requires for his weapon. From the pickaxe to the rifle the effort has the same object: to kill.

At the hour when the men come up from the mine, trumpets are being sounded at the top of the long street which traverses the town in a straight line. A battalion of chasseurs is on its way to the rest cantonment. The orderly troop, marching in regular lines, keeps well to the middle of the road. In the front line the shining trumpets swing in the air with a single movement. The horse bearing the first

officer tosses its proud black head above the somber mass of the men. Out of the overcrowded houses comes a crowd of galloping children in sabots, who rush toward the soldiers. There are people at all the doors and leaning against the houses. Behind the proudly resounding trumpets, which play in turn by fours, advance the men who endure. The stiff commanding officer, mounted high above them on horseback, has a long white beard. The crosses of the Legion of Honor give a touch of red to the rows of chests.

Above the mine pits the wheels of the windlass are turning. The cage is coming up. The first miners arrive at the pit head as the soldiers pass. Chasseurs-à-pied bespattered with mud, workmen covered with dust—Army and Labor meet. They are two gangs who have finished their day. Like the workmen, the soldiers wear what they please. There is no uniformity of headgear; they wear either cap or helmet, just as the miners have the leather hat or the blue cap. But the traces of work—the mud and the coal—are equally visible on both gangs. The soldiers have just left the trenches, the miners the mine gallery. All these men have come forth from the earth. The soldier fights hidden in the ground, and beneath the battle is the mine.

The gang of war workmen passes in front of the gang of mine workmen, both unearthed. The soldier encounters every day blood and death, and endures the hardest life known to man: he lives exposed to all weathers, none too well nourished, hidden in a hole like a tracked animal; he is exposed to explosions, fire, asphyxiation, and the knife. The mine sends up corpses only on days of accident, when subterranean fires suddenly call upon Labor to bear the same suffering as the Army. The soil now trodden by the soldiers has borne the steps of men carrying away the dead, burned by fire damp, and shriveled up that a robust miner weighed no more in a sackcloth than a child of twelve years.

For the burned miner and the man-gled soldier the martyrdom of the flesh is the same. The war has not invented greater sufferings than those already known to Labor: lacerations of the body, burns, carbonization, suffocation underground. But the war has made the martyrdom of man his daily bread. On the soldier is ever the breath of Death.

The troop passes amid glory and enthusiasm. An old woman mutters again and again: "Poor lads! Poor lads!"

Hard Labor removes its cap of toil. The crowd of refugees from the war and the men who strike with pickaxe underground form up in silence before the regular march of the soldier.

The miners make their way home, keeping step with the troop: Army and Labor together.

There are many reasons why you should not accept of anything less than the best. The fact that COLLIER'S does not accept of anything less than the best is a guarantee that you are getting the same chance for success as the best.

There are many reasons why you should not accept of anything less than the best. The fact that COLLIER'S does not accept of anything less than the best is a guarantee that you are getting the same chance for success as the best.

# The President

Continued from page 3

ble supply and would not give them up. These cases are legion. In Washington everyone is tired of hearing of them.

The housing capacity of the region around Norfolk was so crowded by the War Department, owing to a lack of hips, that housing was not available or shipbuilders. In spite of cases like his and cases where one shipyard stole labor from another, the Shipping Board is trying to pin the blame on labor for all its troubles.

A man with a contract to build ships came to Washington from the Pacific Coast because he was looking forward to launching some of his vessels and wanted to know whether the engines and boilers had been ordered and when they would be delivered. When last seen he was being batted back and forth from bureau to bureau without an answer to his question!

These are the signs of an absence of any general plan. There is no correlation or clearing house for various departments. Much big planning is no one's responsibility. Planning slips down through the yawning gaps between departments and is lost.

It is the result of the President's parceling out responsibility—separate piece by separate piece. No one man at the top, I repeat, can do a job of general planning, of assigning work, of adjusting one process to another, of creating a smooth-acting war machine.

## A War Cabinet—with Power

THESE are the considerations which lead men to suggest a war cabinet—a small body of the best-fitted men in the country, who for at least eight hours of the twenty-four may plan the war job, check up the work of the various departments (which may be left as they are now unless there is a need for change), who may adjust differences and conflicts and demand action, who may gather all the facts and all the responsibilities in one place to which the country can look for driving power, for clear answers to questions, and for accountability for bringing the energies of the country, human and material, into the powerful blow which we must develop for delivery against Germany.

The Cabinet must have power to give orders, just as the war boards which Great Britain and France have developed, after bitter experience, have power to give orders. The British and the French point out that their experience indicates that a war cabinet or board must not be made up of the men who have the separate jobs to do. Why? Because then it becomes, as the English say, "a groaning board." Each man with a job to do would try to favor his own job rather than the general plan; nor would any man among them have enough hours in the day to attend his conference war board and also do the job allotted to him and to his department.

"Such a plan would be so foolish that it would please Von Hindenburg," said a British representative to me.

The alternative to the present system, under which the President keeps in himself the central war machine which no one man can handle, or to the system of mixing functions in a "groaning board" made up of executive heads, is a real war board which shall have the duty of planning the war, controlling the different departments, and ending the absurd oversights and snarls and errors which might waste the lives of American boys and waste the dollars of their parents and threaten a vast economic jam.

From the beginning the attitude of the President toward this suggestion has been worthy of study. To put down any deduction to be drawn from the facts may be unfair, but it is not unfair to put down the facts.

## Advice—Advice—Advice

It is a fact that since the war came in eight numerous agencies which were made to look like a war-planning board, or to have the appearance of authority, have been created one after another, and that one after another these agencies have faded away into the background of the picture. These agencies have always been advisory. The great, ponderous machinery of the Council of National Defense has been advisory. In spite of the vast task it has accomplished in securing the cooperation of producers and in rounding up supplies, it has had no power, and

most of the advice it has given has never reached execution. Men who have worked on it until nerves were on edge and voices grew thick were aghast at their own uselessness in this squirrel cage of advice.

The War Industries Board, the next development, has been advisory. Its experience was like that of the larger advisory body. It had information; some departments availed themselves of it. It had plans; after the slow processes of sending them for consideration, little was done with them. It is on the edge of disappearance or of rebirth.

When Daniel Willard of the Baltimore & Ohio Railroad was drafted for work as the head of the War Industries Board, from which he has resigned, he conceived the idea of bringing together the heads of the departments of the war machine at a dinner in October. If this dinner had taken place, it would have been the first time that the heads of departments had ever met at one place! The dinner was not given, but within a few days the President announced a plan of a weekly conference of the heads of departments. I believe this was to be called a war council, but everyone has forgotten it. It had no power. It was not a war board.

There began to be agitation for a director of munitions, who, like the British Minister of Munitions, would represent a central purchasing agency and would accomplish something toward determination of what the country needed to buy, what should be paid for it, what department needed to have its necessities met first, and bring purchasing order out of purchasing chaos. The man whom some of those who believed in the plan suggested for the place was Stettinius, a partner of J. P. Morgan. The President and Baker opposed the director-of-munitions idea, but they gathered in Mr. Stettinius, gave him the title of surveyor general of supplies, put him under an army officer, and made his recommendations subject to War Department red-tape procedure. The result is something which looks like a director of munitions. It is not. Merely another advisory agent without power.

When the organization within the War Department was criticized because of the lack of any adequate centralization of directing power, Baker created a supreme war council—made up of men some of whom had just been relieved of duties because of a lack of any conspicuous success. It looked like a little war board within the War Department, but it was not. It was another advisory agency without power.

## Passing the Buck!

A MEMBER of Congress laughed when I spoke of these litters of advisory kittens and said:

"I have had a little experience myself with them. They create the great game of buck-passing. For instance, I went to Barney Baruch of the Council of National Defense about the price to be fixed on metals. He told me I must see the President. I wrote to the President, and the President replied that this was all in the hands of Barney Baruch. I understand now that Baruch has not been closeted with the President for six months.

"A little later I wanted the head of one of the Government departments who was serving in advisory capacity to take action on a serious matter in my own State. I telegraphed him. He replied that he was doing only those things the President wished him to do. I wrote the President, and the President replied that he was wholly subject to the recommendation of the other man!"

The result of all this powerless advice is to wash back on to the President, provided he is accessible, a million details for decision—which he cannot decide. But if he is not accessible, it is to leave thousands of decisions hanging in the air and thousands of questions which no one can answer.

Does the President realize the condition? Some say he does, and some that he does not. At any rate, he opposes the suggestion of a war board with powers, which could do what no one man could do, which would plan, act as a clearing house for conflicts, and be accessible. His opposition discloses something of the President.

The President's enemies, for instance, say that this opposition to creating any war-planning machine will show obstinacy. It is a matter of opinion, but the facts which throw

## The Men Who Serve You

THE Pullman car employees are in a distinctive sense the representatives of the Company. They are continually on dress parade; their conduct is a matter of supreme importance.

Each Pullman car has its porter, and on every train is a Pullman Conductor, in charge of all porters on the train. Either is at your service throughout the journey for information or to supply any special wants within his power.

Courtesy and thoughtful attention are among the most important things that the Pullman Company has to sell; and they must be of high quality. A careful record is kept of the manner in which each employee does his work; and rewards of extra pay are given for perfect records.

It is noteworthy that twenty-five per cent of the eight thousand porters in the Pullman employ have been for over ten years in the service of the Company; and some have been in its employ for forty years. Pensions are provided for men retired from active service and provision is also made for sick relief for all car employees.

There are no rules for passengers save those which conduce to the comfort of all travelers; but the rules for employees, made in the interest of the passengers, are many and minute.

## 600 Shaves From One Blade

Yes, and more! That's the great Rotastrop. It's the only safety razor that gives you 600 shaves from one blade. It's the only safety razor that gives you a smooth, close shave every time. It's the only safety razor that gives you a razor that lasts for years. Send today for the Rotastrop.

## Which—will succeed?

Each has only a few hurried moments for reading. One spends *all* his precious moments with the daily paper. The other, little by little, is gaining that knowledge of a few truly great books which will distinguish him always as a *really well-read* man.

What are the few great books—biographies, histories, novels, dramas, poems, books of science and travel, philosophy and religion that "picture the progress of civilization"?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching—40 years of it as president of Harvard University—has answered that question in

## THE HARVARD CLASSICS

*The Few Great Books That Make a Man  
Think Straight and Talk Well*

Every well-informed man or woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," and so arranged it that even "fifteen minutes a day" is enough.

### Read Only Worth While Books

And you begin to-day to be really well read. In only a few pleasant minutes a day, by using the reading courses which Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint, that every University strives to give.

The free book guide contains Dr. Eliot's own plan of reading explained by himself. Merely ask for it.

Name \_\_\_\_\_

Address \_\_\_\_\_

light on his characteristic of yielding or resistance do not bear out any theory of obstinacy. The theory is unfair.

The President was supposed to be obstinate in his opposition to interference with Mexico. It is true that he spoke bitterly of those who pressed on him for intervention. But he intervened.

He was supposed to be determined to keep the country out of war, and he assailed those who pressed on him for a breach with Germany. But he made the breach.

He was supposed to be against preparation for war, or at least not willing to make war preparations. But after berating preparedness he changed his course.

He was bitterly opposed to the demand for a declaration of war on Austria. The declaration at last was made—and at his urging, in a message to Congress.

He took a stand, apparently like a rock, against taking the determination of the woman-suffrage question away from the States, and was against the Federal Amendment. But he came over.

There are a long list of cases in which the President, after the appearance of being filled with wrath that measures should be urged of which he did not approve, has yielded in a manner so inconspicuous that he has appeared to have originated them—in some cases after denouncing their sponsors. It may be that he considers it a part of the President's functions to resist the tide of public opinion, or even denounce it, until it has become ready to burst and then to release it. But in any case the facts do not bear out the charge that the President has any distinction in stubbornness.

The proposal for a war cabinet has brought out many other of the President's methods of thought and strategy. He assailed its supporters. He indicated that he had other plans to accomplish the same ends, but he did not state them. He affirmed at once the announcement of changes in organization which gave the impression of activity. He called in a dozen Democratic senators for a conference at the White House to enlist them in a fight upon the proposal. His friends were primed to point out that this was a partisan measure, though it was introduced through a Democrat, Senator Chamberlain, and supported from the floor of the Senate by a Democrat, Senator Hitchcock. They were primed to turn the proposal—which really was that executive power should become extended in order to be made effective—into the appearance of a conspiracy to limit the executive power.

### When the Time Comes—

THE President accused Senator Chamberlain of a distortion of the truth. He attached to this accusation a statement leading to the impression that the British War Board and Director of Munitions had been failures. This angered both British and French representatives who in this country had sincerely given the contrary impression. I have been told over and over again that both in Great Britain and France the war boards have been the Allies' salvation. They have stopped the disorganized scattering of effort and prevented the very disasters which are threatening us to-day. To the President's side leaped Senator Stone and the Hearst papers. Both were lined up against our going to war with Germany. Their support must be a trial to the President.

In spite of all, if the record of other important steps taken by the Administration can be accepted as a guide, the President will sooner or later create, as he can create, perhaps without authority of Congress, a true war cabinet with ample powers, and he will do it in the manner of one who has just conceived the plan. "It is time for a war machine, a workable organization," he may say in effect. "I will call upon all loyal citizens to support the proposal for one of the most important steps we can take." He will be driven toward a war cabinet because men have discovered no other way to make a war machine which will not fall apart.

When, and if, the President comes to it, only a few men in the country will remember his former opposition. Few will remember that a statement telling the people how well we were doing was issued as a New Year's greeting to the nation, was sent out broadcast to the press with the assistance of the Bureau of Public Information, was withdrawn at the last moment before publication, and that a large sum was sent to get every copy back. A time

had come suddenly just then when those who believed in a war cabinet were about to point out defects in the war machine.

These are recorded events which do not indicate necessarily that the President is resisting suggestion; they may indicate only that he is not in touch with the facts and therefore not wary toward suggestion. They may indicate an inaccessible man. No one but the President and Joseph P. Tumulty, his secretary, can speak with accuracy as to the exact number of persons the President sees. That number, however, is increasingly small.

Creel dashes over the way to the White House. The President calls upon Baker. Brandeis has a hearing tomorrow. Barney Baruch has dropped out of the circle. Filene of Boston comes on Tuesday. Colonel House comes down from New York on Wednesday. And round again.

### Unloose the Gag!

TODAY the President steps out of the door at the White House and goes into a motor car with Mrs. Wilson. They are going for a ride. The iron gates at the White House fence open the solemn White House guards stand back, the soldier sentry rattles his rifle. The President returns. With a group of relatives who, with the President's family, are known as "the Unchanging Five" he sits down to a meal. He waits about; he sits down. He is with the book and the pen.

The evening comes. He goes to Keith's Vaudeville Theatre with "the Unchanging Five." The comedian singing "I'm a twelve o'clock fellow in a nine o'clock town" rolls his eye toward the presidential box. Keith is over for the night. There will be no President at Keith's until the changes next week. The President goes home to the White House. The lights go out. The sentry stamps his feet in the cold.

All will agree that the President must have not only hours for meditation but hours to recognize the swift movement of war facts which change faster with the days and the hours than the President's plans can change. These can be read only through various and change of significant human contacts. For these contacts he is inaccessible. Scales which balance a personality, vision on one side and processes of accomplishment on the other are weighing down more and more on the side of vision and desire and less on the side of naked truth as to the nature of the ground underfoot and the cold, hard facts of things now done. It is too bad.

The failure of our war machine would break our influence over the destiny of mankind.

It is too bad also that men go on viewing the President from one side or the other and never all round—a great man needing the counsel of all and not only the counsel of a little group of men, most of whom are minors. It is too bad that truth should not be free of expression. It is too bad that one set of persons should say: "What's the use of calling the captain's attention to the rocks? He won't hear." We may face not only a deficiency in punching Germany, but even a frightful industrial disaster at home, and he won't listen! It is too bad that the other set should forget that we are trying to make the United States, as well as the whole world, safe for democracy and should cry out: "Silence! The gag! The gag!"

It is unfair to the President.

### It's Everybody's War

I PASSED the White House gates at the dusk and, looking through the iron picket fence and across the snow-covered lawns to a lighted window, saw a figure pacing up and down—alone. I thought the figure was that of the man with more executive power than any other in the world. I thought of the handful of men who see him most—who, taken together, may be a little cautious, a little subservient, a little facile, characterized a little by gentleness and good and sometimes feminine characteristics and reluctant to be the bearers of evil tidings.

Then I thought of 200,000 army corps dumped out in the snow in Pennsylvania on the side of the storage depot which was not planned in October and is not built yet! But the President does not know of them. And I thought of Willie James in the Senate waving his arms and crying out in effect: "Don't tell him! It's disloyal! Keep away from this war!" Well, where war is thus

*"Regular as Clockwork"*

## ISN'T IT WORTH A TRIAL?

We do not claim that Nujol is a  
cure for all ills.

But many people have told us  
that it is.

Why?

Because most human illness is  
considered to be directly or in-  
directly caused by constipation.

Nujol relieves constipation.

It may help you. Try it.

*It is absolutely harmless.*

Nujol is never sold in bulk. Send

More than a Million Every Week

# What would the oil in your engine show ?

For years, no one, not even the leading automobile engineers, could tell how much sediment is formed in the average motor oil or how much oil is lost by evaporation.

Both motorists and engineers were in the dark as to the amount of friction and consequent wear due to this sediment.

Today over a million motorists are keeping their engines running like new by using a lubricant that resists heat.

## What sediment means to your engine

It was the Sediment Test that first brought home to motorists the two logical reasons why it is false economy to use ordinary oil.

Inferior oil breaks down under the terrific heat of the engine, forms voluminous black sediment, and much of the oil turns into a steam-like vapor and is lost through the oil-filler pipe.

This sediment causes rapid, irreparable wear of the working parts of an automobile engine because it crowds out good oil at points where friction occurs, thus preventing it from forming a protecting film between the metal surfaces.

## Airplane engineers discover important facts about lubrication

During the past two years, airplane engineers have learned that their greatest problem is lubrication. Because of the intense heat of airplane engines, the lubricating oil breaks down very rapidly, forming sediment. Their discoveries prove the great value of the Sediment Test and the necessity for a lubricant that resists heat.

## A practical proof of superiority

This heat-resisting quality of Veedol that reduces sediment 80%, as compared with ordinary oil, is due to the Faulkner Process, used exclusively by the manufacturers of Veedol. Besides minimizing sedimentation, the heat-resisting quality of Veedol reduces losses by evaporation to a negligible quantity, thus greatly increasing the mileage obtained from Veedol, as compared with the average motor oil.

More than half of all the motorists who buy oil by name, buy Veedol.

Make this test for yourself

Drain the oil out of your crankcase and fill with kerosene. Run the engine very slowly for 30 seconds and then clean out all kerosene. Refill with Veedol and make a test run over a familiar road, including steep hills and level straight-aways.

You will find that your engine has acquired new power, hill-climbing ability and snappy pick-up. It will run more smoothly and quietly and will give greater gasoline mileage.

Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he will not, write us for the name of the nearest dealer who can supply you.

An 80-page book on lubrication for 10c

The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

In the right-hand bottle is a sample of ordinary oil taken from the crankcase of an engine after 500 miles of running. The left-hand bottle contains a sample of Veedol obtained under identical conditions. Note that the ordinary oil contains over five times as much sediment as Veedol.

Sectional view of a popular type of motor, showing high operating temperatures that cause rapid destruction of the average automobile oil.

Millions of tiny teeth cover the apparently mirror-like surface of a bearing or other working part of an engine. These teeth tear and grind each other unless kept apart by a protecting film of lubricant.

# Barrett Specification Roofs

Barrett Specification Roof with brick surface on Altman Building, New York City, being used as a drill ground.  
Architects - Trembridge & Livingston, New York  
General Contractors - Mori Rodito & Son, New York  
Roofing Contractors - T. New Construction Co., New York

Copyrighted, International Film Service, Inc.

## A Severe Test—A brick-surfaced Barrett Specification Roof being used as a Drill-Ground

Hundreds of marching feet—a regiment in action with a roof for its drill-ground—that's what you see above.

You couldn't use a roof much more severely than this.

And that's what happened almost daily for months on top of the big Altman Department Store in New York City, where several hundred members of the Home Defense League have learned to do their "bit."

Barrett Specification Roofs contain a larger amount of waterproofing and protective materials than any other roof-covering.

That is why they give such wonderful service.

And not only do they give longer service than any other type, but they cost less per year of service.

If you want this kind of a roof on your building, the way to make sure of getting it is to insert in your building plans the following:

"The roof shall be laid according to The Barrett Specification dated May 1, 1916, and the roofing contractor shall secure for me (or us) the 20-Year Guaranty Bond therein mentioned."

Only competent roofers can obtain the Bond, and the roof is constructed under the supervision of a Barrett inspector, who sees that the Specification is strictly followed.

### 20-Year Surety Bond

We now offer a 20-Year Surety Bond Guaranty on all Barrett Specification Roofs of fifty squares and over in all towns of 25,000 and over, and in smaller towns where our Inspection Service is available.

Our only requirements are that The Barrett Specification of May 1, 1916, shall be strictly followed, and that the roofing contractor shall be approved by us.

### Barrett Specification Waterproofing

The foundation of this huge structure is also kept dry with a great seal consisting of alternate layers of Specification Pitch and Felt. This is the standard type of waterproofing for all important underground construction.

A copy of The Barrett 20-Year Specification with full information will be sent free on request. Address nearest office.

## The Painter Proves that it's Valspar!

This is the famous Valspar test. It proves that Valspar is *absolutely water-proof*.

An ordinary varnish would blister and turn white in a few minutes if boiling water were poured on it like this, *but it doesn't affect Valspar one bit.*

Haven't you noticed how spotted and shabby most front doors look? That's because the varnish isn't water-proof. It can't stand up against the elements.

But with a Valsparred front door the rain can beat on it, snow can bank up against it and stick all over it, but it can't damage

or mar the surface. Valspar is a varnish that *really protects and preserves wood-work.*

There is nothing like Valspar for general household use. It is particularly good for use in kitchen, pantry, laundry, and bathroom, where water is freely splashed about and the wear is severe. No ordinary varnish will stand this test.

**Special Offer**—If you wish to test Valspar send 20c. in stamps and we will send you enough Valspar to finish a small table or chair.

#### VALENTINE'S Val-Enamel

An American product vastly superior to the finest imported enamels. *It starts white and stays white.*

Val-Enamel is very economical. A small quantity covers a great deal of surface, enabling the painter to furnish a superior job at a reasonable cost. It is washable. For dining-room, living-room or bedroom, for kitchen, pantry or bathroom, for interior or exterior work, use Val-Enamel. Ask the Valspar dealer for it.

# WAS BAKER RIGHT?

BY MARK SULLIVAN

IN the first place, let it be made clear that in all the blows that have fallen on Mr. Baker's official head, there was nothing personal, in the accepted sense of the word. His high character is so much taken for granted that it would have been an insult to refer to it. His devotion to his work, if mentioned at all, was mentioned as being too great rather than too little. His unique ability within certain lines was always admitted. (Indeed, one ought not to stop with that statement. It might be taken as having the flavor of damning with faint praise. Mr. Baker is an extremely able man. In the possession of certain qualities of reflective and interpretative thought, in logic, in the intelligence of his zeal for democracy, as a social philosopher and idealist, he is much like President Wilson; and, in these respects, among all the men in Washington, stands second only to the President.)

So far as I can recall, in none of the speeches was it said that Mr. Baker ought to resign. It was not a fight to force him out—it was a fight to make him accept an assistant, to make him accept, voluntarily or against his will, in the form of a minister of munitions, a kind of ability which would have pieced out his own. Even Senator Chamberlain, at the moment when he might have been bitter if it was in him to be bitter, was generous in his praise of the personnel of the War Department. Senator Hitchcock was careful to say that Secretary Baker has been "patient, painstaking, and energetic." Senator Wadsworth, a Republican, who might have been expected to be partisan, was equally careful to say that "the blame for the shortcomings ought not to be laid upon any individual. The criticism should be directed against our system." Senator Weeks, another Republican, went out of his way to be specific in saying that he did not wish "unreservedly to criticize the head of the War Department. . . . Secretary Baker has had to deal with a multitude of questions during his incumbency, the disposal of many of which heartily meets my approval. It would require too much time to enumerate the favorable comments I might make. If I were to criticize the Secretary of War personally, it would be that he had undertaken to do too many things himself, some of which, at least, might have been attended to by subordinates, and that he has been too open of access to people who might have had their needs provided for through some subordinate officer, leaving him too little time to deliberate over the many larger problems coming before his department."

This care to give Mr. Baker his due has been universal wherever his critics have been thoughtful enough to be discriminating. In journalism the most persistent and able of his critics has been the "New Republic," and when the uproar was at its height, this organ said, concerning the Secretary's proposed trip to France: "His influence in America, as a liberal force of thought, especially in the application of thought to labor questions, as a public man who sincerely loves the democracy for which we are trying to make the world safe, is too important and too valuable to be long dispensed with."

No, every critic whose motives were just was eager to concede a great deal, a very great deal, to Secretary Baker. The nearest anybody came to being disagreeable was when Senator Weeks spoke of Mr. Baker's "temperamental relationship to war." "Doubtless," said the senator, "Mr. Baker himself would admit that he is a pacifist by nature."

Yes, Mr. Baker would admit it. A man I know said to Mr. Baker, some

time before the war began: "If you were not down here in Washington as Secretary of War, you would in all probability be down here as chairman of the Cleveland Anti-Militarist League." And Mr. Baker said he probably would. But there is little or nothing to that. It isn't necessary that Mr. Baker should be one of those eat-'em-alive fellows, a bloody berserker with two rows of teeth, one for Huns and one for Turks. That isn't the trouble. As it happens, the most conspicuous pacifist in the United States for a generation has been Mr. Andrew Carnegie. He organized and led most of the antiwar propaganda in this country for twenty years. But, as it also happens, Mr. Carnegie in his prime would have been exactly the kind of Secretary that is needed by the kind of war that the present war is. Had Mr. Baker possessed, in addition to his own kind of ability, the kind of organizing ability that made Mr. Carnegie greatly successful as an organizer of industry, there would have been no criticism of him, and this war would have been farther along. (It ought also to be said, parenthetically, that if Mr. Carnegie had been Secretary of War, the country to-day would be just as much paralyzed by labor troubles as it now is by lack of organizing ability. And the same is true of many of the other so-called "he-men" who have been suggested. Secretary Baker's sympathy with labor, and the confidence labor has in him, have been a great asset to the United States.)

*What is needed is a great industrial organizer. What is needed is that this whole United States should be turned into one great factory, turning out munitions in the way the Ford factory turns out cars, with all the parts synchronized, with all the functions coordinated, with all the complicated lines of parts and raw materials arriving at the right place at the right moment.*

And that is precisely the particular variety of ability which Mr. Baker has not got and never will have. It is an accident of personality, like black hair or blue eyes. Either you have it or you don't have it. If you don't happen to have it, that fact is no more to your discredit than failure to have an aquiline nose. But the failure to have it disqualifies you clearly for some kinds of jobs.

Executive ability, business ability, the talent for organization and administration—whatever you call it—is a most difficult thing to define. When you try to set it down on paper, you are baffled. And that difficulty is just what baffled the senators when they tried to make the public understand what the trouble with our war machine is. You can no more describe it than you can describe musical ability. You can't even tell whether a man has it until you have seen him try. Mr. Baker has taken the bow in his hands, and he has drawn it across the strings of the country's industry, and the result has not been those coordinated sounds that make harmony. Decidedly not.

For the present, Mr. Baker has won a victory. The feeling of the country is that he has refuted his critics. And he has. But he has refuted them, not on the fundamental merits of the controversy, but merely in the arts of debate. His victory is purely dialectic. That is the field in which Mr. Baker is more expert than any man in the Senate. The senators did not have the genius to make clear just what the defect of our war machine is. Moreover, the way in which the controversy came up made it exceptionally easy for Mr. Baker to win. Stated chronologically, it began with Senator Chamberlain's speech at a dinner in New York, when he said: "The military establishment of America has

fallen down; there is no use to be optimistic about a thing that does not exist; it has almost stopped functioning. Why? Because of inefficiency in every department of the Government of the United States. I speak, not as a Democrat, but as an American citizen."

Now, Senator Chamberlain had hardly said that before he knew he had said it badly. Again and again, in his later defenses of his position, he referred to the fact that he had been speaking without notes, and at a dinner. The opening charge, unfortunately, had been expressed in an oratorical, inexact way, extremely easy for Mr. Baker to disprove. It involved what Mr. Baker would call "a universal affirmative." It is as if you should say that "every man in Germany is a militarist." If your opponent can produce one lone German pacifist, he wins. When Senator Chamberlain said that "every department of the Government is inefficient," reasonable persons felt that it carried its refutation on the face of it; and Mr. Baker must have smiled the smile of the cat which observes the door of the canary cage open.

But if Senator Chamberlain's charge was uttered in the intoxication of oratory, President Wilson's reply was uttered in the intoxication of anger. When the President said that Senator Chamberlain's "statement sprang out of opposition to the Administration's whole policy rather than out of any serious intention to reform its practice," he meant to convey the same thing that a cruder man means to convey when he yells to his opponent: "You're a pro-German." And this was a very inexact and very cruel thing to put out about Senator Chamberlain. No man in the country has worked harder for the Administration's program than he. As chairman of the Senate Committee on Military Affairs, he was in favor of preparedness, and working hard for it, long before the President was.

Then, when Senator Chamberlain, in his address in the Senate, tried to make good on his charges, he realized the difficulty that every speaker and every writer has in making concrete and vivid to the public mind that most abstract of abstractions, "failure to organize and coordinate," and so he fell back on what newspaper men call "human interest." He read letters from mothers who had had sons in the newly drafted army, and who felt that in sickness and death their sons had had a sort of treatment so different from the refinements they had been accustomed to that the mothers felt bitterly aggrieved. And the newspapers, which were not able to print all of Senator Chamberlain's speech, picked out these "human interest" parts of it. The result was that the deep, inherent defects of organization have never been made clear to the public. And it so happened that on the very points which had been emphasized, Secretary Baker was able to make a particularly good defense. He took up in detail the case of a family who had been shocked by receiving their son's body not in his uniform, but merely wrapped in cloth. He showed that this death had happened in a Canadian camp, and that the custom of the British army had been followed—sending the uniform in a separate package, the body being wrapped in a winding sheet. He showed that this had been remedied by putting an American officer in the camp, charged with the duty of preparing the bodies of dead soldiers in accordance with the American custom. He read a letter from a distinguished and popular woman novelist who had visited the camps and hospitals and gave them an enthusiastically clean bill of health.

Altogether Mr. Baker made out a good case for the human care of the individual soldier, and, so far as the public could understand, Senator Chamberlain's charges were rebutted.

What, then, is the essence of the really fundamental charges that were made out against Secretary Baker's department? The best summing up of them that I have seen was made by a writer in the New York "Tribune." Have the patience to read them through, for the whole point of the case is that it takes patience to comprehend it:

"That the Government has not been effective on the material side of the war.

It is as if Mr. Baker had built a huge factory with only a two-by-five door!

"That the country's vast industrial and mechanical resources have not been properly synchronized.

"That the President, so wonderfully able to impart to the people the emotion which 'teacheth the hands to war and the fingers to fight,' has suffered himself to be overwhelmed by the physical problems of war itself as a hard practical undertaking.

"That the war machine, for want of great coordinating ability at its head, has been breaking down." Now, if you have read this indictment, you will realize how forbidding it is, how forbidding the whole subject is, and how difficult to express in a way that the public can readily grasp.

#### The "Master Plan"?

SENATOR HITCHCOCK, like Senator Chamberlain, recognized the difficulty of making the people understand, of making concrete and vivid such forbidding abstractions as "organization" and "coordination." So he too sought the aid of the human-interest way. In this he did better than Senator Chamberlain. Senator Hitchcock tried, and measurably succeeded, through the aid of a simple story of an uncle with much money who called in his five nephews and said: "Boys, here is a great amount of money. I want you to build a house. Buy all the materials that you please. Each of you build a part of the house." The brothers arranged among themselves that one should build one side, one the end, and so on. They were good workers; they knew how to build. One built his end high and short, while the other built his end low and long. One built a long side that was low, and the other built a short side that was high. After they got the portions together they would not work. There had been no architect, nobody to plan; each had done his own part, but there was nobody to give the master plan, and it was not a house at all.

Applying this analogy to the situation at Washington, Senator Hitchcock said: "When, suddenly the nation was plunged into war, Congress could do nothing better than to vest in the President a lot of additional powers. He appointed men to exercise them so that now he has the oversight not only of the executive departments represented by the two so-called Cabinet meetings each week, but of many additional war bureaus. Some exist by authority of Congress, some without it. Let me mention some of them: (1) The board controlling priority of freight shipments; (2) the Raw Materials Board; (3) the War Industries Board; (4) the Food Administration; (5) the Fuel Administration; (6) the Shipping Board; (7) the Aircraft Production Board; (8) the Allies' Purchasing Board; (9) the War Trade Board; (10) the Director General of Railroads, and a number of others, all exercising great functions of war.

"Can the President coordinate them? Can he give the time to bring them together and harmonize them in the proper work without any machinery to do it? It is utterly beyond the possibility. These great war bureaus should be focused in some authority that would harmonize them and coordinate them. That

is what is proposed in the bill for a war cabinet of three men. At present these bureaus are running independently and sometimes running wild. The nearest approach to a co-ordination is an occasional conference of one bureau with another or with the President."

#### It's "Business"

IT is probably idle ever to hope to make this matter clear to the general public. For the thing is more or less technical. It belongs within the domain of business, of business organized on a large scale for the purpose of what is called quantity production. Business men understand it and are able to express it in a way that will make other business men understand. One, a representative from the United States Chamber of Commerce, was a witness before the investigating committee. Trying to picture the defect to committee members not themselves business men, he said: "There is no central control or planning. What is needed is some one who shall have power or responsibility for making decisions. The difficulty of getting decisions in Washington to-day is apparent

to everyone. It is an extraordinarily difficult thing to have any matter definitely and positively decided. The thing that we are trying to impress upon you is that the experience of business men has been universal, that without central control and responsibility no enterprise, large or small, could succeed."

To a large extent the difficulty goes down to the very heart of the personality of the Secretary of War, to that personal trait called mental attitude. This was brought out by Senator Weeks, who, in expressing it, showed an understanding one would not have guessed he had of psychological refinements:

"When the Secretary of War was before the Military Committee he was asked if there were things which could be done by the War Department to stimulate the service so that it would be able to do more effective work. He replied that he did not know of anything he could suggest, for whenever the soundness of a change was demonstrated to him he acted at once. That sounds wise and efficient, but it is the difference between waiting until you meet a problem which may require months to prepare for and having a deliberating body looking months ahead, finding that problem, and preparing a definite plan for its solution when it develops."

#### There Is No General Manager

IF the indictment as a whole is difficult for the general public to comprehend, some of the details are sufficiently simple and concrete. This one was brought out by Mr. Homer L. Ferguson, president of one of the big plants which are relied upon to build most of our new shipping. The substance of his remarks on the difficulty of taking care of thousands of added shipbuilders, in a small city suddenly filled by large army activities, will be found in Mr. Hungerford's article, "A Shipbuilder on the Job," in last week's COLLIER'S. Here is more of his evidence:

"We have the Navy Department work, which we are directed to expedite in every possible way, and we have the Shipping Board work, which we are directed to expedite as much as possible; and the same week I have instructions from either one of the Government departments to give their work priority, and in the meantime the very people we are trying to serve are absorbing the facilities we must have for our people in order to do this work.

"I have information this morning that they could not get any water in the shipyard. The army has 15,000 horses there, all using water, and we have 20,000 soldiers there using water. We cannot get hard coal, for which our houses are built, with latrobe stoves, yet the army has put a lot of hard-coal stoves in their camps which might as well have burned soft coal. I took this matter up with the Secretary of War, and wrote him a letter, and discussed it with everybody in Washington I could discuss it with, and the Secretary is investigating and, I understand, proposes to put up some temporary quarters for the soldiers and the regular officers."

"Senator JOHNSON—That indicates lack of management and utter lack of cooperation.

"Mr. FRACUSON—It is due to the fact that the people have the power to arbitrarily give orders without knowing the consequences of the orders they give."

"Senator JOHNSON—And without knowing who else gives orders?"

"Mr. FRACUSON—Yes, sir."

Here, with all the map of the United States to choose from, the War Department selected, as the place to build a cantonment, with the many demands on local labor and housing which the cantonment involved, a small city which was already relied upon by the navy and the Shipping Board to expand to double its size in taking care of the requirements of those two departments. The answer, of course, is that these three departments had never been brought together, that there was no central planning and coordination—no "top-planning," as Mr. Child called it in his article in last week's *COLLIER'S*.

The record is crowded with other examples of failure to coordinate, to plan ahead. Up to the 1st of January last 21,117,612 pairs of shoes had been ordered. That is more shoes than have been ordered for the very much larger British army during three and a half years of war. If that were merely an example of ordering in a big way for a big job, it would be a cheering fact, rather than otherwise. But at the same time the army was short by several hundred thousand of the number of overcoats needed. Our shortage in several lines of arms and ammunition is serious. One alarming shortage is in powder.

Although this country must provide about half the powder needed by the Allies, and although we are short in the production of it to the extent of about a million pounds a day, the orders for the new buildings to increase our powder supply were not given until December. But all these things are merely typical details. If you should wade through the three or four thousand pages of testimony, you would find scores of them. But the big fact back of it all is that Secretary Baker never grasped the job as a whole. He never looked upon it as what it was, the turning of the United States into one great factory. He never got on top of his job, never dominated it. He never grasped the position of general manager of the United States at war.

#### *It Comes Back to Ships*

FOR the present he has beaten his critics. It was rather agreeable, sitting in the committee room, to see him do it—to see a frail, small man, by sheer acuteness of mind, by the qualities of an able lawyer and logician, expert in the use of words, with perfect urbanity, with a gentle, almost feminine voice, beat half a dozen senators with the facts in their favor. A massive senator would come at him with a massive question, and presently the massive senator would be flopping like a turtle on his back. But all the while you kept reflecting how different it would be if the sides were reversed: the able Mr. Baker cross-questioning. His victory is purely dialectic. As surely

as the Fourth of July will come in midsummer, the facts are going to catch up with him and with all of us. For you can tell the whole story with one detail which is typical of all the details and is the biggest of them. It comes back to ships. This nation is manufacturing munitions at the rate of five times the carrying capacity of our shipping. We are turning out some millions of tons of goods which are of use only at one spot on the earth's surface, the battle front in France. And we have not got, because we did not plan and coordinate, one-fifth the amount of shipping necessary to carry those munitions to the spot where they must go. It is as if Mr. Baker had built a huge factory with only a two-by-five door to get the finished product out, with only a narrow-gauge railroad and a wheezy donkey engine to get it away. The result is going to be worse than you will realize unless you reflect upon it. The stuff is going to pile up on our docks, and back up on our switches, and congest our railroads to the point of paralysis, and our great war machine will have to slow down before it has fairly got under way. The consequences, economic and military, are going to be extremely serious. And they will be on us in only a few weeks. Lack of planning and coordination! It is just a year ago the sixth of next month that we began to build the shells and guns. And it is only to-day that we are trying frantically to get the men to build the yards to build the ships to carry these shells and guns to France.

# "WE'RE IN THE LINE!"

BY WYTHE WILLIAMS

COLLIER'S SPECIAL CORRESPONDENT

PARIS, Feb. 1, 1918.

WE are in. A small portion of the American army has taken over its line on the front in France—the tenth month of our war against Germany.

Last June I stood on the quai at Boulogne when General Pershing and his staff first set foot on French soil. A few weeks later I saw the first detachment of our army land at a French port. It was this same detachment that, a few days ago, I saw disappear into the night as they turned in toward the trenches of their front line. I shall never see them again—that is, not all of them; for even now, as I write, it is more than probable that some have already paid the price of war.

In Paris one day, among the other boulevard rumors and gossip, I heard a whisper: "Some Americans are about to take over their line." I at once hurried over to the office of officialdom and inquired if this were true.

I was asked to divulge where I had secured my information. My questioner was somewhat taken aback when I told him my informant was not an American officer nor an American anybody, nor even a Frenchman, but an Englishman whose whisper had really been quite a vocal effort in a public place. Officialdom then remarked that, inasmuch as I seemed to know about it, I would be told later the exact time to leave Paris for the front—that my name was "on the list."

#### *Getting to the Front*

I WAS never notified, because this Paris office of officialdom never found out any more about it. After several days of vain inquiry, in company with fellow correspondents, I went by train and automobile to the town that shelters the Press Headquarters of our army, situated some thirty-odd miles from another town, the headquarters of General Pershing and our General Staff.

The chief press officer revealed the date when our men would take over their line. He told us where we might go to witness the undertaking, and

the means provided for getting us there. He also told us what we could and could not write, according to his definite instructions from General Pershing. And there was more, far more, that we could not write than that we could. In view of the restrictions, which seemed to include everything except what I have said in the first paragraph of this article, the arrangements for the cable correspondents seemed amusing. After long and heavy conference, it was decided that as soon as the official communiqué arrived from the Staff Headquarters town, thirty-odd miles away, the three press agencies were to be given a one-hundred-word "flash" on the wire. After this overture all of the eight special cable correspondents were to have another "flash" of one hundred words each. Then these same eight, filing their dispatches in the order drawn by ballot, were to be allowed one thousand words of descriptive cable. This would close the performance.

It was carefully explained that these almost ten thousand words would completely choke the telegraph wires from that town for thirty-six hours. Inasmuch as the stories of at least half of the eight correspondents would reach America after the first half had already been printed, it would be scarcely worth while for the latter to write any "descriptive stuff" at all. Again I point out that the press telegraphic arrangements, for the benefit of the American public, have been existent in this town for six months. To-day the number of French operators who cannot understand English is the same as on the first day that a cable was ever sent from that part of France on the subject of the American troops.

I will give no further chronology of what we correspondents did in order to get the facts and to understand this taking over of our line. Once it was decided that we could not go near the troops at all. We pointed out that the occasion was a part of the vital history of the war, if not indeed of the world; inasmuch as the performers were all Americans, we argued that the American people had a right to have some of that history written from the

ground. Finally the order was changed, after twenty-four hours of backing and filling, and we were permitted to go into the zone to see the men, but were absolutely forbidden to enter or go near the trenches. This last order was quite understandable, because the relief of a section of trenches is a difficult and ticklish performance at any time, and was especially so in this case because of possible confusion resulting from the difference in language. But, in the memory of certain recent cable dispatches, I wish again to assert that at this writing not a single correspondent has ever gone into a trench at its taking over by American troops.

#### *From Horizon Blue to Khaki*

SEVERAL years ago I visited these present American trenches when they were held by the French. I went over every yard of that front when it was one of the important sectors of the line. Looking back to my nights and days passed there, it was quite easy to shift the color scheme from horizon blue to khaki; it was a simple matter to change the bearded poilus and grinning Africans into slim, clear-skinned young Americans, and to look forward to the American "zero hour" when our soldiers would make their first attack. "Contemptible little armies" can grow fast once they are planted. Our force now in the line could not numerically be called an army (unless it were acting as a punitive expedition in Mexico); but the mere fact that the first section of American troops is now guarding its own trenches, sending its own patrols and its own raiding parties through the barbed wire and across No Man's Land, should force our army chiefs to speed up and finish the training of new divisions landed and landing. We shall need them all too quickly to make good the losses of the First Army and to form new armies to expand the American military zone.

Our regiments left the tiny villages where they were billeted, some miles behind the trenches, just at sundown. The day had been somber and the air dank, like almost every day in France at this time

of year. The roads were unending streams of mud and water. Machine-gun companies went first, sloshing and slipping along under a fine drizzle that would at least prevent any German reception in the form of a gas attack. The air was too dense and still for gas. The men were calm and quiet, and those who said anything at all simply expressed the general opinion that they were glad they were moving—moving to the real front, to fight; they were completely fed up with training and waiting.

An imperative whispered command soon silenced all conversation, and there was only the gentle padding of feet in the mud as the infantry then took up the march, platoon after platoon. Cigarettes were prohibited in the general order that no lights were permitted so close to the lines. At a certain point French liaison officers met each platoon and silently signaled the American officers to follow them into the dark, along a narrow, slippery path that wound slightly uphill through a black forest. One of these Frenchmen explained that there had been some slight artillery activity along about dusk, but that the French batteries had quickly silenced it. There might be a return barrage fire, he explained, so every precaution was necessary. The Germans had the range of the mud path, so that even a "slow barrage"—that is, one shell every few minutes—might seriously impede "la relève."

After a few moments of climbing, the last file of our infantry could feel—for they could not see—passing bodies of men headed toward the rear. Occasionally our men would brush against them on the narrow road and slip aside into the ditches knee-deep with water. By a muttered imprecation in French after one of these collisions the Americans realized that these soldiers were the French troops they were relieving, probably the first platoons to go out as our first platoons marched in. But the Frenchmen did not know that the long-awaited "American relief" was passing them. The effort of the High Command to keep the matter secret had prevented even a whisper reaching the front.

Another case where news concerning troops reached them after open discussion in the cafés of Paris!

No indication was given by any of the Americans of their identity. Both files plodded silently along, a weariness in the march rhythm of the one, an alertness in the other that was significant. There were no salutes from the almost invisible officers who marched at the heads of their columns.

The last American platoon left the narrow path, turning toward the position on the right it was to occupy. It passed through a mass of broken stones that had once formed a village. Our men had never seen a demolished village, so they peered eagerly about. Again they sensed soldiers filing toward them. The Frenchmen had seen so many ruins that those through which they were soon stumbling registered no new impression. A few of them sank down among the stones to rest just as several flares from distant hills rocketed up and for a moment illuminated the scene.

#### *The American Relief Has Come!*

THE poilus sitting at rest were scarcely recognizable, they toned in so exactly in color with the ruin all about. Their figures looked more like the high reliefs carved on the walls of ancient churches than like human beings. They were as motionless as the debris. They were covered with dirt and mud. Their packs and helmets were crusted with clay, and their faces gray with fatigue and streaked with grimy sweat. All they wanted was rest; they looked with unseeing eyes at the staring Americans. The fact that "la relève américaine" was at hand was not yet known in the zone of the armies.

The Americans marched out into an open field. Their trenches were just on the other side. It was downhill now, into a little valley. On hills opposite were the German lines; these hills toned into the blackness of the starless, moonless sky.

There came a suspicion of swagger into the walk of the Americans, swinging down the hill. None of them were tired. The climb had been nothing.

They were fresh and clean and recently fed. Their packs were in good condition. True, some of them had wet feet, because their new boots had not been sufficiently oiled before starting out, but, all in all, there was nothing the matter with them. The hour was still early, so there would be plenty of time for the field kitchens to follow to their positions and send morning coffee up through the communication *bougies*.

Another file of French soldiers was climbing up the field from the communication trench that led to the front line. There were only a few of them, and they marched slowly. A few stumbled. As the Americans came abreast there was a succession of flares on the hills, so that for a few seconds the field was bathed in flickering blue light. At the head of the French column was a bedraggled, bearded sergeant. He stared straight ahead, his eyes so fixed and lifeless they might have been blind. Then he saw the column of Americans. He did not recognize them, but his hand came up in a mechanical salute. A young American lieutenant returned it; and then the man's eyes and mind awoke. The flares flickered out and the American officer disappeared in the dark. In the light of another rocket the French sergeant could have been seen still standing at salute. He smiled now, and as the light again died he gave the first signal to French troops that Americans had taken over their line. It was the phrase which every soldier in the French army had been repeating as a question for months: "La relève américaine est venue?" ("The American relief has come.") The sergeant reiterated the miracle in a whisper: "La relève américaine est venue." And as the Americans were swallowed into the mouth of their trench every poilu in the line stood at rigid salute: ink, vague forms in the occasional glare from the rockets.

As I came away I saw the moon had risen and was sending a pale gleam through the heavy dark. The relief of the trenches was successfully carried out without incident, says the War Office dispatch.

*This is the 3d of a series of articles by Mr. Williams.*

# OUR MILITARY RAILROAD IN FRANCE BY EDWARD HUNGERFORD

"WAR is a construction job," says my friend, the man from Tech—"a construction job, with fatalities thrown in."

To which I should like to offer an amendment and say that modern warfare is a transportation problem of the first magnitude.

The United States to-day faces the greatest military problem of all ages; the movement of an army of a million men, perhaps two or three times that number, five thousand miles—more than three thousand miles of this distance through the submarine-infested North Atlantic. And with these men go hundreds of thousands of tons of food, ordnance—large guns and small—aircraft and their appurtenances, remounts—a horse to every five or seven men—and finally such valuable allies of the modern army as the signal, the medical, and the hospital service, with all of their impedimenta. The ocean part of the problem is one of ships—many ships—and their adequate protection, but ships cannot put our army down at the fighting lines. That is a problem for the railroad. And because the railroads of poor, torn France are already overburdened with her own military needs, we have begun to create over there our own transportation line—the United States Military Railroad in France. It will, when finally finished, connect the ocean ports allotted to our use with our sector of the fighting line, a distance of some 600 miles—which is more than equal to that between New York and Cleveland; indeed is farther than from San Francisco to San Diego. It is the hand of Uncle Sam; its diverging branches, close to the front, are his sinewy fingers; over the pathway of the sea stretches his mighty right arm.

#### *The Stems Start!*

PICTURE to yourself a French seaport, a modern French city. Its streets, if not always broad, are for the most part asphalt-paved. Its buildings are handsome and substantial. It has a cathedral and many churches. It is a fine city, but mistake not its modernness; it is six centuries old.

Yet here beside the broad river changing into an estuary of the sea which the French port has faced these 600 years are new docks; docks verdant with the rawness of fresh-cut timber—huge docks too: tipples and cranes and wharf houses and warehouses, with a mass of tracks connecting all of them and noisy switch engines going back and forth. And at the berthing spaces are great gray ships in from the United States, discharging their olive-drab burdens into railroad cars of the same hue.

These bear the lettering of the United States Military Railroad on their freshly painted sides. There are clatter and roar and enterprise and a huge lot of hard, hard work. But this cannot be France; this must be—these docks and warehouses, even though they are fabricated of timber instead of the more familiar steel, must be Ashtabula or Conneaut or South Chicago. And yet the signs upon the little shops that line the road from the town to the terminal are in the Gallic phrase; the little old lady who slides the iron gate across the highway at the near-by railroad crossing is as French as the gray bulk of Notre Dame de Paris.

Another port such as this is to be created scarcely 200 miles away. It too bears the name of an ancient French city. And by the time you read these words its docks and warehouses should be well started. To-day they await the coming of the heavy timber from overseas. For heavy timber construction, such as our engineers delight to use in such emergencies as these, is strange to French eyes. They have not been used to seeing timbers half as thick as a man is tall and seven or eight or ten times as long.

From these two separate ports the two main stems of the United States Military Railroad will start. One for a time follows the windings of a lovely river; the boys who make their entrance to France upon this line will be fortunate indeed. The other is a slightly more direct route. It plunges at once away from the sight and smell of salt water and thrusts itself directly inland, cutting through the crests of rolling hills and spanning great wide valleys. It should be understood at the beginning that the main portions of these lines are not new. They have not been constructed by the United States; nor did the French build them with any military use whatsoever in mind. They are portions of the lines—in many cases side lines rather than main stems—of the existing system of French railroads. For, as we shall see in a moment, the construction problem of the United States Military Railroad in France has been almost entirely one of seaport terminals, of division yards, of divergent lines, and of light railways at the front.

#### *A Cross-Country Line*

UPON my desk rests a copy of "L'Indicateur des Chemins de Fer," which is to France as the "Official Guide of the Railways" is to this country. It shows the six great railroads of the French Republic, the dozen or more main stems of five of these, radiating from Paris as the spokes of a wheel from their hub. The two main stems of the United States

Military Railroad cut from one side of France to the other and cross the spokes of this wheel at acute angles. In other words, our railroad over there is a cross-country line running at angles to the main paths of peace traffic—just as Twenty-third Street crosses Broadway or as the Delaware & Hudson crosses the main line of the Illinois Central Railroad across the main stems of traffic in the United States almost at right angles. A transportation man can quickly see that this has meant the least possible upset to the traffic conditions on the war-congested French railroads—our simple method of the utilization of branch lines and cross-country tie lines. Our military railroad so intersects four of the six great systems of the country—the Etat, the Paris-Orléans, the P. L. M. (Paris-Lyon-Méditerranée), and L'Est. It uses portions of all of these lines for its two double-track main stems, which in the main are parallel, although they cross one another between the ocean and the military front.

Yet while it uses these lines, its operation is absolutely distinct from theirs. It has had to unite sections of railroads ordinarily as competitive or divergent as the New York Central and the Pennsylvania. In fact, we can best gain an idea of the location and the operation of our military railroad overseas by reversing the picture and imagining it being built by France across our own United States. Which can be the more readily understood by a reference to the accompanying map.

#### *A French Military Railroad Here*

SUPPOSE that a great enemy force has landed somewhere upon the desolate shores of Louisiana and made a far-reaching invasion, both up the Valley of the Mississippi and off toward the Southwest and the Mexico line. And the army of the United States, having become hard pressed, the Republic of France has become our ally and has followed her distinguished precedent by again sending an army to our shores—only this time an army a hundred times the size of the force which Rochambeau and Lafayette brought here, nearly a century and a half ago. Suppose our resources to be as nearly exhausted as our army, and that France is giving bountifully and cheerfully of her stores, but that her problem here (like ours in France to-day) is chiefly one of military transportation.

The French have been assigned a sector along the east bank of the Mississippi, from a point halfway between Natchez and Vicksburg to one close to Memphis. They are not only preparing to hold this,

AP © Kadel &amp; Herbert

There has been great haste to build the necessary connecting lines—

From the ocean ports allotted to our use to the battle front

but to advance. But to reach their sector from the North Atlantic seaboard—avoiding the submarine-infested Gulf of Mexico—is the real problem. Our own railroads are struggling valiantly to meet the many necessities of our own huge, widespread army, desperately trying to hold the invading host in check. The Washington authorities assign Atlantic ports to the French—good harbors, which in recent years have fallen a little into disuse. The chief port of the North, let us say, is Salem, Mass., and of the South, Port Royal, S. C. From these, and possibly a few others closely adjacent, the French Military Railroad in the United States is being built.

No, not built, but adapted. For in this emergency no tracks are being laid, save for terminals and division yards or for intersecting certain links of existing lines—around Springfield, Mass., for instance. The northern French line heads due west from Salem, where huge temporary docks and warehouses have been built, goes just south of Lowell and Lawrence, and yet avoids the war-congested area about metropolitan Boston. It traverses side lines of the Boston & Maine up to a point just north of Springfield. And because Springfield is a great and congested railroad center even in times of peace, the French Military Railroad does not try to avail itself of any of the yard and engine houses there, but builds its own, even though this involves the construction of a temporary bridge across the Connecticut River.

At Springfield the French road leaves the Boston & Maine and, after running for four or five miles upon the main line of the Boston & Albany—even though this has necessitated the adding of another pair of rails to that congested railroad—dips sharply to the south and follows the tracks of the Central New England Railroad to and across the Poughkeepsie Bridge. The grades on a part of this line are steep and some of the curves are short. (But so are the grades steep and the curves short on some portions of the line of the United States Military Railroad in France.) It is a problem met, in a war emergency, by the design of a proper kind of sturdy, hill-pulling locomotive of comparatively light weight.

#### In Forty Days!

AT Maybrook, N. Y., thirty miles west of the Hudson River, the Central New England connects with the Lehigh & Hudson, which carries the French road on to Easton, Pa. Great yards and engine houses at Maybrook have been expanded. From Easton to Allentown a short run of sixteen miles, over the Central Railroad of New Jersey, then a longer one upon a cross-country route of the Philadelphia & Reading, bring the French Military Railroad into Harrisburg. It would have cost entirely too much to build a new bridge across the Susquehanna—two miles wide at this point. It has happened, however, that the row of tall piers of the uncompleted bridge of the ill-fated South Penn Railroad still stand at Harrisburg—unused for thirty years. The quick ingenuity of the French engineers seizes upon these, and even if they have rather bragged

about the way they put up an emergency double-tracked superstructure in forty days, clearing not only the river but the busy main line and Northern Central divisions of the Pennsylvania Railroad as well, we must remember who they are and be a little lenient. Which continues the allegory.

#### Feathering Out

FROM Harrisburg, Pa., to Hagerstown, Md., over the ancient Cumberland Valley Railroad; from Hagerstown to Bristol (which balances itself evenly upon the State line between Virginia and Tennessee) on the Norfolk & Western; from Bristol, through Chattanooga and on to the firing line south of Memphis over the Southern Railway—here is the north main stem of the French Military Railroad, which avoids both the overburdened main lines of our railroads and the great cities, with their congested metropolitan districts, yet is built entirely upon existing trackage of fair grade from Salem, Mass., to near Memphis, Tenn., and is direct and reasonably efficient. The map shows the way. In a similar fashion the south main stem of the French road, by utilizing existing and little-used lines, runs from Port Royal to a point north of Vicksburg. And within a hundred miles of the Mississippi River these two main stems of French transportation are not only united but are feathered out into many army service branches, which in turn are still further feathered by the use of many, many miles of narrow-gauge light railways. Upon these long rails, interspersed with their regular traffic, run French trains—cars built in Orleans, drawn by locomotives the output of Lyons shops,

Reverse the picture! Turn negative into positive, fancy into fact! It now is the United States Military Railroad in France that we see, and that railroad is real; as real as the Grand Central Terminal in New York, or its smaller brother in your own town. Its two main stems have long since been allocated and there has been great haste to build both the necessary connecting links and the division yards. When General Pershing asked for wharf buildings, 225 experts were on their way within a fortnight. And 19,000 freight cars, 130,000 tons of rails, 500,000 ties, 600 miles of telephone wire, and other equipment were the first orders from the American Commission. When our rails could not come rapidly enough from our rolling mills, or were delayed through lack of ships, the generous-hearted French, represented by M. Albert Claveille, then Minister of Public Works and Transportation, did not hesitate to tear up their own tracks—where possible, the second track of double-tracked routes carrying, comparatively, the least amount of traffic.

In a similar fashion the Belgians loaned us locomotives, thus saving time and tonnage—Pershing received 600 in a single shipment. Now, however, nearly 1,000 locomotives—a motive-power equipment about equal to that of the Lehigh Valley Railroad—and 19,000 freight cars are already under construction in American car and locomotive shops. A few of them have started overseas. (These engines must not be confused with the great orders placed by the French railroads with the Baldwin and the American Locomotive Works within the past two or three years, delivery of which has been under way. However, they are greatly similar.)

A few of these military engines for France—awaiting "knockdown" and boxing into nineteen great crates for each engine—have recently been put in temporary emergency service to help relieve the great freight congestion in the Northeast. Folk round about New York and Philadelphia, for instance, have seen them—trig freight pullers, in battleship gray, with "U. S. A." in great initials upon their tenders. They are not large engines or heavy—as we view locomotives. They are of the so-called Consolidation type and of a size which American railroads outgrew more than a dozen years ago. Each weighs, without the tender, about 166,000 pounds. That they are not heavier is due not only to the limitations of the "clearances" of the French tunnels and bridges, but also to the fact that the railroads of our ally are built with a ruling grade of 1 per cent—or 52.8 feet to the mile. This, oddly enough, is the grade which the builders of our earliest railroads in the West adopted. But in recent years ruling grades of from but one-third to one-half per cent have been our maximum in good construction, permitting the use of the heaviest locomotives in the world.

In general appearance these engines more closely resemble the motive power of foreign railroads, with their half cabs, their low freeboard, and in their two stout bumpers (Continued on page 10)

For military reasons it is inadvisable to show a map of our railroad in France, but reverse this map and you have a vivid idea of its direction and layout

the whole manned and directed and dispatched by Frenchmen, using their native tongue—and doing it all so well that the horrible war in the United States is being won, slowly but very, very surely.

# Collier's

## "The Battle of 1917"

A FEW readers of COLLIER'S may have seen a cabled message in the "Times" newspaper of New York questioning the truth of an article communicated to us by WYTHE WILLIAMS and called "The Battle of 1917." If they took the pains to go through these columns of unsupported assertion (which for their sakes we hope they didn't), they must have remained unconvinced at the end. The cable is signed by CHARLES H. GRASTY, but is plainly in the handwriting, so to speak, of M. PAINLEVE, former French Minister of War. Nobody can be entirely right who denies so vehemently. The truth never screamed as loud as all that. M. PAINLEVE, through Mr. GRASTY, admits that Mr. WILLIAMS had access to documents, but asserts that the persons who "indiscreetly" showed him the documents "cunningly" concealed parts of them, thus betraying him into incorrect conclusions. Indiscretion and cunning, two strange partners, must have worked together to fool French journalists also, for there were any number of comments in the newspapers of France, of the same general character as Mr. WILLIAMS'S. Finally, to support the contradiction of the COLLIER'S article, the "Times" correspondent turns on General NIVELLE, who is apparently suspected of supplying the facts for "The Battle of 1917," and attempts to discredit him. General NIVELLE is absent from Paris and cannot reply.

The facts of COLLIER'S connection with this article are clear. When Mr. WILLIAMS wrote it he was not connected with COLLIER'S. He was the accredited correspondent of the New York "Times" in Paris. He sought a paper of national circulation for this important comment, and sent "The Battle of 1917" to COLLIER'S. Upon its appearance in France, M. PAINLEVE cabled through the "Times" to the editor of COLLIER'S a denunciation of the article so emotional in character that we declined to print it before giving Mr. WILLIAMS a chance to reply. That is, having some knowledge of politicians on both sides of the Atlantic, we were reluctant to injure the credit of a conscientious newspaper man on the demand of one of this class. There were other reasons for our reluctance. The first was that the tone of M. PAINLEVE'S cable made us doubtful of its sincerity. The second reason sprang from the fact that our only acquaintance with Mr. GRASTY came from a recollection of his statements about submarine warfare last year—an adventure into romantic statistics that gave almost the first touch of comedy to the news of the war. Neither to the indignant politician nor to the imaginative statistician were we willing to sacrifice a writer of good repute. M. PAINLEVE'S cable was sent to the Paris representative of COLLIER'S for investigation. That investigation was going on when the Painleve-Grasty article appeared. Since then COLLIER'S has received a message from Mr. WILLIAMS in which he says he "reaffirms the exactness of every charge in the article," and promises a full reply. After reading articles in the French papers we are of the opinion that it is hardly necessary for him to go to so much trouble.

## Real Labor for Real Farms

IF you ever stuck a plowshare in the soil, you know that farming is a local matter. That is how this farm-labor problem looks to us. If solved to any very material extent, it will be by localities, the U. S. A. being a sizable expanse of territory in one way and another. Incidentally, the professional farmers will probably have to put up with a good deal of part-man help derived from wherever they can get it. We hope said help will go, on the whole, to the more professional and more successful of our agriculturists. This is a good time for raising supplementary supplies of garden truck as near the household table as possible, but it is no time at all for scattering out on the production of the staple crops or for trying to reclaim obsolete farms for these uses. Real farm labor is going to be scarce, and it must be applied at the points where it will do the most good this year. Every town very properly wants to see the rural regions about it built up to that maximum of growing power, and some have done much toward that end, but the present situation is a national one and must be handled nationally. We are not on a war basis yet, we are still having a lot of unnecessary things done, and we can therefore divert a good deal of strength to raising food for our cause. We've got to. That labor and material must be put where it will count in our war. The shot that hits is why we make guns.

March 23, 1918

## "In the Trade"

A FRENCH trade paper prints this advertisement in the fourth year of the war:

Paris

Having Made Our Pile, we Are Retiring!

A BUSINESS IN GROCERIES

WHOLESALE AND SEMI-WHOLESALE

An establishment near the Central Markets, founded in 1900. Rental: 8,000 francs. Custom: merchants in edibles (grocers, dairymen, fruiterers, etc.). Six to eight employees; four horses in peace time (two at present); goods in stock to the value of about 500,000 francs. Business: about 700,000 francs in time of peace and over a million in war time. NET PROFITS: in peace time, 25,000 francs; the net profits since the war will be communicated confidentially.

The Paris newspaper, "L'Œuvre," which reproduces this interesting advertisement, confines itself to making this comment: "What are the tax collectors waiting for before they look into this 'good thing' and 'confidentially' inquire what is its 'net profit since the war'?" The food hogs are not all American. It would seem; and Mr. Hoover is probably well informed that in France—yes, even in the country which has given and suffered most in the war—the grocers and the coal merchants have proved the littleness of the trader soul. "My grocer will give his son to the *patrie* and cheat you out of two cents the day after his funeral," said one Frenchman the other day. But all the grocers aren't French; and, obviously, not all grocers are cheats—either in France or in America.

## We Doubt It!

WE always blamed those dinky little mustaches, the kind sawed off at the ends, on the British army. Certainly the first we ever saw disfigured the close-shaved young officers of that well-behaved organization back in those far-off, happy days when, speaking approximately, the British army was as small for the British Empire as the dinky little mustache for a man's-size face. But listen to a writer in the Paris "Matin." M. LOUIS FOREST, whom we paraphrase:

The girls are writing me letters begging that I step in and, by one of my articles, save for civilization the mustache à la française—the long, silky, distinguished, and well-cared-for kind of a mustache. And it is true, that the present style is all in favor of a close-cropped toothbrush, just under the nose. "Stupid and silly!" cry the young ladies—but it appears that the style comes from America. . . .

M. FOREST, we protest! What evidence can you offer that the toothbrush is an American invention?

## Don't!

THE grave error of M. LOUIS FOREST, who is a wonderfully informed man on a thousand subjects, brings out a profound verity. That is the danger of all generalizations touchin' and appertainin' to nations. "You cannot," as EDMUND BURKE so gravely affirmed in the speech "On Conciliation with America," which every American collegian used to have forced upon his annoyed attention—"you cannot indict a whole nation." Neither can you praise one. Or, rather, you can—and shouldn't. We are much impressed by these truths when we reflect upon the silly undervaluation of France, in Great Britain and the United States no less than in Germany, before 1914; also when we reflect upon the unqualified and unreasoning deification of French character (which, speaking humanly, no one admires more than we do) since 1914. There is something of Mrs. EDITH WHARTON which bears upon this point of the silliness of making general statements about nations.

"Twenty years ago," writes Mrs. WHARTON in an essay contributed to the French "Revue Hebdomadaire," "during a cruise in the Mediterranean, the yacht on which I was traveling had to put into a little port of the Peloponnesus, in a storm.

"Before disembarking on this foreign soil, which was rumored to be none too safe, we consulted our guidebook. Here is what we found there: 'The inhabitants of this region are brave, amiable, hospitable, and generous, but ferocious, traitorous, vindictive, and addicted to piracy and brigandage.'"

When you are tempted to generalize about England or France or perhaps even about the United States, remember the advice of the philosopher and—don't! We mean to begin by practicing this philosophy in respect to mustaches.

## Small Talk About an Alley

A PORT in France which teems with Yankee troops has a brief alley named the Street of American Victory. More than one youngster in khaki has wondered by what prophetic instinct such a name was given to such a street over a century ago? A local historian argues, however, that there was no thought of 1918 and its events when the Bordelais potter HUSTIN gave his wife's name VICTOIRE to the cul-de-sac. Hailing from Martinique, Mme. VICTOIRE was known to the town of Bordeaux as "Victoire l'Américaine"; by the time of the French Revolution the street itself was called "Victoire-Américaine." Probably many a passer-by in 1800 assumed that the Street of American Victory had been so named to commemorate the American War of Independence. In 2000 the passer-by will imagine that the street was named in honor of what the American army accomplished in the summer or fall of 1918. Anyhow, one may hope so.

## Gardening—a Privilege

ALL this urging people to grow some foodstuff this summer is not any effort to saddle them with an extra task, but only to wake them up to their opportunities. Too many civilized men have hands too soft to be either masculine or useful. Hundreds of thousands of people in our country stay indoors so habitually throughout the year that even sitting out on a porch has for them a real quality of adventure. Perhaps one reason why porch ceilings are sometimes painted sky blue is to remind the inmates of the look of the sky! Many of us dodge so quickly from one shelter to another, from home to trolley to office and back again, that we get very little notion of how lovely the changes of light are at night and morning. In a garden you get all that and sometimes also the coming of the stars. Legend and science combine to tell us that we arose from the earth and in time will take our rest in it again. Why not know something more of it while we are here? In a garden certainly you learn man's place in this universe as chooser between better and worse, preferring the one and hindering the other, and of his responsibility for his own choices therein. How much of kindness would we have if our race had not had to deal with budding and blossoming plants, and how much of intelligence if we had not had to watch the procession of the day as it strides past between our garden walls? Take your troubles out for cure to the healing peace of green things growing. Get back to earth's realities this year; go gardening!

## Is Seed Scarce?

WE do not know. There have been better years for crop quality than 1917 was with all its vagaries of hot and cold, wet and dry and frost. Probably there are men in the garden-seed trade who want to talk their goods up to higher price levels. Hot air inflates, rises, and buoys up, and the expedient in question is an ancient one in dry goods and other lines. But suppose seeds are scarce—why not then use them carefully? The average amateur commuter sows with a lavish hand so that the first growth of his planting either chokes itself untimely or comes up thick as fur on

a green cat's back. And when it once gets a good start growing, how he does hate to thin out the young shoots! The result is that still less of his kitchen-garden stuff comes to maturity, so that his product average per seed is about .0003 per cent or thereabouts. Higher prices may avail to remind him that seed is not dirt and that his drills must have space for filling in with earth. There will then be less to thin out and throw away and, probably, a sturdier crop. If worst comes to worst, one might transplant the young specimens of various succulent varieties or even go get advice from those who know how. It is not, normally, very hard to get. In

any case, order your seed now, if not sooner, and scan your neighborhood for humus, fertilizer, and any helpful chemicals or compounds that will make things grow. No matter how high seeds go they will never be as dear as food is to the hungry.

## Alphonse and Hinckley

IT may be true that America was going soft and the war had to come along to harden us. But unless HINCKLEY'S is an isolated case, it is also true that America is softening—in the right direction.

"I have adopted a French soldier," said HINCKLEY, who is well beyond the military age and waist measure.

"But I thought you abhor writing letters."

"We don't correspond, Alphonse and I," said HINCKLEY. "But I take him out to lunch and dinner every day." Now HINCKLEY is unmarried and eats about town.

"Alphonse has been invalidated here?"

"Not at all. He's still out there on the Chemin des Dames. You remember Hoover's mentioning the fact that in four months we saved 140,000,000 pounds of beef for the Allies? Well, that works out to just a pound

a week for every living soul in France, which is first-rate. But you know what figures are. Cold. The personal touch isn't there. That's why I picked out Alphonse. Of course his name may be Raoul or Marie-Joseph-Anne-Jerome, but let us say it's Alphonse."

"And you save meat for him?"

"We dine together," said HINCKLEY. "He's good company; silent chap, with something of the look of Verdun about him; but he's all there. Well, formerly, when I went out by myself, it was frequently a sirloin and smothered with onions. Now I look across at Alphonse and say: 'Well, *mon vieux*'—that's right, isn't it, *mon vieux*?"

"Sure; or *mon cher*, if you prefer that."

"Well, *mon vieux*, I feel like an onion omelet to-day. You better get around a couple o' chops." He protests politely, of course, but you should see him sail in just the same."

"You see him all the way out there on the Chemin des Dames?"

"Yes," said HINCKLEY. "Sometimes he says he is not in the mood for eating. Then I am firm with him. 'None o' that, Alphonse, *mon vieux*,' I tell him. 'Buck up, *Ventre Saint-Gris*!'—that's the way you pronounce it, isn't it?"

"Oh, yes, that's perfectly sound Alexandre Dumas père."

"That extra meat diet is doing Alphonse lots of good," said HINCKLEY. "I've taken in my belt two inches since Thanksgiving."

"What's a mother's love, Newton, if the eggs spoil?"

# SNOWBIRDS

*Photographs by Press Illustrating Service*

WAR nowadays is a pretty dreary affair—mostly a matter of mud, all-round discomfort, and boredom. In the Italian Alps, however, there still remain some of the picturesque phases of traditional warfare. Trenches lose much of their usefulness, and open fighting is frequent. The snow, too, makes necessary special uniforms and devices. Here is an Italian ski patrol descending a precipitous slope at Venerocolo, on the way to its base.

*The Italian soldier in the Alps carries alpenstocks and wears a special white uniform to match the snow*

*A group of Italian ski patrols near Garibaldi Pass returning to camp through the snow at sundown*

*They look like a returning Arctic expedition, but they're just a squad of Italian Alpine fighters*

# The TRAIL of HINDENBURG

*Photographs by Pictorial Press*

NEARLY seven hundred years ago—about the year 1225—Enguerrand III, a noble of France, built the castle of Coucy in the Aisne region, a few miles from Laon. It was a huge edifice, with four great towers in its outer walls and an enormous donjon within that rose 200 feet above the plateau on which the castle was built. Coucy was the mightiest stronghold in all France, and its master, secure behind its walls, could defy an army. The castle was restored by the French Government in 1856, and became one of France's great relics of the past. Thousands of tourists visited it every year, and Baedeker's "Northern France," referred to it as "one of the most striking monuments of the feudal ages in Europe." Now Karl Baedeker of Leipzig will have to write a new chapter of its history. For Coucy lay in the path of the retreating German forces when Hindenburg made his famous retreat of 1917. What the barbarian hordes of the Middle Ages could not do, what even time itself had not done, German efficiency and thoroughness accomplished in a few hours. There is one Hindenburg monument in Berlin. But there is another, in France, that will outlast any memorial to him ever built by German hands. That monument is Coucy.

*The Chateau de Coucy as it stood in the year 1914*

*Coucy, after the retreating Germans got through with it*

*One of the tree-bordered walks as it was in 1914, seen from a doorway of the castle*

*Here is the same walk, seen from the same spot, as it looked after the Hindenburg retreat*

# THE PRIZE PACKAGE

BY CHRISTOPHER MORLEY

ILLUSTRATED BY W. E. HILL

*He saw the bobbed brown hair and gray eye of Miss Denver*

*Lester looked at his watch with a frown as he passed her table*

LESTER VALIANT came back from Oxford with the degree of B. Litt., some unpaid tailors' bills, and the conviction that the world owed him a living because he had been suffered within the sacred precincts of Balliol College for three years. A Rhodes scholarship is one of the most bounteous gifts the world holds for a young man; but in Lester's case Oxford piled upon Harvard left him with a perilous lot to unlearn. You can tell a lot about a man when you know what he is proud of; and Lester was really proud of having worn a wrist watch and a dinner jacket with blue silk lapels three or four years before they became habitual in the region of Herald Square. But let us be just: he was also proud of his first editions of Conrad and George Moore; for he was much afflicted with literature.

Lester originated in the yonder part of Indiana, but when he returned from Oxford he made up his mind to live in New York. He felt it appropriate that he should be connected in some way with the production of literature, and after hiring a bedroom on the fourth floor of an old house on Madison Avenue, where several former friends of his were living, he set out to visit the publishers.

There is a third-rate club in London called the Authors' Club. A few years ago it was in urgent need of funds, and a brilliant idea struck the managing committee. Every writer listed in the American "Who's Who" was circularized and received a very flattering letter saying that owing to the distinction of his contributions to contemporary letters the Authors' Club of London would be very much pleased to welcome him as a member, upon a nominal payment of five guineas. About seven hundred guileless persons complied, and transatlantic travel became appreciably denser on account of these men of letters crossing to England to revel in their importance as members of a club of which no one in London has ever heard. And by some fluke the managing committee had got hold of the name of Lester Valiant, then at Oxford—perhaps because he had once published a story in the "Cantharides Magazine."

Probably they bought a mailing list from some firm in Tottenham Court Road. Cecil Rhodes's executors paid his five guineas, and he had his cards engraved:

LESTER G. F. VALIANT

The Authors' Club,  
London

The use of these pasteboards brought him ready entrée in the offices of New York publishers. If he had not been so eager to impress the gentlemen he interviewed with his literary connoisseurship, undoubtedly he would have landed a job much sooner. But publishers are justly suspicious of anything that savors of literature, and Lester's innocent allusions to George Moore and Chelsea did much to alarm them. At length, however, Mr. Arundel, the president of the Arundel Company, took pity on the young man and gave him a desk in his editorial

lars a week. Mr. Arundel had once walked through the quadrangle of Balliol, and he was not disposed to be too severe toward Lester's naive mannerisms.

To his amazement and dismay, Lester found his occupation not even faintly flavored with literature. He was set to work writing press notes about authors of whom he had never heard at Oxford and whose books he soon discovered to be amateurish or worse. He had been nourishing himself upon the English conception of a publisher's office: a quaint, dingy rookery somewhere in Clifford's Inn, where gentlemen in spats and monocles discuss, over cups of tea and platters of anchovy toast, realism and the latest freak of the Spasmodists. The Arundel office was a wilderness of light walnut desks and filing cases, throbbing with typewriters, adding machines, and hoarse cries from the shipping room at the rear. Here sat Lester, gloomily writing blurbs for literary editors, and wondering how long it would be before he would earn forty dollars a week. He reckoned that was what one ought to get before incurring matrimony.

LIKE all young men of twenty-three, Lester thought a good deal about marriage, although he had not yet chosen his quarry. The feeling that he could marry almost anybody was delicious to him. But this heavenly eclecticism endures such a short time! For youth abhors generalities and seeks the concrete instances. Also, much reading of George Moore sets the mind brooding on these things. Lester used to stroll in Madison Square at dusk, before going back to his room, and his visions were often of a dark paneled apartment in the Gramercy Park neighborhood where an open fire would be burning and some one sitting in silk stockings to endear him as he returned from the office.

His arrival caused something of an upheaval in the placid breasts of the two old college friends whose sitting room he shared on Madison Avenue. They were sturdy and steady creatures, more familiar with Edward Earle Purinton and Orison Swett Marden than with Swinburne and Crackanthorpe and Mallarmé. To his secret annoyance, Lester learned that both Jack Hulbert and Harry Hanover were earning more than thirty dollars a week, and he even had an uneasy suspicion that they were saving some of it. When he spoke about Beardsley or Will Rothenstein or the Grafton Galleries they were apt to turn the talk upon Ty Cobb and Tris Speaker. When he showed them his greatest treasure, a plaster life mask of himself that a sculpturing friend in Chelsea had made, they were frankly ribald. Jack was in the circulation department of a large magazine,

and Harry performed some unexplained tasks in the office of a large tea importer. Lester was fond of them both, but it seemed to him a bitter travesty that these simple-minded Philistines should possess so much higher earning power than he. Sometimes he thought of taking a garret in Greenwich Village, but in the Madison Avenue house he was sharing a big sitting room at little expense. So he spread his books about, hung up his framed letter from Przybyszewski, put his hammered brass tea caddy on the reading table, and made the best of the situation.

Even on fifteen dollars a week a young man may have a very amusing time in New York. For his room and breakfast Lester paid six dollars a week; for his other meals he used to hunt out the little table-d'hôte restaurants of which there are so many in the cross-town streets between the Avenue and Broadway. To come in from the snowy street on a winter evening, sit down to a tureen of Moretti's hot minestrone, open a new packet of ten-cent cigarettes, and prop up a copy of the "Oblique Review" against the cruet stand, seemed to Lester the prismatic fringe of all that was *je ne sais quoi* and *ne plus ultra*. The dandruffians in the little orchestra under the stairs would hammer out some braying operatic strains, and Lester would lean back in a swirl of acrid tobacco smoke and survey his surroundings with great content.

It was while he was conjugating the verb to *live* in this manner, and sowing a notable crop of wild table d'hôtes that he first realized the importance of Pearl Denver. Miss Pearl was Mr. Arundel's personal stenographer, a young woman remarkable in her profession by the fact that she never exposed the details of her camisole to the public gaze; also when the boss dictated she was able to rescue his subordinate clauses from the airy vacancy in which they hung suspended, and hook them up into new sentences capable of grammatical analysis. As a stenographer she was distinctly above par, but not above parsing.

Lester, of course, had a speaking acquaintance with Miss Denver, but her existence had never really penetrated the warm aura of egocentric thoughts that enshrouded him. He knew her simply as one of the contingents of the office; and the office had proved a great disappointment to him. Not one of the "firm" (he called them "directors") wore spats; not one of them had shown the faintest interest in his suggestion that they publish a volume of Clara Tice's drawings. Lester must be pardoned for having dismissed Miss Denver, if he had thought of her at all, as not *sui generis*.

WE now proceed more rapidly. Entering the hallway of Moretti's on Thirty-fifth Street, about half past one cocktail of a winter evening, he found the cramped vestibule crowded by several persons taking off their wraps. A copy of the "Oblique Review," unmistakable in its garlic-green cover, fell at his feet. Thinking it his own, he picked it up and was about to pocket it when a red tam o'shanter in front of him turned round. He saw the

*He thought to himself: "I must start very gently"*

bobbed brown hair and gray eyes of Miss Denver. "Well, Mr. Valiant, what are you doing with my magazine?"

"Oh—why—I beg your pardon! I thought it was mine! I'm awfully sorry!" He was keenly embarrassed, and pulled his own copy out of his overcoat pocket as an evidence of good faith.

She laughed. "I don't wonder you made the mistake," she said. "Probably you thought you were the only person in New York reading the 'Oblique'!"

He felt the alarm that every shy or cautious youth experiences in the presence of beauty, and with a mumbled apology fled hastily to a little table in a corner. There, pretending to read some preposterous farrago of free verse, he watched Miss Denver meet another girl who was evidently waiting for her. The two chattered with such abandon, smoked so many cigarettes, and seemed so thoroughly at home that Lester envied them their savoir. Maneuvering his spaghetti and parmesan, his gaze passed as direct as the cartoonist's dotted line to the charming contour of the stenographer's cheek and neck. His equanimity was quite upset. Never before had he gazed with seeing eye upon the demure creature sorting out Mr. Arundel's mind into paragraphs. Human nature is what it is; let Lester's first thought be confessed: "I wonder if she knows what my salary is?"

At last, after smoking many cigarettes and skimming over the "Oblique Review," Lester felt it was his move. He walked down the room, looking at his watch with a slight frown as he passed her table. At the door he saw by the reflection in a mirror that she had not even looked up. He hurried back to Madison Avenue, pausing to sniff the crystal frosty air. At the corner of Fifth he stood for a moment, inhaling the miraculous clearness of the night and pondering on the relative values of free verse and ordered rhythms as modes of self-expression.

In spite of a certain bumpiness among males, Lester was painfully shy with nubile women, and it was several days before he had opportunity for further speech with Miss Denver. Moretti's is a fifty-cent table d'hôte, and his regimen was calculated on a forty-cent limit for dinner; but after this meeting with the "Oblique Review's" fairest abonnée he haunted the place for some evenings. Then one day, taking in some copy for a book jacket to be approved by the sales manager, he encountered Miss Denver in the sample room. During working hours she was "strictly business," and he admired the trim white blouse, the satin-smooth neck, and the small, capable hands jotting down pothooks in her notebook as she took a long telephone call. She put down the receiver, and smiled pleasantly at him.

"Don't you go to Moretti's any more?" he asked, and then regretted the brusqueness of the question. "Sometimes," she said. "Usually when I buy the 'Oblique' I go to a Hartford Lunch. I can sit there as long as I want and read, with doughnuts and coffee."

Lester had a curious feeling of oscillation somewhere to the left of his middle waistcoat button. As the little girl said on the Coney Island switchback, he felt as though he had freckles on his stomach.

"Will you come to Moretti's with me some night?" he asked.

"I'd love to," she said. "I must hurry now. Mr. Arundel's waiting for this phone call."

A little later in the day, after a good deal of heartburning, Lester called her up. "How about to-morrow night?" he said, and she accepted.

COURSING back to his chamber the next evening, Lester was a little worried about the ceremonial demanded by the occasion. Should he put on white linen and a dinner jacket, becoming the conquering male of the upper classes? But the recollection of the "Oblique Review" suggested that a touch of negligee would be more appropriate. A clean, soft collar and a bow tie of lavender silk were his concessions to unconvention. He was about to scrub out a soup stain on the breast of his coat, but concluded that as a badge of graceful carelessness this might remain. At a tobacconist's he bought a package of

cheap Russian cigarettes, such as he imagined a Bolshevik might smoke.

There she came, tripping along the street, with something of the quick, Alcaic motion of an Under-smith on high. He waved gayly. She depressed her shift key and reversed the ribbon. He double-spaced, and they entered the restaurant together.

Lester felt an intellectual tremor as they sat down at a corner table. Never had his mind seemed so relentlessly clear, so keen to leap upon the problems of life and tessellate them. It was as though all his past experience had cumulated and led up to this peak of existence. "Now for a close analysis of female Mind," was his secret thought as he settled in his chair. He felt almost sorry for this gay, defenseless little shred of humanity who had cast herself under his domineering gaze. A masculine awareness of size and power filled him. And yet—she seemed quite unterrified.

As they began on the antipasto he thought to himself: "I must start very gently. Women like men to veil their power." So he said:

"That was funny, my picking up your magazine the other night, wasn't it? You know I thought it was my copy."

"Oh, the dear old 'Oblique'! Isn't it a scream? I read myself to sleep with it every night. We'll have

look like prose, just the opposite of the free-verse gag." She smiled reminiscently, and quoted:

"When I am as dry as a fish up a tree, then I to the hydrant repair, and fill myself up, without ticket or fee, with the water that's eddying there. I drink all I want—half a gallon or more—and then I lie down on my couch; when I rise in the morning my head isn't sore and I don't wear a dark brindle grouch—"

"Is there any free-verse stuff that can cover that?" she asked.

LESTER was somewhat disconcerted. His assessment of female Mind did not seem to be proceeding methodically. He played for time.

"I thought you enjoyed the 'Oblique'?"

"As a joke, yes: I laugh myself giddy over it. But I know darn well that kind of junk won't last. By and by the ghost'll quit putting up, and the editors will get jobs as ticket choppers. I guess I'm a Philistine!"

With this deliciously impudent creature beaming at him, Lester felt himself cursed at a disadvantage. Neither Harvard nor Balliol had informed him about this Walter Mason, and though he had seven hundred quips and anecdotes indexed in a scrapbook marked *Jocoseria*, none of them seemed to bubble up just now. Darn the girl, her

mind wouldn't stand still long enough for him to take its temperature. It was like trying to write captions for the movies while the film was running. He blew a cloud of blue Russian vapor across the board, and smiled at her in a tolerant, *veni—vidi—Bolshevik* kind of way. Behind his forehead he was fighting desperately to catch up.

As they wrestled with the spaghetti, he remembered that some one had told him publishers usually depend on the literary judgment of their wives. Perhaps that was the case with Mr. Arundel! But Miss Denver laughed aloud at the suggestion.

"Wrong again!" she said. "He's not married. Petunia Veal, the author of 'Sveltachmerz,' has been angling for him for years, and lots of other lady authors too. He's so sentimental, he's escaped 'em all so far."

She bubbled and chuckled and gurgled her way through the rest of Moretti's menu, amazing him more and more by the spontaneity, sophistication, and charm of her wit. He escorted her home, and then stood under a lamp-post for three minutes removing the soup stain with a handkerchief. "She's immense!" he said to himself. "Why, she's—she's a poem by William Butler Yeats!" As an afterthought, he made a mental memorandum to visit the library and look up the work of Walter Mason.

A few days later Mr. Arundel sent for Lester, who hurried to the private office with visions of a raise in salary. The president was sitting at his desk turning over some papers; he motioned Lester to a chair and seemed curiously loath to begin conversation. At last he turned, saying:

"Mr. Valiant, your life at Oxford did a great deal to mitigate your literary sensibilities?"

Lester hardly knew what to say, and murmured some meaningless syllables.

"I think that your abilities can be of very great service to us," continued Mr. Arundel, "and as an evidence of that I am asking the cashier to raise your salary five dollars a week."

Lester bowed gently; he was not capable of articulate speech.

"I want to ask you a rather delicate question," pursued the president, who seemed as much embarrassed as his visitor. "Do you ever write poetry?"

Lester's voice was amazingly hoarse and choky, but in a spasm of puzzlement and gratification he ejaculated: "Sometimes!"

"What I really mean," said Mr. Arundel, "is this: do you ever write verses of a sentimental nature—hum—what might be called endearments?"

The young man sat speechless in surprise and embarrassment. As a matter of fact, he had been trolling some amatory staves in secret, in honor of Miss Denver; and he imagined they had come in some way under his employer's eye.

Publishers are justly suspicious of anything that smears of literature, and Lester's innocent allusions to Chelsea and George Moore did much to alarm them

to make the most of it while we can, because Mr. Arundel says it can't pay its paper bill much longer."

This irreverence rather startled Lester, who was writing an article "On the Art of Clara Tice" which he had been hoping the "Oblique" would buy. In fact, he was startled quite out of the careful conversational paradigm he had planned. He found himself getting a little ahead of his barrage.

"Does Mr. Arundel read it?" he asked.

"Heavens, no!" cried Miss Denver, and effervesced with laughter. "He would rather face a firing squad than read that kind of stuff. But he has an interest in the concern that supplies their paper."

The matter of paper had never occurred to Lester before. Of course he knew a magazine had to have something to print on, but he had never thought of the editors of a radical review being embarrassed by such a paltry consideration.

"Is Mr. Arundel literary?" he asked.

Miss Denver found this very whimsical. "Say, are you kidding me?" she said, with tilted eyebrows. "The chief says literature is the curse of the publishing business. Every time somebody puts over some highbrow stuff on him we lose money on it. The only kind of literature that gets under his ribs is reports from the sales department."

"That's very Philistine, isn't it?"

"Sure it is, but it puts the frogs in the pay envelopes, so what of it?"

"Well, I should expect the head of a big publishing house to be at least interested in some form of literary expression."

"You should worry! That's what we hire you for. Besides, he has a literary passion too—Walt Mason. He thinks Walt is the greatest poet in the world."

"Walter Mason!" murmured Lester. "I don't think I know his work."

"Hasn't Walt made Oxford yet?" asked Miss Denver. "He writes the prose poems in the evening papers, syndicate stuff, you know. Printed to

"Please do not be alarmed," said Mr. Arundel, seeing his discomfiture. "This is purely a matter of business. As it happens, I have a need for some poems of an intimately sentimental character and, being totally unfitted to produce them myself, I wondered if you would sell me some? I would be glad to pay market rates for them."

Still Lester could do no more than bow.

"I shall have to be frank," said Mr. Arundel, "and I must beg you to keep this matter absolutely confidential. I have your word of honor in that regard?"

"Absolutely," said Lester, quite vanquished by amazement.

The president's sense of humor seemed to have mastered his diffidence. A quaint smile lurked behind the furrows that years of royalties had carved on his face.

"I want to do some wooing in rime; and I want you to turn out some verses for me of a superlatively lyric sort, it being understood that I purchase all rights in these poems, including that of authorship. Would you be willing to do me half a dozen, at say ten dollars each?"

Lester, although staggered by the proposal, was still able to multiply six by ten, and his answer was affirmative and speedy.

"I do not wish to give you any specifications as to the object of your vicarious amour," said the president. "It is a lady, of course; young and fair. How soon can you despoil the English language of half a dozen songs of passion worthy of the best Oxford traditions?"

JACK and Harry found Lester good company that evening. When they got back to the sitting room on Madison Avenue he was lying on a couch, nursing a large calabash and contemplating the ceiling with dreamy brow. As they entered, stripping off their overcoats and chucking the night extras across the room at him, he smiled the rich, tolerant smile of Alexander at the Macedon polo grounds.

"I'd love to," she said. "I must hurry now."

"Well, Lester," said Jack, "why the Cheshire cat grin?"

"I've sold sixty dollars' worth of verse," said Lester benignly; "also I've had a raise."

"My God!" said Harry. "Think how many starving cubists you could endow on that! There'll be a riot in Greenwich Village."

"Pity the poor bartenders on a night like this!" cried Jack. Then they went to Browne's chophouse for dinner. After a three-finger steak and several beakers of dog's nose, Lester was readily persuaded

to enounce the first number of his sonnet sequence which had accreted or (as its author expressed it) nucleolated while he was walking home from the office.

"Sonnet, in the Petrarchan mode, item No. 1," he proclaimed:

*Upon a trellis, bending toward the south,  
I set my heart, a yearning rose, to climb;  
It pullulates and blooms in sultry rime,  
It spires and speeds aloft, in spite of drought.  
And seeking for that sweeter rose, your mouth,  
That beckons from some balcony sublime,  
It heeds no whit the tick-tack-tock of Time  
And with its sweetness all the night endow'th.  
O beauteous rose! O shrub without a thorn!  
O velvet petals unsmutched of the mire!  
For this my life was manifestly born,  
To climb toward thy lips, and never tire!  
Now open thy shutter in the flood of morn—  
Lean out, and smile, and pluck thy heart's desire.*

"Seems strange," said Harry, "that a man can buy a good meal with a thing like that!"

"What is a petrarch, anyway?" said Jack.

"Gee, you'll have to brush your hair to keep it out of your eyebrows," said Harry. "Herod was petrarch of Galilee, don't you remember? It's a kind of a comptroller or efficiency expert."

"Nonsense," said Harry. "Herod was patriarch of Galilee, not petrarch."

At this moment Lester was busy multiplying twenty by fifty-two, and adding sixty, and he did not attempt to put Laura's friend right in the eyes of his companions.

THE next morning, at the office, Lester took occasion to stroll over to the corner where Miss Denver was tickling the keys. Her delicious, able fingers flashed like the boreal aurora, the incomparable smoothness of her neck and throat fascinated him, her clear, blue-washed gray eyes startled him with their merry archness. Wambling inwardly, he met her gaze as coolly as he might. (Continued on page 32)

# THE ADVENTURES OF COLIN O'RELL

BY ARTHUR SOMERS ROCHE

FOURTH ADVENTURE—THE SECOND CUP

ILLUSTRATED BY HENRY RALEIGH

FERNALD looked around the crowded restaurant. The Marquis, that grotesque, fat figure of a man, was not here. But that was hardly to have been expected. Fernald hoped for no such luck as that; and yet, so bizarre had been the events that had happened since the moment he had rescued Colin O'Rell from the clutches of the police as she alighted from a train in the Grand Central Terminal, that if the Marquis himself, that fester spot of treason, had walked openly into the restaurant, Fernald would hardly have been surprised.

It was a far cry from being a cub reporter on the "Morning News" to being a free-lance member of the Secret Service. It was also a far cry from being heart-whole and fancy-free, as he had been hardly more than twenty-four hours ago, to being in love with the loveliest, bravest girl whom he had ever known.

Colin O'Rell! He had become her ally. Though the Police Department had tried to encompass her arrest; though all the evidence tended to prove that she, secretary to Richard Hassager, had fled the country home of that captain of industry with plans that, if delivered to agents of Germany, might strike a blow at the very vitals of America's war preparations, he had read in her warm blue eyes the truth of her character. And now—the police sought for him as well as for Colin. Lest the Marquis, whose identity and hiding place were shrouded in mystery, although he and Colin had seen the master spy, and talked with him, should suspect the good faith of Colin, it had been arranged that she should pose as a thief and that Hassager should give no hint to the police that Colin was really working for the Government. For the greater the anxiety of the police to apprehend Hassager's secretary, the greater would be the trust of the Marquis in Colin O'Rell, the "Lady Beth" of the underworld.

And now the Marquis, still trustful of Colin, had become doubtful that Jimmy Fernald was "English Fred" Jevons! And doubt on the part of the Marquis meant—death! In the taxicab on the way down from Colin's apartment near the Drive, Fernald had made anew the decision that he had made when the

girl had for a moment objected to his keeping the rendezvous.

It was so easy to direct his chauffeur to Police Headquarters; there he could explain the situation. The lives of Colin and himself would be saved. But, as he analyzed this idea, he became aware of its dishonesty. Colin's life was not in any more danger than it must have been in before he met her, when, posing as the criminal Lady Beth, she had made her way along the devious paths that finally converged upon the lair of the Marquis. It was the life of Jimmy Fernald that was in danger and that he would protect by going to the police. Colin, though her danger was terrible, was not threatened at the moment. If it were, there would be justification in going to the police.

BUT he had shaken his head even as he reached this conclusion, for Colin O'Rell had gladly pitted her life against the machinations of the Marquis. More than her life was at stake; the safety of the nation itself might possibly depend upon the wit of this girl. And he knew that Colin O'Rell would gladly give her life if by so doing she might avert the blow aimed at her country. He had no right to save her against her will. Big as love loomed—and by its suddenness it loomed the larger—before his eyes, duty loomed larger still. The nation came first.

And now he was going, he believed, to his death. Well, he had volunteered to serve his country. The country that had refused his military services, because of his weak heart, did not know that he had volunteered. If aught should happen to Colin O'Rell, it might be whispered abroad that Jimmy Fernald, mixed up in some police matter, had mysteriously disappeared. Dishonor as well as death might come to him. And yet the Marquis had told Colin to send him to Burnham's restaurant, on Fourteenth Street. If he should fail to keep the rendezvous, the Marquis would know that Colin had warned him, and all that she had done thus far would go for naught. Whisperingly, he cursed himself for a fool. He had forced himself upon the girl,

and, by so doing, had not only failed to aid her, but had hindered her. But for him she could have gone ahead, thinking only of herself. But now she thought of him also. The tears in her eyes, that had thrilled him with joy a little while ago when they parted, now saddened him. Why on earth couldn't he have controlled his impulses and not made love to her? In a little while he would be simply a memory to her; she would carry a heartache for the rest of her days. Then he grinned. "Too bad," he told himself, "that I can't write my own obituary! I'll bet it would be a tear-jerker! But Colin O'Rell-Fernald that is to be hasn't ordered her weeds yet!"

He had been having a gorgeous time, drooling over his own danger. If ever in the future, when he had left newspaper work and begun writing fiction, he wanted to draw a character of a mangy yellow pup, he would faithfully reproduce the James Fernald of a moment ago.

But the James Fernald of this minute was not the captive of fate that he had been before a grin had curled his lips and made his eyes twinkle. The new James Fernald was the same person who had rescued Colin from the police and had cheerfully embarked with her upon adventure since. And this James Fernald was quite conscious, no matter what the army doctors said, of possessing what his college athletic trainer had termed a "kick in either mitt." Moreover, in his jacket pocket was something that held eight kicks: a flat, savage-looking automatic pistol. A funeral might be in prospect, but if it was, it would at least be a double affair. He was no ox to be led to the slaughter. Knowing the risk he ran, it would be surprising if he were unable to strike at least one blow before his finish.

And even if some one were already launching the blow that was to spell that finish, there was absolutely no reason on earth why he should die upon an empty stomach. It was extremely unhealthy. And whatever sort of a dive Burnham's restaurant could prove to be, the food looked most appetizing. The Germans were undoubtedly the most barbaric race in the world, but when it came to preparing roast

goose, they were there. Burnham was certainly not a German name; the proprietor had changed his name completely or altered it slightly. It might have been Bernheim before the Great War. But these speculations didn't matter. Jimmy Fernald was hungry. He had not eaten since breakfast. The tea that he had so painstakingly ordered at the Biltmore, and that he had expected to share with Colin O'Rell, had been rudely interrupted. The Marquis's instructions had ended with telling Fernald to go to the restaurant. What he was to do there had not been stated, but certainly there was no prohibition against his eating.

He leaned back with a sigh of relief when he had finished. He had eaten like a famished wolf. Now, with his coffee before him, he studied the faces around him. They were Teutonic of cast, and, knowing the German mind and its workings, Fernald was quite certain that the publicity of the place would not prevent the Marquis or his followers from attempting violence there. The patrons' loyalty to America would be passive at best. He could not imagine any of them coming to his rescue if it were cried that he was a spy. Not that he doubted the loyalty of the average German-American to America, but the Marquis was not a fool. He would not have selected as his rendezvous a semipublic place unless he was quite certain that those who frequented it were German in their sympathies.

FOR a while he had dismissed apprehension while he satisfied hunger. But now apprehension came back to him. Every minute that passed brought danger so much nearer. He pushed back his chair; in the event of an attack, he would be freer to strike back. He tucked in the flap of his right-hand jacket pocket. It would be easier to get at his automatic this way. He buttoned his jacket about him. He was glad that he faced the door and that his table was close to a wall. His waiter, hovering near by, approached.

"The coffee?" he asked anxiously. "It is not good?"

Fernald stared at the man—obsequious, timid. The destiny of the world hung in the balance, yet men must still perform homely duties for meager rewards. Fernald reached for the cup. He touched it to his lips, then set it down.

"It is not good?" asked the waiter.

It was pathetic that any human being should so truckle to the whims of another person. Fernald smiled. "It's my fault if it isn't," he answered. "It's grown cold. But it doesn't matter. I don't think I want coffee anyway."

The waiter looked harassed. Tips, mused Fernald, were probably rare in Burnham's. The people whom he had observed this evening were thrifty middle-class Germans or German-Americans, who doubtless decided that they had done all that was expected of them when they paid the amounts called for by their checks. He supposed that he looked more able—perhaps willing was the word—to see a

waiter than most of the people here. And the waiter was anxious to please.

"But the gentleman should not leave our restaurant without drinking our coffee," protested the waiter. "It is most excellent coffee. The gentleman should have some. It will cost no more," he added anxiously.

Well, even if Burnham's was the hotbed of treason that the Marquis's selection of it as a rendezvous made it seem to be, there were other reasons for its popularity among its patrons. Not only was the food excellent, but this attitude toward the customer, so strange in New York, this desire to please him at the owner's expense, was a new experience for Fernald.

"Bring me another cup," he said.

This time he did not permit the coffee to grow cool. He sipped it immediately. He nodded to the hovering waiter. "It's all right," he said. "Bring me my check," he added.

The waiter was gone a long time. Evidently Burnham's suffered, in common with every other restaurant with which Fernald was acquainted, from an inability to furnish a patron his score promptly. Still, there was no hurry. Fernald certainly did not intend leaving here. No one had approached him as yet, but that didn't mean that the Marquis had sent him here merely because the cuisine was good.

And then an idea came to him. It was over an hour—an hour and thirty-five minutes he learned by consulting his watch—since he had left Colin. The Marquis and those associated with him were not the sort to delay. They suspected that Fernald was a spy. Spies were extremely dangerous to the Marquis. It would be his object to capture or kill a spy without delay. An hour and thirty-five minutes is not eternity, but it might very well seem so to one whose plans, whose very life, were hanging in the balance.

The Marquis's plans and his life were hanging in the balance! Why, then, was Fernald permitted to sit here and leisurely consume a most excellent dinner? It might be that those foes, against whom Colin and he waged secret warfare, were trying to gather evidence of Fernald's treachery. But that idea was absurd. They would not withhold the blow while they gathered evidence, and at the same time permit him to be free. Yet he was free! Why wouldn't it have been much more simple for the Marquis to have said nothing, but to have come himself or sent some of his followers to Colin's apartment? That would have been the obvious thing.

Had this method been chosen because, for some reason, the Marquis wished Colin to be alone? But surely the Marquis did not fear him, Fernald. The sinister spy, if he meditated violence toward Colin, would not be deterred by the presence of Fernald.

And yet Fernald had been in this restaurant over an hour and no one had approached him. More and more it seemed to Fernald that, distrusting him, they must also distrust Colin. A greater apprehension than had attacked him hitherto overwhelmed

him now. It might easily be possible that there had been some miscarriage of the Marquis's scheme, whereby the blow against Fernald had been delayed.

Or, perhaps, before they took strong measures against him, they wished to threaten Colin, to wring from her, if possible, confession of her knowledge that Fernald was not "English Fred" Jevons.

HE visualized the Marquis entering the apartment of Colin; he saw the icy eyes, snakelike, of the Marquis, boring into the eyes of the girl whom he, Jimmy Fernald, loved. To do what the Marquis ordered; that had seemed the only way, if way there was at all, to disarm suspicion. But now the thoughts of Fernald were too horrifying. Fernald, in the eyes of the Marquis, must be, after all, small game. But Colin O'Rell, who, though she had not penetrated to the center of the Marquis's activities, yet knew so much that she might wreck his plans now—she would be big game for the alien plotters.

She was the girl of Fernald's heart. He should never have left her for a moment. He felt shame that he had been concerned at all about his own safety when she, so his imaginings proved to him, was in vital danger.

His waiter arrived with the check. "The gentleman has not drunk this cup of coffee!" he exclaimed.

His voice shook, and Fernald stared at him amazedly. He was a person of whims, was Jimmy Fernald. His actions, since meeting Colin O'Rell, were proof enough of that. Even in a moment like this, when he realized that he had been duped and that Colin might be crying vainly for him, he could think of the unimportant troubles of a rabbit-faced waiter. He handed the man a bill.

"You may keep the change," he laughed. And then, because still the man's woe-begone expression appealed to his sense of humor, he lifted the cup of coffee to his lips and drank.

He set it down. He frowned at the waiter. "After all your insistence, I've a mind not to tip you," he said. "For it isn't good at all. In fact, it's the worst stuff I ever tasted!"

And then, because he had delayed too long over a triviality when the most important thing in the world awaited him, he strode from the restaurant. So intent was he that he did not notice the apprehension in the eyes of the waiter, was hardly conscious that the man spoke to him. He only knew that he had been gone from Colin almost two hours, and that in those two hours almost anything might have happened to her.

A TAXI was drawn up to the curb outside the restaurant. He leaped into it, giving the chauffeur Colin's address. "And never mind the speed laws."

The chauffeur nodded. The engine was running and the car started immediately. And before it had rounded the corner into Fourth Avenue, Fernald understood the insistence of the waiter. His first sip of the coffee had not been unpleasant, but the half

The effects of the drug that had been in the coffee had practically worn off. His brain was clear, though his body was weak

# Who Discovered **RICORO**?

"I know," said the Banker—

"Let me tell you," urged the Architect—

"I did," exclaimed the Major—

"My wife discovered Ricoro," interrupted the Merchant—

"No, it was my doctor," said the Naval Officer—

"Take it from me, *you're all wrong*," said the Lawyer—

—And so the argument continues.

Thousands of Ricoro smokers think they know who discovered Ricoro. We hear of new discoverers every day from all quarters.

Men in all walks of life—happy and enthusiastic Ricoro smokers—tell us how they discovered this mild, "self-made" cigar.

And always the story is different. We are going to publish some of these stories. Watch for them, and read them, because—

*Sooner or later you'll discover—*

# Ricoro

*the "Self-Made" Cigar*

*You'll discover* an imported cigar, of rich, tropic fragrance, sweet, mellow taste and gentle mildness at less than the price of the usual domestic cigar.

*You'll discover* in Ricoro a fine looking cigar—a cigar you'll hand to a friend with pride and with the assurance that he will enjoy it thoroughly.

*You'll discover* that a 7c Ricoro, imported duty-free from Porto Rico, is the equal of other 15c imported cigars.

*You'll discover* why we call Ricoro, the "self-made" cigar—and why Ricoro made its own success on its own merit.

Ricoro is made in a dozen sizes and shapes, from 6c to 2-for-25 cents—simply the question of size. The quality is the same in all.

Sold only in United Cigar Stores.—"Thank You."

cup that he had drunk! . . . What a fool he had been to expect a violent attack in the middle of a crowded restaurant! If he had thought clearly, he would have known that the Marquis would be more subtle than that. And now his very departure from the restaurant would have to be explained. Instead of helping Colin, it was possible that he was doing more to injure her by going again to her apartment. He did not reason this out; he merely felt it; felt it as the one tangible thing that he should not do. It was certain now that the Marquis's suspicion was definite. It was better for Fernald to die than to go to Colin, for Colin would try to save him and thereby endanger herself. Death was one of the risks he had faced, and he should face it alone. Colin, seeing him in this condition, might betray her love for him and so betray herself.

He leaned forward to knock upon the window, but the drug in the coffee had acted too quickly. His fingers never reached the window. Unbalanced by leaning forward, he slumped down upon the floor of the automobile.

SOME one had been in her apartment; of that Colin was certain. Things were not in the exact position that they had been left in. Yet it could not have been emissaries of the Marquis who had disturbed the orderliness of the place. The Marquis's trust in her was amply proved by his confession to her of his distrust of Fernald.

It must have been the police, then. But that was not a reasonable conclusion. For if the police had discovered her home, surely she would have been arrested before this. Perhaps, after all, it was imagination. Much had happened since she had been in this apartment, and, in the stress of greater matters, memory might have become blurred as to details.

She dismissed the matter from her mind. After all, what did it matter? For her to think of her own danger, at a moment when Jimmy Fernald was venturing into the very jaws of death, was impossible. She was not of a hysterical nature. Warm-hearted, she could be cold of brain. But to-day coolness of brain deserted her. Her mind could only dwell upon the possible plight of Fernald. Bitterly she reproached herself. Had she refused his aid at the outset, he would not have become involved in an affair that now seemed likely to result in his death.

For a moment she played with the idea of telephoning to the police and telling them everything. And then she put the idea from her. She had enlisted in a great cause. She had no right to put the man she loved above that great cause. For her to telephone the police meant surrender of her great purpose. For the police to interfere and rescue Fernald would be tantamount to confessing to the Marquis the fact that she was a Federal employee. The Marquis's suspicions, though apparently not directed

at her as yet, would veer her way upon the slightest cause.

For more than an hour duty and love fought for the mastery of the heart of Colin O'Rell. And neither won. She would not telephone the police, yet she would not abandon Fernald to the fate apparently in store for him; she would at least make an effort to aid the man she loved. She would go to Burnham's restaurant and at least learn what had happened there. After all, the battle waged in her heart had ended in a truce: an armed truce. Because, if Fernald were still safe, but with danger threatening him, the battle would be renewed again. But on this she refused to think as she rode downtown.

THE dinner crowd at Burnham's had thinned out upon her arrival there. She walked half the length of the restaurant, searching for Fernald. He was gone. The battle, then, had been decided while she thought truce existed. For there was no use in appealing to the police now. If she, Colin O'Rell, did not know where to find the Marquis, it was absurd to think that the police could find him. If Fernald had been here, if she had been present while attack was being made upon him, then she could have summoned aid. But now it was too late.

She became suddenly conscious of hunger. The needs of the body could not be neglected if she were to continue in the great cause in which she had enlisted. She ate without relish, mechanically, slowly. Her meal ended, she raised her eyes to summon her waiter. She lowered them swiftly, but it was too late. "English Fred" Jevons walked to her table and sat down opposite her.

"The best of friends must part, Lady Beth," he smiled, "but not always forever." Brusquely he waved away Colin's waiter. "You thought you had me, eh? Never thought of such a thing as bail, did you? Never occurred to you that unless it's murder, anyone can get out of jail until their trial comes, if they have the price. And when it's only general suspicion that you're arrested on, the price isn't so very high."

She stared at him. The color left her cheeks; even her hair seemed to lose its luster, as though she had been ill for a long time. Up until now, though Fernald had evidently departed with one of the followers of the Marquis, there had been a chance that the alien plotters might, if they had delayed violence toward Fernald, be hoodwinked. But with English Fred released, able undoubtedly to get in touch with the Marquis and betray Fernald and herself, hope had died—unless she dared do what she had decided not to do: tell the police the truth. Once again the temptation assailed her, but she put it from her. Duty was greater than love. Even though Fernald was slain, she must, so long as life remained within her, continue trying to deceive the Marquis. Even

with Jevons to denounce her, she might still persuade the Marquis of her good faith. At any rate, she must try. But she could not find speech, as she stared at the cynically smiling face of English Fred.

"It's a slick game you've been playing, Lady Beth," said Jevons, "but the cards are on the table now. You've about reached your finish."

The color ebbed slowly back into her cheeks. She stared defiantly at the crook. There was no use in trying to deceive him. English Fred knew exactly what she was.

"Suppose," she said, "we make terms?"

"You're a clever girl, Lady Beth," said Jevons. "Suppose we do that very thing. Where do we stand? What's in it for me? And don't try to fool me. You're sensible. I know what you've been doing. The police think that you really are Lady Beth. They think that you really did steal something from Hassager. But I know you've been pretending, simply to get in right with the Marquis. It's a danger-

*She sank back upon the cushions of the great car*

ous game. But if we can do business—" He paused, questioningly.

"How did you know I was here?" she demanded. "I got in touch with the Marquis as soon as I got bail. He referred to our meeting last night, and when I told him that I hadn't seen him—well, I guess he has your friend Fernald by now. He told me to go immediately up to your place. But when I got there, you were leaving, and I followed down here. He wanted an eye kept on you."

"Then you told him what I really was?" demanded Colin, terrified.

Jevons looked sly. "I play my game a trick at a time," he said. "I didn't tell him everything. Why should I? I told him that you had probably been deceived by the man who passed himself off as me. I wanted to know first the safer side and the one with the most in it for Fred Jevons."

"But when he saw you he must have known that you were not the man that visited him with me last night!" exclaimed Colin. "There's no longer any chance to save—"

"Who said he saw me?" asked Jevons. "I went to a certain place where he telephones me. He hasn't seen me yet, and he won't, if you can make it worth my while."

RAPIDLY Colin reviewed the situation. If English Fred spoke the truth, the Marquis had no definite grounds for believing in her treachery. With Jevons out of the way, she could in some way, she hoped, continue to deceive the Marquis, and thus save Fernald. "You want money, of course," she said.

"Of course, lots of it," agreed Jevons.

She shook her head. "Not so much as you'd want if your life weren't also part of the arrangement," she told him.

"I don't get it," said English Fred.

"Spies are shot," she reminded him.

"When they're caught," he sneered. "I'm not caught, or anywhere near it. You have nothing on me to give the Government. If you should cry for the police now, I'd walk out of here before they came. I'd get to the Marquis within an hour. I don't know what they've done to Fernald. But you haven't denied my guess that they've got him. A word from me to clinch the thing, and—you can guess the rest."

Colin could guess the rest. She also knew that when Jevons spoke of her inability to detain him, he spoke the truth.

"Ten thousand dollars?" she asked. "That is absolutely all that I have in the world. You'll simply disappear? Because if after that you work with the Marquis, the police will know of it, and English Fred Jevons is too well known a character to hide forever from the police when they want him badly."

He nodded. "And I'm not to be mixed up in what's already happened?"

"You gain immunity," she told him.

"I think your check will be good. Write it," he said.

# IN THE CAGE

BY WALTER DURANTY

ILLUSTRATED BY BALFOUR KERR

I TOOK my friend the American captain to a certain café on a side street between the Bourse and the Boulevards. He had landed only a few days ago, and seeing how empty the place was he said: "Why couldn't you choose a place where there's a little more life?"

"Because here they have the best beer in Paris," I replied.

"Of course that's why it's so empty."

"What on earth do you mean?"

"Because they have always had good beer, so naturally it was full of Germans before the war, and now of course—"

"Do you really mean to tell me that after three years—or is there something fishy about the people who run it?"

"Oh, dear, no, the patronne is French right through. But every place in Paris that has a reputation for having been a "boite à boches" or "boche joint" might nearly as well go out of business unless it's situated on the Boulevards or on some corner where there are lots of people passing who don't know about it. Good wine might have brought them back, but beer just reminds them of the Germans, and they stay away."

As I was lighting my cigarette the captain whispered: "Say, old man, I can't get over this business of employing war heroes as porters and waiters. It makes me nervous to offer a ten-cent tip to a fellow wearing a row of decorations. Just look at this chap."

"But the waiter here isn't—" I began, still intent on my cigarette. Then I looked up, and there before me, tall, thin, and lantern-jawed as ever, apparently quite unchanged by three years' fighting, stood Marius. "Bon soir, monsieur," he said as calmly as if he'd been my regular waiter all the time.

I jumped to my feet and grabbed him by the hand.

"Good Lord, man, when did you get back? The patronne told me you were missing, and we all thought—"

Marius acknowledged my transports with a wave of the hand. "It was untrue," he said seriously. "I have dodged too many boche shells to be killed by a French one. Two demibrunes, n'est ce pas, monsieur? I will give the order," and without further explanation of his mysterious phrase he stalked away toward the bar.

"Great Scott, do you know him?" cried the captain. "Say, did you see his ribbons, the military medal and the war cross with five stars—that means he practically won it five times over, doesn't it? When he comes back ask him to—"

"Why don't you ask him yourself?" I said. "He speaks as good English as we do."

"What!"

"Yes, and German too. The first time I came here I thought he was a German the way he slung it around, and I'm sure the Germans thought so. At least they all used to call him Fritz. It was quite a while before I found out his real name was Marius."

"Where did he get a label like that, for the love of Mike?"

"Oh, it's a southern name. He was born in Marseilles; you know Parisians say that everyone from Marseilles is called Marius. Most of them are too. But he's a real Frenchman all right, and has been at the front ever since the start—Marne, Verdun, Chemin des Dames, the whole show. His father was an acrobat in a big traveling circus, and Marius spoke four or five languages before he was twenty. After he'd done military service he decided he wasn't supple enough for an acrobat, and waiting was an easier job; but he always liked moving about and has waited his way half round the world. You ought to get him to tell you about New York when he—"

"Oh, bother New York; I've been there myself. I want him to tell me about the war."

At that moment Marius returned with the beer, and I presented my friend with due ceremony.

"Pleased to meet you, sir," said Marius in good American.

Much cheered, my friend replied enthusiastically: "I'm proud to meet you, Mr. Marius. I've been wanting to talk to a real poilu, but this language—"

"Why can't you sit down and have a drink with us?" I broke in. "There's hardly anyone here, and

"You're a queer chap," I said. "Why, I should have imagined—"

I never got any further, for the captain could restrain his impatience no longer. "Were you at Verdun?" he burst out. "Was it really so dreadful?"

Marius nodded. "Worse," he said cheerfully—"much worse."

"But tell me— Oh, I have a million questions, and I don't know which to ask you first."

"Tell us about the worst thing of all," I vouchsafed.

"No, please tell us about your military medal," added the captain rapidly. Like a true meridional, Marius is always ready to talk.

"Forward!" he shouted: "forward! All together now, with the bayonet!"

the patronne won't mind, will you, madame?"—to the stout dame who was waddling across to our table.

"Mais non, m'sieu. It is not every day that one comes back from the dead—and a hero, avec ça. You have seen his medals? Stay there, mon petit Marius; do not trouble yourself." Then turning to me: "You know, m'sieu, they have amputate' his leg, it is for that he was réformé."

I did know, though I hadn't said so. There is no mistaking the curious stiff gait that means an artificial leg to which the wearer is not yet accustomed.

"What do you take, mon petit?" went on the patronne as Marius sat down.

"Ah, yes; a demibrune, as always," and off she went to get it.

"They are chic, your American legs," said Marius in a conversational voice with a slight bow toward my friend; "mino bends at the knee as if it was real; when I get used to it I will never know the difference. *Vot' santé, messieurs.* Ah, it is good to be back again in this old Paris. I never spent a permission here because I knew it would be impossible to drag myself away when it was over."

I thought he was joking, but he said: "No, it's true. I saw the boys who came back from Paris after their first permission, and they had such a 'cafard' that I decided not to run the risk. You know there were some who never returned to the trenches. I don't blame them, but—"

I WILL tell you both at the same time, for it is the same story. Voilà! There are people who will tell you that the Chemin des Dames was more terrible than Verdun, that there were more shells, more gas, more of those filthy flame jets. All that may be true, but just the same they are wrong; they did not know Verdun in the early days.

To begin with, it was the first time the boches had treated us to a really heavy bombardment with big shells in the modern style. There had been just a taste of it in Artois a fortnight before, but far more limited in extent. Now, a heavy bombardment is like the thunderbolts of God. You are surrounded by a terrific din of noise and leaping flames. The air is full of sound and fire and jagged lumps of steel. You know that death is certain, and of course you are very frightened. That is, the first time. But afterward, if you find you are still alive, you begin to think: "This is no worse than yesterday or last week; I lived through that, maybe I will escape this one also." Finally you take it quite calmly. If a shell drops too near, it is good-by; if not, tant mieux; in either case, why worry about it? You have reached freedom from anxiety.

At the Chemin des Dames we had got to that stage, but at Verdun it was still new and very terrifying. Also, things were going badly when we got there, and the general morale was low. And the weather was horrible, frost and snow and icy rain. True, the boches had just been checked at Douaumont; we had stopped the rout, and there was no more panic, but the fellows we relieved were

not encouraging, and it is always a bad sign when Alpine chasseurs are so glad to quit the front line. They sure had reason. They had been there four days in a mess of water-logged shell holes to the west of Pepper Hill, and there were just eighty-one men unwounded of the whole battalion. Less than two hundred living, all told, out of a thousand, and that in four days! It was enough to make anyone uncomfortable.

ONE of their sergeants told us the boches had lost ten thousand killed in two days' fighting against the hill above Vacherauville, and still had not taken it. Most of us thought he was lying, but I was not so sure. You see, the night before I had talked at the station railroad with a wounded artilleryman whose battery was just across the river commanding that very hill, and this is what he said: "This is the end of everything; it is not war, but madness. I tell you I have seen men advancing in solid masses up the white slope, regiment after regiment, thousands and thousands. Our shells tore holes in them—big, ragged gaps in the gray-green carpet, as you tear holes in a canvas target at long-range practice—and it made no difference; the ranks closed up, and they went on regardless. Then when they reached the crest of the slope the machine guns caught them and blew back the leading lines as a strong wind blows back the wave tops. Soon there was a huge

# Why Should Your O. K. Saddle You With an Unfair Responsibility ?

**Y**OUR O. K. of a dummy usually amounts to an acceptance of somebody's promise to give you a good booklet.

The finished booklet may exceed that promise; or it may fall short of your expectations.

But you have no recourse after you have written down your O. K.

Unless you have some way of knowing beforehand what every page shown in the dummy will look like when finished, you are helpless to determine its proportion of success and failure.

If, on the other hand, you have before you examples of color-work, line-work, fine and medium screen halftones, solid blacks, tignettes, etc., treated on different papers, you will be better able to understand what your printer tells you, and little or nothing will be left to chance.

The Warren Suggestion Book was prepared for the express purpose of eliminating the element of uncertainty in ordering printing and of making it possible for you when you approve a dummy to visualize the booklet in its final form.

By looking through this book, keeping in mind the nature of the illustrations of our booklet, you can determine what paper will best bring out the hidden values

of your halftones, line-engravings, or wood-cuts.

On Warren's Cameo, for instance, you can see the effect of a delicate pencil drawing reproduced by highlight halftone, or the charming softness which this paper lends to halftone reproduction of an etching. Warren's Cameo is dull-coated, lustreless, light-absorbing, and so peculiarly suitable where tonal values are paramount.

Warren's Lustris shows you that it is possible to manufacture a brilliantly coated paper that will not "pick" when solid backgrounds are used. It is a highly finished paper which reproduces fine engravings with the extreme faithfulness to detail which they deserve but do not always get. Warren's Lustris is widely used in books or catalogs of mechanical subjects where the pictures are to receive close scrutiny.

Or, on Warren's Cumberland Coated, you may see how the detail which the retoucher has brought out in a photograph is preserved with the utmost fidelity; or how reproductions of fabrics in color on this paper have an unusual depth and richness.

Warren's Silkote, in White and India, is a semi-dull finish paper which, if you are an admirer of dull-finish printing effects,

will enable you to secure them at a cost no greater than a good glossy coated stock would entail.

If you are planning an edition so large that a low-priced paper is essential, you can look at the sheets of Warren's Cumberland Super and Warren's Cumberland Machine Book and see the difference between coated papers and super and machine finish papers—you can see the kind of work to be expected from each and save yourself from the error of paying too much or too little.

Each of Warren's Papers is a paper for a definite class of work. Each is a definite assurance of uniformity throughout the run of your booklet. The word "standard" as used in connection with Warren's Papers means that it possesses practical uniformity in color, weight, thickness, surface, strength, etc.

## *Write for the Warren Suggestion Book*

This book is a hand-book of good printing for which you will always find room on your desk. Its wealth of ideas and the consummate beauty of its illustrations justify in every way its title of a suggestion book.

It is not a book to be looked at and thrown away—it cost a great deal of money to produce. Sent only to buyers of printing, printers, engravers, and their salesmen.

**J. D. WARREN & COMPANY, 49 Federal St., Boston, Massachusetts**

*Constant Excellence of Product*

# A Tribute

The patriotism of the employes of Swift & Company is being manifested in so many substantial ways that we take pride in acknowledging here the evidence of their staunch Americanism.

3089 men from our ranks are now in army khaki and sailor blue uniforms.

This impressive figure represents nearly a full regiment from this firm.

In this Swift Legion of Honor, 103 of the men have won commissions in the army.

When "Preparedness" was the admonishment of the hour—the Swift Military Club was organized—in it have been trained hundreds of men.

It is our local "West Point"—we know that its graduates are better soldiers because they have gone into the army and been promptly promoted. Some of them have won commissions.

28,718 Swift employes own Liberty Bonds, to the amount of \$3,879,700.

The women employes of Swift & Company, and the wives and mothers of employes, have turned thousands of pounds of wool into sweaters, socks, helmets and scarfs for our men in uniform.

They have donated large sums of money to the Red Cross.

They have contributed to the war funds of the Y. M. C. A. and Knights of Columbus.

It is an inspiration to observe the flags waving on the desks of department heads in our Chicago office, indicating that every employe in the department is buying War Savings Stamps every week.

Swift employes, voluntarily, are contributing weekly sums to a comfort fund through their Military Welfare Association to provide their associates in service with smokes, sweets and other needs.

Food Conservation pledges are being kept in their homes.

In our employes' restaurants we are abstaining from meat and wheat on the days now on our war calendar, and are doing it cheerfully.

The name of Swift was never associated with more valiant patriots than the men and women who make up its official family.

The company is proud of this magnificent war record.

Our employes know that there will be other appeals and they stand as a unit, 48,000 strong, eager to give and sacrifice more.

With a full and grave conception of our mutual obligation we blend our loyalty and responsibility with theirs.

## Swift & Company

L. F. Swift President.

mass of bodies at the top of the ravine, and still those behind came on, crawling forward over the fallen, only to be blown back in their turn when they reached the top, until from where I saw it the whole heap was like nothing so much as a bunch of swarming bees, everywhere in movement, but staying always in the same place. And throughout our shells were landing among them, churning the mass and throwing up fountains of bodies and human fragments, until the slope westward toward the river was scarlet with blood that spread through the snow like ink across a blotting pad. At last the pile of bodies became itself a harrier, and then and then only the attack ceased. All through the night we could hear the crying of the wounded each time the shell fire lulled, but in the early hours before dawn, as the frost grew keen, the crying became more faint until there was silence, and when day broke they were all frozen stiff, wounded and dead together, and the ice along the river bank was dappled and streaked with red. It is not war, but madness."

ALL that sounded pretty nasty, and you can imagine we didn't feel very cheerful as we crawled through the icy slush from one shell hole to another and tried to find out in the darkness whether there existed anything in the nature of a trench, and, if so, where it was. Finally a man in my squad—I was corporal at that time—scratched his face on some barbed wire, and the next minute we were in a regular tangle of the beastly stuff. That was all that remained of the trench we were supposed to hold. Nice, wasn't it?

Well, we started trying to straighten out the mess and connect some of the shell holes to form a sort of line before the shelling began again, when suddenly, without warning, a party of boches fell upon us out of the darkness, and before I could even raise my shovel I received a welt on the head from a club that put me to sleep immediately. From what I heard later it seemed to have been as neat a little raid as you could wish. They collected four of us, killed half a dozen more, and disappeared as swiftly and silently as they had come, without losing a man. When I came to I was lying in a cart, wedged in with a lot of others in the midst of some filthy straw, and at every jolt I thought my head would split. Gradually I began to remember what had happened and finally pulled myself together enough to wriggle up, half sitting, against the side of the cart. It was quite light and a fine morning, but cold as an Arctic hell. At the tail end of the cart, which was open, there was a wounded German. At least he had been wounded some hours earlier, but now he was dead, and there was a thick fringe of hoarfrost on his whiskers. I remember thinking how funny it was—made him look like Father Christmas.

I pulled some straw over me, and the man at my right groaned and swore in German. Without thinking, I answered in the same language, and we had quite a talk. He was a Brandenburg, got a piece of shrapnel in the knee before Douaumont, and had lain out in the snow eighteen hours before they picked him up. He was pretty low physically, but vowed they'd got the French licked to a frazzle this time. I didn't argue the point, and finally he lugged out a big silver flask and gave me a swig of dam' good brandy.

I said as much, and he replied that he got it from a pal of his in the ambulance corps who'd taken it from a dead French officer. I didn't like the idea, but it tasted none the worse for that. I felt better then and looked out over the tail of the cart. Everywhere I saw endless convoys of guns and munitions and lines of marching men, all singing to beat the band.

Suddenly the cart stopped with a worse jolt than usual, and they lugged us out and dumped us down like sacks of flour, dead and alive together, in the slush by the roadside.

At first I couldn't stand, my legs were so stiff, but after a lot of rubbing they began to tingle, and I stumbled to my feet. There were two of my pals there also, both unwounded—the fourth had died in the night—and as soon as they could stand the three of us were hustled into a little tent where there was a big boche in a greatcoat sitting at a table.

He asked us the usual questions through an interpreter, and, as usual, we played stupid and told him nothing. He was just waving us out when an orderly came in and whispered some-

thing. The officer sat up and told the orderly to take my comrades away. Then he turned to me and yelled: "Why did you pretend you knew a German, you French pig?"

I looked blank and muttered "comprends pas," hoping he might be bluffing. But he cursed me some more and said straight out that the Brandenburg had given me away, and that I might as well answer his questions as the French were beaten anyway and it didn't matter any more.

I suppose my headache made me foolish, for instead of keeping quiet I said that on the contrary the German advance was now checked and that Verdun would never fall if they hammered it for months. That seemed to surprise him. For a moment he stared at me without speaking, then, with a nasty smile, he murmured: "Ah, yes; I see quite mad; poor fellow, doubtless the shock—yes, yes, stark, staring crazy—and clapped his hands loudly.

The orderly came in. "Take the lunatic away," said the officer, "his condition is hopeless, and put him with the others."

The soldier saluted and pushed me out of the tent.

Five minutes later they brought me to a barbed-wire passage leading to a sort of gate between two wooden sheds. The orderly said something I didn't catch to the sentry at the gate, who unbarred it, and they hustled me through. "Now run," said the sentry, "and run quick," and, drawing his revolver, he fired a bullet at my heels.

I ran without waiting, as one does when he is chased by bullets, and though the third shot ripped my boot and skinned my left ankle, I was still unwounded when at last I stumbled and fell full length in the snow. Groggily I picked myself up; there were no more shots, so I reckoned I had run far enough. Then I looked around, and in a flash I realized that boche officers' idea of a joke.

He had sent me to the cage when they kept their "loonies." You know gentlemen, that in this war there are numbers of men who go mad, especially during a bad battle like Verdun, what with shell shock and the nervous strain and so on. Even on our side there were plenty, and I'd heard that the boches had far more. There was a doctor with us who had been captured and sent back through Switzerland. He told us about a trainload of loonies that used to leave every Saturday for Germany from behind their lines in Champagne. He said that when there were many of them they were kept in a barbed-wire cage to await the train, like the captives in which we keep prisoners before they are evacuated. So directly I saw what my companions were like I knew exactly where I had landed.

THE enclosure was perhaps fifty yards square, and right in front of me, massed close to the wire, were about fifty men, some sitting, some standing, some huddled on the ground, and a few wandering around restlessly. The thing that struck me right away was that there were no groups talking together, though there were lots of shouting and disjointed conversation. But everyone was quite alone; none of them paid attention to the others or took an interest in what they did. That bucked me up a bit, as at first I was nearly mad myself with terror. To be killed in battle is one thing, but to be torn in pieces by a lot of loonies is another. Then, too, I reminded myself that my uniform was so covered with mud as to be hardly recognizable as French, and that with my knowledge of their lingo I could easily pass for a boche even should anyone bother about me. So after a while I plucked up enough courage to stroll over toward the wire. In point of fact, I suppose most of them were shell-shocked, just poor dumb things with all the reason blasted out of them. Their faces were vacant, and they didn't speak or show any sign of human understanding.

At each corner of the enclosure was a sentry with fixed bayonet, but I noticed the wire fence was not double, which gave me a glimmer of hope. The wind was bitterly cold, so I edged back toward the shed for shelter. It was just a shack, open on one side, with bare walls and no floor save the trampled earth.

There were at least forty more loonies there, mostly lying quiet, some with their heads hidden in the capes of their greatcoats as if their shattered nerves could not even bear the dim light of a February day. As I stole unobtrus-

### The Enjoyment Of a Hot Cup

is doubled when you know that present satisfaction will not be followed by regret.

Herein lies one great charm of

## Instant Postum

Its fine, snappy flavor gives immediate enjoyment, and its freedom from those troublesome effects which often follow the regular use of coffee assure the fullest pleasure and comfort.

This splendid beverage is made from selected cereals and is appetizing and refreshing. No caffeine, no harmful ingredient whatever. It requires little sugar and there is no waste. Made in the cup, at table, instantly, without boiling.

In these days the convenience and economy of Postum are particularly welcome.

**"There's a Reason"**

Sold by Grocers  
Everywhere.

sively into the building, meaning to sit down with my back against the wall, a big fellow plucked timidly at my sleeve. I jumped, and my first thought was to hit him quick. But the utter piteousness of his blue eyes in a dead-white face checked me.

"Have you no letters for the mail?" he whispered. "I have got everything fixed now with a regular post box."

He led me to a corner and pointed to an empty sardine tin wedged between two crosspieces of wood. Though the top gaped half open, there was a narrow slit in it. As I stood there the boche gave a little cry and pounced on a dirty scrap of paper. "Another letter," he said joyfully, and pushed it through the slit into the box, adding with a pitiful smile: "This time she cannot say I never write to her."

I TURNED away, wondering what was the tragedy behind his madness. As I reached the back of the shed and settled myself as comfortably as might be in the mud, a voice beside me said quietly: "Is it not dreadful to see these poor fellows in this state?"

The speaker was a little round-faced man whose cheeks once must have been apple-rosy, but were now sallow and sunken.

"Yes," I muttered, startled by the sanity of his tone. He was a boche all right, or I would have thought it was another case of that officer's practical joking with a prisoner.

"I felt that I ought to see everything," he went on, "even such a terrible sight as this, but it is very, very painful."

Before I could answer there arose a frightful yelling and shouting on our left, and with one accord the loonies began dashing in that direction. In a moment only the little man and I and perhaps a score of the worst shell-shocked were not part of a howling mob clustered around the entrance gate.

"One o'clock already," said my companion; "really I cannot stay much longer or I shall be late for the attack."

"What is it?" I asked; but before he replied I tumbled to it myself. The loonies were being fed.

The guardians stood outside and tossed hunks of bread into the air across the wire as one throws off to a pack of hungry wolves in a cage. And like wolves they fought and tore and howled—howled till cold shivers ran down my back and the hair prickled on my scalp.

From time to time one would seize a morsel and detach himself, scratched and bleeding, from the mêlée and run off like a dog with a bone. Once at a distance, the poor wretch would look round suspiciously, and if there was no one there would begin eating savagely, varying his repast at intervals with handfuls of snow. Toward the end the guardians threw more slowly, as if to prolong what was evidently the best moment of their day. Even the sentries from the fence corners had strolled round to share the fun. I myself had watched the beasts being fed in the circus, but I will never do so again.

Suddenly a short, thicket fellow came running along with a lump of bread as big as an orange in his hand. Close behind him was a long, thin man in a flapping cloak. Just in front of me the pursuer gave a horrible scream and leaped upon the other's back. The shock flung the bread right to my feet, but neither of the loonies seemed to care. Like naked cave men, they grappled and fought with teeth and nails. As they rolled over and over in the mud I saw that the big man had his arm wound round his adversary's neck. Then the other gave a wriggle, broke loose, and gripped the big fellow's throat with both hands. For a moment the long, thin body arched up in the effort to break that clutch, then sank limply back; his heels drummed the ground an instant and he lay still.

THE victor hung on without a sound for fully a minute. Then he got briskly to his feet and without a glance at the body trotted back toward the gate. I was roused from my trance of horror by the voice of my little companion. "Do you think you could give me a small piece of the bread?" he said politely. "I have eaten nothing for two days, and I am faint with hunger."

I broke the lump in half, passed one piece to him and began munching the other. It might be long before I got any more if what I had witnessed was the price I should have to pay for it.

The little German thanked me warmly. "You understand," he said, "that

## Every Hand Would Vote for Corn Puffs

This is a time to find out how good corn dainties are.

In Puffed Grains, for instance—Prof. Anderson's wonderful creations. Millions of people now delight in these airy, flaky bubbles.

But not one-tenth have yet tried Corn Puffs. And that's the queen of Puffed Grains. We think every child who knows all three would vote the Corn Puffs best.

### Drop-Size Hominy Bubbles

The finest white hominy is made into pellets. Then the pellets are sealed in huge guns.

The guns are revolved for sixty minutes in a fearful heat. The pellets are toasted and their moisture is turned to steam.

Then the guns are shot and the steam explodes. Each little pellet is puffed to a bubble, eight times former size. The result is globules sweet and savory, toasted, flimsy and crisp.

The flavor is like toasted corn flakes. But the drop-like form and the filmy texture add wondrous fascinations.

They taste like confections. Yet they are just corn hearts made delightful and easy to digest. Every food cell is exploded.

As a scientific food and a dainty, Corn Puffs hold supreme place among the corn creations.

Bubbled  
Corn Hearts

Airy  
Toasted  
Tidbits

*After-School Confections*

**Puffed Corn Puffed**  
**Rice Puffs Wheat**

Each 15c Except in Far West

### Try This Method

Serve Corn Puffs like any cereal, or mix with fruit, or float in bowls of milk. Scatter them on ice cream, or in soups, or use like nut meats in home candy making.

But try this method too. Crisp them and lightly douse with

melted butter before adding the sugar and cream. That makes the breakfast dish twice better.

And keep a dishful, crisp and buttered—like peanuts or popcorn—for children to eat after school.

Order some Corn Puffs now.

# Johns-Manville

From mine to market—  
a Johns-Manville Product

**F**ROM the time Johns-Manville Asbestos is quarried from the mine as a nugget of fibres until it reaches you as NON-BURN it is a Johns-Manville product. This means it can serve you on your truck or motor car as it has served for 25 years on heavy machinery for industrial use.

No brake lining is better than the asbestos woven into its fabric. Johns-Manville Asbestos is taken from our own mines and only the choicest fibres from our great annual tonnage are set aside for brake lining service. And that's what you get when you buy NON-BURN. No brake lining purchase buys greater service in safety, wear and satisfaction than from Asbestos Headquarters—Johns-Manville.

Look for it when you buy a car—insist on it when re-equipping. At your dealer's.

*To the Trade:* The invaluable protective features of our jobber-dealer sales policy are still open to recognized dealers who wish to make quick turnovers without sacrificing profit margins.

H. W. JOHNS-MANVILLE CO.  
NEW YORK CITY  
10 Factories—Branches in 61 Large Cities

it is quite impossible for me to mix with a mob like that. Though I am here incognito, my imperial dignity would never permit it." Then I understood what had been puzzling me, the reason why they had not left such an apparently normal person in the trenches. The poor little gink thought he was the Kaiser, and of course it would have been *lèse-majesté* not to shut him up immediately.

As the afternoon passed it grew very cold, and I wrapped myself in the cloak of the big loony who'd been strangled, and tried to sleep. Just as it was getting dusk I was roused by a wild yell.

**I**N the middle of the field stood a big German, his arms waving like windmills and his hair bristling like an angry cat's. "Forward!" he shouted; "forward! All together now, with the bayonet. To hell with the Frenchmen. Forward, forward!" and still yelling at the top of his voice he rushed furiously across the ground against the fence. He sprang at the barbed wire like a tiger, and for a moment hung there beating at the wire with his fists, tearing the flesh most cruelly. Then he jumped back, waved his arm as if urging on his comrades, and with another shout of "Forward!" plunged once more at the wire. Four times he repeated that frenzied charge, until his clothes were hanging in ribbons and his face and hands streaming with blood. Seemingly tireless, he threw himself forward a fifth time and again hung there, fighting, in the corner near the sentry. "Enough," shouted the latter. "Lie down."

The madman only yelled and fought the more. Without another word the sentry swung the butt of his rifle full on the poor chap's head. He fell backward, and I thought he was killed, but after a little while he got up and staggered back toward the shed. About fifteen yards away he stopped and looked at his wounded hands with an air of surprise.

"Blood!" he howled. "Blood; always blood!" Then he slid slowly to the ground and lay stretched out in the snow. I shut my eyes and tried in vain to sleep.

Some time later a new lot of loonies was admitted, at least a hundred of them, mostly dazed and silent, though a few were shouting or singing. I judged them to be the jetsam of that morning's battle. To my horror, as the guard rebarricaded the gate, I heard him

say to his pal: "There won't be any more to-night, as the train is made up, and we'll have enough to do getting this lot aboard."

"Damnation!" cried the other. "I'm tired. When must we begin?"

"Oh, there's time enough yet. Say a couple of hours after they've been fed."

His last phrase saved my life. I was rapidly dying of fright at the prospect of several days' train journey in that company, but the idea that the scramble for food would be repeated filled me with hope. With the added interest of doubled numbers the sentries would be certain to come again and watch, and then my chance would come.

The time passed so slowly that I began to fear we would be entrained without any feeding, but at last the shouting recommenced, and the same wild rush toward the gate began.

When the storm had reached its height I slipped stealthily down to the fence. Sure enough, the sentry had gone and I made my way between the wire with little difficulty.

After that it was plain sailing. I even got a lift from a wagon and a meal of bread and sausage on the plea that I was a Pomeranian who couldn't keep up with his regiment owing to sore feet. I knew they'd fall for it, as I'd seen some Pomeranians go singing past some time before.

I followed their trail right along, no one suspected me for a moment. Luckily they went into line in a quietish sector which the French had evacuated that day and where there were no trenches left. I found it quite easy to slip past them in the darkness, and my only mishap came from a nervous French sentry who nearly blew my head off before I could explain matters. Luckily he missed me, which gave me a chance to talk. I don't mind telling you I was mighty glad to get back.

**M**ARIUS paused and drank deep of his beer, with a satisfied glance at the captain's spellbound expression.

"But the military medal," I said. "What about that?"

"Oh, well, they gave me that as a sort of souvenir of my adventure, and then, of course, I'd kept my eyes open in the German lines, and some of the dope I got turned out to be rather useful."

The captain spoke at last. "Good God," he said slowly, "is that what this war is like?"

## The Adventures of Colin O'Rell

Continued from page 27

Colin reached for the hand bag on a chair beside her. She had opened it and had half withdrawn her check book when a man, walking slowly down the aisle between the tables, stopped and stared at them.

"Jevons?" he asked.

English Fred almost imperceptibly motioned to Colin. She closed the hand bag.

"Yes," said Jevons.

The man lowered his voice. "From the Marquis," he said. "The man who has been impersonating you got away from here."

Colin felt a tightening about her heart; for a moment she could hardly breathe. It was not the reaction of fear, but the reaction of relief; the two are very similar in effect. And then the breath that had halted burst from her lips in a sigh, as the man continued: "But he went to Lady Beth's apartment house. His chauffeur thought he was drunk and was trying to get him out of the machine, when those of us sent to relieve you from watching the place arrived. He's in your apartment now," he said to Colin.

The girl's features hardened. "Then we're safe," she said.

The newcomer eyed her. "Yet there are explanations necessary," he said. "Why you are here? You will go up-town at once?"

**H**E had said that the chauffeur had thought Fernald was intoxicated. That meant that Fernald probably had been drugged here but had escaped before the effects had overcome him. Undoubtedly one of the waiters here had telephoned her arrival, knowing her description well. And if this was the sort of place where men could be drugged and where spies of the Marquis were to be found, there was no chance of her

being permitted to leave here save in the company of this man whose question was a none too subtle threat. As for Jevons, he would not help her. A moment ago he had been prepared to drop out of the matter and let her cope with the Marquis as best she could. But now, with danger threatening him, Jevons would save his own skin. There was no chance for Fernald.

Dumbly she rode uptown with the two men. She could not concentrate. She had no opportunity to exchange a word with English Fred. And even had there been opportunity, she would not have known what to say—what appeal to make to Jevons that would be more potent to him than the appeal of self-preservation. She was still without a plan when she entered her little living room.

But for one thing she was grateful: The Marquis himself was not there. Two other men whom she had not seen before stood guard over Fernald. Beyond the fact that, like the man who had accosted them in the restaurant, they were hard-featured, she paid no heed to them. She could only stare at Fernald.

Fernald returned her glance. The effects of the drug that had been in the coffee had practically worn off. His brain was clear, though his body was weak. And in the look he gave her there was warning. She knew what he meant: that she must not consider him in the slightest, but must think only of the great cause which was more important than the lives of either of them.

The shorter of the two men took command of the situation. He addressed himself to Colin.

"The Marquis wants this matter straightened out, here and now," he stated. "He don't know, Lady Beth." (Continued on page 29)

When you think of Asbestos  
you think of Johns-Manville

## Think of this with reference to the Hudson Super-Six

Fifty thousand cars sold in the past two years

Only 15,000 available this year

Thousands are bound to be disappointed this year for they won't be able to get a Super-Six. During the active buying seasons there has never been enough Hudsons to meet the demand. Imagine then what must follow this spring, now upon us, when people will want cars. Automobile production has already been curtailed at least forty per cent under last year's output.

Passenger train schedules have been cut one-fifth. More and more now will we have to rely upon the automobile as a means of transportation. There simply will not be enough cars to meet the demand. And just see how the Hudson especially will be affected with its reduced production.

Never before has it been so important that the motor buyer be so particular about the proved qualities of the car he chooses. Thousands upon thousands of the best motor mechanics have left their regular employment in the garages and service stations throughout the country to give their skill to the repair of aeroplane and motor truck engines. The man who has a car requiring frequent mechanical attention will be greatly inconvenienced. There will not be the skilled men to make the repairs.

That is another reason why the Super-Six must be the choice car. Its reliability is so well established that buyers who appreciate the importance of having a car that does not call for constant mechanical attention will soon take up all we can build.

Review in your own mind the history of the Hudson Super-Six as you know it.

Think of what it has done as proof of its endurance. You must know intimately the performance of from one to a dozen Super-Sixes. They are always on the road. Their owners almost never postpone planned trips because of some unexpected necessity for the car to go into the repair shops. They are just like proved and reliable timepieces which go on day after day and month after month doing the things they were built to do and doing it without obvious effort.

Bear in mind that any automobile is going to be hard to get before the season is past because of the reduced production. Then think how difficult in particular it will be to get a car of such demonstrated reliability as the Hudson Super-Six.

HUDSON MOTOR CAR COMPANY, Detroit, Mich.

—all of which later grew to world-wide importance—the enterprise and facilities of the Billings & Spencer Company provided the Drop Forgings on whose quality, correctness of design, and uniform workmanship their development and ultimate success was contingent.

The engineering ability of the Billings & Spencer organization anticipated and visualized the phenomenal growth of these industries. They conceived, planned, and executed on the Company's own machinery and hammers the Drop Forgings which were destined to carry these infant industries from their period of struggling for recognition into the very vanguard of big business.

And now, their success more than achieved, these monarchs of industry still are being fed by the output of a hundred board and steam drop hammers in the Billings & Spencer plant. More than a million Drop Forgings a month are being pounded into shape by hammers varying from 400 to 8,000 pounds falling weight, their excess metal sheered off in the jaws of giant trimming presses.

Wherever Tools, large or small, are in evidence on particular work—wherever Drop Hammers are in daily, uninterrupted use—you will find that symbol of supremacy, the Billings & Spencer Triangle B Trademark.

**THE BILLINGS  
& SPENCER CO.   
HARTFORD, CONN. U.S.A.**

whether you're crooked or not, but we're going to know in about two minutes. You"—he turned to Jevons—"are English Fred. We know that well enough. The question is, did this man"—he pointed to Fernald—"who looks enough like you to be your first cousin—did he fool this girl?"

**H**OPE died in Colin's breast. To save his own skin, Jevons would tell the truth. But, before English Fred could answer, Fernald spoke.

"This isn't a trial by jury, with appeals and delays and all that sort of thing," he sneered. "You've got the goods on me, and I know it as well as you do. But the girl—don't blame her. Of course I fooled her! A nice little trick too, she is, and it's too bad she's a treacherous crook like the rest of you. I told her that I was English Fred, and she fell for it. And if I'd had about twenty-four hours more, I'd have landed the whole bunch of you. But that's over. You win."

Mist clouded Colin's eyes. This was the end. But if only there had been opportunity for a different farewell than this! She knew that his lips did not voice his heart; and yet, to have had some word of love to carry with her over the lonely road that stretched ahead!

But who serves her country must face sometimes the things that are worse than death. To die with Fernald would not be hard. It was harder to live without him. And yet English Fred might not deny Fernald's dying story. Hope of money and promise of immunity for the past might win him from his none-too-strong allegiance to the Marquis. She might yet succeed in her efforts to destroy the plans of the grotesque plotter. And yet it was so much easier to die—were there only herself to consider! But her country trusted her, relied on her, and she flashed Fernald a message from her eyes that made death itself seem worth while because it had brought him this. It told him that he would live forever, enshrined in the heart of Colin O'Rell.

"I'm glad you take it sensibly," said the tall man. "I ain't got any use for a bad loser." He turned to Jevons. "The Marquis said to let you attend to what's to be done. The deeper in you get, the stronger you'll be for us. Got a gun?"

Jevons turned white, but he nodded assent.

"Well, I guess that's all," said the leader. "We'll wait outside for you."

**A**N automobile stood outside the apartment house. Colin was ushered into it.

"Jevons will be out in a minute, and the driver will take you two to the Marquis," said the tall man. "There's a whole lot he don't understand and wants to know about."

He shut the door upon the girl. Colin watched him as he spoke a minute with the driver. Then he and his two companions started back to the apartment.

Reaction from dumb acquiescence in fate set in. What did anything matter compared to the life of Fernald, the life so precious to her, that these men were taking as callously and as carelessly as though it had been the life of a

worn-out, crippled beast of burden? It was too much for her country to ask of her that she, with a small revolver in her hand bag, should make no effort to protect the helpless man she loved.

What did it matter that treason gained the ascendancy and that the country suffered? Undoubtedly the Marquis suspected her, anyway. She was practically a prisoner. She would be killed herself. English Fred would denounce her. It was better to die now with Fernald; to die protecting him. To remain alive on the bare chance that she might be able to continue serving her country—she wouldn't do it. She reached for the handle of the limousine door. And then, muffled by the apartment walls, she heard a pistol shot. She sank back upon the cushions of the great car. While she deliberated, while she fought with the absurd, the intangible thing called honor, Fernald had died. Ill fitted by training to cope with these men, he had died.

There were no tears in her eyes now. Her face was immobile in its hardness. But the man who had killed Fernald—no matter what happened, she would mete justice out to him herself.

Across the sidewalk came the four men who had been Fernald's murderers. Two of them supported English Fred Jevons. His hat was pulled over his eyes, and even in the darkness she could see that his face gleamed white-ly. His knees were bent, and his whole body sagged.

The door opened, and the two men thrust the murderer into the car. "Buck up," said the leader. "It was comin' to him." He slammed the door, and instantly the car started.

Colin stared at the huddled figure of English Fred. This venomous thing was the instrument that had robbed her of the man she loved. Overwhelming, righteous wrath seized upon her.

Once again she forgot that she served her coun-

try. Her revolver was half out of her hand bag, when the huddled figure turned to her. Its hand muffled the sudden cry that burst from her lips.

"Don't, Colin, my own!" whispered Fernald.

She stared at him, unbelieving joy in the eyes that a moment ago had been almost maniacal.

"Jevons draws the line at murder," he whispered. "While they were gone, we changed hats and coats."

"But didn't they look at him?" she cried.

"Surely," he answered. "But what people expect to see, they see. They were looking for me, and they saw me. The blood they thought they saw hid his features."

"Thought they saw?"

"Yes," he told her. The driver could not see them.

His arm drew her close. "I'm old-fashioned, Colin," he said. "I object to rouge, but this time, considering that it made them think Jevons's face was mine and that that face had a bullet wound—"

He stopped speaking. One cannot talk and kiss at the same time.

*The fifth adventure of Colin O'Rell will appear next week.*

## THE OLD HOUSE

By Katharine Tynan

The boys that used to come  
and go  
In the gray kindly house  
are flown.  
They have taken the way  
the young feet know;  
Not alone, not alone!  
Thronged is the road the  
young feet go.

Yet in the quiet evening hour  
What comes, oh, lighter  
than a bird?  
Touches her cheek soft as a  
flower.  
What moved, what stirred?  
What was the joyous whis-  
per heard?

What fitted in the corridor  
Like a boy's shape so dear  
and slight?  
What was the laughter rang  
before?  
Delicate, light,  
Like harp's wind plays  
out of sight.

The boys who used to go  
and come  
In the gray house are  
come again  
Of the dear house and fire-  
lit room  
They are fain, they are  
fain:  
They are come home from  
the night and rain.

## Afloat or Ashore

—unobtrusive, yet effective—a touch that completes the appearance of the gentleman—this accounts for the vogue of the new Cheney Tubular Cravats. These ties are wrought of the reliable Cheney Silks in a striking group of new patterns, wedding fashion to true economy. See the new Cheney Tubulars at men's shops of the better sort.

The new offerings in Cheney wide-end cravats will also interest you, particularly the new Cherry Reversible Cravat, giving double wearing value and authentic style while in keeping with today's economy demands.

# SHALL I GO TO FRANCE?

BY FRANCES WRIGHT

IT was about six months ago that I began to ask myself that question. Among the women that I knew, some few had gone, others were preparing to go. There seemed no reason why I should not follow their example. I am healthy and strong, with no ties that need keep me here. I adore France, and am filled with longing to serve my country. These points had not escaped the notice of my friends.

"Hello!" said one, whom I had neglected for a number of weeks. "I thought perhaps you'd gone abroad."

"Stop your knitting," I begged, "long enough to tell me what I could do there."

My spirit disappointed her. "Lots," she said. "I think you'd be splendid."

Why splendid? How could I help? What is being done by the many American women who are now in France? Frankly, are they helping at all? Their service must be very real and very great to atone for their presence. Every nonspecialist who sails for France is taking boat space which a soldier, a doctor, or a trained nurse might fill. Each, on arriving, must be fed, clothed, and warmed. Each, if she falls sick, will require attention, medicine, and hospital space which can ill be spared. Only by talking to those fresh from the front can one realize the enormous difficulties of transportation; the huge problem of securing supplies for the army; the immense, urgent duty of caring for a civilian population already distressingly large.

## "Have You a Watch?"

IT was in the lounge of my club, where French lessons have been given all winter for the benefit of war workers, that I approached a very pretty girl and ventured to ask her the time. I had forgotten my watch, and it was important that I should leave at three.

"Avez-vous une montre?" I asked, obedient to the request that no English be used.

"No, do take it," she answered, pointing to the vacant chair at her side. It filled me with unholy joy that at least one member of the class knew less French than I, but I was somewhat shocked when she whispered: "I'm going to France to-morrow on reconstruction work, and I'm so excited that I simply have to talk about it." Reconstruction work! We indulged in English conversation between the French phrases, very few of which she understood. I found her charming, and I wish her well. Her limousine was waiting for her and, since she still had packing to do, she offered to leave early and drop me on her way home. She pulled down her veil as we left the room, and I noticed her hands, very white and smooth with pink nails, nicely polished. She said she was worn out with shopping and that she'd been on her feet for hours, getting things she'd need

in France. "I've done miles of aisles," she laughed, "and it's nearly killed me, for I absolutely never walk."

On the very next day I lunched with a friend who told me Miss S. had arrived safely in France and "simply loved it."

"But," I said, "Miss S. has spent a number of years in a sanitarium, and is always nervous and easily upset."

"Oh, her health is perfectly all right now," answered my friend. "She passed the examination, and mentally it will be just the thing for her. You see, she's never had a real interest before. It will do her a world of good."

But will it do France good?

## Misfits

I SUGGESTED to an English aviator that I might send him some new books. After a week of conferences in Washington, he was returning to the front, where he had served for three years. "Thanks awfully," he said, "but I feel it wouldn't be right. Send everything you can spare to the poor fellows in the trenches. There's no misery equal to trench misery. And don't forget the soldiers' widows. There are thousands and thousands of them in France, too poor to buy the things they need, and too proud to ask charity."

There is an answer to my question. I shall not go to France. Those French widows, daughters, and sweethearts can do better reconstruction work than I. France is their own land. French is their own language. My heart may be filled with sympathy, but I cannot hope to rival them in mothering their children, understanding their peasants, or guiding their affairs. I am dumb when adventurous women, waited upon for many years and unused to privation, desert their hotels or apartments for that war-ridden country. I am unmoved at the photograph of an American heiress washing dishes in France. Somehow, I remember those widows who could, perhaps, wash dishes equally well, and without thought of the photographer.

"Nine-tenths of the women who've gone to France—English as well as American—have gone just for the thrill of the thing." It was an ambulance driver speaking. "I'll be honest. That's why I went myself."

"But you certainly helped," I reminded him.

"Sure," he said, "until I got hit." After a pause, he continued, ungrammatically (and I feel I can't do better than to leave him the last word): "That criticism don't apply to the trained nurses. They're great. Women doctors are all right too. In fact, I'm strong for women. Since this war I think they can do anything, but the trouble is, most of the ones who go over to France don't fit."

# OUR NEW ISLANDS

BY EDMOND MCKENNA

EAST of Porto Rico, across the Virgin Passage, lies a little island only 13 miles long and about 2 miles wide, yet for this island and its two neighbors with their adjoining islets, barely 138 square miles in all, the United States paid \$25,000,000 to the Danish Government.

Negotiations for the sale were naturally carried on for the most part behind closed doors. Beyond a necessarily vague announcement that the Danish West Indies were needed by the United States for a naval base to protect the Panama Canal, and some incompletely reported debates in Congress, the public was left in the dark as to why this enormous sum should have been expended. Yet the reason for the United States acquiring the Virgin Islands from Denmark is now a mystery. St. Thomas, whose marvelous landlocked harbor is commodious enough to contain the entire battle fleet of the United States, is one of the greatest strategic points in this hemisphere. Unless universal disarmament follows the war, it ought to be—doubtless will be—strongly fortified by us; it may indeed become the Gibraltar of the Caribbean. Standing at the crossroads of the Atlantic, it dominates our gateway of the Pacific.

The harbor is shaped like a gourd or pear. It faces south, and, backed by a range of hills with a mean elevation of 1,000 feet, is completely protected from the prevailing winds in all weathers. The harbor is from 30 to 100 feet deep, with a 90-foot depth a mile and a half or so outside, and its size can, if necessary, be nearly doubled by enlarging the entrance to the connecting bay to the west. The approach to the harbor is free from rocks, and there are lighthouses on small islands just off the entrance, east and west.

## Guard Our Canal

ST. JOHN, four miles east of St. Thomas, is the smallest of the three Virgin Islands. This island has a harbor at Coral Bay which has been called the best harbor of refuge in the Antilles, and which, with a little expenditure, would provide us with a second naval base almost equal to St. Thomas.

Charlotte Amalie, at the head of the harbor, the only town in St. Thomas, has a larger population than any other town in the group. As the population of St. Thomas is only about 13,000, the place, unlike Porto Rico with its dense population, can readily be provisioned to withstand a long siege. Moreover,

## Cashing Your Checks Abroad

A New Banking Convenience  
for Americans Overseas

THIS Company has inaugurated a new banking service for Americans abroad. It is available to the depositors of any bank or trust company which has made the necessary arrangements with us.

Through this service the depositor can cash, up to an agreed amount, at the Paris Office of the Guaranty Trust Company of New York, and at numerous correspondent offices of this Company throughout France, his personal checks drawn on his bank in this country.

This means that the depositor while abroad can have, to a considerable degree, the checking account facilities to which he is accustomed at home.

We shall be glad to send you a descriptive booklet on request.

This service is at the disposal of banks and trust companies whether our customers or not. Their inquiries are invited.

1010 Albany Bldg. Boston, Mass.

in the deep inlets among the tiny islands which fringe the northern coast, submarine and torpedo-boat destroyers can find anchorage and protection. The hills can be fortified to command the approach by the Caribbean and by the Atlantic.

St. Thomas would be the most vitally strategic point on the flank of any hostile movement from the Atlantic toward the canal. The island is on the eastern rim of the Antilles, and, although close to the islands of other great powers, its harbor would permit the entrance or egress of the fleet unobserved.

### Of International Importance

THE Monroe Doctrine, as every school-boy is supposed to know, was evolved to prevent European powers from interfering with the affairs of the Latin-American countries. It was drafted to remove a possible menace to our own peace and safety, and to prevent the political struggles of the small nations in the American continents from becoming a pretext for European aggrandizement.

To maintain the Monroe Doctrine we must continue to control the Panama Canal. To control the Zone it was necessary for us to have a harbor near Colon that would provide quarters for the navy and lessen the steaming distance of our ships. Until the acquisition of the Virgin Islands, Guantánamo, in Cuba, was our only naval base in the Caribbean. A clause in our treaty with the Republic of Cuba grants our navy the use of Guantánamo Harbor. But access to a harbor is a very different thing from the possession of it with the necessary fortified littoral and hinterland.

Porto Rico offers no suitable naval bases. The harbor at St. Thomas, however, fits every requirement. For more than two hundred years it has been a port of call for vessels of all nations, and was once the great distributing center in the West Indies—a transshipping point of international importance. The island is over 1,000 miles from Colon. This seems at first thought to be far too great a distance to be of much strategic importance to the canal. But, save for Guantánamo, Hampton Roads, 2,000 miles from the canal, has been till now our nearest naval base of any size.

### Germany Was Right There

ST. THOMAS has already many facilities for coaling and provisioning a fleet. Large supplies of coal and fuel oil are kept on hand, and there are six coaling docks at Charlotte Amalie where vessels drawing up to 31 feet can lie alongside. There is also a floating dock, 250 feet long and 70 feet wide, which can take up vessels with a keel length of 300 feet and drawing up to 23 feet. There is also an excellent machine shop and foundry on the island, besides other facilities for repairs. These give employment to expert ship carpenters, sailmakers, and riggers.

All along the water front are huge warehouses, mostly empty, reminders of the time when St. Thomas was the storehouse of the Caribbean. These warehouses will no doubt be the scene of renewed activity and usefulness once the war is over, for the Virgin Islands lie in the direct track of European traffic through the canal. St. Thomas is practically the same distance as New York from French and British ports.

The Monroe Doctrine prevented Germany from acquiring the islands, but she did the next best thing. On Hassells Island, on the left side of the harbor entrance at St. Thomas, the government-subsidized Hamburg-American Line bought eight acres of land for coal depots and wharves. Three large warehouses were erected; water tanks and tank boats added, and a marine slip constructed for repairing purposes. For years before the war fifteen steamers of this line made St. Thomas a port of call every month. When the treaty was under consideration the line announced that it might move its base to the Dutch island of Curaçao. It saw that its wharves, stores, etc., must inevitably pass under the control of the United States.

### May Rival Porto Rico

NINETY-SEVEN per cent of the inhabitants of the islands are black and colored. At the time of purchase the remaining 3 per cent were British planters and agents, with a sprinkling of Danish officials and professional men. The color line is not drawn, English is

Inlands will save you in the cost of running your car and in the cost of gas-tight piston rings.

They are lower priced than other gas-tight piston rings, because the Spiral Cut principle permits simple one piece construction while making a mechanically perfect piston ring.

**Gas-tight piston rings are absolutely essential to the efficient operation of your engine.**

They will save you as high as 25% in gasoline, and will remedy the biggest source of engine troubles—carbon, pitted valves, sooted plugs.

Piston rings *must* be replaced after a time, as they are only metal washers and they get worn and leaky like any other washers. If you neglect putting in new piston rings, when needed, you will pay for it many times in waste of gasoline and power, and rapid depreciation of your engine. Any engine expert will tell you that these are facts.

Ask your garage man to show you an Inland. You can see for yourself that it is absolutely gas-tight—there is no gap, and the Spiral Cut causes the ring to expand in a perfect circle, forming a complete seal against the cylinder wall. The Inland is strongest and most durable, because equal width and thickness all around.

Inlands in your engine will allow you to do your bit toward fuel conservation, without reducing your mileage. Your garage man will confirm this—get the facts from him. Write for booklet.

# INLAND 1 PIECE PISTON RING

Over 1,250,000 in use. In many of America's fine cars and chosen for Aeroplane and Submarine service.

## Six of Many Office Uses

- 1 3-in-One cleans and polishes desks, filing cabinets, all office furniture.
- 2 3-in-One lubricates typewriters just right. Saves repair bills. Makes old machines run like new. Never gums or collects dirt.
- 3 3-in-One renews worn typewriter ribbons. Better than reinking. Apply with toothbrush. Allow oil to permeate ribbon.
- 4 3-in-One cleans the keys. Prevents rust or tarnish on the metal surfaces.
- 5 3-in-One stops squeaking of revolving chairs and stools.
- 6 3-in-One is the correct lubricant for adding machines and all calculating machines. Also polishes the case and prevents tarnish.

## 3-in-One The High Quality Oil for Offices and Banks

costs little—saves its price many times over. Keeps all delicate office mechanisms in smooth working order. Try it on typewriters, adding, calculating and billing machines, numbering and dating stamps, check-protecting devices. Best for time locks of vaults. Penetrates instantly to the bottom of the deepest bearing, lubricates perfectly, wears long.

3-in-One transforms old office furniture. Works out the grime of time—causes superficial scratches to disappear. No oily residue remains to show fingermarks and catch dust. 3-in-One polishes and prevents tarnish on the bright nickel and other metal parts of bank safes and vaults.

3-in-One Oil is sold at all good stores in 50c, 25c and 15c bottles; also in 25c Handy Oil Can.

**FREE** The 3-in-One Dictionary of Uses describes an infinite variety of needs for this pure, high grade oil. On request we will gladly send you a copy and a liberal sample of 3-in-One Oil—both free.

Three-in-One Oil Co., 165 ANN. Broadway, New York

## "Sea-fights and land-fights grim and great"

Pictures full of thrill, showing what war really means to the men who fight—but behind it all a broad point of view that assigns each battle its proper part in the campaign, each campaign its proper part in the war as a whole.

An impartial inquiry into the war's causes; an expert analysis of the tactics of the great battles; a revelation of the

social and economic factors behind the firing lines.

It is this perspective, combined with the vividness of detail, that makes

the language, the people are intelligent and industrious, and their sentiment is overwhelmingly pro-American.

St. Thomas thrived in former years on the production of sugar, but after the abolition of slavery this industry gradually declined. When the competition with beet sugar became strong, it became practically extinct because of the lack of irrigation and the decreasing fertility of the soil, which had been worked out in the more than 200 years of one-crop cultivation. The waste lands in this island and in St. John, however, could be turned profitably to the production of hemp. St. John, which is well watered and fertile, raises bay trees from which bay rum is produced. Lime trees also are grown on the island.

## The Prize Package

Continued from page 18

"Come to Morotti's to-night?" he asked.

"I'm sorry; I've got a date to-night." He sighed in spirit. "To-morrow night?"

She hesitated a moment, tapping the desk with a rosy finger nail. Then her face brightened: "I'd love to."

As he returned to his desk and the dull routine of writing press notes for Petunia Veal's latest novel, he uttered a phrase that he had caught from Harry Hanover. It was the first sign of his emancipation from Mallarmé and the Oxford Movement, for certainly that phrase had never been heard on the quitted lawns of Balliol: "She's a prize package, all right, all right!"

Ten days elapsed. All six sonnets had been delivered and paid for, and Mr. Arundel had bargained for a few extra rondeaux, at five dollars each.

Antipasto, minestrone, breadsticks, force-meat balls, and here we are again at the spaghetti and Hackensack Chianti. Lester had mailed his MS. on "Clara Tice and the Pleinairists of Greenwich Village" to the "Oblique Review" that afternoon, and had calculated that the editors could not in any decency offer him less than fifty—or perhaps forty—dollars for it. This, added to 20 by 62 plus 60 plus the rondeaux and other probable increments, would certainly support two in a garret for some time. He also had hopes of selling some obscenities for the movies. Pearl would probably want to go on with her work, for a while at any rate. She was so independent! But those clear eyes of hers, like a March sky with tennings of April in it, how tender and laughing they were! A few nights ago they had taken a long bus ride together, and she had forgotten her muff. She let him warm her hands instead. He went home that night feeling strong enough to bite lamp-posts in two, and had waked up Jack and Harry to put them right about Petrarch.

Pearl was teaching Lester to twirl up his spaghetti with fork and spoon, instead of draping it out of his mouth like Spanish moss. Suddenly she laughed.

"What did I tell you!" she said. "The dear old 'Oblique' has gone blooie! Mr. Arundel called up the editor to-day and told him the Barmecide Company won't supply him with any more paper until he pays his bills. Of course that means he'll have to quit."

Lester was touched in two vital spots: his own private hopes, and his zeal for fly-specked literature. "Shades of Frank Harris!" he cried. "If that isn't just like Arundel! Why, that man is pure and simple bourgeois! I never heard of such a thing. Has he no feeling at all for art?"

Pearl laughed—the pure, musical laugh of careless girlishness, but the recording angel caught in the nimble chords a faint overtone of something else—like the tinkle of ice in a misty tumbler. "Oh, he has his own ideas about art," she said. "He's taken to writing poetry himself. You never heard such stuff—I've been meaning to tell you. What does 'pullulate' mean?"

Lester's valiant heart, Lester's manly hands that had acted as a muff on a Riverside Drive bus, trembled and stiffened. "It pullulates and blooms in sultry rime," she quoted gayly. "Now what do you make of that, as referring to Mr. Arundel's heart? Sultry is right too!"

LION-HEARTED Harvard, osh-horned Balliol, and all the mature essences of manhood were needed to keep Lester calm. How had she seen these secret strains? She must have been peeping into the chief's private correspondence. He hesitated

St. Croix, or Santa Cruz, as Columbus named it and the blacks still call it, is the largest and most fertile of the Virgin Islands. Some 15,000 acres, or about one-third of the island, is planted in sugar cane and produces eight to ten tons an acre. Most of the sugar is imported into the United States. Some of it is distilled to make the well-known Santa Cruz rum. As in St. Thomas, there is no irrigation, but the average rainfall is 45.7 inches per annum, and because the land is lower and the trees are not entirely cleared off, the soil remains fertile. With modern methods of irrigation and fertilization the yield would be three or even four times as great, and rival that of Porto Rico.

during six inches of spaghetti. "Search me!" he said. "Is it in Walter Mason?"

"No, it's his own stuff, I tell you. 'O beautiful rose! O shrub without a thorn!' she chanted, and her laughter popped like a champagne cork. The horrid truth burst upon him. The boss was courting the angel of the office with the very ammunition that Lester himself had furnished, and his vow of secrecy forbade him to disclose the truth. Oh, the paltry meanness of fate, the villainy of circumstance! It is impossible to describe the pangs it cost him to dissemble, cloak, disguise, and conceal the anguish he felt. But dissemble, cloak, disguise, and conceal he did, and though his heart glowed like an angry cigar stub, he reached home at last.

THERE he sat down at his table, and amid the healthy snores of his room-mates he concocted a fine piece of literary ordnance. Late and grimly he toiled and contrived. At length he had fashioned a sonnet which would be the golden sum and substance of the previous sequence; a cry of the heart so splendidly forensic that Mr. Arundel would pounce upon it, yielding his crisp steel engraving in return. But see, the asp concealed in the basket of fruit, the adder in the woodpile! Read Lester's sonnet as an acrostic:

Over that trellis where the moon distills  
My heart is climbing like a rambler rose:  
You lean and listen to the whippoorwill,  
Headless of how the fragrant blossom grows!  
O beautiful rose! O shrub without a thorn!  
When wilt thou realize my love in sooth?  
I touch the windowsill with heart forlorn,  
Hoping the garden of thy bounteous youth.  
After the grief and teen of bitter days,  
Troubled by woe that cicatrize and burn,  
Ever at eventide I seek thy praise.  
Yearning thy maiden bliss—I yearn, I yearn!  
Over the rotten fruit of buried years  
Unbar the bolt—have pity on my tears!

THE discerning reader will spot the glittering falchion of malice lurking in the initial letters. Read them downward, they convey: O MY HOW I HATE YOU! Lester had but to convey this poisoned confit to his chief; then, playing upon the artless Pearl, persuade her to show it to him—point out the murderous duplicity of the love token; and she would recoil into his arms. Greenwich Village would sound the timbrel of joy, and even the "Oblique" might find a softer-hearted papyrus vender. Vos plaudite! With such thoughts, amid the wailing matin song of boarding-house steam pipes, our hero fell into a brief slumber.

That morning Lester hastened to the office. He waited feverishly until the hour when the chief usually arrived, then visited the private office. There he found the vice president, going over the morning mail. "Is—Mr. Arundel in?" he stammered.

"Mr. Arundel isn't here to-day," said the vice president. "He will be away two weeks."

Lester retired queasily, and hurried to the corner sacred to Miss Denver. Here he found one of the other stenographers, using Pearl's machine.

"Where's Miss Denver?" he asked. The young lady, of a humorous turn, looked at her wrist watch. "Getting ready to go over the top," she said.

"What do you mean?" "Haven't you heard? She married the boss this morning."

## A DADDY HE CAN BRAG ABOUT

*Now, all you boys in olive drab,  
Come smoke a good luck pipe with me,  
I'll read your fortune in the smoke  
An' tell you all the things I see.*

*I see three kiddies, plain as day —  
One says "My pa owns everything,  
A million million dollars, too."  
The other says "My pa's a king."*

*An' then the littlest kid of all  
Swells up until his buttons tear —  
"Shucks, they ain't in it with my dad!  
Why, fellers, he fought Over There!"*

*Here's luck, you boys in olive drab,  
Good fortune bring you safely out  
And give some littlest kid some day  
A daddy he can brag about.*

*Velvet Joe*

## POWDER IN SHOES AS WELL AS GUNS

Foot-Ease to Be Added to Equipment of Hospital Corps at Fort Wayne.

Under the above heading the Detroit Free Press, among other things says: "The theory is that soldiers whose feet are in good condition can walk further and faster than soldiers who have corns and bunions incased in rawhide."

The Plattsburg Camp Manual advises men in training to shake Foot-Ease in their shoes each morning.

One war relief committee reports, of all the things sent out in their Comfort Bags or "Kits," Allen's Foot-Ease received the most praise from the soldiers and men of the navy. It is used by American, French and British troops, because it takes the friction from the shoe and freshens the feet. There is no foot comforter equal to Allen's Foot-Ease, the antiseptic, healing powder to be shaken into the shoes and sprinkled in the footbath, the standard remedy for over 25 years for hot, tired, aching, perspiring, smarting, swollen, tender feet, corns, bunions, blisters or callouses.

Why not order a dozen or more 25c. boxes today from your Druggist or Dep't. store to mail to your friends in training camps and in the army and navy.

## Our Military Railroad in France

Continued from page 9

in place of our time-honored cowcatcher. Yet a French railroad man will be sure to notice two radical points of difference: their whistles are of the deep, sonorous key of our most dignified of mountain pullers, not the sharp, squeaky note of French engines, and each has a bell. The first time a boy from down on the B. & O. somewhere drove one of these smart Yankee engines up to the railhead behind the firing line, he rang the bell lustily, whereupon all the soldiers came rolling out from quarters in their gas masks. A bell at the front means but one thing—a gas attack.

### From 10 to 30 Tons!

IF ever you have been in Europe, you must have noticed the goods trains. The cars are particularly small compared with freight cars in the United States. As a rule, those seen by American tourists are of about 10 tons capacity, although the average in France actually does run close to 15 tons. These are hardly to be compared with the 50-ton box cars in general use here, or the 70-ton "battleship gondolas" used on some of the most important of our coal roads. The vaunting spirit of our efficiency engineers was kept in bounds by those same narrow tunnel sides and bridge spans that limited the locomotive builders. Yet they actually have produced freight cars for France of 30 tons capacity. These cars, built of wood upon steel underframes, according to good Yankee practice, are equipped with continuous air brakes. The *guérites*—tiny sentry boxes set upon each fifth car, from which, at the whistle, the "brakie" in overalls used to emerge and tug violently at the hand brakes—are slowly but surely being replaced by the little red cabooses of the U. S. A. The hand car also has invaded the land of Jeanne d'Arc.

In the shadow of tall rows of poplars and the pleasant odor of the vineyards the section gang ditches it at noon, chats of things "back there," and wonders if the boss is making good in his new job down at Logansport.

### The French "Marches"

THE French, under extraordinary conditions, during the past four years, have shown themselves remarkably expert in the handling of their railroads. Even to-day, in spite of all the terrific military demands upon the nation, expresses, although much shortened and deprived of almost all their luxurious facilities, are still operating at least twice a day from Paris to important outlying cities—Lyons, Marseilles, Bordeaux, Cherbourg, Havre, Calais. And the local service for both passengers and freight is entirely adequate. Yet all of these wait upon the military necessities. The operating problem—particularly on the almost universal double-track lines—is comparatively simple and well worth the attention of our own railroaders the next time we have a traffic tie-up. The trains are spaced at even distances and each—freight or passenger—moves at exactly the same rate of speed, eighteen miles an hour. The schedule is called the *marches*, and a definite *marche*, or place in the procession, is assigned each train each day.

The American military railroad, operating over the lines of existing French railroads, fits in with this plan. At the desk of the French general manager sits an American general manager; at the desk of each French general superintendent an American general superintendent, with the rank of major. Railroading is much like soldiering; and, to promote efficiency and discipline, in organizing regiments efforts were made to align railroad with army rank. A railroad colonel is a regular, but his lieutenant colonel is likely to be a general manager; train or yard masters and dispatchers become lieutenants; track foremen sergeants or corporals, and so on, down to the dispatcher, who is learning more French in a few weeks than he ever thought he was going to know in his whole life and who has to translate the program of the *marches*, so that he can send out a plain English sort of an order to a train crew, which will read something after this fashion:

March 9, 1918.

Engineer and Conductor, Train No. 42, U. S. Engine 148. Assume *Marche* 26, leaving X at 10.20 a. m.

Which are all the orders that the train crew will need. Talk about sim-

plicity! Some of our Yankee railroad boys will admit that they have learned something. And handling a line efficiently under great congestion or emergency conditions is not to be the least. For by the time we have a million troops at our sector in France our military railroad will be expected to move 30,000 tons of supplies to the front as a part of each day's work. Which quickly can be translated into 1,500 cars or sixty trains daily in each direction—on even spacing a train each twenty-four minutes. This is a traffic movement roughly approximating that of the main line of the New York Central between Albany and Buffalo, but the average freight train in the United States today carries from 3,000 to 5,000 tons. The French train, with its light equipment and with stiff grades to climb, does well to maintain an average capacity of 500 tons.

### We Cut Twenty Years' Red Tape

ALL is not simple, though. I have spoken of the speed with which double-track was torn up. Putting it down may be different. COLLIER's American correspondent in France was dining with a veteran forty-year-old captain. "We need to learn a lesson from you and your methods," said the captain. "Traffic between X—and Y—justified the building of a second track—there being only a one-track line—some twenty years ago. Ever since then there had been an effort to get the double-tracking accomplished, but the job was never accomplished. You see, the line runs between a river and a highway. Thus two different ministries were involved if the highroad was to be encroached upon. [Presumably the Interior and Public Works?] And the paperasses kept moving back and forth—but the second line of track wasn't built. Then you Americans set up shop at X—. You at once announced that there was need of a second track, and would there be any objection to your building it? No, of course not; but there would be certain formalities. . . . Très bien, said the American engineers; we'll attend to the formalities later. Already they were moving up the materials—and in a very few days the line had been double-tracked and the rolling stock was in operation over it. . . . We hear lots of stories like that. Yes, we needed the coming of you Americans."

One final phase of the military railroad in France remains. It is the dramatic point where traffic slows, where great distribution yards and warehouses multiply and one no longer has to strain the ears to hear the steady rumble of cannon. Here it is that the activities of the construction and the wrecking gangs are doubled and trebled, for the track is poorer and the line forever is being temporarily severed by shell fire. But repairs are made quickly by the courageous expert trackmen.

The railhead—the exact spot where the standard-gauge tracks end—is placed from five to twelve miles back of the trenches. It rarely ever is less than five or more than twelve. If the trench line is steadily advancing and gets more than twelve miles beyond the railheads, the standard-gauge lines will be thrust forward quickly until they are within five miles of the actual fighting. In the case of retreat the process is reversed. The light railways—the 60-centimeter (24-inch) narrow-gauge lines—are at all times close to the firing line. They are made of portable sections of rails and metal cross-ties like a small boy's toy railway. Miles of them can come up and go down in the course of a single night, if necessary, although the best final results are secured by grading and ballasting a roadbed. The pesky little locomotives—coal-burning well back of the lines, and gasoline-motored close up to the trenches—have an abominable habit of going off poorly laid track. And it is not always easy to replace them—under shell fire.

These light railways are the most unusual transportation development of the present war—not even excelling the motor truck and its wonderful performances. They were not even thought of at the time of our Civil War. Neither was the modern sort of gunfire dreamed of in that conflict. In thirty weeks of the defense of Verdun, some 60,000,000 shells—3,000,000 tons of steel—were fired. The entire pig-iron production of the United States for 1864 was less than 1,000,000 tons. When Sherman (Continued on page 36)

# TORBENSEN

INTERNAL GEAR  
TRUCK  DRIVE

TORBENSEN Drive is made to last. Every owner gets a **GOLD BOND GUARANTEE** that the I-Beam axle and spindles will last as long as the truck, and the internal gears at least two years.

This strong, solid-forged I-Beam is the unyielding steel backbone of TORBENSEN Rear Axle Drive. It does nothing but carry the load. It takes all the strain off the driving parts.

Powerful external contracting and internal expanding brakes make TORBENSEN Drive safe. They brake at the wheel and near the rim, with direct, inflexible action.

TORBENSEN Drive adds 43 percent to road clearance. The differential housing is small, because the gear reduction is divided between the differential and the internal gears at the wheels.

This jackshaft, with its pinions and differential, together with the internal gears, forms the driving mechanism of TORBENSEN Drive. It carries no load whatever. TORBENSEN Drive is lighter, saves gas, oil, tires and repair costs.

These jackshaft pinions apply the power through internal gears at the wheel and near the rim, giving TORBENSEN Drive tremendous driving leverage. All motors develop greater driving power with TORBENSEN Drive.

Send for interesting booklet "DRIVING AT THE WHEEL and NEAR THE RIM." It tells all about TORBENSEN Drive.

Made by  
**THE TORBENSEN AXLE CO.**

**Agents Make Big Money Selling Portraits And** portrait pictures. Sample and training free. Consolidated Portrait Company, Dept. 7, Chicago, Ill.

**Sell Guaranteed Made To Measure Raincoats.** Agents for \$5.00 guaranteed. National workmanship in comparable quality free. Standard Raincoat Co., 26 E. W. N. Y.

made his hasty October-to-January march across Georgia he carried sixty cannon and 200 rounds of ammunition for each gun. A modern French 75-mm., or an American three-inch gun, fires 200 rounds in about ten minutes. Wonderful as have been the performances of the motor truck in this war, it could not have done the work of the light railway in maintaining steady and terrific gunfire.

More than 5,000 miles of these railways of two-foot and three-foot gauge are to-day employed upon the western front. The favorite locomotive, the double-ended Pechot, is a creature of French design, but many of them are American-built—the product of a world-famed locomotive plant, "somewhere in Philadelphia." And, despite the unfamiliar metric specifications, these engines came out at times as frequently as one every sixty minutes.

The light railway extensions of the United States Military Railroad connect at the railheads of the several divergent standard-gauge branches—the fingers of Uncle Sam's right hand—and, roughly speaking, form successive series of interconnected loops; which not only enable quick operation by avoiding the turning of trains but render the entire system fairly invulnerable. Into the railheads throughout the night creep the trains from the seaboard ports, or perhaps switching engines with a trail of ammunition or food cars come up from the distribution yards and stations, well behind the lines. It is quick work to transfer all of these to the narrow-gauges, and hardly a longer job for them to begin the distribution to the men at the front.

## "Mister" S. M. Felton

IT all requires system and organization; both are fundamental principles in American railroad operation. And the genius of the Yankee railroader—which has brought 50,000 people into and out of New Haven or Cambridge for a football game without perceptible delay; which in the Northwest has got the wheat out and the coal in, perhaps in the face of raging blizzards; which has met any transportation situation with initiative and brain work—never has had a wider opportunity than today in the great conflict overseas. When the history of that conflict is fully written I am confident that the part of the railroad and the American railroader will form no small chapter. It may not be as dramatic as the story of the front line. It will be the epic of the transplanting of a portion of one of America's industrial armies to strange environment and of its falling to the job almost as easily and naturally as it would upon the home division. Consider the personnel. It starts with one S. M. Felton—no, not General Felton nor Colonel Felton, nor Captain Felton, but just plain Mister S. M. Felton, Director General of Military Railways. A couple of years or so before the war this plain, hard-headed railroader had had, as its president, a large part in the transformation of the Chicago Great Western. In the Spanish War, as receiver of the old Queen & Crescent, he had transported the greatest number of troops carried by any one railroad; and when war with Mexico seemed likely he was at San Antonio in charge of tentative arrangements—he had been at one time president of the Mexican Central. His interest in military railroading is born in him. By an ingenious bit of work his father—also S. M. Felton—undoubtedly saved the life of Abraham Lincoln at the time of his journey to Washington for his first inauguration. Through his detectives he discovered a plan to assassinate Lincoln on the streets of Baltimore. Lincoln was expected to pass from the Northern Central to the Baltimore & Ohio. But Felton found a pretext for putting the President-elect, at Philadelphia, on a through sleeper which was hauled by horses from the Baltimore & Ohio to the old Philadelphia, Wilmington & Baltimore (of which Felton was president).

## The "Thirteenth"

NOT only did the younger Felton have to supervise the planning of the cars and the locomotives for the United States Military Railroad in France, but to him was intrusted the task of immediately raising nine engineer regiments. He started recruiting late last spring. His appeals met with a ready response. There has not been a heavy flavor of romance in the railroad business here in recent years, and the enthusiasm for the expedition into France spread rapidly. Engineers, firemen, brakemen, sec-

"By Jove!  
no more  
foot misery  
for mine

—that one Cal-o-cide  
foot bath did the work."

End Your  
Foot Misery

Relief is at hand for  
everyone—just take a Cal-o-  
cide foot bath—pain ceases—  
swelling vanishes—excess-  
ive perspiration is controlled.

Soreness from corns,  
callouses and bunions is done  
away with. Tired, tender,  
swollen feet are made firm,  
healthy, cool and comfort-  
able—free from odor.

Cal-o-cide penetrates  
the pores and gets to the cause  
of the trouble. It acts on the  
subcutaneous tissues and re-  
stores them to normal.

## Guarantee

Get a 25c box of Cal-  
o-cide from any drug store or  
drug department. Try it to-  
night. If you are not delighted  
with the results your money  
will be refunded without a  
quibble—either by your  
dealer or directly by us.

## UNCLE SAM'S WATER WAGON

BY JOHN B. HUBER, M.D.

**TYPHOID** fever, cholera, and the dysenteries are the "ingestion infections," and they are, in camps, incurred mostly by drinking tainted water. They have in the past accounted for a far greater number of soldiers than the enemy's ordnance. In the Spanish War, for example, 90 per cent of our volunteer regiments developed typhoid within eight weeks of going into camp.

Of course the antityphoid inoculations have since then been the chief preservers of our troops against typhoid. And in Europe and Asia anti-cholera inoculations, though not so effective as those against typhoid, have proved fairly so. There is at present

practically no such means of insurance against the dysenteries. All in all, therefore, water purification is today an absolute essential of military sanitation. And it is by reason of such purification, combined with the inoculations mentioned, that in our own camps there is no danger of infection for our boys.

When our troops were in Mexico their drinking water was sterilized as follows: Major William J. Lyster and Major Reuben B. Miller, U. S. A., and Dr. D. F. Fetterolf, of the United States Medical Supply Depot in New York City, perfected a method by which hypochlorite of lime (calcium) was used. The water was thus rendered safely potable, although it did not remove turbidity or queer odors, which latter are best removed by filtration, as we shall see, and in any event are harmless.

According to the method adopted by these medical authorities of the army, the smallest convenient amount of the chemical mentioned, 1 gram (about 15 grains), is hermetically sealed. This is done in a glass tube about the size of a fountain pen, so that the chlorine, the sterilizing element in the compound, remains active for at least ten months if kept in the dark, in a moderate temperature. The specifications call for a chlorine content of 30 to 32 per cent. Such a tube can be prepared by any competent druggist and should be obtainable at about 5 cents the tube.

This, apart from military considerations, is valuable information for housewives, farmer folk, travelers, prospectors, campers, and the like.

The contents of such a tube should

sterilize from 40 to 60 gallons of water.

Of course water boiled for cooking purposes need not thus be treated; only that for drinking. The tube is easily broken in the hand by a file at the marked point; it may be shaken directly on the surface of the water; or it may be added to a small amount of water in a clean cup and then poured directly into the large container. No stirring is necessary. The water is generally rendered safe, so far as typhoid, cholera and dysentery are concerned, in five minutes, but thirty minutes will assure a 100 per cent bactericidal efficiency. A water supply treated in this way may be potable for ten days.

Dr. Lyster and his associates have devised for army use a portable container—a canvas bag of specially woven flax, 20 inches in diameter and 28 inches long. This supplies a company of infantry with a canteenful of water for each officer and man. The opening is sewn over a galvanized iron ring which is hinged at one diameter, so that the bag can be folded. It is supported when in use by two pieces of hemp rope 3 feet 2 inches long, spliced to the ring at equidistant points. There are five self-closing faucets fitted just above the bottom seam, spaced at equal intervals. The whole weighs from 7½ to 8 pounds. Sufficient chemicals can be carried in sixty glass tubes to supply an infantry

This container supplies a company of infantry with water a canteenful for each officer and man

company at war strength with five canteens of water a day per capita for twelve days.

Here, then, is a convenient method of sterilizing water; an appliance light enough to be carried constantly in the field, a process available without renewal for at least ten days, a prompt service outfit, the water not raised in temperature; incidentally the canteen is disinfected and supervision made easy. Furthermore, to make a roily water clear before sterilization, a piece of Scotch outing flannel is fastened by tapes sewn to the upper circumference of the bag, enough space being left for the introduction of the chemical.

Far preferable is the water wagon, especially such a water wagon, to the groggery through which the soldier becomes intemperate, "an example of insubordination and a nuisance to his comrades; first in a mutiny and last in a battle."

## Kissed by a General

**A LIEUTENANT** in the American army abroad writes that one day a French general, formerly commander of some of the troops at Saloniki, and later in command of a whole army, passed by the American camps. The American says:

"He was a little man and, except for his uniform and his medals, seemed more like a sixty-year-old shopkeeper than a general," says the lieutenant. "He said something to one interpreter, and the interpreter said: 'The general expresses the emotion he has in saluting the first American he has seen in this war. The general has come out of his way on his journey to the front in order to salute you. He regrets that he knows no English, but it would give him great pleasure to shake hands with each of you in person.'"

"So we all stood at attention, and the general passed along this line of us,

shaking hands with everybody, and he really did mean what he said about appreciating our coming so far to fight on French soil, for the tears simply rolled out of his eyes, and when he shook me by the hand his hand was quivering with excitement."

"You know, I don't speak any French, but I caught myself saying: 'Bonjour, mon general!' I had to say something."

"And he reached up on tiptoes—and kissed my cheek!"

"They guyed me some afterward, for I was the only fellow he kissed, and it was my first shock of the kind; but they didn't guy me much, for he was really so sincere about appreciating our being here, and he was such a nice, fatherly sort of man too—and he'd been out there at Saloniki and was on his way to the front again. But, say, it is different, isn't it?"

# The Road To Victory

**T**HERE is but one sure road to Victory—the defeat of the German armies in the field. Germany will be ready to surrender Belgium and northern France only when she is driven from them by force of arms.

There is but one sure road to Victory, and it must be built on the Liberty Bonds of a loyal and devoted American people. On this road, and this road alone, can our splendid Khaki-clad armies drive through to the Rhine, and, if necessary, across the Rhine.

There is but one sure road to Victory, and it must be built by the toil, the steady purpose, the *saving* and *lending* of a whole nation united to one end. Build well and build quickly, O Builders of the Road to Victory! Your every effort and your every dollar is needed *now*, if we would make the struggle shorter and the victory sure.

Every bond today saves lives, American lives; saves sorrow, suffering and possible defeat.

The Third Liberty Loan is the nation's road to Victory. Build it well.

Send 20c. in stamps for trial sizes of the four forms shown here. Then decide which you prefer. Or send 6c. in stamps for any one.

The J. B. WILLIAMS COMPANY  
Dept. A, Glastonbury, Conn.

After the shave or the bath you will enjoy the comforting touch of Williams' Talc Powder. Send 4c. for a trial size of the perfume you prefer—Violet, Carnation, English Lilac or Rose.

Williams' Shaving Soap is as much at home in camp or at the front as it is in a bathroom. The water need not be hot, your brush need not be a fine badger, to coax Williams' Shaving Soap into a lather. Like a good soldier, it fits into any kind of life, and delivers its full quota of rich, creamy, lasting lather, even under difficult shaving conditions. Pass this war comfort along to your soldier. It is one of the few luxuries the government permits.

# The best of Easter meals

You like to make Easter a festive day. You have flowers in your home, candies and Easter rabbits for the children, and to complete the gladness of the day you should strive to serve a meal of Swift's Premium Ham.

The appetizing flavor will plainly tell of the special care in preparation. Only the careful, special Premium cure, and the fragrant smoke of slow hickory fires could carry to every morsel of this ham such delicacy, such delicious flavor.

This year make your Easter a memorable one. Choose this specially-cured Premium ham. See how heartily your family will appreciate its unusual flavor and fineness. Be sure to see the brand name on the ham you buy—Swift's Premium.

Swift & Company, U. S. A.

## Swift's Premium Ham

**United States Tires  
are Good Tires**

## Make the Most of Your Car

It is precisely in these days of urgent duties that your car—passenger or commercial—is most valuable to you.

Never before has it played so essential a part in business and domestic life.

It supplements the railroads—relieves traffic congestion—increases production by facilitating rapid movement of materials—speeds up distribution of food products.

It saves time, labor and in a wide variety of ways helps to put industrial and personal efficiency on a war time basis.

Straight thinking Americans are using their cars to the limit. But they are putting their motoring on a business footing.

**Exercise thrift!**

**Save gasoline.** Keep your cylinders clean. Don't let your motor run while your car is standing. Look to your carburetor adjustment.

**Save oil.** Use enough—but not too much. Guard zealously against waste.

**Save tires.** Get more miles for your money—the extra miles that hundreds of thousands of thrifty motorists are finding in United States Tires.

United States Tires will give you the supreme service you want and must have today.

You have your choice of five treads, one for every motoring need,

—and all of the unusually high quality that has sent the sale of United States Tires bounding ahead in tremendous strides.

*Also Tires for Motor Trucks, Motorcycles,  
Bicycles and Aéroplanes*

*United States Tubes and Tire Accessories Have All the Sterling Worth and  
Wear that Made United States Tires Supreme*

# Certain-teed

## Paints-Varnishes-Roofing

The reputation of this world-wide business is wrapped up in every Certain-teed package; and its pledge is expressed in the name, which means that you will be *certain* of quality and *guaranteed* satisfaction.

### Certain-teed Roofing and Shingles

More than one-third of all the roll roofing used throughout the world comes from the Certain-teed factories. Certain-teed has become the *dominant* choice for buildings of every size and type—

for factories, warehouses, garages, stores, hotels, office buildings, farm buildings, etc.

Certain-teed saves money from first to last. It costs less to buy and less to lay than other types of roofs; and it gives years of efficient service with practically no cost for up-keep.

Certain-teed is immune to practically every form of roofing attack. It is rust proof, spark proof, weather proof, waterproof, and is not affected by acids, fumes or gases. The sun's heat cannot make it melt or run.

In shingle form Certain-teed makes an artistic, durable roof for residences.

Certain-teed is guaranteed 5, 10 or 15 years, according to thickness. Sold everywhere.

### Certain-teed Paints and Varnishes

are made from the best quality materials, used in scientifically correct proportions and finely ground and thoroughly mixed by modern machinery. For these reasons, Certain-teed covers more surface per gallon and wears longer than ordinary paint.

There is a Certain-teed Paint for every purpose. Each contains the best paint materials for that particular kind of paint—as any paint expert can tell by reading the formula on the label.

Certain-teed Paints are made in a full line of colors, and both Paints and Varnishes are put up in all size cans.

The prices of Certain-teed Paints vary according to the cost of making each color. As a result of this policy, which is new to the paint industry, most Certain-teed Paints cost you less than other paints of anything like the same high quality.

Ask for Certain-teed wherever paints are sold.

# Collier's

## THE NATIONAL WEEKLY

P. F. COLLIER & SON, INC.  
NEW YORK, N. Y.

MARCH 30, 1918  
VOLUME 61 NUMBER 3

# THE SKY RAIDERS

BY JAMES HOPPER

COLLIER'S SPECIAL CORRESPONDENT

I WAS calling that evening on two very dear friends, when, at half past ten, in a lull of the talk, my little hostess said suddenly: "C'est le canon!" And I, who also, with an inattentive ear, vaguely had heard that heavy yet soft and muffled sound, as of a door slammed in the depths of a dungeon, or in some remote tower, agreed with: "Yes, that was a cannon shot!"

But the husband, lying on the sofa, a convalescent from a shell wound which had shattered both his thighs, the lamplight gleaming softly on the bronze of his Croix de Guerre, on the vivid red spot of his Cross of the Legion of Honor, he, come from the "over there," expert in all the bells of sound and all the other bells, said quietly: "I did not hear it."

We opened the window, put out the lamp, and he stepped out on the balcony between us, held on one side by that most wonderful little wife of his, on the other by much less wonderful me. The balcony is high up at the top of the seven-story house; before us spread all the roofs of Paris glistening with blue moonlight, and there was not a stir, there was not a light, there was not a sound. So we will never know whether at half past ten that evening there was a cannon shot, whether some lone watchman at that time, some vigilant cannoneer, had thought he had glimpsed, in those high depths of luminous sky, a flitting blackness or threat.

I said good-by and started back home, or rather to my hotel, on the Quai d'Orsay. The night—what with the moon, almost full—was so beautiful I could not go fast. In fact, so slow were my steps that I was stopped by the police! As I passed the great shadow of the Halles Centrales, filled with what to-morrow Paris was to eat, a policeman hailed me. "Where are you going?" asked this guardian of the peace. "Back home, to my hotel," I said cheerfully. "C'est bien," he growled. But I became curious: "Why do you ask?" I said. "Do I look suspicious?" "Non, monsieur," he answered, rather in bad humor, "but around the halles we allow no strolling; if you are going home, it is well." "I am going home," I assured him. "It's a beautiful night, eh?" "Ah, oui," he said with a sort of sigh and a tone penetratingly expressive—"ah, oui, la nuit est belle!"

My way lay along the quai. I went by the Louvre, immaterial and ghostly. Down its gray-blue roofs the light of the moon passed like a thin, smooth sheet of blue water. The river flowed lavender between walls bluishly golden. One thought: "This is the most beautiful thing in the world; this is the most precious thing in the world," and suddenly one saw in vision great bodies of men in khaki far off across the sea, getting ready to come and help defend this most precious thing—and one's heart filled with tenderness.

I reached the hotel, my mind ready for bed, and I was standing, looking at my watch, which said half past eleven, with a bourgeois satisfaction at having put something over on the Fates (for had I not spent an evening of most pleasing company, and was I not getting to bed at half past eleven—a combination of pleasure and business prudence achieved but rarely?) when, of a sudden, I knew

I had heard it again. I had heard once more what I had heard in my friends' apartment an hour before—that dull slamming of a huge door somewhere.

I stepped out upon my balcony, which is on the sixth and top floor of the building, and thus again found myself under the spell of the night's incredible beauty. The moon, slightly gibbous, was about three-quarters of the way up in the eastern sky; Orion blazed ahead, and in the west there was a big, wet, blue star, like a tear, and the whole sky was filled with a tenuous, tremulous, and iridescent milkiness which was as if all the rainbows of the world had been melted, purified, subtly faded, and then poured into the great inverted bowl. But there was something beside beauty, now, that demanded attention. Now, all about me, in a circle like that of the horizon, but closer, there was a sound of closing doors. Only, now, after all, it was not quite like that. It was rather like the soft snapping of a flame, the sound made by a fire just about out and struggling—a sort of a floop, floop, floop as of a dying lamp on the table near by. It was continuous, and it filled the silence, and yet it was soft and silken. It was the sound of the antiaircraft guns—barking in a ring around Paris, throwing up barrages of hissing steel into the sky—which came thus to my ears.

Then from the depths of the narrow street beneath my feet a terrifying shriek rose abruptly, and, peering down into the gut, I saw at the bottom what seemed at first a strange monster rushing by. It was not a monster, though, no antediluvian fossil rising resurrected from the ooze of the Seine, but simply a fire engine out on its mission of alarm. I had a flitting glimpse of the bugler crouching on its running board, a brass helmet on his head, a brass trumpet at his lips. He was sounding with full chest the French call of "Garde à vous"—watch out for yourselves—a sort of clear, high cry, thus:

But his was not the only voice. The engine had also its own signal, that used by all fire vehicles in Paris, a sort of sinister thing through mournful insistence, a horn repeating monotonously and incessantly two notes, thus:

Over and over and over and over again, forever:

Sometimes the bugle for a moment rang clear, sometimes you heard by themselves the horn's two sad notes, sometimes bugle and horn mingled, thus:

clear, high cry punctuated heavily by the measured two-toned beat, and then, more often, both became whelmed within a tornado of sound coming from a huge siren, also attached to the fire engine—one of those sirens which, beginning with the lowest of sonorous notes, rise swiftly upward, through all of the chromatics, to the highest pinnacles of pin-point shrieks and then plane down again, lugubriously.

### Crack! Boom! Thunderous Echoes!

THE engine, heavily powered, was going very fast. In a moment it was at the end of the street, and had turned at right angles into another. By its clamor I followed it as it plunged into narrow ways, which it threaded like a streak, or, as it burst out into wider avenues and squares, nosing all about, diagonalizing, zigzagging, worried, penetrating all retreats with its piercing alarm. In an incredibly short time its mission was done, all of that part of Paris which lay before me warned; then it was still, lurking voiceless somewhere in the shadow.

A moment of brooding silence followed. The lights of the city, already rare, low, and hooded, had all gone out now, but, on the other hand, here and there, some high window flashed bright, then darkened, as some startled inhabitant came out to see, and, remembering, put out the light behind him. In the street below there was a low murmuring—invisible people grouping at corners to watch the sky. And afar, in the circular distance, the cannon sounded—a floop, floop, floop, as of great dying flames.

Now came the first bomb. In sound it was a paralyzing surprise, unlike anything we had heard up to that time, and especially unlike the booming of the cannon. It was, for one thing, at once so voluminous and so sharp. It had all of the volume of big things and yet the mean viciousness of small things. It began abruptly with a violent crack, so sharp that one was astonished to find it so loud, so loud that one was astounded to find it so sharp, then immediately on top of that came a heavy boom, of tremendous power and solidity, which shook earth, building, and yourself, then reverberated in long, thunderous echoes. That first bomb had struck far—the cunning of the ear is such it can tell such a thing clearly. It had struck far, and yet—well, that was just it. It had struck far, and yet the crash of its explosion had reached, even at that distance, just about to the limits of what one can bear from sound. Immediately there came into my mind a clear vision of whole blocks of buildings crumbling, vanishing as if touched by some titanic conjurer's wand. Then came a second bomb, nearer.

I had made up my mind to watch the show from the balcony, which gave me a clear view of one-half of Paris, but just then I noticed that a window, removed but two from mine, was ablaze with light. The person in that room, probably, had gone downstairs, leaving the window open and the light going. I started to telephone about it to the office downstairs, then remembered I did not know the room's number. To get that number I stepped out into the hall—and unwittingly let my door snap locked behind me. Then there was nothing to do but go down to the office for another key. I went down the six flights of broad stairs. In the big lobby there were groups standing about quietly, all quite dressed, with none of that disorder of apparel one sees in earthquakes or fires.

I got my key in the office—but I never went back to my room. As I passed the revolving door of the hotel entrance, I went out through it to have a little look from the street, and then I remained there, outside.

### The Stars Were Moving!

I KNOW now why I stayed there, outside. A small group of men, with, I think, three women, was standing on the sidewalk, close to the door, watching—and this was much nicer than the lonely grandeur of the balcony. Man is a social animal—sometimes. This was one of the times. We liked each other's ribs. We stood there, close to each other, all looking up at the sky, but feeling each other. We had not much to say; merely "There goes another" or "That one was near" or "That one was farther," but we liked one another.

Also I was vaguely but deeply aware of a sense of shelter from the sidereal menaces; above us something jutting out from the hotel façade curved over us protectingly. I examined this after a

while, and found it to be glass—a glass marquise! While I had been going down the stairs, the building had been shaken by several explosions, and just as I reached the sidewalk there was a tremendous cracking crash, followed by a solid boom and a displacement of air that jarred us distinctly like a wave on a beach, and one vivid flash showed us where that bomb had struck, a few blocks to the north. Then there was a lull, a silence with the continuous soft flapping of the cannonade as foundation, and we came once more under the spell of the night's magic beauty.

Before us was the Seine, flowing smoothly between its stone balustrades; on the other side, the garden of the Tuileries, with the Louvre above and the Concorde below—that panorama which fixes once for all, it seems to me, the highest point of beauty achieved by the hands of man—and above this was eternal beauty, the beauty of the moonlit night. The sky held wondrous depth. It was not, as it would have been in a drier clime—in New York, for instance, or the Arizona desert—

a roof, a blue roof, a turquoise roof; it was a depth, a profundity of trembling, tremulous, ethereal opalescence. And there was the moon, and there were the stars—and the stars were moving!

### Hell Uppermost

THE stars were moving—I had not noticed that at first—but as I gazed at what I took to be a particularly bright star, suddenly I saw it pass from left to right athwart the sky, and, looking at another one, I saw it zigzag, while a third abruptly described a blazing curve. The sky, in fact, was full of moving stars. In the sky were two kinds of stars—stars that were still and stars that moved; and the latter, the restless stars, were the lights of the French planes rising from everywhere to give battle to the evil up there, at the top of the heavens. Some already were very high, mere pin points; some were lower, as big as Sirius; some were just starting upward, looking like Venus in the west, on a dewy evening, and they crossed and crisscrossed, up there among the other stars, and now and then dropped, as signals to the anti-aircraft guns, soft balloons of light which remained still, or dropped very slowly, a long time, then went suddenly out.

And this is the character the raid held for a long time—a gigantic duel between Beauty and Evil. The aerial invaders, seemingly, were coming in successive squadrons that fled, each one, as soon as its murder was done; suddenly there would come the crash of many explosions, and the whole world rocked in a swaying tumult of incredible noise, of thunderous destruction and death. Then there would be a lull; in long undulations, sound trembled back to silence, and Beauty, scattered by the central violence, flowed back from all sides, from the confines of space, as air returns to a vacuum, filling the firmament's whole bowl to the brim again, till gradually our souls, shaken as they were, regained their serenity, and, in a few moments, drank of the beauty, remained aware only of the beauty, of the beauty alone. We looked at the moon; we looked at the stars; we followed the trailing lights of the French winged machines, and it was hard to believe there were others up there, probably still higher, hidden in the very heart of that infinitely delicate and fluid pearliness which was the sky; we could not believe it; in fact, for minutes at a time we would forget the possibility of it—till, suddenly, a new rage of bursting, abominable uproar, recalling us to the reality of the moment, told us this was a topsy-turvy world, with Hell uppermost, riding the high ether.

### "It Was a Boche"

I HAD been watching for a short time a moving light above there which was bigger than all the others—of a plane, evidently, lower than all the others. It made a great circle, and the light became still bigger. It followed this by another circle, of much shorter radius—and then, to my astonishment, the whole plane was visible.

It was there, right above our heads, very close; one could see the little green lamp under its right wing, the little red lamp under its left wing, its shiny, reptilian body, its big owl's head, and its one eye. There was something hurt and wounded about its movements; it seemed to be holding itself up above this last thin layer of air between it and destruction only with immense flapping effort, and its eye, its monstrous, single eye, was turning hither and thither, to the left, to the right, downward, fast, in a sort of desperate, sick, blind way. I moved out to the corner of the building to see better. It made there, above a small open space, another short, abrupt circle, its eye searching, searching; it just missed the roof (for a flash of a moment I thought it had struck), then it seemed finally to have seen, to have caught a revealing glimpse. It freed itself of the building by a last powerful effort, turned halfway, then, in one whizzing, descending swoop, scooted west, just cleared the Solferino Bridge, and plunged into the Seine.

At least, this is what I thought—that it had just cleared the bridge, two hundred feet away, and fallen into the Seine; my eye was on the spot as I started running. Two or three others came running behind me.

It is strange how suggestible the mind is at such moments. One of those running behind me said as he ran: "C'est un boche," and immediately I knew it was a boche; I knew it was a

German plane which I had seen. It was a German plane, and it had fallen into the river, right there, just beyond the bridge: I knew the exact spot. I had a clear vision of what was coming next. I saw myself reaching the edge of the stone quay, and a dripping aviator rose from the water and faced me. What was I going to do? How simple and childish is the mind at such a time! Well, of course, I was going to grab him. "But," said my childish mind quickly, "he'll have a revolver, and you have nothing." Immediately came the triumphant retort: "You'll tackle him—low, around the knees!" You see, I had played football (some years ago) and that German aviator—he had never played football!

### The French Cocarde

WELL, when I reached the quay and the water's edge, there was nothing there—no wrecked plane drifting on the current, no dripping aviator rising like Poseidon out of the waters. The river ran smooth, empty, and undisturbed; nothing was there at all. I was profoundly astonished; I have seldom been so astonished in my life. Then I realized that the plane had been going much faster than I had allowed; that, although it seemed to have fallen just beyond the bridge, it must have fallen quite a bit farther on, and I began running again. By that time there was a tramping of feet ahead of me—feet of men who had been nearer, and were going the right way. I followed; running. I crossed the Place de la Concorde, the great, wide, beautiful space in the center of Paris. I stopped at the opening of the Champs Elysées. Nothing here either. Where could he be?

And then I saw, close by, pale in the moonlight, what seemed to be a piece of cardboard scenery from a theatre; I moved nearer—and there it was, the plane, crumpled and broken at the foot of a bronze column. A tip of one wing lay there across my vision—and on it was painted the French cocarde, red, white, and blue; the plane was French!

I cannot come near expressing in words my disappointment, my stupefaction, and the desolate character of it as I stood there staring at that red, white, and blue cocarde, intact there, still bright and coquettish, above that pile of sinister wreckage. I had been so sure it was a German, I had been so gladly certain that we had caught red-handed two at least of these strange, crooked-souled beings who, enfolded in the silent security and breathless isolation of stupendous heights, find no better occupation than an evil peering down in search of little children whom they tear to pieces. (For that is all they do, absolutely all—I know. I went all over the bombarded city the next day. They wreck a few houses—oh, yes, impressively—and here and there make a small hole in the pavement and shatter a few thousand windows; they do not one whit of military damage—and their big work is the killing of children. Making use of that which the genius and long patience of man has created of finest and most wondrous, they amuse themselves tearing little children to pieces, that is all—little children and their mothers.) I was certain we had one or two of these strange cripples of soul—and instead it was a French plane! In the light of this new knowledge, all that which I had witnessed came back, tragically vivid. That plane, which I had seen in the sky as a high star, had been wounded up there in defense of the city, and the subsequent circling down of the star had represented, every second of it, the tense, tight, and courageous flight of the aviator to save himself and his comrade. How he had used his skill, the dregs of his resources, all of his resolution—while attacks of dizziness whispered softly to him to let go—to delay that fall, to slow it up, brake it: how stubbornly and bravely he had fought! Those descending circles—I knew now what they meant. And that restless turning of the searchlight; when it was a matter of life to see—to see, see; to see right away, within a second—while the plane fluttered and drooped, fluttered and drooped, held up now, it seemed, only by the aviator's will, his will to save and not to die! And finally he had seen—the Place de la Concorde, right over there, a wide space, safety, life. And at the last moment, with success won out of disaster, life out of death, the bronze pillar—and here was everything now, courage and hope and everything, machine and man, a small bundle, crumpled and wrecked, at the foot of that bronze pillar!

We stood there, a small group, at a little distance from the machine, hesitant, not with fear, but with a feeling of being near something sacred; then, just as we were beginning to move toward it, a squad of police came running and curtained it; another squad joined it, another; they began to push back, efficient French policemen, polite but very firm. I suppose I could have made a fuss—claimed the privileges of a newspaper man—but really, it did not seem to be the time for it, not at all, nor the place. Besides, there were other things to occupy us. A new squadron of bombing machines was over Paris, and the city was being shaken by a new series of savage explosions, and to the north there was the flare of a great fire. We stood about, in small groups, and alternately cast sidelong glances at the wreck, dim in the moonlight, from which two forms had been extricated and taken to the hotel near by, or looked up into the sky, or at the fire far off, or concentrated all on our sense of hearing, seeking to tell ourselves just where this bomb was falling, or that. All over the Place there were groups; indistinct in the moonlight, they were also made small by the tremendous volume of the explosions; they seemed calm, but serious; they did not move much, and they spoke in murmurs. They were from all over the world. I saw English officers, and French; two bronze Sikhs; Algerians, Canadians, and Australians.

A little Englishwoman clung to me for quite a moment. She was a very nice little woman, but really she lived altogether too much in the past. She persisted in telling me of a bomb which had fallen close to her house in 1914—of the first bomb, of the

first raid, of the first German aviator of the first month of the war! I wasn't very much interested in the bomb of September, 1914; my interest was for the bombs of January 30, 1918; I was trying to calculate just where the next one would strike. I saw two American jacks leaning up against a column and smoking cigarettes.

"Well, what do you think of it?" I asked them briskly. The two considered a long time, taking a puff or two, looking up at the sky, then down again. "Well, I don't know what to think of it," said one of them finally.

"What do you think of the ——— up there?" I insisted, alluding to the Germans, and using, I am afraid, a very bad word. You see, I wished to put myself on a level with those sailor lads and draw from them some expression at once vigorous and picturesque. But they were much better bred and much more polite than I. The one who had already spoken hesitated. Then he said, very slowly: "Well,

it's certainly a queer way to carry on war." I was taken aback a little at first. But when I thought it over later, it struck me that he had "said it"; that he had said it just right, judiciously, without excitement or hate, with a tranquil contempt which held behind it a solidly formed and unshakable resolution, a sort of "and we'll fix all that, you just see, some time."

"Regardez, regardez!" said a low French voice at my ear, and, following an outstretched arm, I looked up and, in the northern sky, I saw a little rag burning—a little rag burning high up in the northern sky. It began to fall as it burned, faster and faster; then suddenly it went out and became a little black smudge, still falling, which my eye lost almost instantly. Suddenly it reappeared, all aflame again, a little burning rag, just above the horizon. Then it vanished once more, for the last time. This was the German plane, brought down by the French air-men near Chelles.

### "C'est Fini"

AFTER a time I started back toward my hotel—I don't know just why. It's amusing how

one behaves in a crisis like this—a bombardment, a fire, an earthquake, a flood. One goes about proud as one can be, chest inflated, thinking: "Gee, how well I'm behaving; how cool and collected I am!" Then, later, looking back, one sees one has done—well, some queer things. I don't know why I went back to the hotel—I did it slowly, strolling, following the river, crossing a bridge. The most magnificent spectacle will pall after a time: maybe I was tired. I felt like going home, and the hotel was my home, though I'd been there only three days. Or perhaps I had just remembered the group I had left so unceremoniously an hour ago—the group of watchers under the glass marquise in front of the hotel—and perhaps it was an ethical impulse which took me back to them, to report to them the knowledge I had gained, and which somehow I owed them. If that was the impulse that took me back, I failed to carry it out.

The group was still there, as I arrived, watchful under its imaginary shelter. I simply took the place I had held before; I simply rejoined the group, and said nothing. I rather liked it here. I liked the feeling of elbows against my elbows, the sound of murmuring voices. We stood close and looked up at the sky, and listened, and said: "That one was near," or "That one was not so near," or "Here's a heavy one," or "Here's a light one," and that fraud of a glass portico, above, curved over us with a gesture of maternal protection.

Then an officer near me said: "Voilà! C'est fini!" And I became aware of a great silence. It was not only that there were no bombs, for none had exploded now for a good ten minutes. But something else had ceased, something which for two hours had been ceaseless in our ears, a stubborn undercurrent of sound even when the air rocked to the most violent blasts—the silken sloop, sloop, sloop of the cannonade. The antiaircraft guns had stopped firing. "C'est fini," the officer repeated, and then some one else said: "Oui, c'est fini."

### "Cease Firing"

I CLIMBED back to my room. I went out on the balcony—and the night was much as it had been before, before the beginning of all this hell and racket. The moon was a little higher toward the zenith, Orion a little farther to the right, and the big wet star to the west had set; but the sky, from which all this horror had come, was as beautiful and as deep as before: it held within itself, tremulous, the ghosts of all the lunar rainbows of the past, and in its light Paris was once more a blue city of dreams.

Down in the dusk of the narrow street beneath my feet the fire engine again passed. Its siren was silent now, and also its two-toned horn. Only the bugle was alive, and it was singing "la Berloque," the French "Cease firing"—a few gay, sweet notes, then a pause, then again the gay, sweet notes, thus:

I went to bed. It was half past one—time enough for one who had started to go to bed at half past eleven.

This is the first of a series of six articles by Mr. Hopper. The second will appear in an early issue.

"Stay with him, kid. You got him now. Hang on. Look out for his right"

# R'ARIN'

THE MIDDLE WEST WANTS

BY WILLIAM

THE building vibrated to the roar from a thousand soldiers. "Stay with him, kid. You got him now. Hang on. Look out for his right."

The building was a theatre in the amusement zone at Camp Funston, the National Army cantonment in Kansas. The two professional welterweight fighters who were performing for the benefit of the soldier crowd slammed each other professionally through the last round and unarled protests when the referee called the bout a draw. With their handlers they passed through the crowd to their dressing rooms.

When they had disappeared with their alibis and their handlers, there crawled into the ring a glowering, blue-chinned heavyweight who looked like the logical result of a diet of raw meat and green bones. I was seated on a raised platform at the ring side with a number of civilians and officers. A local fight promoter was beside me.

"Who's the assault-and-battery artist?" I asked him.

"Tough boy," he assured me. "I've seen him make good men jump out of the ring."

"Is he a soldier?"

"No; he ain't been drafted yet. He's still fightin'."

The proper retort was too obvious to be worth while making.

"Who's he fighting?"

"Don't know. The guy he was supposed to go on with didn't show up. I pity the bird who substitutes."

I heard a step in the crowd and looked around. A tall, dignified, partially bald banker was coming down the aisle toward the ring, with a dressing gown wrapped about him. He may not have been a banker; it is possible that he may have been a hardware merchant in a small town in the Middle West, or perhaps a lawyer or druggist—certainly an active church member and a man of well-ordered habits. He was a big enough chap, but he had the soft look of the busy professional man who has never been an athlete.

The crowd laughed good-naturedly and applauded as the dignified, partially bald man climbed into the ring. The referee held up his hand.

"This is K. B. Sims of Battery —," he announced. "Mr. Sims has never fought before, but he's been taking lessons of the division boxing instructor, and he wants to get a little practice in real fight-

*(Photo from Union Pacific Railway Press Bureau)*

ing. He doesn't expect to do anything more than get licked, but he's going to do the best he can. So don't ride him too hard if you think he isn't a good as he ought to be."

The bell rang, and the two men shook hands and squared away. The fighter pranced a little, assured grinning uglily. The soldier stood poised stiffly, left hand extended just so, left foot forward in precisely the right place, right arm poised ready to hit or guard. He looked like an advertisement for a book on "How to Be a Prize Fighter in Ten Lessons." I laughed hysterically in spite of myself. The tough boy led teasingly with his left. The soldier stepped in mechanically, according to Hoyle in his every movement, and snapped over a left cross counter. He not only snapped it over, but he landed with it, and a red stain spread over the tough boy's lips. I laughed till my cheeks ached. It was a great joke, this green, dignified amateur getting in a real blow on the tough professional. The tough boy lowered his head and tore in, showering blows at his opponent.

"That's all," the fight promoter said. "He'll finish him now."

The amateur met the charge calmly, with wrinkled brow. You could see his mental processes written on his face as he strove to recall just what the boxing instructor had told him to do in such a case. He hung on for a second, thinking heavily, then broke away and pulled a right uppercut against the professional's chin. The blow was delivered calmly, thoughtfully, in the tentative manner of one making a possible wrong move in a new game. The professional rocked back on his heels and stood away- ing, groggy, his arms hanging limp at his sides. That calmly delivered uppercut must have had the drive of a mule's kick in it!

## "Look at Grandpa Strut"

WE rose and shrieked to the amateur to tear in and finish his opponent. But the amateur stood waiting, stiffly posed, very earnest, and somewhat puzzled. It never occurred to him that he had hurt the man and that he could win the fight with a blow. He was lacking in any instinct of conquest to tell him that the moment had come to slam in and wipe his man out. Fighting was a new business that his Government had called upon him to learn. He was practicing according to instructions and, having gone as far as his teaching took him, knew nothing further to do but wait.

While he waited, the tough boy recovered his wits, and the round ended. He let the professional recover again and again, and in the beginning of the sixth and last round the tough boy landed a hard swing to the jaw. The soldier swayed and crashed to the floor. He was groggy, but he remembered his instructions and followed them by rising unsteadily to one knee and remaining there to listen intently for the count of nine. Then he rose, and as he did so he smiled pleasantly and nodded to the fighter in a manner of a sportsmanlike tennis player, complimenting an opponent on a well-played drive. The prize fighter saw his chance and swung. The soldier dropped to the floor again. He dropped, but he didn't stay down the proper nine seconds that time. He sprang to his feet immediately and he sprang with his hands up. For the first time he was mad. For the first time he went after the other man with the idea of abolishing him.

The calm, thoughtful man of affairs earnestly acquiring knowledge of a new business was gone, and in his place there moved forward in that ring a hard-eyed fighting man with the impelling flame of fury alive in him—a fighting man working at his trade with full driving knowledge that he must destroy the power of his antagonist or suffer the destruction of his own power.

I have never seen fear more clearly written than on the face of that tough professional prize fighter. He ducked and side-stepped, hung on, backed up, and finally ran around the ring to escape the pursuing fury that he had roused to action. The going ended the round and the bout. The professional gasped with relief; the soldier shrugged his shoulders regretfully and, dropping from the ring, strode up the aisle toward his dressing room. There was a certain truculence in the swing of his shoulders, the set of his head, that bespoke a fighting man.

"Look at grandpa strut," I called to an army correspondent near me. "Walks like General I Am of the Wide, Wide World, doesn't he?"

Suddenly I quit laughing. I had come from the

# TO GO!

## TO BE OFF FOR FRANCE

### SLAVENS McNUTT

East to see the Middle West in arms; to see and tell of its attitude and progress in preparation for war. It was impressed upon me that there in that ring, individualized and revealed, I had seen the Great Middle West learning the business of fighting. There in that ring, individualized in the person of that tall, dignified, earnest soldier, I had witnessed the present military development, war wind, and war necessity of the Middle West. Mr. Middle West is a big man physically with great potential hitting power, but he needs hardening. He is earnest, prosperous, rather dignified and thoughtful. Mr. Middle West is preeminently a peaceable citizen, a man of home and business.

And now this peaceable citizen has been called to learn the business of fighting. He has been called upon to learn the rules of the most frightful war of all history. I have watched him getting his education in the business of killing. I have seen him rushing and lunging with his bayonet; I have seen him shooting in the range; I have seen him hurling grenades on the bombing grounds. I want to say that that man in the ring was Mr. Middle West in the war, to the life! Mr. Middle West has a healthy hatred of war. War presents an antithesis of every one of the Middle West ideals. Mr. Middle West's liking for war and its ways is approximately equivalent to a rheumatic old Louisiana negro's yearning for a home in the Arctic with the Eskimos. Feeling as he does, and finding it necessary nevertheless to engage in this hated business of war, Mr. Middle West is applying the same sincere, thorough effort in learning his new occupation that he has hitherto devoted to raising hogs and corn, building up a business or a home and establishing a family. He didn't know anything at all about this fighting game when he matriculated last fall as a freshman in the University of Destruction; and, realizing his absolute ignorance, he was keen to learn. He has been a particularly apt student because, hating war as he does, he is the more anxious to become immediately so efficient that he can accomplish the task at hand and go back to the activities of his heart's desire to work in field and in shop, in factory and schoolroom, the life of business and the home.

#### General Wood in Command

CAMP FUNSTON, Kansas, and Camp Dodge, Iowa, are thoroughly illustrative of that which one ordinarily means when speaking of the Middle West. There are three other national cantonments so situated geographically in the Middle West; namely, Camp Grant, near Rockford, Ill.; Camp Custer, at Battle Creek, and Camp Sherman, at Chillicothe, Ohio. But Funston and Dodge, between them, are typical. The soldiers at Camp Funston are entitled to feel themselves nearer the physical heart of the nation than the men in any other training camp. The Ogden Monument, marking the geographic center of the United States, stands on the military reservation on which Camp Funston is built.

At Funston are to be found National Army men from seven States: Missouri, South Dakota, Nebraska, Kansas, Colorado, New Mexico, and Arizona. The camp was built to accommodate 41,000 men. It is on the Fort Riley military reservation at the confluence of the Republican and Kansas Rivers. The reservation contains approximately 20,000 acres. A military road connects the camp with Fort Leavenworth on the Missouri River, about twenty-five miles above Kansas City. The two nearest towns are Junction City to the westward and Manhattan on the east; each place about nine miles from camp and each a small town. An electric line which runs directly through the camp connects with both places, as does the Union Pacific.

Camp Funston, however, finds it necessary to provide most of its own amusements. There is an amusement civilian zone in the heart of the camp where are moving-picture theatres, pool halls, restaurants, stores, and banks. There are fewer casual visitors and local welfare workers floating around loose at Camp Funston than in some of the cantonments I have seen.

The camp is named for General Frederick Funston, who died at the border last year while the army was playing bandit-bandit-who's-got-the-bandit? in Mexico, and is under the command of Major General Leonard Wood. A small bungalow stands high above division headquarters on a bare hillside. From that bungalow Major General Wood last year watched the ripening of the late-born fruit of his efforts to get

the country to prepare. General Wood was absent in France when I visited the cantonment, but his influence was very evidently present with the men of the division. From buck privates in the rear rank, all the way up the staff officers, almost every man with whom I spoke—literally almost without exception—voluntarily made some laudatory reference to General Wood. He has surely captured the imagination and devotion of his men.

#### A Great Manufacturing Plant

COME with me on a clear, warm January day and climb the hill that flanks the camp on the north. Before us the great cantonment lies spread out on the lovely valley, visible in its entirety, and we get some hint of the vastness and complexity of the work of preparation going on there. Away off to the right are the stables and corrals of the remount station. Look carefully through your field glasses, and you will see there men of the National Army from New Mexico, Arizona, and Colorado; men with bearskin chaps over their uniforms, wearing high-heeled boots and high-peaked sombreros. You see them over there on the river flats astraddle pitching bronchos. You see them at work around the corrals with rope and bridle. You see there in that remount station some of the world's most expert horsemen training the animals for their service in France. It was not necessary to go outside the personnel of the National Army to get these men. They were selected by law and assigned to the work at which they were expert.

The five-mile-long camp below us looks like a great manufacturing plant of some sort. Each regiment has its own heating plant, and the scores of tall chimneys belching forth black smoke add to the industrial appearance of the place. From away to our right we hear the crackle of rifle and machine-gun fire on the range, where the men of the Middle West are learning to shoot. Along the roads below and everywhere over the hills columns of men, indistinct and snakelike against the brown of the bare ground, are moving out for their daily hikes. Immediately below us some seven hundred men are at bayonet practice, thrusting, charging in formation, practicing with blob sticks, shouting savagely at command as they lunge at the imaginary foe. (Continued on page 27)

*The men who are to do the fighting should be the best men of the army*

*A soldier hurries up the hill and takes a message from the leg of one of the birds*

*Some seven hundred men are at bayonet practice, thrusting, charging in formation, shouting savagely*

## No Peace Talk at Washington

WHEN a pro-German agitator talks peace with Germany from a barrel on the sidewalk, the police take him to the station house. When he prints his opinions in a socialist newspaper, the postal authorities bar the paper from the mails. It is rightly believed that these utterances tend to undermine the confidence and determination of the people in carrying on the war, and that, therefore, they are dangerous to the success of our army. Yet it is perfectly apparent that talk of an early peace is going on throughout the country and that a settled belief exists in the minds of millions of Americans that the war will soon end, not through a victory over Germany, but through a conference of the powers. The reason for this is indicated in the following letter from a writer who is a strong personal supporter of the President and can speak without prejudice:

Peace talk from Washington to influence the Germans and Austrians? What is the influence on the American people?

Bewilderment and uncertainty of purpose! A weakening of the national will to win! The injection into the national mind of the poisoning hope that argument can do the work of guns, and a naturally consequent loss of vital determination to sacrifice.

The people, having been steeled to war by the necessity of victory on the battle fields, are let down by the absurd hope of a verbal settlement in the council halls. During my tour of the country in January and February I found the belief in an early peace almost unanimous among the civilians of all sections. The belief was based on the President's peace talks to Congress and the reports of terrible conditions in Germany, spoon-fed to the wide world from Berlin. The following conversation with a farmer on a train in the Southwest is typical:

"I guess it'll be over 'fore our boys really git into it."

"What makes you think that?"

"Why, I see the President's been tellin' 'em again how to make peace. I reckon he aims to patch it up 'fore ever we really git goin'."

However potentially patriotic that farmer may be, thinking as he does, he is not a national asset in war times. His thought was formed by peace talk from Washington, uttered to influence men of other nations.

The story of the recruit who, being ordered by the drill sergeant to march, halt, march, halt, and so on, soon threw down his rifle in disgust, saying: "I'll not go another step. You change your mind too often," is apropos.

The American people have speed and staying power, and they are willing to go, but too many false starts will sap the strength and spirit of the most powerful runner.

This is fair criticism. The situation is due more to the tone and manner of the President's public utterances than to their substance. There is a good deal of the big stick concealed in what he says, but he speaks softly. Moreover, he has harbored the hope, however ill founded it has proved to be, of an uprising of the people of Germany and Austria-Hungary. But there is one pretty sure test of his real feeling and of the depth of his determination to prosecute the war to a finish satisfactory to the liberty-loving people of the world. However much of it there may be in other parts of the country, *there is no peace talk in Washington.* The writer has discussed the question with scores of officials, some of whom are in daily personal contact with the President and might be expected to reflect his opinions, and in no case has he found any disagreement with the belief that we have entered upon a long war into which the nation must put every ounce of its strength.

## The President's Peace Position

IT is plain that, after long deliberation and many misgivings, the President's mind is made up for *peace with victory* over the autocracies of the middle empires. Moreover, all the activities at Washington point to the belief that the Administration has dismissed as illusory the hope that an endurable peace can be gained through any means except military success. The lethargy with which we were so impatient in the early days of the war, the confusion that arose from a failure to grasp completely the greatness of the undertaking, have disappeared. Having often differed with the Administration on matters of policy, COLLIERS is only too pleased to report that at last the departments of the Government are coordinating, authority is centralizing, and officials of the Government, paid and unpaid, are working with tireless energy to create the power to drive the war machine which we are sending to France as fast as the soldiers can be trained and armed and ships can be found to carry them over. If mistakes are made at the capital from now on, they will not be due to the demoralizing belief that a German peace can be imposed upon the world without a struggle in which we will expend all we have before we are beaten. Whatever the farm-

ers of the West may think, we are convinced that the authorities at Washington are in the war to stay and to win.

It should be increasingly clear to those who have followed what the President has actually been saying that he will accept nothing less than a military victory. Indeed, it should be apparent that he demands something more than a military victory. He demands also, and in addition, a political victory, without which a military victory cannot be permanent. The only terms of peace which he will accept are unequivocally democratic terms, terms which involve the utter abolishment of military autocracy. This is the plain secret of the President's "peace offensive." Our correspondent may, like those "civilians of all sections" whom he has observed and interviewed, be confusing this peace offensive with easy talk of an early peace. If so, he is profoundly mistaken. The President's insistence on a completely democratic program is not peace talk; it is war talk of the most determined kind.

## The Third Liberty Loan

THE United States is a giant among the nations—a giant which has not yet tested its own strength. And if it has the lethargy as well as the strength of a giant, that is not to be wondered at. The campaign for the first two Liberty Loans opened slowly. But each was handsomely oversubscribed as soon as the country was awake to the need. The resources of this country in treasure remain almost untouched by loans which totaled nearly six billions of dollars, just as its resources in men remain almost untouched by placing a million of us under arms. Now it is time to raise the third loan, a loan as large as the first two added together. Is this giant of a country sufficiently awake to respond promptly next Saturday? Its strength will not be effective until it is. And each of us can do his share by stepping in and buying the first day—buying to the extent of some small sacrifice of personal convenience.

## Knowing the French

BEFORE our sons and younger brothers went off to war, a great many Americans had read poetical tributes to the glories of France, and had heard too many slanders about the crimes and stupidities of England. The result was that our youngsters have been crossing the Atlantic with somewhat distorted notions of both France and England: underestimating the latter and romanticizing the former. On the ground the young American is struck by the shipshapeness of British military organization; the British way of doing things after a three and a half years' course in the University of War appeals rather unexpectedly to nearly every American student from doughboy to major general. One can no longer safely look down on "those English!" On the other hand, the French are a strange people. They speak a strange language, take seriously things that Sam hardly takes at all; frequently seem cynical when they are really only honest; don't take some things so seriously as Sam; are far more scientific (whether it's artillery or eating dinner), and, in a good many respects, far less hit-or-miss practical than Sam. They take longer to learn how to run a tractor or a caterpillar; on the other hand, their officers are a great deal more patient than Sam's when it comes to plotting out curves and things in ballistics. The private soldier gets only a few cents pay daily, and Frenchmen know how to economize (which Sam scorns to do); on the other hand, they wastefully scrap perfectly good motor parts and agricultural machinery which our boys can, and sometimes do, restore in a few hours' time to easy running. France is an old and complicated country; the French is a far more complex intelligence and character than the American or the British—to say nothing about the barrier of language. The better one knows the language, and the more one knows of life, the better one appreciates the most democratic but also, in a sense, the most conservative of nations; the gayest and at the same time the saddest of them; the most social and also, in many respects, the most reserved—and certainly the most individual. In spite of excrescences like BOLO and CAILLAUX, loving France is only a question of knowing France. But it is much easier to misunderstand a nation whose subtleties of speech and behavior are largely a closed door as, in spite of national affinities, France and the French are to their casual guests from newer lands. To misunderstand France is the necessary first step to knowing her—and the love that is founded on knowledge, not romance, is, after all, the kind that's going to last.

## Theological Note

AT the moment of writing no intimation has come from LUDENDORFF concerning the identity of the army corps and divisions that are to be employed in separating the Armenian Caucasus from Russia and restoring the Armenians to the warm embrace of Turkey. But most likely it will be the German shock troops of which we have heard so much. At least the name would eminently befit the occasion.

Let us be grateful to the Junker for the vindication with which he supplies us, once every so often, of the incurable goodness of human nature. It is not altogether a cause for shame that we should regularly have to be exhorted to remember the *Lusitania*. The memory keeps it as a date and an event, but, as the first agony and wrath disappear, the soul rejects it as a reality. We forget the *Lusitania*, not in dull indifference or selfish absorption in business, but in the normal reaction of the healthy human soul against a moral monstrosity. Because of that incurable faith in the upward strivings of the spirit of man, we find ourselves saying of the Junker spirit, after the *Lusitania*, after EDITH CAVELL, after the Belgian deportations, that there nevertheless must be some things of which even the Tirpitz soul is incapable. After the story of half a million Armenians slaughtered, of pregnant women disemboweled, of children hewed down with axes, of girls handed over as day's pay to the Turkish soldier, most of us found it impossible to think of Turkish Armenia being handed back to the Turk. Thereupon we read that not only is Turkish Armenia to be given back to massacre and abomination, but that 20,000 square miles of Russian Armenia are to be thrown in for good measure. And in the sudden horror of the thing the soul of man reveals itself as uncalled for by three and a half years of German morality, retaining its capacity for moral stupefaction, for faith. Let us be grateful to the Junker for this regularly recurrent demonstration.

The tribute which WILLIAM II thus brings to the goodness of humanity helps one to understand how people back in JONATHAN EDWARDS's times discerned in the Devil an instrument for the vindication of the mercy of Providence. Even the Almighty profits by contrast.

## On "Jesting Together" at Belfast

PERHAPS this is not the moment for an ally to indulge in personalities about Irishmen who call themselves "Scots-Irish" or "West-British," yet we do admire this perorational sentence from a speech of Sir EDWARD CARSON, as misprinted in Lord NORTHCLIFFE's London "Daily Mail" (Continental edition):

We shall go on to do our jest together, seeing the full responsibility that is upon us as trustees for others, and will always act together in the steps we will take under a sense of responsibility in which we ask for the guidance of "Almighty God."

And it is consonant with all of Ireland's tragical irony that the most perfect playboy of them all should be this barrister of Belfast and London—and that the Comic Muse should have had to wait for the death of JOHN SYNGE and our bloody twentieth century before presenting, in Sir EDWARD, arch-Covenanter and ex-Cabinet minister, the greatest of all stage Irishmen. Isn't it, just?

## Another Eminent Bonehead

THE Talgai skull, conservatively estimated to be 500,000 years of age, takes its place in the list of our oldest families, along with the Neanderthal Man, the gentleman from Cro-Magnon, the Heidelberg Skull, the Lower Drift Englishman, and that popular pedestrian, *Pithecanthropus Erectus* of Java. About this latest arrival in our best evolutionary circles has started up the old controversy whether man is descended from the apes or the other way about. The best scientific opinion seems to be that it isn't a case of descent either way, but a sort of second cousinship. Somewhere about the time when U-boat manners were the rule and not the exception, an ancient family broke up, and some of its members got into evil ways, lost the habit of work, and landed in the trees on all fours, while others saved their money, subscribed to a correspondence course, and evolved into trousers. What no scientist has so far attempted is a sketch of the probable status of the drama in those days of predominantly lowbrow proclivities.

## "The Pushcart Peddler at Verdun"

SUPPOSE some writer of highly colored fiction were to get past our editorial censors with a rattling good story under the above title. Suppose it was all about a shy, dark-haired boy whose immigrant parents left their native Greece to struggle for a living in our country and raised their son on the old legends of AGAMEMNON and HECTOR, so that he grew up with a warrior's heart. The author might go on to tell how the boy left school to help support his family and, being too modest and timid to assert himself, took any humble sort of job so that the Great War found him selling fruit on the street corner. His heart went out to the holy cause of France and he enlisted in the Foreign Legion. The writer might then put him unscathed through three years of peril and bravery, culminating in the epic of Verdun, and end the narration by having him decorated with the Cross of War and the Military Medal, etc., etc., and kissed on both cheeks by an admiring French general. Wouldn't that be a little too steep for you, and wouldn't you wonder (contemptuously) that COLLIER's should fill its space with such trash? You would, you know you would! And yet—this is the phraseology of the French Republic:

KORNIEZ (NICK), Legionnaire, Eleventh Company de Marche, Foreign Legion—elite grenadier; 20th August, 1917, won the admiration of all his comrades by his courage and contempt for danger. Led his comrades to the conquest of a trench which was defended with energy and which was captured along a distance of 1,600 yards after several hours of bloody combat; took, single-handed, numerous prisoners; already twice cited in Army Orders.

That same NICK KORNIEZ used to sell bananas at Twenty-third Street and Avenue B, New York City. (We'd like to show the cop at that corner a picture of NICK bringing in his captive Hun!) Our imaginary story is all true, and there is no formula for heroes.

## Songs from the Sludge

WAR lifted RUPERT BROOKE to an ecstasy of self-surrender; it was in a mood of high romance that ALAN SEEGER marched to his rendezvous with death; FRANCIS LEDWIDGE gave his life for his blackbirds and "the fields along the Boyne." It has remained for SIEGFRIED SASSOON to sing to us of "clay-sucked boots," of trudging through

Five miles of stodgy clay and freezing sludge,  
And everything but wretchedness forgotten;

of the

draughtily dugout frowsty with the fumes  
Of coke, and full of snoring, weary men;

of

crouching for "crumps" to burst  
While squeaking rats scampered across the slime.

Here is a poet who gives us the very taste and feel of war. He flashes unforgettable pictures into our minds as if "a rocket fizzed and burned with blanching flare." His lines are forthright, uncompromising, forceful as bullets. He rouses in us battle lust, he lifts our hair, he sickens our hearts, and, suddenly, with a sardonic twist of humor, he flicks us into half-horrified laughter. Then, as suddenly, he discloses the heroism of humble deeds and the beauty that is "floundering in the mirk."

But no less than LEDWIDGE, SASSOON possesses the poet's release—the ability to escape into a world of his own creation:

I have no need to pray  
That fear may pass away;  
I scorn the growl and rumble of the fight  
That summons me from cool  
Silence of marsh and pool,  
And yellow lilies islanded in light.  
O river of stars and shadows, lead me through the night.

SIEGFRIED SASSOON has been lying wounded in an Edinburgh hospital, and is now ready to rejoin his regiment. May it be written in the stars that he come back from the trenches to the "small fire-lit room," the shining garden colors—that he may sing for us the "secret music" he has kept in his mind. Meanwhile he goes out to rejoin those who through their anguish have won spiritual freedom. He has written to a friend:

I know  
Dreams will triumph though the dark  
Scowls above me where I go.  
You can hear me; you can mingle  
Radiant folly with my jingle.  
War's a joke for me and you  
While we know such dreams are true!

March 30, 1918

# BOMBING

THIS is the greatest of all wars, not only horizontally—i. e., in respect to the area it covers—but vertically. The airplane has extended the range of fighting upward into the air itself. The bombing plane especially has added to the terrors of warfare by providing a new source from which an attack may come. James Hopper's article in this issue gives a wonderful picture of aerial warfare from the standpoint of the victims; these two pages present the subject from the aviator's point of view. First of all we see a huge bomb being put in place under the fuselage of a French bombing airplane. The bomb shown weighs several hundred pounds and is so long that it extends up through the body of the machine. The pilot drops it by pulling a cord which in turn releases the catch holding it in place. The lower picture is a view of a French aviation camp taken from a low-flying airplane. A number of planes, both of the fighting and bombing type, are grouped in front of the hangars ready for flight. To the right, by the road, are parked the motor trucks that bring supplies to the camp. Between the parking space and the hangars are the barracks and repair shops.

In the circle on the opposite page an aviator is shown in the act of dropping a smaller bomb of the hand type. Several of these bombs can be carried in one airplane. They are usually of the incendiary type, being rolled upon to start fires rather than do much damage directly. The large picture shows the town of Pagny-sur-Moselle, behind the German lines, during its bombardment by French aviators. Pagny is an important railway center and supply headquarters, and the attack was directed against the railway yards (seen at the top of the picture) and munitions factories. As may be seen, fires were started in several of the factories. In the insert is seen the smoke of an incendiary bomb that has just burst beside a factory. The map shows the situation of Pagny in relation to Metz and Verdun. The heavy broken line shows the present front. This line turns sharply to the east and runs a few miles south of Pagny, through Pont-à-Mousson, which lies just outside the lower limits of the map. An important railway line, which is shown on the map, passes through Pagny, supplying a wide sector of the German lines.

*The bombing of Pagny-sur-Moselle. Above may be seen the smoke from three fires started by the bombs. The small picture shows a bomb bursting beside a factory*

der Sturm.

Druck  
 In der Nacht im Sturm wie wildes Meer,  
 Wie sie kämpfen umfassen und schenken,  
 Des Artillerie's Orgel zum schrecklichen  
 Und verstört und unheimlich ist das Meer.  
 Die dinstliche Nacht ist ein unheimliches  
 Und kämpfend umfassen und schenken,  
 Und er sucht und sieht kein Licht mehr,  
 Das sich nicht am Phosphor leuchtet.

THE STORM

Like roaring hoards in unquenchable din,  
 They fight, never tiring of quarrel.  
 While he looks on, with his crimson grin,  
 And breath comes shorter and shorter.

The hottest fierce brands bare of defense,  
 Not vengeance brings down such new mien,  
 While he, with mad lust rearing up in such mien,  
 Sees the ranks growing thinner and thinner.

# What Austrians think of the War ~ ~ ~ ~ ~

ALL reports agree that the people of Austria are sick of the war, but are prevented from saying openly what they think about it. Once out of reach of the authorities, however, they speak more freely, especially when, in the long months of confinement in Allied prison camps, they have time to think over their experiences. Sometimes, among the more gifted, their expression takes the form of pictures and poetry. Such was the case when two Austrian soldiers, Ludwig Gruber and Alois Dillinger, who were captured by the Russians and transported to a war prison in eastern Siberia, recorded their impressions of the war in a cycle of grimly realistic drawings and verses. The central idea of the series (seven pictures and poems; three are here shown) is that War and Death have planned a hunt, in which the soldiers are to be driven into a trap and divided between the two hunters. Not a spark of patriotism is evidenced; no thought of fighting for great ideals. The common soldiers have been forced into the fight by a trick. At the end Death goes clattering on through the world; War prepares for another harvest. The drawings, made with such materials as could be obtained, were brought to this country by George P. Conger, a Y. M. C. A. secretary. Mr. Conger also made the English translations.

die Dürre.

In Stellen halberfallener Gräber  
 Auf dürftigen Fench beglänzt an Blum.  
 Aus jenseitiger Gräber das Ungeheuer  
 Der mörderische Tod doch grau zu sein.  
 Und prangen jedes Wundenwunden,  
 In halberfüllten und schrecklichen Furchen.  
 Im Mauerloch Schrei zu der wilden Furchen.  
 Als riefen sie die Leiche, (hm)

THE PENITENCE

In fantledon, half-mutilated shells  
 On weeds above the rim he crows and  
 dries up.  
 The whole a monster leaps and the  
 soldier  
 The naked Death who hates them all  
 enters.

At every, over, of every word that  
 he  
 Through their thin clothing, in the  
 cold appalling—  
 From beneath while the reason calls  
 of eyes,  
 As if Eternity were calling.

die Strecke.

Thun wird du nicht erfahren sein  
 Du wirst der Furchenwunden!  
 Du lügst zum langen Furchen,  
 Du schreist, brunnend Furchen!

Ich bin, Du bist der gut bestellt,  
 Du bist der mit grünen Furchen  
 Und klappert weiter durch die Welt,  
 Bis an die Tage der Furchen.

THE "KILL"

He's ready to death  
 "You'll be killed, I know,  
 As a paragon of all despots,  
 For you're the one in this big row  
 The good, brave, or busy leaders."

Death replies and repeats  
 "I am—the game has a full today"  
 (Again that hideous, ghastly grinning,  
 Then through the world he takes his way,  
 Till yesterday falls upon his wings).

*The mean eyes glittered as they rested on her; the lower, sensual mouth was twisted in a sneer*

# THE ADVENTURES OF COLIN O'RELL

BY ARTHUR SOMERS ROCHE

## FIFTH ADVENTURE—THE EMPTY SLEEVE

ILLUSTRATED BY HENRY HALEIGH

"YOU have done well, my Colin, and yet—" The shoulders of the Marquis, so fat that it seemed that they would burst the tightly fitting coat, shrugged slightly. Colin avoided his eyes.

"And yet?" she asked gently.

"We have failed in much," said the Marquis. He pointed out the window, the window that commanded a view of the North River. Yesterday, save for the tugs and ferries, the river had been a harbor of the dead. Ships there had been, but from their funnels had come no smoke; at their sterns had gathered no foam. But to-day Colin thrilled as she looked upon the sight that the stream afforded; for to-day the greatest convoy that had set sail from New York since the inception of the Great War was leaving for France. There had been no publication of the fact; there would be no announcement for a fortnight, when, having successfully passed through the submarine zone, forty thousand Yankee soldiers would step upon the soil of Europe.

The Marquis had indeed failed in much! Despite all his machinations there had been no hindrance to America's war preparation. And she, Colin O'Rell, had played her part in bringing to naught the efforts of those who would have destroyed America as a war power.

Her long lashes veiled her violet eyes as she turned back to meet the gaze of the Marquis. Accomplished actress that she had become, not even the Marquis, she believed, could know the exultation that was within her.

"You mean—those ships?" she asked.

"They—and many other things," said the Marquis. "This Fernald whom Jevons killed—I do not blame you, my Colin. You are, after all, young, and a woman."

He eyed her closely. "There was a tenderness between you, yes?"

Despite herself, Colin flushed; and yet to one who did not read her heart her color might have been symptomatic of anger. "That is absurd," she said coldly.

The Marquis touched his spatulate finger tips together. Colin stared at those fingers. So fat that they were creased, there nevertheless was in them the appearance of strength, and the closely cut nails

seemed somehow to suggest a brutality that was matter-of-fact.

"Nothing is absurd, my Colin, when there is a woman concerned in it."

"You are old-fashioned," she told him.

"Love is always old-fashioned," he reminded her.

"And yet," she said, "it was not to discuss your theories concerning the heart that you sent for me."

Her voice was as crisp and cold as though they discussed trivialities. If she had lost her self-possession when he had spoken of Fernald, it was only momentarily. She was herself again.

The Marquis's eyes held admiration.

"It does not matter. He is dead." His voice had in it no trace of regret or fear. He seemed as he sat there, the tips of his fingers touching, and parting to touch again, like some great, cruel cat gorged with its kill and mildly playful now. "So all who would betray us shall suffer," he said.

"You sent for me," Colin reminded him.

"You are impatient," he told her. He smiled. "That is the youth of you, my dear, and yet, for one so young to be so cold—that is perhaps because the spark that is to fire you has not been struck."

Her face hardened. "You speak of failure," she said.

He smiled again. "I wander, my Colin. You do well to bring me back to things of moment."

"And yet a suspicion of me—that would be a thing of moment."

HE waved his hands carelessly. Grotesque as he was, there was something graceful in the use of his hands. Again Colin thought of the great, cruel feline.

"One jests, my Colin," he told her. "Did I suspect you, you would not be here with me. To you would have come what came to this Fernald." For a moment his eyes were speculative. "His game, Colin—what could it have been? Why did he not go to the Federal authorities yesterday? My dear, when I spoke of tenderness I spoke of Fernald, not of you. The man was infatuated, but you—"

"Please?" she exclaimed.

"It is ended," he said. "Yet I wish that it had been possible for me to have wrung from him the

truth. The papers that he brought me—that fleet outside ready to sail—it is in this that we have failed. Those papers did not tell the truth. The fleet was to sail next week, and yet we see it sailing now. But it has not reached France yet. Much can be done in two weeks. A cable to Norway can be forwarded to Berlin, and it is only three days from the Kiel Canal to the coast of Ireland. We shall not worry about that fleet."

"And that is not the only fleet that will sail for France. And it is the future for which we plan; it is the future that is important to us, and in the future there will be no one to deceive you, my Colin, for I prefer that you should work alone. Had it not been that it seemed necessary for you to have an aid, Jevons would never have been assigned by me to be your aid, and this Fernald would never have played the part of Jevons. But still you can do alone what I have planned for two of you to do. Unless, my dear, the sight of blood has chilled your ardor for our cause."

"Blood is warm, not cold," she said.

He chuckled. Beneath his waistcoat his great torso seemed to ripple with his mirth. "You have wit, my Colin," he said. "Youth, beauty, and wit. Were I twenty years younger, my dear—"

"But you are not," she told him.

He nodded. "You would have it business between us, eh? That is well. To business, then, we shall get. You wonder, perhaps, why it was that I wished you to register at the Biltmore as Mlle. Cunard?"

Colin raised her shoulders. "The pay is sufficient. I ask no questions."

"Your virtues are too many," he smiled. "The years drop from me. But be not alarmed," he said hastily, as she frowned. "One thinks of women when tasks are accomplished."

He leaned back in his chair, and his fingers interlaced. Somehow she felt as though he were weighing her, appraising her, and she felt a numbness in her breast. Thus far it had been pitifully easy to deceive him. The master spy's cleverness had availed little against her own. True, he had learned that "English Fred" Jevons, one of his followers, had been impersonated by Jimmy Fernald, and there had been a dreadful hour in which her life and the life

Behind the Marquis were half a dozen other men

of Fernald had hung in the balance; but at the end of that hour Fernald was apparently dead at the hands of Jevons, and the weight of dread had been lifted from her heart. For the Marquis had never seen Jevons, and for the second time had accepted Fernald as the English crook. Those eyes that blinked so coldly were nearsighted. Physical things they did not see clearly, but it was not with the eyes of the body that the Marquis saw so much as it was with the eyes of that thing within him which must be termed his soul. And yet, even as Fernald once again had deceived the Marquis's physical eyes, so she felt that, weigh and appraise her as he would, she would be able to deceive the eyes of his instinct.

"You have heard of Colonel Dufresne?" he asked. "Who carried the message from Foch to Joffre at the Marne?"

"The same one," he said. "He lost an arm. He is no longer on the firing line. But he serves his country still. So does Mlle. Cunard. And you, my Colin, speak French. Mlle. Cunard and her brother—you do not know of them?"

Colin shook her head. "But you have heard of Jacques Fourès and his sister?"

The girl nodded assent. "Who has not heard of the two most famous secret agents that France has?"

"Had," he corrected her. "Unfortunately for France, Mlle. Fourès and her brother no longer serve their country."

She asked no explanation. She knew now why the Federal authorities had failed in recent weeks to get into touch with the French couple. The arm of the Marquis was long and deadly, and for a passing moment her heart quailed again as she realized his tremendous power. And the explanation for which she did not ask he vouchsafed to her.

"They knew too much and were about to tell that which they had learned," he said. "But I think of everything. Crudely to destroy them—that seemed not the best way. Some time in the future I might wish them to live—apparently. So it was that I wished you to stop at the Biltmore under the name of Cunard, the name they used. Had not young Hasnager recognized Fernald for what he was, you could have remained there. But it does not matter. That recognition, while it spoiled one detail of my plan, taught me that Fernald was not Jevons. You still say that there was no tenderness between you two?"

His eyes blinked benevolently now. "Ah, well, I do not doubt you, my Colin. But I have many who serve me, and the kiss in an automobile may well be reflected for the eyes of the chauffeur in the wind shield before him. But you need not blush, my Colin; a kiss is, after all, only a kiss, and this Fernald was a most attractive young man, I believe."

"But no more so than Jevons," said Colin.

The Marquis laughed. "I misjudged you," he said. "I thought you ice, but you are— But it does

not matter; it is no concern of mine. I am, as you remind me, not twenty years younger."

He leered upon her, and Colin felt that it no longer mattered what suspicions he may have had of her feeling toward Fernald. Evidently he thought her something a little worse than a coquette, and it was well that he should think that way.

He dropped his tone of persiflage for one of gravity. "Dufresne is here on French Government business. All that France wants of America in the next few months Dufresne knows. I know what his instructions were when he left Paris. They were to get in touch with Mlle. Cunard and her brother; to receive from them their reports as to the situation over here and to balance French needs against what they should tell him America could give. Had you been able to remain at the Biltmore, Dufresne would have gone to see you there. As it is, you must go to see him at his hotel. Under the name of Jac not he is stopping at the Regent. He arrived only yesterday. It is vital, my Colin, to the cause of Germany that I learn what word Dufresne brings from France. If it is troops that France wishes most of all, I must know that; or if it is guns she cries for; or food. Dufresne will know."

"But Colonel Dufresne is a hero of France," protested Colin. "He will not talk to me."

"Then you will have failed again," said the Marquis, "and Germany, my dear, pays not for failures. You are a woman; you are young; you are charming. Dufresne expects to see Mlle. Cunard. There is no reason why he should doubt you. You will go to him?"

OUTSIDE of the room in which the Marquis had talked with her, Colin paused for a moment. From a window in the hall she looked out again upon the North River, teeming now with life where yesterday it had been wearing almost the appearance of death. The Marquis trusted her, and yet—why did he not send Fernald with her if he believed Fernald to be English Fred Jevons? His plan yesterday had been to have both of the French secret agents impersonated; to-day he sent her alone. Yet a moment later, in the arms of Fernald, she forgot these doubts.

She found Fernald in a room on the same floor as that of the Marquis. His window also commanded a view of the river, and he too was thrilled at the sight of the ships setting forth on their way to the battle ground where civilization's fate is being tested. Fernald heard what she had to tell him of her interview with the Marquis.

"It is simple," he said. "We came here in the dark. But you will leave here in the daytime. You will know just exactly where this building is. It will be easy to surprise the Marquis here. We're at the end of the trail, Colin."

She shook her head. "But I shall be followed, undoubtedly, every minute," she objected. "Even to go to a telephone—they would stop me."

He laughed. "You're forgetting, Colin, that you are going to see a man who has given an arm to France. The Marquis's man cannot follow you to Dufresne's apartments. A word of the truth to him and this neighborhood will swarm with secret agents within an hour. And after that—"

"You forget that the Marquis has a great many men here," she told him. "Before they surrender—surrender means death to them, Jimmy. They will be in here, and you and I—"

"And I!" he exclaimed. "You will not come back here, Colin. You will stay with Dufresne. He can telephone—"

"You mean that I am to leave you here to face them alone?" She smiled and shook her head. "We didn't meet for that, Jimmy. What we have faced since you joined me we have faced together, not separately. I am coming back to you."

"I forbid you to," he said. "What possible good will it do for you to die with me?"

"Then you know what it means," she said. "Jimmy, last night when I thought that Jevons had killed you, I knew that I would not live without you. I don't want to now, and I don't intend to."

From his pocket he drew his automatic pistol. "Suppose," he said, "we fight our way out now?"

"Colin, Colin," said a voice reproachfully.

The girl wheeled to face the Marquis in the door. The movement of her body hid the weapon in Fernald's hand. He slipped it back into its hiding place, for behind the Marquis were half a dozen other men. It was useless to attempt fight against so many. To do so would merely jeopardize Colin's safety; more than that: in a few minutes more Colin would be free; she knew the Marquis's lair; what happened to Fernald later on did not matter. She would be free, for suddenly it came to him that Colonel Dufresne would never let her venture back here. The Marquis's arrival in the room had saved him from an absurdity that would have cost Colin her life.

"My Colin, there is no end to your coquetry," leered the Marquis. "From the dead to the quick you turn. Go along, my dear; your work is waiting."

There was not even opportunity for an exchange of glances, for the Marquis's bulk interposed itself between Colin and the man she loved, and then her heart lightened as she moved down the hall to the room that had been assigned her last night. God was just! It would not be just for the Marquis to win in the moments of their triumph! And yet, as she put on her hat, a faint doubt came to her; the master spy was too complaisant! But she shook off the doubt. Why should the Marquis be distrustful of Fernald when he thought that Fernald was Jevons, and that Jevons's hands were red with the blood of the man she loved? These men who entered the room of the Marquis were not there for violence; they were there for consultation, undoubtedly. She smiled. Into the midst of that consultation would come surprise and death. God was just. Death would not touch Fernald.

IT was unfortunate, thought Colin, that a hero should not look heroic. Colonel Dufresne was the last man that she would have suspected to have been the idol of France that she knew him to be. Even his eyes were set a bit too close together, were small and mean. She could have forgiven him his mottled complexion, his almost sinister mouth, whose lips were so loose that they did not entirely hide the cruel-looking stained teeth. Yet, as she looked at the empty sleeve, pinned (Continued on page 32)

He too was thrilled at the sight of the ships setting forth on their way to the battle ground

# THOSE BROWNING GUNS

BY LUCIAN CARY

IN the lobby of a small hotel at Hartford, Conn., there sits to-night, with his chin in his hand, a very tall, lean man of sixty-two. He wears a suit of ready-made clothes, an old-fashioned standing collar, and scuffed vici-kid shoes. His income is a million dollars a year. Why should he put up a front?

The evening paper lies folded in his lap. He has read the Associated Press dispatches on the first page and the baseball gossip on the fourth page. He will not keep a social engagement. He will not wander down the street to a bar or a pool room. He does not drink or smoke. His only vice is a bunjo, and he is much too shy to indulge that in public. He will not be drawn into talking about himself. He cares nothing about impressing people—among his possessions the Order of Leopold is gathering dust.

The reporter for the local paper may drop in. This tall, lean man with the white mustache is quite the most distinguished visitor in town; anything he says will make a story. But the reporter will not ask him questions—he knows it's no use. In his chosen specialty this man is without a peer in all the world. Great corporations compete for his services. Why should he advertise himself?

No—he won't put up a front, or make an impression, or seek publicity. For an hour he will lose himself in memories—memories of the country where he was born, the country that will always be home to him, the country rimmed in by the frosty peaks of the Wasatch Mountains and the Great Salt Lake. He will remember happily the year when he lived for weeks at a time on elk steaks—a panful of fried elk steak for breakfast, sandwiches of fried elk steak for lunch, a panful of fried elk steak for dinner. He will wish he could go back there forever—back to Ogden, Utah, and never go farther away from home than up to the Jacksons Hole country in Wyoming, where the elk winter. He will dream an hour, and then at nine o'clock he will get up, exchange a formal word with the bell boy about the weather, and go to bed. What else is there for such as he to do in Hartford, Conn.?

His heart is in the West. But he can't go back there just now. He must stay in Hartford. For he is John Browning—the man who invented the two kinds of machine guns the Ordnance Department has chosen for our army—and he must stick around there they make them.

## He Has Never Invented a Poor Gun

THESE guns are new. They have never been tried in war. But General Crozier's experts report that they are better than any other machine guns. We shall have to wait until May before Colt's and the other factories who have contracted to furnish the government's enormous order will reach the peak of quantity production. But Secretary Baker assured the Senate investigating committee that the Browning guns were worth waiting for.

The chances are that General Crozier's experts are right. John Browning never has invented a poor gun, and he has invented more guns than any other man living.

John Browning's father was a gunsmith in Iowa. In 1852 his father decided that Iowa was getting overcrowded. He took the family across the plains in an oxcart to Ogden, Utah. John Browning was born there in 1856. At thirteen he had made his first gun with his father's foot-power lathe and simple hand tools. At twenty-three he perfected his first breech-loading rifle—a modification of the famous Sharps rifle, favorite of the sharpshooters of the Union army in the Civil War, and afterward of the buffalo hunters. Before he was thirty he had devised the first of that long series of repeating rifles for the Winchester company which has taken the name "Winchester" wherever rifles are known.

He is the inventor of nearly all the Winchester rifles, of the pump shotgun, the autoloading shotgun, the automatic rifles manufactured by the Remington-Union Metallic Company, of the Colt automatic pistol, adopted by our army and navy and National Guard, and by four European armies, and the Colt machine gun. The Colt-Browning machine rifle and the Colt-Browning machine gun, heavy type, are merely the

Browning is a man of the West

It looks like a British Vickers-Maxim, and fires at the rate of 450 to 600 shots a minute

It is possible to direct its fire as one would direct the stream of a hose

latest additions to a long list of successes. What is also to the point—they were designed especially to meet the conditions of this war, the war which has made the machine gun famous.

The experts all agreed that they wanted two kinds of machine gun. For troops going over the top they wanted a light gun, a gun that one man could carry, if possible a gun that could be fired from the shoulder. The Lewis gun, far and away the most successful new gun on the western front, had proved the immense desirability of a light gun in the hands of advancing troops. But the Lewis gun was too heavy to be fired from the shoulder except under the most favorable circumstances and for very brief periods. What the military experts really wanted—have always wanted—was a gun no heavier than a service rifle that would pour a continuous stream of bullets on the pressure of the trigger.

## 39,500 Shots Without a Break

BROWNING couldn't give them that—no man could and use the service ammunition. The smokeless charge in a .30-caliber cartridge generates a heat so terrific that continuous firing is possible only when the barrel has a heavy jacket of water. (Even then the water soon boils away unless the operator gives the gun time to cool.)

What Browning has succeeded in doing is in giving us an automatic rifle weighing 15 pounds that will fire twenty shots before you can take your finger off the trigger—unless you know how. And twenty more as fast as you can slip out the empty magazine and slip in a full one! By the mere shift of a lever, it will fire semiautomatically: one shot for each pressure of the trigger. In a word, the Browning automatic rifle solves the problem over which small-arms experts have sweated for thirty years. It means our army will have the best offensive weapon in the world.

The gun looks more like a Remington autoloading shotgun than any rifle on the market, and, though heavier than the service rifle by nearly 6 pounds, is no heavier than the single-shot rifle many a skilled rifleman has chosen for fine shooting at the target. The cartridges are carried in a clip or magazine which is inserted

in the action just forward of the trigger guard. One magazine with twenty cartridges in it weighs less than a pound and a half. A squad of four men, one with the rifle, and the other three with loaded magazines, can carry a goodly supply of ammunition.

The gun can be taken down in a few seconds and reassembled with no tool except a single service cartridge. Our machine gunners will assemble and disassemble that gun over and over again until they have eyes in their fingers and can do it in the dark.

All machine guns stop. It is half the art of the machine gunner to remedy stoppages in a hurry. He learns all the stoppages by heart—all the possible malfunctions—and how to tell from the outside of the gun what's the matter with the inside.

The other half of his job is learning how to shoot. He has to learn not only how to sight and range the gun, but how to control the bursts and traverse the barrel. If a machine gun is accurately aimed at one point and kept there, it isn't much better than a service rifle. You can't shoot more than one man at a time!

A machine gun will fire a dozen shots before the amateur can let go of the trigger. So it takes a specially educated trigger finger to fire a machine gun. It also requires a very high order of skill to place bursts of three or four shots each at intervals of three feet across a wide arc—traversing fire. The Browning rifle, thanks to its semiautomatic device, permits single shots to the unskilled. And it is preeminently adapted to shooting from the hip. Browning found in his experiments that when the conditions were favorable it was possible to direct its fire as one would direct the stream of a hose—you can't see the torrent of bullets, but you can see the spurts of dust and direct the gun accordingly. I said that all machine guns stop. But the Browning light machine rifle has yet to show a single malfunction in action. And the Browning heavy gun has made the world's record nonstop run. (Continued on page 18)

## In the Final Analysis, "Up

A maker may write a volume exploiting the details of construction of his car and explaining the superiority of some one feature or another.

But of what avail such arguments if the product in actual service fail to make good the claims?

We also like to talk about the various details of Reos—at times we do concentrate on one feature, then another, and explain our reasons for using this instead of that.

Infinite care has been directed, by engineers whose experience is the ripest in this industry, to perfecting details of this Reo Six to the end that uniform excellence shall prevail everywhere.

Other makers do the same—so far as their experience and their facilities permit.

And each fondly believes that his Six is the best. He is honest in setting forth his claims. He thinks

But when you investigate you'll find one piece of evidence that overshadows all others, and that is the cost of Upkeep over a long period of service.

That tells the tale as nothing else can—for if the car is there; if it be uniform; if the engineering be perfect; if, in a word, the car be not merely "good in appearance"

Then obviously the Upkeep cost should be low.

THE REO SIX

## "p" is the Answer to Quality

Ask any Reo Six owner—ask any garage man you know—and he will tell you that mile for mile, this Reo Six (and it is a big seven-passenger car) is the lowest in upkeep of any car he has ever known.

Our records show that Reo owners have paid, on the average, less than eight dollars per car per year for replacement parts over a period of years.

Full that over—\$8.00 per car per year!

That's the average cost to all Reo Six owners—not a few selected ones.

And those records cover the entire time—four years—this Reo Six has been made.

And it covers all the thousands of Reo Sixes in all parts of the world, in all kinds of service over all manner of roads.

Can you equal that in your own experience with any other motor car—regardless of price?

And yet the price of this sterling product—this car that proves up, on the only evidence that really counts and is conclusive—is only \$1550 f. o. b. Lansing—plus the special federal tax.

When you select a Reo Six you save fifty per cent in the purchase and another twenty-five in Upkeep.

Mr. Brazelton

Phelia

Mrs. Brazelton

Nedanted

Zinnia

Hartley

Ruby

# RUBY CROSSES THE RUBICON

BY HOWARD BRUBAKER

ILLUSTRATED BY FONTAINE FOX

THERE is a puzzling system of enmities and solidarities in the Brazelton family. The boy twins and their younger sister, Ruby, are normally arrayed against the adult half of the family, which includes Zinnia, who is eighteen and has her hair and her manners up and who "thinks she is smart." This natural division is complicated by the fact that Zinnia sometimes slumps into childhood while Ruby on occasion takes histrionic little trips across the Rubicon into the grown-up world. Once in a while there is an alignment of the twins and father against the feminine or unreasonable half. Back of it all is the Brazelton loyalty against the outside world. This is not used often; it is kept shut up and clean like the parlor. As a result of these complications and a dark-brown cook named Phelia, who has been threatening to leave for the last four years, Mrs. Brazelton hides within her placid personality some of the elements of a diplomat, a slack-wire artist, and a committee on public safety.

In this twisted little world the twelve-year-old twins, Edward and Theodore, are the one reliable force—one knows where they stand. They are usually spoken of as "Nedanted," without pauses or hyphens. They love as one, they hate as one. Punishment for crime falls upon them together—unfairly, perhaps, in individual instances, but no doubt in accord with the larger social justice. If at times of slothful peace the twins fight each other, it is in a listless, perfunctory fashion, as if they were doing it for a dollar and a half a day.

Their hair is red—not bright and cheery like the inside of a watermelon, but more like a time-worn brick. To Zinnia, who is a cultured person (as attested by a high-school diploma tied in the class colors), Nedanted had come to mean a red-headed Janus with freckles on both his disgusting faces—a monster with four legs and four dirty, inquiring hands.

Unlike the mythical gatekeeper, this Janus has two separable bodies as well as two heads. This, in Zinnia's opinion, only increases his capacity for making trouble for one who is trying to introduce certain crude standards of decency in the younger element of the Brazelton home.

THE low opinion which the children hold of their sister is not shared by those who do not know her so well. The Brazelton tennis court is encumbered with beauty and chivalry for long summer afternoons together while the Brazelton veranda is clogged on pleasant evenings with beardless and more or less chinless youths, tenors predominating. This Zinnia has already acquired something of a personality. Her good looks are more a matter of vitality than of regularity; her hair, which is of a washed-out brown, is commonly disorganized; but there is nothing serious the matter with her head. If she is small, she is compensatingly quick on her feet. She has a good tennis arm and a wicked little twist in her service. Also in her repartee.

Those evening front-porch pests father and mother

tolerate upon the well-known superstition of the safety that lies in numbers, but recently there came the disquieting knowledge that the visitation had lost in both quantity and quality—had sagged down, in fact, to Hartley Winters, as if the other young wits and vocalists had been obliged to recognize in Hartley some kind of claim.

Now, quite aside from parents' belief in the permanent infancy of their daughters, young Winters is not the kind of prospector that one would choose to have driving claim stakes into the front lawn. Already, at a tender age, Winters shows an inclination to make leisure his life work. Reasonable parents, if there are such, do not expect their daughters' friends to set the world ablaze at nineteen, but Hartley is about as active as an aged barnacle. It is not only that he has neither gone to college nor clerked at Conley's soda fountain; three or four sterling young characters in town have not done either of these things. But Hartley has never done anything at all. Thus there has grown up in business and social circles a belief that if he ever had done anything, it would not have been a credit to his respected family.

What so active and vivid an organism as Zinnia could have found congenial in such a stationary young man was more or less of an enigma. One possible explanation is that when Hartley was in her society he did not seem to have anything else on his mind.

in the ways of maidens and better acquainted with Zinnia, refused to allow Hartley Winters to be kicked into a position of any kind of importance. She recognized the need of getting her daughter heart-whole through this first affair, and she would not permit any bungling.

"It will have to come about some other way," she said. "We'll have to keep our hands off."

"I wasn't thinking of using my hands," said Mr. Brazelton savagely—thus surrendering without loss of self-respect.

THESE domestic problems invariably get themselves settled in some such way as this. Mr. Brazelton is a bustling little man who in the daytime trots about in the real-estate business—all complete with farm loans, abstracts of title, and fire insurance. His highest form of self-expression is trading farms on the back of an envelope with a pencil. He is also reputed to have "a good deal to say" in the electric light and water company. In fact there are a number of little ways in which the people of Hilton can become indebted to Mr. Brazelton. Hence his home shows such signs of wealth and culture as a cupola on both house and stable and an ornamental (so to speak) iron deer on the lawn.

His word carries weight in the marts of trade, but at home he is inclined to yield to superior information. What he says is law, but Mrs. Brazelton tells him what to say. When he stands upon his hearthstone he is the limited monarch of all he surveys.

THE next day after he had thus laid down the law and picked it up again, the subject of Hartley Winters arose once more. It was noontime, at that freeing of the inner Brazelton which was "dinner" to the rest of the family but "luncheon" to Zinnia. The older daughter was making representations about wanting the automobile.

"Father, I'd like to drive a little this afternoon if you are not going to use the car. Hartley Winters is coming over."

Mr. Brazelton tried to think of some farm property that it was absolutely necessary for him to inspect instantly, but before he could wrap his mind around anything helpful his wife had skillfully given the impression that he had consented.

"Can we go along?" asked Ted. "Make her let us go along, pop."

"Yes," said Zinnia scornfully, "and have Ruby tell everybody in town that you're pinching her knee—like she did the last time."

"We could leave her home," said Ned. "You don't want to go, do you, Ruby?"

"I'll wear my blue hat," replied the disappointing Ruby.

"We won't make any trouble at all," said Ned. "Just sit there on the back seat and look around."

Ted had to agree to this, though it interfered with his private plans for standing up in the back of the car, whistling to acquaintances and pointing derisive fingers at the doddering old parties on the front seat. For the boys could never

Mrs. Brazelton looked out of the window to see her daintily clad daughter engaged in mortal combat with her difficult sons

One evening when Winters was showing a record disinclination to go home, Mr. Brazelton spoke to his wife of drastic measures and looked meaningfully at a substantially built shoe. But Mrs. Brazelton, wiser

# The GREATEST of Apperson Triumphs

*Apperson Brothers Remove 80 Superfluous Parts from the 8-cylinder Motor*

THIS most recent feat of the Apperson Brothers is not a "fluke" or a lucky chance. It is the culmination of a series of herculean achievements in the advancement of motor car construction.

Previous Apperson inventions and discoveries have become basic elements of the motor car construction of the world.

The four illustrations above are chosen from upwards of thirty Apperson "firsts" in invention, in construction, and in road, track and hill-climbing contests of all kinds.

So, also, will this compact, simplified 8. For the result of the removal of 80 useless parts is a more dependable, more enduring 8-cylinder motor than had been built before.

This new 8 is smoother, more powerful, faster.

Let your dealer demonstrate these qualities. He'll prove at the same time the spaciousness and the easy riding qualities. He'll offer evidence regarding the tire and gasoline economy.

You can settle for yourself the matter of appearance. Secure this demonstration soon. Facts about this new 8 mailed on request.

**Apperson Bros. Automobile Company**  
Manufacturers of Sixes and Eights  
Kokomo, Indiana

As far as we know, no other 8-cylinder internal combustion motor is as simple and compact as this one. By the elimination of 80 parts we have made this 8 practically as simple as the old 4-cylinder motor. At the same time, the flexibility, power, speed and endurance of the 8-cylinder type have not only been retained, but amplified.

make out what Zinnia saw in Hartley Winters—or vice versa.

Mr. Brazelton now reluctantly ruled that Zinnia was entitled to entertain her company free from "young ones."

"Well, I hope she don't have any trouble," said Ned insincerely. The twins knew better how to drive the car than did Zinnia; therefore by adult logic she was allowed to drive it and they were not. She even spoke of it sometimes out of parents' hearing as "my car"—though in justice to her it should be said that she did this purely to be offensive.

Ned was deep in mental lucubration for the rest of the meal. After dinner he skillfully herded the younger set into the library.

"Hey, Rube," he whispered. "You know that little dingbod underneath where you turn off the gas?"

With that beautiful spiritual sympathy which exists between twins, Ted caught the idea hot from the hat. "It looks like this," he said, putting out his finger in a supposedly expressive way, though it seemed to mean nothing in Ruby's young life.

"Don't you remember when we got some gasoline to clean your blue ribbon?" Ted persisted. "It's a kinda finger that points along the pipe. You pull it so it points down. That'll shut off the gas."

"They'll be no ridin' for smarty ol' Zinn," said Ned temptingly. "She don't know how it is underneath. Hartley don't know nothing either."

"Why don't you do it yourself?" asked Ruby.

"They'd never think of you," Ruby understood Ned's cryptic remark and agreed (as she had intended from the first) to do the deed. The boys now elaborately announced to all the world that they were going to play tennis. The court was in full view of the house and constituted a splendid alibi. It could plainly be seen from Zinnia's room, where she was presently arraying herself for social conquest.

To Ruby, as she hopped and skipped upon her joyful mission, this seemed another of those heaven-sent opportunities to be of disservice to her sister and at the same time to get a pleasant little hold upon the boys. For obvious reasons the twins never "tell upon" each other, but Ruby makes a special case of each event and sells her silence at the market rate. Nedanted knew there would be something to pay—also that Ruby would stand by her bargain.

Ruby is rather a misnomer. She appeared in this world at a time when Zinnia was eight. The parents took a thoughtful look at the weedlike Zinnia of the period and abandoned horticulture in favor of jewels. But whatever color there had been in the family reservoir of blondness had spent itself upon the twins, and Ruby turned out hopelessly tow-headed. Zinnia holds that her little sister's hair is of the worst possible color for one who has such low tastes in companions and occupations. It shows dirt fearfully. So now at ten and beginning to run spindly, Ruby does not remind anyone of a precious stone.

This is what might be called the acquisitive stage of Ruby's development. She takes everything the gods provide and lays plans for more. She takes little tricks and manners from odds and ends of people, including moving-picture heroines. Upon her clothing, which Mrs. Brazelton makes sure is of a durable and washable kind, she takes toll of everything she touches during a busy day. A skillful chemist might analyze Ruby's frock after she had gone to bed and reconstruct a fairly complete history of the day's work.

THE affair of turning off the gasoline supply and ruining her sister's afternoon proved to be pleasant and easy work. Whatever haziness the boys' explanation had produced in her mind disappeared when she once got under the car. The finger was there as advertised; she pulled it downward and nothing unfortunate happened—no geysers, no explosions. When she again stood erect there was nothing about Ruby to indicate that she had been under an automobile except a dab of grease upon her

hair, two black hands, and an oiliness about the front of her dress and the knees of both her stockings.

Ruby now climbed into the haymow—for the garage is really a stable with a concrete floor and a changed name. In fact, the old family surrey (with top and fringe of the prevailing Brazelton blondness) still stands in the corner, its shafts pointed upward as if it were perpetually begging for mercy. The loft no longer contains hay, but a great deal of reminiscent chaff and dust. There is a knothole in the floor through which one can look down and enjoy the sufferings of one's sister and her beau.

Ruby does not remind anyone of a precious stone

ever quite understood. There was a kind of tournament that ran on through the ages. The score was 873 to 918 in favor of somebody at the hour when the light-flannelly Hartley Winters arrived and greeted his hostess. Henceforth tennis became largely a matter of wasted motions.

"There goes the starter," said Ted. They listened, racked with suspense. It was possible that Ruby had failed in her duty—girls were so stupid about machinery. There was silence—the starter again—then further silence. All was then well in the best of possible worlds. Presently came the expected summons: "Boys, come here a minute, will you?"

They went with solicitous haste to the garage.

"Hello, Hartley," said Ted.

"Hello, Ned," young Winters replied. The confusion of their names has long since ceased to be a treat to the twins except when it points the way to adding a little to the sum of human unhappiness.

"The engine won't start," said Zinnia. "Now, what do you suppose is the matter with it?"

"Who you goin' to have for a fella now?" asked Ruby

"Is the starter all right?" Ted wanted to know. "Yes; it's all right and there is plenty of gas. It coughed once or twice and then stopped."

Theirs is not, to use Mr. Brazelton's phrase, "a great hulking car." It does not take this car long to pass a given point, and it has only a reasonable number of cylinders. But it is a fairly responsible five-passenger car and does not often give trouble.

Mr. Brazelton stipulates that whenever there is anything the matter he will try his hand at the thing first before calling in the sixty-cents-an-hour fellows. "Very often it is just some little thing," he says, "and they'd make a job of it."

The boys now went hypocritically over the car, examining the spark plugs and the wiring, screwing down a grease cup here and there. As time went on Zinnia grew more and more embarrassed. Hartley was a broken reed in any motor-car crisis; he had not even done his loafing in a garage. The villains of the piece gave themselves up to quiet enjoyment. Once Ted nearly paralyzed his brother by making use of the paternal phrase: "Very often it's just some little thing." Ned grew so bold at last that he invited Hartley Winters to look under and see if everything was all right. Hartley looked under as well as his elegant summer suit would permit and agreed that it looked all right to him, but he did not know this make of car very well.

Now Ruby, craving society, appeared from above a little at a time, beginning with those dusty and spindly legs. When she got done, Zinnia delicately hinted that her sister's face was dirty.

"Is this 'Phelia's little girl?" she asked.

"I ain't going anywhere," Ruby replied defensively.

The twins regarded this as great wit because they had a shrewd suspicion that Zinnia was not going anywhere either.

The newcomer now did her bit in the examination of the recalcitrant car. "The mud guards seem to be all right," she said helpfully.

The twins leaned weakly against things at hearing this. There was no doubt that Ruby was in rather rare form to-day. Encouraged by their approval, she took a favorable opportunity to give the horn a splendid "honk," thereby greatly startling Zinnia's young man, who was directly in front of the car. Zinnia sharply admonished her to keep away and not bother. Ruby thereupon climbed into the front seat of the antique surrey, cleaning its wheel slightly as she did so. Presently she dropped this amiable suggestion. "If we only had a horse now, Zinn, you'd be all right."

This outrageous remark broke up the party. The boys frankly went into a decline, and Zinnia lost all patience.

"I'm afraid we shall have to give it up for to-day, Hartley," she said. "I'm sorry."

"Well, all right," said Hartley reluctantly.

THE whole company now moved toward the front yard and in an open skirmish line explored the grounds together. Ned soon caught up with the others after ducking under the car and setting the gasoline supply right. When father took a hand at starting the car he would find no difficulty. He would therefore have the laugh upon his ignorant children and be amiable rather than inquisitive.

The Brazelton establishment was erected in what might be called the iron age of American architecture. The yard is inclosed with heavy iron fence and gates—the boys have a comfortable theory that this fence would keep out elephants. There is a fountain in the yard, now commonly dry because of plumbing deficiencies, and in its center a little iron boy holds a little iron fish. The boy is clothed only in rust. The iron deer, the tennis back nets, the lightning rods, the iron fences that surround the square tops of house and stable (fences which Zinnia says are to keep the birds from falling off), all are as a monument to the founders of a great and useful industry.

THE yard itself is riotous with trees and shrubbery, forming pleasant little nooks and culs-de-sac. Such landscape gardening would be conducive to privacy—if the House of Correction had its due. But as the young people strolled about they seemed to meet at every turn blue-eyed little children desiring to be sociable. Did Zinnia and her gentleman friend wish to sit upon the bench over-

looking the tennis court, two brick-headed persons expressed their willingness to entertain with a slight exhibition of tennis. Did they visit the fountain, Ruby made herself a party of the statuary group, assisting the lad to hold the fish and adding a little iron rust to the other foreign substances upon her person. When this act failed to please, the filthy young lady obligingly rode the deer. (Continued on page 30)

## Now, A FISK TIRE

**T**RANSPORTATION, the nation's vital present day need, looks to the motor truck to help solve its problem.

Tires of brutal strength are demanded to carry without delays merchandise that *must* be delivered on time.

*for every motor  
vehicle that rolls*

meet this demand. It is a tire built to perform the hardest and heaviest work

that solid tires are called on to withstand.

Here is a tire that must be reckoned with, and users of motor trucks must look at it squarely.

Made by a Company with a nation-wide branch distribution and an established reputation for quality and fairness.

To be the best concern in the world *to work for*, and the surest concern in the world *to do business with*—THE FISK IDEAL

# FISK SOLID TIRES

# Prest-O-Lite Battery

A correct size  
for every car  
—at District Service  
Stations everywhere

## A member of the Prest-O-Lite Clan

**T**HE members of this happy clan hardly know a battery "grid" from a piece of cheese. They don't know and don't want to know about the functions of "electrodes" or "electrolyte".

They are tickled to death to leave all that engineering "dope" to their battery-bug-friends, and the expert who runs the Prest-O-Lite Service Station down the street.

What they do know is that the little box of power, labelled "Prest-O-Lite" is an all-the-year-'round, one hundred percent performer in wet, dry, hot and twenty-below-zero weather;

—that it carries in storage the necessary surplus power to feed the electric head-lights and spin the stiffest engine under conditions that would have forced any other man's battery to lay down on the job.

They know that the Prest-O-Lite Service expert is the proper party to pass on the condition of the battery and from time to time apply the simple treatments necessary to keep it up to its rated capacity.

They know that this service man's station is just down the street. That it's an easy matter to stop the car at his place for a few minutes once a month;

And—they know that the said Prest-O-Lite service man is a human being—a deserving battery engineer who in accordance with our well known policy makes no charge for "inspection" or distilled water—but has his fixed rates for all other services rendered.

If you can say "Amen" to this solution of all your car battery problems you are eligible to membership in the Prest-O-Lite Clan.

Drop us a line today and we will put you in touch with our nearest service station man, who will be on the lookout for your first call and will treat you as we want a life time customer treated.

The Prest-O-Lite Company, Inc., Indianapolis, Ind.

The Oldest Service to Automobile Owners in America

## THE CAMEL FLAGGER

BY FLETCHER CHENAULT

**L**IGE DODSON and I had forgathered on the promenade deck of the log cabin in the Ozarks to view the scenery and enjoy our pipes. At least I was enjoying mine and hoping the wind would hold to its course and protect me from the deadly fumes that emanated from the mountaineer's long-stemmed clay. For Lige had filled the bowl with dry burley, fresh from the fields and powerful as chlorine gas, which made it plain to my understanding why a mask should be part of every modern soldier's equipment. One whiff of this tobacco was enough to make the whole world swear.

It may be necessary to explain my presence on Nubbin Ridge, although I don't see why. I was on a lawful errand, for one cannot be convicted of free speech as long as his utterance does not border on treason or sedition; and free speech was about all we insurance agents ever carried into the mountains. What we came out with is another matter. Sometimes we were lucky to come out at all, because a certain degree of diplomacy is required when you trespass on the domain of the moon-shiners. These wild tribesmen were in the habit of operating their Winchesters from a distant hilltop without the formality of an investigation.

Presumably my unsophisticated artlessness protected me from suspicion. At any rate, I had never served as a target, although I had learned much about the peculiarities of the moon-shiners, and Lige Dodson, the genial postmaster of Higginsville, was the chief source of my information.

As an act of simple justice it should be recorded here that Lige Dodson never made a quart of corn liquor in his life. But, for one thing, he was an ultimate consumer and for another he was quite intimate with some of the well-known distillers of the community, wherefore he could speak as one with authority. Whether or not he always spoke the truth is beside the mark, and certainly not for one so humble as I to say.

"I see by the papers," Lige was saying, "whar'bouts the Gov'ment is sendin' over some painter fellers to Yurope to put camel flags on our army."

"Camel what?" I inquired, puzzled.

"What kind of flag is that?"

"Tain't no flag a-tall," Lige said. "It's a art. You take a cannon, mebbe, an' you paint it to look like a plow-beam, so to speak, an' a common ordinary waggin will look like a hayrick. It's easy ef you know how."

"Oh!" I exclaimed, a light dawning on me. "You mean camouflage."

"No, I don't," Lige insisted. "I mean camel flags. It's a French word meanin' to kiver up. Them Frenchmen shore is wonders with a bucket o' paint or a skillet, although the only painters which I ever see was Irish an' b'longed to a union."

"House painters?"

"Shore—the stepladder kind. But when it comes to that, this here Lee Starr was the best camel flagger which I ever see," Lige added reflectively. "Whensoever he got through paintin' a thing it warn't what you thought it was a-tall—not even himself."

"Tell us about it," I said. For these signs indicated that Lige was leading artfully up to a story, and, such being the case, it was beyond the power of human ingenuity to stop him.

So Lige filled his pipe again with poison gas, which caused me to hook my chair three degrees more to windward, and began on his tale of how the Campbell Carnival came to Nubbin Ridge, and how the Law came along the same trail.

**Y**OU see, this here Lee Starr was a man o' many u-lysees, so to speak. Sometimes he was this an' sometimes he was that, but most in gin'ral he wove into a place an' then wove out agin afore ever you knowed to a T jes' who an' what he was. An' then you ricklect, an' says: "Well, darn my cats! Ef that warn't Lee Starr, which I thought was a book peddler!"

The trouble was thar ain't no revynoo man ever was welcome on Nubbin Ridge, not as far back as I c'n remember. We ain't to say a inhos-teel people, so to speak, but the lathstring never did hang out for no revynoo-er, an' well they knowed it.

Lee Starr snook into the mount'ins an' got Ike Ray, an' later on he snook back an' got Rud. But he ain't nigh

got 'em all, even so, for thar's Eph'm Ray an' Baldy Jackson a passle o' t'others who could brow beat that had a punch to it like the kin a mule. An' shoot! Man alive, here Walter Tell you heard spoke a the feller who shot apples off'n a head in Buffalo Bill's show, he nothin' but a plain amachure compared with them fellers. Why, on a mere night they c'd shoot the eyelashes a frowg at a hundred yards.

Well, sir, one time thar was a nival come over here to the B camp-meetin' ground. It was a likely circus, so to speak, which eled through the kinty on w. They had about a dozen side show some o' them fellers c'd do some slick tricks.

One feller was a rale humdinger was a Americo-African, an' he c'd a whole darn torch o' fire down throat, shet his mouth tight, as bring the torch out flamin' agin never see the like! An' another up an' jammed needles in his arm like he was made out'n India rubber thar was a woman which let a crawl all over her. Gosh! but hate them rep-teels.

**C**OME Thursday I went over to Campbell's Carnival, an' thar up with Baldy Jackson, the kah the Ray gang. Baldy was a v 'bout middle age, an' we-all called Baldy 'cause he ain't got much in front. You notice I got a vacant spot in the back, which no bigger'n a dollar, so to speak Baldy's front was as shiny as a knob an' he was tech'us about a was a settin' up to the Widder Flax an' he won't stand no joshin' down head 'cause the widder she up an' she don't hanker much after fellers ain't got no surplus o' hair.

Me an' Baldy saw the swo'd an' the snake charmer an' the fire an' then we stopped whar'bouts a bit was bettin' we-all couldn't guess which shell thar was a little pet an' Baldy 'lowed we c'd break this up in bizness, so to speak, it looked tarnation easy, but somehow or yit we ain't had much luck. I lost a dollars pesterin' with that black an' Baldy lost six.

While Baldy an' the man was argufyin' 'bout which was the quickest, the eye or the hand, I waded down the lane to whar'bouts a bit was hollerin' somethin' 'bout a fortune teller an' the magic year now an' then achantin'.

*The pure heathen Hindoo.  
He down the best he kin do  
Ef he ain't got no clo's,  
He jes' makes his skin do*

I stopped an' took a look at that tune teller, who was a settin' thar legged on the platform, an' then I tied my eyes and looked agin.

Yes, sir, stranger—you guess 'Twarn't nobody else but Lee Starr a settin' thar big as you please! He on a Hindoo cos-toom an' a swo'd an' Hindoo whiskers, but don't fool me none. He had Lee's eyes, an' they ain't no way he c'd flag them, they was that keen an' an' steady. Accordin' to the Bill their eyes shall ye know then Starr's eyes I knowed him.

Helva Din was the name of the dirty canvas, but that do't none a-tall neither. He jes' lookin' wise an' solemn, so while t'other feller was 'bout how of the ladies an' would step into the tent on please, an' no crowdin', I Din, the renowned seer-er would tell 'em all 'bout it.

After the man quit a chatterin' like a magpie, I folded up his cos-toom 'n' went into the tent, I was by, an' I went in first. I on a little platform in the I went up to him he looked me square in the

"Your life line is unth' a solemn like. "You will l'erate old age."

"I ain't keerin' nothin' my age," I says. "What know is, did you see the gittin' me a pinted jestic o' for this here towaship."

# BETHLEHEM

## SPARK PLUGS

### Service in Spark Plugs is Nine-tenths a Question of Insulation

**T**ESTED in the terrific temperatures of the electric furnace—heated until it glowed like live coals on an open hearth—Bethlehem Porcelain in Government tests has given clear proof of its superiority as spark plug insulation.

Insulation is vital. No plug can successfully resist the intense temperatures and hammer-like blows

of repeated explosions unless its insulation remains unaffected. The smallest crack, the slightest flaw, means short-circuit, in other words, no spark at the sparking point.

In the thorough fashion in which Government tests are made, Bethlehem Porcelain has been shown to have three times the dielectric or insulating strength of other porce-

lains. Other tests prove it nine times stronger mechanically.

These facts -- the logical development of the scientific study of ignition which The Silvex Company has been making—lend added emphasis to the value of specifying and insisting upon Bethlehem Spark Plugs with the test-proven porcelain for your motor.

The Silvex Company, BETHLEHEM PRODUCTS, South Bethlehem, Pa.

Wear a "Vanity!"

## BETWEEN SEASONS

Until it's time to put on a straw, there is no more comfortable, stylish and satisfactory hat than a Pearl Light-weight, provided it is a Vanity. These hats have to be just right.

Your local Vanity dealer has them in extra-light weight, light and medium. He also has a wide variety of other styles and colors.

The Vanity trademark in the lining not only means authentic Fifth Avenue style, but also that the handsome color and trim lines are put there to stay, thanks to carefully selected materials and closely supervised manufacturing.

NONAME HAT MFG. CO.  
2301 FIFTH AVENUE, NEW YORK CITY  
Plant at Orange, N. J.  
Since 1903

TO DEALERS—If we are not represented in your city, we will be pleased to hear from you.

We appoint only one Vanity agency in each community. The line is a valuable asset to any retailer. Write for booklet.

P'fesser Helva Din dropped my hand like it was pizen. "Oh, hell!" he says. "I can't waste no time on you. See ef you c'n pervail on Baldy Jackson to git his future investigated into."

"So Baldy is the feller you're after," I says. "Well, ef you want Baldy you c'n git him yo'self," I says. "I ain't doin' none o' your dirty work."

"HOW come you knowed me?" Starr asked. "I thought I had myself purty well camel flagged."

An' that was the first time I ever heard the word.

"What do you mean, camel flagged?" I says.

"Ask Norah Webster—or a French dic-shunary. Will you lure Baldy over this way, or won't you?"

"I will not," I says.

"Then go thy way in peace, my brother, an' may the Allies bless thee,"

he says, foldin' up his arms. "An' don't you never say nothin' a-tall 'bout this here stunt o' mine. As for Baldy, I'll git him, an' don't you never forgit it."

I went on out'n the tent an' run right smack into Baldy acomin' in.

"What kind of a show is this old Ornamental puttin' on?" Baldy says.

"Tain't much," I says. "Let's try the dancin' gal."

"Not me," says Baldy. "I want to git my future on-revealed. Come on back in with me."

So we went back in, an' we found the p'fesser still settin' on his platform blinkin' like a owl. He give me a wink while Baldy was lookin' 'cross t'other way.

"Your life line is vague an' uncertain," the p'fesser said when he bent his bandaged head over Baldy's paw, "but you will become a man o' great wealth."

Baldy set up straight an' his ears come up like a mule's.

"How's that?" he says.

"You are destined to mingle in wealth," the p'fesser repeated. An' then he turned round an' looked into a glass ball settin' on the table. "I c'n see the sun risin' over the distant hilltop," he went on, "an' a man comes up on a horse, gits down an' enters the old mill. He is alone. He pulls up a bo'd near'bouts whar the grain hopper is. Eureka! He has found it."

"Found what?" says Baldy, all out o' breath.

"The glass is clear now," says the p'fesser. "I c'n see no more. But thar is waitin' for you a pot o' gold in an old mill near the forks of a road. Kiss me—it is written."

"What!" Baldy hollers. "Kiss you, you hairy old heathen—"

"Wait a minit, Baldy," I says. "That ain't what he means a-tall. It's jes' one o' his Ornamental words."

"Well, let him keep 'em to hisself," Baldy growled. "I'd as soon kiss a porkypine as him."

The p'fesser ain't never changed his features none a-tall. "An' remember this," he went on, "the man who went to the old mill was alone."

"Uh—huh, I see," says Baldy, an' he begin thinkin' to hisself.

"Lemme see your hand, my son," says the p'fesser to me. "Ah, you have been crossed in love, I see. A lady has felt the charm of your personality, but one leetle thing has turned her heart away. You do not know what that is, an' you'll never know until it is on-revealed to you by my magic. Would you like to know what trifle it was that stood in the way to great happiness?"

"I ain't settin' up to no gal a-tall," I says, "but you c'n go ahead an' tell me ef it'll do you any good."

"It is this, only this—that one leetle bald spot on the back o' your head. Whensoever your loved one observed this fault o' nature she was distressed. And I—Helva Din—I c'n tell you how to git that spot all camel flagged with

hair agin. It is by my magic I do these wondrous things. Would you like to know?"

"Me havin' a bald spot don't bother me none," I says, "but ef you're jes' dyin' to tell me, why go ahead."

"By my magic shall hair be made to grow. At midnight you shall go to a sulphur spring, an' as the clock tolls the midnight hour shall you bathe your head in the sulphur water an' say in a whisper: 'Mene, mene, tekeli, uphar-sin.' Then shall you return swiftly to your fair abode and to sleep. But first you must make a chaplin o' green leaves, so to speak, damp with the dew, as your nightcap. In the morning you remove this chaplin, an' behold. It is done."

"S all right," I says. "I wouldn't go to all that trouble jes' to make a passle o' hair grow on my head."

Long 'bout then Baldy puts on his hat. "Well, I got to be gittin' long," he says.

"Remember," says the p'fesser, strokin' at his beard—"alone at daylight."

"Uh—huh," says Baldy. "I heerd ye."

"Baldy looks to be very thankful," I says after he was gone. "Do you s'pose mebbe he ain't gone to git some enforcements to ride a revynoo man off'n Nubbin Ridge on a rail? I seen part of his gang outside."

"Not a chance," Starr says, an' wunk at me. "Baldy thinks I'm a bonyfider Injun rager right now, an' that ain't all. I fancy that I put a bur under his think cap which has got him goin'. You c'n bet your old gray hairs on that."

"Mebbe so—mebbe so," I says. "Say, you ain't meanin' all what you said 'bout how to kiver up your baldness?"

"Kin sabby—try it an' see," he says, an' wunk at me agin. "A prophet is without honesty in his own kintry."

"Course you know I knowed Lee Starr was mebbe lyin' 'bout the sulphur water an' the leaves an' all them things makin' hair to grow, but I ain't real shore but what he mought a knowed somethin' 'bout it. Then I rick-lect what Widder Hawkins up an' said 'bout bald-headed men, an' I knowed ef Lee Starr spoken the truth thar was a fine way to s'prise her."

"Who—me? Well, yes; I was a settin' up to the widder some, too."

Come 'leven o'clock I saddled my horse an' rode over to Mill Springs, which ain't far from here. It is a sulphur-water spring knowed all over the State. It was two minits past twelve when I rid up in the moonlight an' hitched my horse to a box elder tree. Then I walked up the hill to the spring and run right smack into three men. One o' the men was Baldy Jackson, an' I noticed he had irons on his wrists. T'other two was revynoo-ers, an' Lee Starr, who was one of 'em, was holdin' his watch in his hand.

"You're two minits late, Mr. Dodson," he says. "The next time you had ought to foller instructions to the letter, else you'll never in this world ketch the widder."

"What's Baldy doin' here?" I says. "I thought you set out a pot o' gold to ketch him."

"Oh, gold ain't got no 'lurements for Baldy, but he'd sell his soul for a mess o' hair. That pot-o'-gold talk was all camel flag. I had one eye on Baldy when I was tellin' you 'bout the magic for baldness, an' I knowed I had him agoin'."

LIGE paused in his narrative to reload his pipe.

"And so you married the Widow Hawkins and lived happily ever after?" I surmised.

"Who—me? Not so you c'd notice it. That woman up an' married a travelin' man from Springfield, and his head was slick as a peeled onion!"

We stand for backing up our Government in every request it makes.

GENERAL CIGAR CO., INC.

## A Mildly Militant Cigar —what's that?

I do not fancy pacifist cigars that weakly proffer peace. Nor do I like barbaric autocrats who war upon my day's efficiency.

In Robert Burns I found the mildly militant cigar I thought did not exist. Prime Robert Burns—so soothing, yet so full of merry zest.

\* \* \*

Robert Burns' Havana filler gives him fine flavor. Our own special curing gives that Havana rare mildness. The neutral Sumatra wrapper helps that mildness.

Thus Robert Burns makes good his pledge to serve the man of moderate and modern tastes, more zestfully and more efficiently, than ever.

Have you tried one lately?

Remember that Little Bobbie is a small edition of Robert Burns ten cent cigar.

## R'arin' to Go!

Continued from page 9

They are the men of the division officers' training camp, men who were drafted from civil life only a few short months ago and are now in line for commissions. Only 10 per cent of the men in that training camp were taken from civil life direct; the others are all men who have demonstrated their fitness to try for commissions while serving in the ranks of the National Army. Immediately at our left on the hillside a man of the Signal Corps is wigwagging messages. A little to the left and behind him another member of the corps is taking a message from the neck of a panting dog which is being trained in maintaining communication at the front. A flock of pigeons fly past immediately over our heads. A little way up the hill, above the man with the dog, they wheel and flutter downward. A soldier hurries up the hill and takes a message from the leg of one of the birds. They too are our allies in the war for liberty, and on the surety of their instinct and the speed of their wings the lives of American men may some day depend.

### To Insure Victory

ON the far side of the parade ground in the valley below we see the great stretch of barracks housing the artillery. Through the streets and fire breaks the men are guiding long lines of mules and horses. Directly below us and a little to the left we see the building of the division school of fire. There the American officers of the division are avidly studying every complex problem of modern war under the instruction of British and French officers who have gained their knowledge in active service. In studying the National Army camps I have always in mind: What action or sentiment evident here is going to insure the winning of this war? What action or sentiment may delay victory? The science of this war is a new science, and our officers must learn it. How do they take the teaching? At least 90 per cent of all the officers I have met and talked with during nearly six months that I have been in touch with the National Army are directing their every energy to learning everything that they possibly can learn from their British and French instructors. Some few, pleasingly few—not more, perhaps, than ten all told—have been contemptuous of any knowledge that they might gain from an Englishman or a Frenchman and have blocked their own path to efficiency through jealousy.

Just below us and farther to the left we see the barracks of the Quartermaster's Corps, and away down there at the extreme left and across the valley the barracks of the old depot brigade which now houses the troops of the 92d Division. The flag that floats above the headquarters of that division is the same red, white, and blue under which all our armies operate, but the men who salute it there are black. The 92d is the first and only negro division in the United States. So far only the headquarters, with its attached units and trains—perhaps 3,000 men—are at Camp Funston. The remaining units are stationed in six other camps, training separately, pending the assembling of the division. The commanding officers are white men, but most of the captains and lieutenants are colored men, graduates of the colored officers' training camp of last summer at Fort Des Moines, where about 700 were given commissions. Like all other divisions, the 92d has its officers' training school, and the students are being instructed by colored officers, graduates first of the regular army and later of the school at Des Moines.

### The "Spirit's" There

I HAVE said that from this hilltop the camp looks like a great manufacturing plant, and that is precisely what it is. It is a great factory wherein the raw civilian material of the Middle West is being made into American soldiers. Already thousands upon thousands of soldiers have gone from that camp. A number of thousands have gone to fill up various National Guard organizations that were below war strength. Other thousands of specialists have been drawn for special work—firemen and engineers, sewing-machine experts, clerks, auditors, stenographers, carpenters, blacksmiths, etc.—and assigned to the practice of their various occupations.

It is a very fine thing that all these trade specialists are at hand in our

National Army ready to be picked from their organizations on call and sent wherever they may be needed in the United States or France. It is all very fine, but—

The most precious thing that is being produced in that great manufacturing plant there on the Kansas prairie is spirit. We have the brain and the brawn to be the deciding factor in this war. We also have in the army the precious will to win: willingness to sacrifice—spirit—the compelling moral power that must ever sustain us if we are to go through united to a peace that will not be a disaster. The National Army has that spirit to a remarkable degree. And it has not been carefully fostered.

Here's the point: Company officers get something approaching their full complement of men and start out full of pep and enthusiasm to make their outfit the best disciplined, snappiest, most carefully trained organization in the division. They all take a prospector's interest in searching the ranks for available noncom material wherewith to make their permanent corporals and sergeants. And when they have found the right men they are as proud of them as a first-time dad with healthy triplets to his credit. Go into the orderly room for an interview, and you will hear something like this:

"If you want to see a real outfit, you just stick around and watch us for a while." This from the captain: "We've got the best company on the reservation. I'm not taking any particular credit to myself. I just happen to have the best lot of men in the whole outfit. For example, my top sergeant. He had fifteen thousand a year for handling a big construction job. He's been bossing big gangs of men for years, and he takes to this work like a bird to the air."

### "Shot to Pieces"

ONE lieutenant tells you what a wonderful mess sergeant they have. Another pipes up with a story illustrating how rapidly the men in that particular company learn. Go out in the squad room, and you will find the same spirit of pride in the organization among the men. The company is just at the top of its stride when along comes a requisition for fifty men from the organization to go toward the filling up of a National Guard unit perhaps. Then the top sergeant of whom the captain brags is taken for some special construction work abroad. This, that, and the other noncommissioned officer and private are taken from the skilled tradesmen, numbering among the best men in the organization, are picked for special service according to their occupation, and sent away a few at a time. Visit that same orderly room, say four or five months from the time the company was first organized, in September last. You find the captain blue and tired.

"We had one of the best outfits in the division," he tells you regretfully. "Wish you could have seen it when we were at our best. Course there's no use your sticking around now; we're all shot to pieces. They've bled us of all our best men. They've got all my non-coms and so many carpenters and blacksmiths and chauffeurs, and the Lord knows what all, that we've got only the skeleton of an organization left. Now we'll have to take new men to fill up the company and go through the training all over again. What's the use of breaking your heart to build up an organization only to have them tear it to pieces?"

"Think this division'll ever go to France?" the lieutenant asked dolefully.

You tell him you're sure of it. The lieutenant shakes his head sadly. "I wish I thought it," he sighs. "I figure they're going to ship out some more of this outfit to fill up other organizations abroad, and that we're going to be stuck here in the mud to train the next draft. It was a shame they had to go and bust up this company. Gee! I wish you could have seen us when we were pretty near full strength. We had a crackjack outfit. I wish I could 'a' gone to the front with that bunch. But it's all off now. They sure broke us wide open."

Come into the squad room. There formerly you'd find a hundred men; you now find a dozen. A private of your acquaintance calls you aside. "Say, mister, have you got any dope on whether this division's goin' to France or not?"

You give him the same assurance you

## And three AutoStrop Razors went with them

When your boy has an AutoStrop Razor with him at the front, you know that he will not lack for shaving comfort.

No matter how far he is away or how long he may stay he doesn't depend on getting back to camp for new blades to be sure of a clean shave. The AutoStrop Razor is its own base of supplies. The twelve blades in the kit will give at least five hundred clean shaves.

**It is the only razor  
that sharpens its own blades**

It keeps them free from rust and is always ready. It does not have to be taken apart to clean or to strop—absolutely self-contained and self-maintaining—a complete shaving outfit.

**The Military Kit  
complete with  
Trench Mirror**

The early boyhood days of W. L. Douglas were spent in hard work with long hours. Besides pegging shoes all day he was obliged to gather and cut up wood for the fires, milk the cow and take care of the horse, working early mornings and until after dark at night by the light of a smoky whale oil lamp.

## "It's a Queer Feller"

Seen by a queerer feller." Such is Mr. Tarkington's good-humored description of Mr. Holliday's new book. A striking portrait of the man and a keen analysis of his work, without any of the hero-worship that sometimes crops out in such books. Booth Tarkington's progress is traced from the spacious Princeton days to the later Penrod era. There are enlightening anecdotes galore and engaging passages of critical insight. You will realize why this man has gathered one of the most enviable followings in America when you read

gave the lieutenant, and meet with the same sorrowful skepticism. "This company's shot all to pieces. Gee! I wish I could get transferred. There'll be a lot o' new men comin' in here to fill this up, an' we'll have to go out and grind through all the old foot drills to train them. Believe me, I'm sick o' this outfit. I wish I could hook on with some unit goin' over."

And there you are!

Another thing: I was talking along these lines to a regular army officer of high rank at Camp Funston. "Mr. McNutt, this war is going to be won by the man with the bomb and the bayonet," he said emphatically. "Our fighting man should be and must be our best man. Of course we must have our engineers and trade specialists of all sorts for work behind the lines, but the man who will win or lose for us is the fighting man in the front-line trench. And this system of picking the trade specialist out of the company after several months of training is making the fighting man, who ought to be the proudest soldier of the army, feel like a discard. One by one the chauffeurs, plumbers, carpenters, and artists with whom he has been drilling are taken away for special service. What does the man who is left think? He thinks this: 'I'm the goat. I'm not fit for anything except to fight. I'm not a plumber nor a carpenter nor a locomotive engineer; and because I can't drive nails nor shoe horses, I have to use the rifle and the bayonet.' That's wrong. The men who do the fighting should be the best men of the army, and they should feel—must feel—that they are the cream of the army, not the scum. All the work that is done by the artisans behind the front-line trenches is simply preparation for the crucial work that the fighting man must do. And that fighting man must be our best man. He must know that he is our best man. The people at home must know that he is our best man and be proud of him as such. He must have pride in himself and confidence. The present working of the so-called selective system, taking artisans from our fighting organizations, after months of drill, for special service and for other units, is humbling the fighting man's pride and undermining his confidence in himself. He feels that he is the left-over and not the chosen one. Skilled artisans, needed for special service, should be picked direct from the exemption board and never sent here to camp to drill with the infantry or artillery."

## Psychology—in a Swagger Stick

I AM given to understand that in the future selective increments will be differently handled. I hope so. It may be that military necessity demanded the method used with the first selective army. It is my hope and belief that in the future each incoming recruit will be immediately investigated and those specially qualified and needed for special work abroad will be transferred at once and not stolen later from among the trained fighting men who have mastered the hard lessons in the carefully organized division units to the hurt of the morale of both officers and men. Anything is of value that adds in any way to the pride of a fighting man. General Leonard Wood, commanding Camp Funston, is well aware of that fact. He issued an order requiring all the officers of the division to wear chin straps and at all times to carry canes or riding crops. He also encouraged the men in the ranks to carry swagger sticks when they were away from the reservation on pass or furlough. The psychological effect is excellent. War is not peace, and a soldier is not a civilian. Anything is good which at this time hastens the translation of the civilian into a soldier and changes the atmosphere about him from that of peace to that of war. The carrying of the sticks gives the men a certain bearing. A soldier carrying a swagger stick does not easily slouch or sag. The carrying of the stick is an announcement of the assumption of a certain position, and the soldier feels that he must carry himself up to it. It helps. The courageous specialist in any dangerous line of activity proclaims himself by some picturesque individuality of attire. The plowman plods his weary way homeward, in a dirt-colored, shapeless outfit; but the cowboy—the specialist—comes lamming in, wearing high-heeled boots, a gaudy handkerchief natty knotted about his throat, a sombrero, and chaps. It is startling, however, to see there at Camp Funston the transformation in the men of the Middle West where a year ago a wrist watch

was a crime and a cane something approximately equivalent to a prison record. It is startling and encouraging, because quick adaptability to the radically altered standards that war has set up is a character asset to be valued.

## The Training of Men

ELEVEN miles north of Des Moines, Iowa, is Camp Dodge. It was built to house 45,000 men, drawing its personnel from Iowa, North Dakota, Minnesota, and a middle belt of Illinois. The camp lies on both sides of the Des Moines River and occupies about 3,500 acres. The camp cost the Government \$5,970,000. Last summer corn, Iowa's greatest crop, was growing where the camp now stands. The whole site was a cornfield. The first work of the laborers was to cut down the grain. There is something moving and significant, something terribly typical of the effect of war, in the destruction of that growing crop to make way for the training of men.

An electric road, several bus lines, and innumerable jitneys connect the camp with Des Moines, the capital of the State and a city of more than 100,000. There is a great deal of civilian welfare work done in the camp. One organization of between three and four hundred women, known as the Camp Mothers, visit the camp daily and do personal work in the barracks.

In Des Moines there is the Army Club; run under the auspices of the local War Recreation Board in connection with the Foodick Commission at Washington, where dances are held three nights each week, partners being provided for the soldiers by patriotic women's clubs of the city. An item in the "Camp Dodge," the cantonment paper, informs the wide world that at a certain dance there were so many more girls than soldiers that the situation was embarrassing, and asks a better turnout of men next time. Certainly no soldier at Camp Dodge is given any spare time to himself in which to brood. Some few of the men are unkind enough to declare that they are not given any spare time in which to do anything. There is much acrimonious discussion as to the value of the civilian social welfare work. It seems to me to be an excellent work, somewhat overdone in the case of Camp Dodge.

There is a regiment at Camp Dodge that probably has a larger percentage of farmers than any other regiment in the United States army. It is the 352d Infantry. Nearly all the men in that regiment are from farms in Minnesota and North Dakota, a section where the farmers are supposed to have been very lukewarm in their support of the war. Up to a period in January that regiment had had no court-martial proceedings. In recognition of its record it was cited in orders from Washington, and Colonel Hawkins, commanding, was publicly complimented by Secretary Baker. The spirit of these men is worth careful nursing, not only for the good they'll do on the firing line, but for the missionary work they will do at home. One old German farmer in the Middle Northwest was very skeptical about the potential military power of the United States.

"I don't stand up for der Kaiser," he was wont to say, "but I know dat he is got a great army an' it is a useless waste of human life dat ve got into it, because der Kaiser he vin anyhow."

The old German farmer's boy was among those selected, and sent to Camp Dodge. The old man was pessimistic. "It is no goot he should go," he declared. "Vot's der use? Ve can't lick der Kaiser."

## Growing Stale

AFTER a few weeks the boy came home on a short leave. When he had returned to camp the old man came downtown singing a new tune that ran something like this:

"Dis you see dot boy o' mine? An' he a fine looker in his uniform? You bet he's a soldier, an' dere is tausands schust like him in der army. Yes! You bet ve got a great army! Ve show dot Kaiser vot for, eh? You bet!"

The Mr. Middle West who is in the army is a splendid missionary of patriotism. But, again but—

They'll have to send Mr. Middle West to France pretty quick if they want him to go with the best spirit. Mr. Middle West is growing stale in training. He's an earnest, intelligent fellow, and he's learned about all he's going to learn in a training camp in this country. He was willing to quit his civilian job to fight in France; but he's not keen on

remaining away from that job to train any longer in America. Mr. Middle West wants to do one of two things: He wants to fight or go home. He's not unwilling to lay down his life. He is willing to go over the top, but he's not keen on going round and round and round in an endless grind of training.

## An "Authoritative" Tip

A COMPANY officer at Camp Dodge told me of the splendid spirit the men of his company had shown the first four months of their training.

"Then all of a sudden the pep seemed to go out of the whole outfit," he said. "During the first month of training, I'd have sworn that bunch of mine, properly trained and equipped, would lick anything two-legged and stay in a scrap down to the last man. They were hogs for work, full of pep and ginger. Then all of a sudden they went bad on me. They weren't open and rebellious, or anything like that, but they were sore and sullen and lifeless. I got so I hated to pass a man, because when he'd salute me he'd do it in a mean, sore way. I began to think that I either had a bunch of dogs that couldn't keep their tails up after the first few miles or that I was a bad captain and they'd found it out. But, sir, about a week ago the whole outfit turned out as bright as a dollar's worth of new dimes. They buckled into drills as enthusiastically as a lean pup with a fat piece of meat. They're singing in the barracks and on their hikes, and everything's lovely. I'd like to know what happened, because if they ever go bad on me again I want to make sure that the happening is repeated."

A few days later that officer came to see me.

"I found out what brought my outfit back to life," he said abruptly. "My sergeant got what he thought was an authoritative tip that we were going to France within a few weeks, and he spread it. That's what bucked 'em up! I guess that's a bad outfit! I guess I'm going to worry over a bunch that can feel that good just because they think they're going to be in the fighting soon. I guess not! Why, man, there isn't a thing in the world the matter with that outfit o' mine, except that they're just rarin' to go!"

That officer had Mr. Middle West right. He's rarin' to go! He's wild to get into the fighting; not because he likes war, but for the good and sufficient reason that he hates it. He hates war and all its ways so bitterly that he wants to go where he's going, do what's got to be done, and get to whatever the end of the matter may be for him, as quickly as possible. Fighting is not Mr. Middle West's business, and because it is so alien to his training and instincts he wants to get it done as thoroughly and quickly as possible. He's rarin' to go!

## LATE COPIES

If your copy of Collier's does not reach you on Tuesday, do not assume that it has gone astray. The order of the Post Administrator, the congestion in the New York Post Office, and the condition of the railroads, all combine at this time to delay the delivery of papers to subscribers, in some cases for several days. We regret these delays and hope our readers will recognize them as part of the necessities of war time.

## EXPIRATION DATE

Be sure to notice the date beneath your name and address on the wrapper. It shows how long your subscription has yet to run. Unless renewed, names are promptly removed from the mailing list at expiration.

## RENEWALS

Do not wait for the last issue to reach you before renewing. Do not make an issue. Look at the date on the wrapper now, and if it is close by, drop us a note, so we may enter your renewal at once.

Smothers fire  
—anywhere

PROBABLY your stock is worth more and perhaps harder to get now than a year ago; and now, less than ever, can you afford waste—particularly waste caused by preventable fires.

Most fires start small—and it makes no difference to the Johns-Manville Fire Extinguisher where it starts. If the fire is accessible, pump it out—if in an awkward corner, discharge your extinguisher by air pressure previously pumped up. Two methods of fighting fire, in one extinguisher—an exclusive feature of the Johns-Manville Fire Extinguisher.

Approved by the Underwriters' Laboratories, Inc. Entitles motorists to 15% reduction in auto fire insurance premiums.

Order today from your dealer—have a Johns-Manville Extinguisher at every danger point in your store or shop or home.

formance now became something of a social function. Father fidgeted nervously as if he expected to be called upon for a speech. Mother tried to be casual and homelike, but the general tone of manners and morals was perceptibly raised. The refining influence even soaked through to the proletariat, and Ted was once almost distinctly heard to say please.

As Zinnia looked across at the promising young actress she got a renewal of the suspicion that had once or twice before entered her mind at moments when Ruby was taking one of her famous trips across the Rubicon into cleanliness and civilization. Mr. Brazelton would come to admit it some day, he twins probably never would—but neither had known about it for quite a while. This hoyden, whose richest pleasure was groveling under a rose bush like a human garter snake, whose appearance was normally so unsanitary and whose conduct was so impeachable that brothers associated with her on terms of perfect equality—this superb boy had potentially, dawningly, almost certainly, the fatal gift of beauty.

At last the solemn festival managed to pull through as far as dessert. Ruby, without appearing in hurry, had succeeded in emptying her cup of custard before the others had got more than half through theirs.

"Mother," she asked sweetly, "may I have another cup?"

"I'm afraid there isn't any more, dear," Mrs. Brazelton replied.

"Never mind, mother," the empress said. "Ted will give me the rest of his."

"Huh?" Ted hastily made sure of what was already in his spoon, and reflected an instant. He may not have been an intellectual giant, but he knew a day of reckoning when he saw one.

"All right," he said gruffly.

His brother was now observed to slide an arm protectingly about his cup and eat with renewed activity.

"Ned-ee." The tone was saccharine, yet full of barbed wire.

"Well, you can have mine too," said the victim.

WHAT forthwith passed between the two young ladies of the Brazelton family was managed entirely without the vulgarly of words. Ruby's look seemed sinister enough, but her lips moved lightly, and Zinnia's guilty conscience conjured up the burlesque version: "We can never be nuthin' but friends." Zinnia surrendered without firing a shot.

"Won't you have mine too?" she said sweetly.

"Well, what's going on here?" asked Mr. Brazelton. "What's the matter with everybody? You must know something about 'em all." Ruby looked quite pained at this low suggestion. "What is it?"

"Oh, father, by the way, that reminds me," said the slack-wire artist, Mrs. Brazelton. It evidently didn't remind her very hard, for she needed a moment for meditation. "I wonder if we couldn't do something now about those sundry tubs."

This was obviously weak, but there was not one of the children who cared to have the subject reopened. The titular head of the family gathered that the mysterious blackmailing that was going on had something to do with the Hartley Winters deliverance and that his well-informed wife, for her own good reasons, had decided to call it a day.

"Yes," he said, referring to the sundry tubs, "I'll look into it tomorrow."

Ruby sat at the receipt of custard and smiled maddeningly upon her victims. She showed more relish for her lessert than was absolutely necessary. The boys, with that spiritual sympathy before mentioned, often thought the same things at approximately the same time. What they now thought, all but audibly, was: "Darn 'er." They wondered what Ruby knew about Zinnia that was so delightfully damaging. Zinnia wondered what Ruby knew about them. They would never know, for Ruby always stays bought.

Perhaps a perfect lady would not have scraped four custard cups quite so clean, but Ruby finished upon a high plane. This show was to remain a polished performance to the final curtain. The family had been waiting with an obvious display of patience for Ruby to finish, yet she managed to catch them napping and leave the boys open-mouthed and baffled.

"Mother, dear," said Ruby, "will you excuse me?"

She arose gracefully and glided majestically from the room.

## This Car for Continuous Service

THE part the automobile now is called upon to perform in American affairs demands a combination of qualities somewhat unusual.

The automobile is no longer merely a supplement to other carriers; it is itself a most important and essential means of transportation.

As such, its use cannot profitably be limited to favorable seasons; it must serve continuously and economically throughout the whole year.

Few cars so successfully meet the requirements of such service as this Oakland Sensible Six unit body Sedan.

Quickly alterable from a closed winter car to an open summer model, this Sedan has ample power for town or country usage in any season.

The carefully made and finely equipped body is unusually

roomy and comfortable; it is very easy to enter and leave.

Unique construction has eliminated all useless weight from the roof, protecting the chassis from overloading and the body and roof supports from undue strain.

The car has staggered doors, the forward one opening to the left at the driver's seat and the rear one opening to the right at the curb.

The high-speed overhead-valve Oakland Sensible Six engine delivers 44 horsepower at 2600 r. p. m., or one full horsepower to every 55 pounds of car weight in this Sedan.

Its smooth action, its high carburetion efficiency and its unusual ratio of power to weight, assure users maximum mileage from gasoline and tires.

OAKLAND MOTOR CAR CO.  
PONTIAC, MICHIGAN

*THE individual front seats and the wide tonneau seat in this Oakland Sensible Six unit-body Sedan are upholstered in fine quality gray automobile cloth, in keeping with the car's interior.*

**Free Sample With Particulars: No Splashing** water, scratches, easy selling returns best experienced or necessary. Union Sales Co., 11 Franklin St., N. Y. C.

# Those Browning Guns

Continued from page 17

In the tests at the Springfield armory the Browning heavy-type gun fired 39,500 shots without a break. That means it used up just about \$2,000 worth of cartridges in one run. In another test 20,000 shots were fired in 48 minutes 18 seconds. There were only three stoppages, and each of these was due to a defective cartridge.

The heavy-type gun looks a good deal like the Colt machine gun which Browning previously devised, and even more like the Vickers—Maxim gun which the British are using. It is lighter than the Vickers—Maxim. It weighs 34½ pounds with the water jacket on—a jacket that holds about a gallon. It is fed ordinarily with a web belt holding 250 cartridges, although belts of as many as 1,000 cartridges can be used. It fires at the rate of 450 to 600 shots a minute, as preferred. For airplane use the water jacket can be dispensed with—a 100-mile breeze cools the barrel.

There is something pleasing to the imagination in the fact that these guns, apparently destined to play a great part in the immediate future, are the work of a man without theoretical knowledge or training. Nobody knows where Browning got his knowledge or how he does his work. Mechanisms for guns "just come" to him. Any graduate of West Point knows more about ballistics than he. Hundreds of amateur rifle shots know more about the fine points of special loads. But Browning is the master mechanic—the Yankee handy man for whom things come right. He had a theory when he was working on his original automatic—the pistol of which the Fabrique Nationale in Belgium manufactured 2,000,000 before the war, the pistol the Germans are now manufacturing in quantity with the tools and factory of the Fabrique, the pistol the Kaiser carries

in his back pocket. The theory was that powder gases were wasted at the muzzle of a rifle. Every ballistic expert knew this theoretically. Browning didn't know it. He determined to find out. So he set up a board with a 45-caliber hole in it. He placed the muzzle of a 45-caliber rifle in juxtaposition. Then—fortunately—he pulled the trigger with a string. His theory was that the bullet would

## A Wind That Blows from Picardy

By Paul Scott Mowrer

Black-eyed girl in the garden—  
close,  
Hemming the sheet so fine  
and white,  
Why do you start when falls a  
rose?  
The full-blown rose was his  
delight.

Brown-haired woman, tired and  
wan,  
Pressing a babe to the heavy  
breast—  
The breast he loved to slumber  
on—  
Why do you stir with vague  
unrest?

Gray-haired mother, kneeling  
alone,  
Plucking the weeds from the  
pansy bed—  
The gentle flowers he called his  
own—  
Why do you pause and lift  
your head?

A wind that blows from Picardy—  
From Picardy, where lie the  
slain—  
A wind that blows from Picardy  
Is breathing low beside the  
lane.

is clearer and one can see farther than anywhere else on earth—at any rate the eyes of the man who can shoot. Yes, Browning belongs to that West which flowered for the last time in that famous regiment of 1898, the Rough Riders, just as truly as he belongs to that long list of Yankee inventors, of handy men, for whom machines "come right."

# The Adventures of Colin O'Rell

Continued from page 18

back so that it would not flap, she forgot the complexion that spoke of too much indulgence of the appetites, and the mean eyes. She only knew that she was in the presence of the man who was one of the immortal heroes who had helped to stop the Hun at the Marne.

They were in the parlor of Dufresne's suite at the Regent. Whoever of the Marquis's adherents had been spying upon her could have followed her only to the door of the hotel. Within Dufresne's room she was safe from espionage.

"You have, of course, credentials?" asked Dufresne.

Colin looked at him through blurred eyes. The Dufresne before her disappeared; in his place appeared another Dufresne who wore the uniform of France, who braved the horrors of a battle field that the invader's line might be turned. She never thought to ask for his credentials; his empty sleeve was enough.

She knew at last the headquarters of the Marquis. She was face to face with a French patriot. The menace that the Marquis constituted to America and her allies would be done away with in a short time now. And this man was of a race that idealized the relations of man and woman. Colonel Dufresne would not heedlessly, by hasty action, endanger the life of Fernald, who was

imprisoned, to all intents, by the Marquis. "Credentials?" she echoed. She turned away from him a moment. From the lace hiding place at her breast she brought forth a tiny gold badge. Wordlessly she handed it to Dufresne.

The Frenchman's eyebrows raised. "But this, mademoiselle, is the badge of the Secret Service of the United States."

She laughed. "And I," she said, "am Colin O'Rell."

Dufresne stared at her. "Not Mlle. Fourès?"

Colin shook her head. And the words of explanation poured from her lips. Dufresne listened. Twice impulsively he started for the telephone, interrupting her relation, but each time she called him back. She finished.

"But, mademoiselle, what you say is incredible!" He raised his hand. "I do not mean that I doubt you, but this monster who betrays America, who sells France for the gold of the books—cannot wait a moment! Even as we sit here he may be planning some new treachery! We must notify your Government at once!"

"Please," cried Colin.

Dufresne stared at her. "But, mademoiselle, to delay a moment when you know where this vile Marquis is—it is impossible!"

But Colin was fighting for the life of

**FLORSHEIM** shoes are serving the men of the Nation — increasing efficiency — Florsheims are scientifically built to give long service with comfort at every step. There's a style in keeping with the Times to suit your individual requirements.

Eight to ten dollars; reasonably priced, value considered. Ask for The Florsheim Shoe — see the Styles of the Times. Booklet of Military scenes on request.

the man she loved. She laid her fingers on the wrist of Dufresne.

"But Mr. Fernald deserves better of his country than death," she cried. "If men are sent directly to the Marquis's house, Mr. Fernald will be killed."

Dufresne ceased walking up and down the room. He made with his one hand a gesture of hopelessness.

"But what can be done, mademoiselle?"

"The Government wants the Marquis," said Colin. "But it would not wish the capture of the Marquis to endanger Mr. Fernald."

"But the Marquis will be suspicious," objected Dufresne. "How would it be possible to rescue Mr. Fernald?"

"I can go back there," declared Colin. "Together Mr. Fernald and I can think of some way of escape."

**DUFRESNE** looked at her. "And if you cannot think of that, then you can die together? That is it?"

Slowly the color ebbed from the cheeks of Colin O'Rell. Her eyes glowed. She was young and life is precious to youth. But Fernald had risked his life for her, and in the risking had forever won the heart and soul of her. Slowly her head bowed in assent to Dufresne's words.

The Frenchman shrugged his shoulders. He bowed. "C'est magnifique, mademoiselle, mais ce n'est pas la guerre!" he quoted.

The color flowed back into the cheeks of Colin; it stained her forehead, her throat.

"C'est l'amour," she answered.

She had not yet, in so many words, told Fernald that she loved him; somehow it seemed sacrilege that this open confession of her love for Fernald should be made to ears other than his. And yet the love that burned in her bosom was as the flag is to the soldier who goes forth to certain death. Not to have retorted to Dufresne's quotation would have been, she felt, almost to deny Fernald's place in her heart. She had reached the end of service to her country; if delay would have jeopardized that service, she would not have asked Dufresne to wait; but the few moments of grace for which she asked could do no harm. Dufresne's mean eyes seemed to brighten with chivalry as he granted her request.

"You may go back to M. Fernald," he told her. "Within an hour men will be there. God guard you until then, mademoiselle."

**IN** the same automobile that had conveyed her to Dufresne's hotel, Colin rode back to the warehouse on West Street which the Marquis had converted into his headquarters. There were guards there posing as clerks in an apparently busy wholesale fiber business, and once out of the automobile Colin knew that she could not turn back. But there was in her heart no desire to turn back. In her hand bag was a small revolver, and with that she would make the last stand with Fernald one not too easy for the Marquis. Yet it was bitter of Fate so to involve her and the man she loved that in the moment of their victory they should face death. But honor and love both told her that no other course had been open to her save to return. The moment the Federal authorities arrived bloodshed would begin. The Marquis was not the sort tamely to submit to arrest. He would prefer death, she knew. And of that bloodshed Fernald was destined to be a victim. There was no hope of surprising the Marquis; of that she felt certain. A while ago she had believed in the justice of God and had felt that Fernald would win clear. But God's justice works in ways not always understandable to the human mind. Only a miracle could save Fernald, and she did not hope for that. But love and honor had spoken to her, and she had heeded their speech. The old martyrs who begged for death at the hands of the infidel were no more exalted than was Colin O'Rell as she entered the lair of the Marquis. Across the water men gave their lives for the Yankee flag. She could do as much as they. And death by the side of Fernald —

She was smiling as she walked down the corridor on which was the office of the Marquis.

She had had little hope of reaching Fernald before the Marquis saw her, and what she had expected came true. For the Marquis's door was open, and he called to her as she would have passed. She entered his room. There was no use in refusing; to temporize, to lull his suspicions that she felt were

## Outdoors for Protection—Indoors for Beauty

**YES** use the very same Enamolin for both purposes. Enamolin is so durable that it protects your porch, front door or window frames for years. It will not chip, peel or crack.

Indoors, on woodwork or furniture, it is practically indestructible.

Outdoors, the rain keeps Enamolin clean and fresh, while indoors, a soap and water rubbing renews its whiteness.

Use Enamolin for economy. One coat covers as well as two coats of ordinary enamel. For years it requires no refinishing. And what a lovely, lustrous, porcelain-like surface it has!

**NAMLAC FLOOR FINISH** not only beautifies floors with a fine, glossy surface, but also protects them against injury. For it is waterproof, heel-proof, scratch-proof—worthy of use in Enamolin homes.

Ask for "The White Spot Remedy." A sample can of either Enamolin or Namlac Floor Finish sent for 10 cents. Address: Domestic Dept.

# KING '8'

SILENCE - DURABILITY - POWER - ACHIEVEMENT

Conserving time and energy is the automobile's great war-time service. This year it is a duty to buy more carefully than ever before. For reasons of economy and assured performance you should select a pioneer car of matured mechanical design and moderate up-keep, built by a reliable and long-established Company. Investigate the KING!—and because of limited "war-year" output and freight embargoes, ORDER EARLY.

This sixty horse-power King is now in its third year of world-wide service, following a smaller "Eight" and a successful "Four". The chassis is designed throughout for utmost simplicity and surplus strength. Comparative light weight for a car of this power and size is the big factor in its low cost of maintenance. The King has long body room because of compact engine, and its 120 inch wheelbase gives a short turning radius, which together with its fine taper roller bearings and easily reached and operated levers, make it remarkably simple to handle. Women especially appreciate its easy driving qualities. Built low it holds to the ground at high speed. Long cantilever springs and deep, correctly tilted upholstery banish riding fatigue.

The car shown above is the seven-passenger Touring model. FOURSOME—is the King 4-passenger sport model and considered by many the handsomest of its type. A 7-passenger Sedan, richly finished, is the popular closed model.

# *The Comfort Car*

## **H**

Owners of earlier Hupmobiles are so well satisfied that they can scarcely believe that the new Hupmobile is more comfortable and more efficient than their cars—*until they have taken a ride in the new car.*

Then capitulation is complete. The old enthusiasm is redoubled.

The Hupmobile has always been noteworthy for the whole-hearted endorsement it has received from owners everywhere.

But it is an actual fact that the astonishing *power-and-comfort* qualities of this new Hupmobile are already building up a broader and deeper loyalty. We feel perfectly safe in referring you to the first owner of the new car that you meet, for confirmation of all our comfort claims.

## **Hupmobile**

## Who Discovered RICORO?

"My chauffeur discovered Ricoro," said the man in the Packard. "We were passing through Buffalo going West on an auto trip.

"I ran out of cigars and when we happily came to a United Cigar Store, I gave him a dollar bill to get some good smokes.

"He came out with a *handful* of big, fine-looking cigars, and held out some change.

"I looked at the change and told him the clerk must have made a mistake. He just grinned and held a lighted match for me.

"I took a puff -another -and a couple more, and sent him in for a box. They were Ricoro Coronas at 8c each.

"That discovery was the most enjoyable event of my trip."

*Sooner or later you'll discover—*

# Ricoro

*the "Self-Made" Cigar*

There is no mistake about it—Ricoro is the greatest cigar value on the market today. Men who can well afford cigars at twice the price have discovered in Ricoro an imported cigar of rich tropic fragrance and gentle mildness at less than the price of the usual domestic cigar.

Just as a test, stop at the nearest United Cigar Store and buy Ricoros for one day's smoking. You'll discover why we call Ricoro the "self-made" cigar—it made its own success on its own merit.

War Savings Stamp  
Sold by all  
United Cigar Stores

Ricoro is made in a dozen sizes and shapes, from 6c to 2-for-25 cents—simply the question of size. The quality is the same in all.

Sold Only in United Cigar Stores—"Thank You."

## OVER THE FIELDS OF FRANCE

*A remarkable photograph, made by a French aviator, showing a second machine in mid-air, its body and wings illuminated by the afternoon sun*

# WHEN AMERICA WOKE

BY MARK SULLIVAN

WASHINGTON, D. C.—England's first year of war was completed a long time ago, on August 4, 1915. But what a different first year it was from ours! On that first anniversary England held a solemn service in St. Paul's Cathedral. Solemn it well might be. She numbered her dead in hundreds of thousands. The wounded, the wreckage of war, thrust themselves on England's eyes in every street and country road. The enemy had been literally at her throat. England had been in the fire. She had passed through Mons and Ypres and the second Ypres. She had seen new forms of death, ingenious, monstrous. She had tasted horror—as we have not. For we have not come to apprehend the day that brings the week's casualty list, nor learned to cover with silence the fresh draft on our fortitude. When we pick the day's paper up, we have not had the occasion to cover grief with serenity, as a duty to our neighbor with a similar grief. Not yet! The spiritual gain of war is sacrifice. We have not reaped. But all in good time! The London "Times" was able to say of that first year: "The people face the remote end with a rising courage."

## America Wills to War

THERE is a theory about the present status of the war, held by some thoughtful men in Washington (if this theory is not sound, the disproof of it will probably have come by the time this article is printed). The theory, to state it in the simplest way, is this: That the present war is at an end, or, at least, that the first stage of the war is over, and that we shall now have, for about a year, an interlude, without a formal general peace—such an interlude as used to come in the Napoleonic wars; that the Germans will make no offensive in the west during the coming year, but will merely hold the line, using the resting spell to consolidate and organize their great gains in Russia and the East; that in about a year the second stage of the war—or, if you choose to call it so, a new war with a somewhat changed alignment—will begin, in which the United States will have to bear the principal burden. (The reasons which are given to back up this theory are many, intricate, and plausible. But for the purpose of making the present somewhat immaterial point, it is enough merely to state the theory.) If you accept the theory, you can well imagine the Kaiser, as he finishes cleaning up the crumbs in the East and comes toward the end of this breathing spell, calling in Hindenburg and Ludendorff, to survey the situation, to cast the balance, and make estimates of what is ahead. And in such a conference you can easily imagine the Kaiser asking his aids: "What of America?" Hindenburg may bluster and bluff; but Ludendorff is a man of thought; Ludendorff would say: "A thing has happened, Majestät, a thing that is like the pulling of the lever of a great machine. At first the wheels turn quite slowly, but they gather great momentum. America

has taken a step. It was for her a very strange step, an unfamiliar step, but having decided to take it, she has taken it all, and whole-heartedly. She has willed to war. She has turned herself for the time into a war machine, and that machine has been gathering momentum for now two years already. A very great democracy, the greatest of democracies, has organized for war, to 'make the world safe for democracy,' as their President Wilson says. They have adopted what we always assumed such a loose democracy would never adopt—the draft, as they call it. We did not count upon that: we counted on these Americans adopting their traditional system, the volunteer system. It is a thing to be considered, Majestät. It is a serious thing, not merely for now and for you, but for the future, for your son and your dynasty and for the system of autocracy that is the concern of us all. They have registered ten million young men between the ages of twenty-one and thirty-one. About a third of them they are drilling, and the rest they will drill also, as the machine gathers momentum. And each year will add a million. That army, man for man, will average higher, physically and mentally, than any other soldiers in the world. When that machine reaches the maximum that ultimately it must come to, automatically, it will be by far the most powerful war machine in the world, and it will be dedicated to the destruction of autocracy. It is a thing most menacing to your dynasty and to our system of government. "Moreover, this new system of national service will make of America a nation. It will give her what she did not have, and what we assumed she could not have; it will give her compactness, solidarity. It will give her common ideals and common purposes. It will give her a national consciousness. It will give her that same homogeneity that has made us ourselves so strong. You know, Majestät, we

And you can imagine Von Hindenburg summing it up: "Ja, that America will now a nation be. No longer is she a Babylonian boarding house."

## First—the Draft

IN any summing up of our first year's war achievements, the draft is the first and most important. Our enemies thought we could not do it. Our friends thought we could not do it. Many of us, ourselves, believed we could not do it. Many of our leading men, in office and out of it, up to a week before we did it, dismissed the idea as too improbable. Those who believed in conscription, and hoped for it, thought we should only come to it after years of bungling compromise with the volunteer system, as we did in the Civil War. They recalled that in the Civil War we clung to the volunteer system for two years, varying it, as we got deeper into the system's vices, with bounties for enlistments, which ran as high as \$300, before sixteen months of the war had passed—a device which led to more than a hundred thousand desertions; they recalled that when Lincoln finally did get around to the draft system, there were riots throughout the country, the rioters in New York getting control of the city for some days. It was predicted that we could not have the draft system in this war without riots.

Any betting man, a week after the war began, could have made a fortune by making bets against our adopting the draft with congressmen and senators who, when the time came, voted for it, staring at each other in surprise as they did so. The great majority of Congress did not believe it was practicable, and a vast majority of the people had deep convictions against it. But they accepted it with complete and whole-hearted good faith, as only rarely do we accept things against our convictions. It was due partly to the spell of war, partly to confidence in President Wilson. Perhaps that was the compensation for his two years of costly waiting. Possibly that long exhibition of patience, of effort to remain out of war, was necessary to convince our people that war was inevitable, to the degree that would make us willing to adopt conscription. They say that the President is weak on the material side of making war, the practical, physical side. And the criticism is true. But the most material and practical thing we did was the adoption of the draft. That is the foundation wall of everything else.

We have adopted a system which, with supplementary legislation from time to time, will turn out such an army as the world has never known, such an army as no other existing nation can have.

Quite aside from its military value, the draft system is going to give us other benefits which will be valuable national assets. The other day a captain in our new National Army told a story of his experience in teaching a squad to shoot. There were eight men in the squad—men from Youngstown, Ohio. These eight men spoke eight different languages—

## THE ACHIEVEMENTS OF ONE YEAR

	April 6, 1917	April 6, 1918	Ratio
Trained soldiers under arms.	160,000	1,400,000	875%
National budget . . . . .	One billion	Twenty billions	2,000%
Personnel of the navy . . . .	84,000	343,000	400%
Personnel of the Signal Corps	1,400	140,000	10,000%
Annual production of merchant ships . . . . .	250,000 tons.	1,500,000 tons	600%

counted on her lack of solidarity, her lack of discipline, her looseness, her lack of homogeneity—so much so that we relied upon the several millions in America of our own German blood to keep her out of the war. All that, Majestät, is of the past. America has taken a step which will result in unity of character, of spirit, of purpose. And that unity, now or very soon, will express itself by organizing all her material resources and energies into one common purpose. And that purpose, Majestät, to be blunt, will be the elimination of your dynasty."

none of them English, which was the reason they had been put into a special squad. The captain spoke English, but no other language. And it was his special task to teach men none of whom could understand his language and none of whom could understand any of the others.

And while this instance is not really typical of America it is one of the extreme cases which make dramatic a national defect of ours which the draft is going to cure.

### A Year's Expansion

**WE** have officers. That is a brief sentence of three words, but the fact it expresses is of supreme importance. If we were to set down our present military assets in the order of relative value, close to the top of the list would be those 50,000 selected and trained men physically and mentally able to lead and direct soldiers on the fighting front. They are literally "picked men." The War Department's official phrase describes them as "selected after observation and training."

Old-fashioned statesmen used to speak of our little force of regulars as "the nucleus of an army." Now, the fact is that a small army is not the nucleus for a large army. The real nucleus of an army is a body of officers. Once you have officers, you can make an army, and the size of the army you can make is in direct proportion to the number of trained officers you have, in the relation of about thirty soldiers to one officer.

Our Civil War lasted two years before either the North or the South had an appreciable body of officers who knew their business. The Civil War was a four years' struggle between armies that were learning the soldier's trade while they fought—teaching men in actual war in order to teach more men in actual war. In the present war one of England's greatest handicaps was the tragic wiping out of her trained officers in the first shock. England had to begin at the bottom with little or nothing but retired majors to train a new body of officers.

In the same way Russia, in the first and second years of the war, lost months of precious time by the difficulty of replacing the officers who had been killed, so that at one time it was proposed to bring in Japanese officers. (Russia's plight in this respect was made worse by the fact that so large a proportion of her soldiers were illiterate and therefore incapable of being made into officers.)

Officers the United States now has, in numbers that are adequate for the present and capable of automatic expansion to any requirements that the future may bring. For this adequate body of officers we must thank Plattsburg and the other officers' training camps which came into being, not merely as an event of our year of war, but largely before it and independent of it—and largely independent, also, of our War Department; largely independent of our formal preparation for war. It is not the War Department nor the Administration that primarily is to be thanked for the extraordinary body of officers we now have. The Plattsburg idea was conceived by General Leonard Wood two years before we entered the war, and carried out by him, with the aid of a small group of earnest young civilians, not merely without any help from the Administration, but rather in spite of its discouragement to preparedness. When we finally did enter the war, there were twenty thousand Plattsburg graduates, and the whole Plattsburg machinery was turned over to the War Department. That was what has enabled the department to be forehanded about officers, to a greater degree than in any other of its functions.

Do you recall, by the way, how narrowly we escaped the political colonel, the system of officers appointed by State governors, on a basis of forty-eight varieties of political pull? That plan, in the discussion that preceded our present preparedness, was put forward with much pressure, chiefly from old-fashioned State rights advocates and politicians who see every national expansion primarily in terms of patronage. That had been our way in our previous wars. In the Spanish War Bryan was the political colonel of a Nebraska regiment. We have got away from all that, and the betterment is not merely military. It is moral as well.

Yes, when Germany, in her present pause, surveys the world to analyze the present facts and determine her future course, she will take earnest account of the fact that America to-day has more than 50,000

officers, 50,000 line officers (distinct from the other 50,000 officers who do not figure in the line, who are doctors, quartermasters, and the like)—50,000 young men, lean men, fighting men, "selected after observation and training"—capable of automatic expansion to any number that may be needed for as big an army and as long a war as our spirit may endure.

The navy is a little farther ahead in preparedness than any other department. George Creel gets a good deal of satisfaction out of this. He has long been a friend and partisan of Secretary Daniels, and when George likes a man, he approves of him highly. Two or three years ago, when everybody else was on Daniels's neck, Creel was saying to all who would listen, and writing in every paper he could cajole his stuff into, that Daniels was a most unappreciated man. To Creel, Daniels is the greatest secretary of the navy that this country ever had. He is also the first real democrat (democrat with a small "d") the navy ever had as its head. Per contra, he is the greatest disciplinarian the navy ever had. When Creel is for a man, he is for him. To him Daniels is a greater seaman than the Ancient Mariner and a greater strategist than Admiral Nelson. He is at one and the same time a greater fighter than Von Tirpitz, and a greater pacifist than Trotsky. Creel is strong for Daniels. When the furor of investigation was on a few weeks ago, when the Senate was calling Mr. Baker on the carpet and holding hearings over the Shipping Board, Creel used to go grinning around Washington, saying to all the former critics: "Anybody page Mr. Daniels? Anybody want to investigate the navy?"

As a matter of fact, Daniels did hump himself a

was much smaller than the expansion demanded of the other departments. Mr. Daniels, being first on the job, was able to grab all our shipbuilding capacity. Many of our shipbuilding plants will be busy for months ahead with Mr. Daniels's work. That is one of the reasons our building of merchant ships is in such extremely bad shape. Then, too, the navy didn't have to expand more than about 400 per cent. The army, on the other hand, had to expand at least 500 per cent in the smallest of its departments; in other departments as much as 5,000 per cent; and ultimately it will expand in the bulk of its activities as much as 10,000 per cent. The navy's expansion could be accomplished without any change in organization. It just spread out, doubling on itself twice in one year.

### In the Air

**WHEN** you express the expansion which we have had to attempt during the past year in terms of percentages, the figures are huge. In the matter of flying, for example, it has been not less than 10,000 per cent. When war was declared we had perhaps seventy-five officers in the Signal Corps. Of these a few could fly. We had a few airplanes of modest power, suitable for elementary training purposes. We had no airplanes suitable for work in battle—no airplanes armed with guns. A little earlier—when we went after Villa in Mexico—we were able to muster a single aerial squadron. There were twelve men who could fly and about eight 90-horsepower planes. Of these planes, every one was lost in the Mexican sands. An appropriation of half a million dollars provided a dozen planes of 160 to 200 horsepower.

When we went into the war the personnel of this branch of the service numbered 1,400 men. Now it numbers, all told, 100 times as many.

When war began there was no real airplane industry in this country. We were not producing engines or planes on a par with those which had been developed in Europe. Speaking by and large, we knew nothing about air fighting. We didn't know what sort of equipment was required. We didn't have the factories for making the equipment.

The Aircraft Production Board went to work to produce an engine—an American engine. In the past year it has had designed, built, tested, and redesigned a twelve-cylinder airplane engine which, while weighing only 800 pounds, develops from 400 to 450 horsepower. (The nearest rival of this engine, the English Rolls-Royce, weighs 930 pounds and develops 380 horsepower.)

There is a powerful appeal to the imagination in this Liberty motor. Compared to the horse, for which Richard III offered his kingdom, the Liberty motor is a small piece of machinery. It has half a horse's weight and a fifth of a horse's bulk, but it has the power of 400 horses.

The Signal Corps insists that this engine is the best engine for the purpose in the world. It represents a pooling of all the ideas obtainable in this country and abroad. Granted that it is the best—and in Washington there is

general agreement about this—there is no question that it can be produced in quantities hitherto unknown in the industry. For military reasons, the exact figures are not permitted to be printed; but it can be said that we are now making ten Liberty motors a day and that within a year we shall be making fifty a day. Our production of training planes has gone so far that we are now storing them against breakage of those in active use; we are producing, all told, nearly 500 airplanes a month, and it is going higher every month. We are actually producing a battle plane of a type for use on the western front—not merely a machine for the training field—a fighting machine.

### June—on the Western Front

**THIS** branch of the service is accustomed to express the quantity of its activity in terms of hours in the air. The other day, at a field in Texas, the day's total of flying was 857 hours, done by 137 machines which had been in the air during the twenty-four hours. This record has already been broken, but it is interesting to note that all the military flying done in the United States before war was declared would not equal in number of flying hours the record of this one field in one day. And there are eighteen such fields now in use. There is a picturesque detail which illustrates how fast we are expanding in the field of flying, and how quickly we become accustomed to the new. One (Continued on page 21)

America - "Is my hat on straight?"

little earlier than the others. The first real "big navy" appropriation came through in August, 1915. That bill laid down a program for battle cruisers, for twenty destroyers instead of the usual six, for double the former number of battleships. Other emergency and regular appropriations came through in February, in March, and in April. They aggregated about three billion dollars, as much as the navy spent from its foundation in 1794 to the time the war began. Daniels got very busy. There was an American fleet in the war zone within a month after our declaration of war. Our merchant ships were armed. Destroyers were built, and are still building in very large quantities. The greatest destroyer plant in the world is now at Squantum, Mass.; the navy has cut the time schedule of destroyer building from twenty-four months to eight months; it is building more destroyers than England and the United States together had before the war started. As the special necessities of submarine chasing developed, new types of vessels were devised to meet them, and they are being made in huge quantities. All in all, nobody seems to find much fault with what the navy has done. Its personnel has been brought from 84,000 to 343,000, as high a figure as is judged to be desirable, for the present at least.

On the whole, everyone seems to agree that Creel's pride in Daniels is justified. To be sure, there is this to be said: The expansion demanded of the navy

# ADVENTURES WITH RUSSIAN ARMY

*She was one of those who make the world a smaller and more friendly place*

THE Kiev express rolled out of the crowded Petrograd station, away from the never-ending talk of "all power to the Soviets," and "peace without annexation or tribute"; away from the capital's whirling rumors, its dirt, disillusion, and despair, and down into the clean and quiet country. Again the friendly Russian plain, the little white churches in the distance with their clusters of beet-shaped domes in gilt and green and blue, and the jolly peasant girls working in the wheat; the soft dirt roads between fields without fences, and the ponds with their frames of black pines and wistful white birch. And again that feeling of escape, of getting away from the world into some easier century, where nobody bothered much about "getting on." The very train seemed to feel it, and stopped amiably, now and then, for the passengers to tumble out for tea. It became a Russian train, and we got back into Russia again. It was in those late summer days after the first Bolshevik uprising and before the Kornilov "counter-revolution" had flared up and failed. . . .

## "Just Peasants"

THE new order began to show itself next day at Mogilev—a little more than halfway from Petrograd to Kiev. When I had passed the Great Headquarters a year before, civilians could not go farther than the station lunch room without a military

*Photographs by the Author*

*The district covered by this headquarters extended, roughly, along the line of the River Zbrucz, southward to the Dniester and the quaint old half-Turkish city of Kamienets Podolsk*

*It was one of those Jewish settlements not uncommon in this southern end of the Pale, where Russia, Galicia, and Rumania meet, with here and there a lingering touch of the Turk*

pass, but now we marched into the street without question and chartered a ramshackle cab for the usual mile-and-a-half ride which, for some mysterious Russian reason, almost always separates a railroad station from the town itself. That evening, while waiting for my papers to be prepared, I gossiped with a Canadian reserve officer who had just come up from Rumania and the southwest country.

He was a big, genial mining engineer and railroad man who had helped put in the narrow-gauge military railroads behind the French front and had now brought his experience and optimism to help here. At Tarnopol a few days before he had been in the thick of the rout, had jumped in and carried away wounded while the Austrian airplanes were bombing the railroad station, whacked lazy *tourists* into action, and, apparently, more or less run the place.

As we sat on the balcony of his little hotel, looking down on the cobblestoned street with its Jewish shops and the little park across the way, full of soldiers walking with peasant girls, he gave his impressions of the rank and file of the Russian army. Drawing a line across a sheet of paper, he made a mark a little way from each end: "About one-tenth of the soldiers are first-class—you couldn't ask for better men. They want to be good. They've come through from the old army mostly—they'll go anywhere and do anything. At the other end there are about 10 per cent bad. They are looking for trouble and making it every day. The most, however, the big mass in between, are neither one thing nor another, but just peasants, thinking mostly of getting home and ready to be swung this way or that by almost any strong man who gets hold of them."

## Russia—1917

THE Dnieper, rolling southward under the warm August sun straight down to Kiev, was not easy to leave, but there was no steamer for several days and then only a sort of enlarged tug, and after giving the river the tribute of a swim, I sternly turned my back and a day later was dumped out in the dirt and crowds and confusion of Kiev station.

Imagine, if you please, a sprawling series of sheds—the war struck Kiev with a new station just started—packed with human beings very much as a stockyard's corral is packed with cattle: soldiers with rifles and trench shovels, peasant men and women in sheepskin coats, with their packs and teakettles and babies, asleep on floors or platforms; officers of all sorts and weary civilians, all milling about trying to get something that couldn't be got—trains when there were none, food when there was no food, and tickets when there were no tickets, or, at most, when a ticket meant only the chance for a hand-to-hand fight for a place.

For months almost no place cards had been sold on Russian trains. Except for the officers' cars, in charge of the station commandants, and an occasional car of the Compagnie Internationale des Wagons Lits, sold out at fabulous prices weeks in advance, trains were merely so much cubic space into which human beings were poured.

The little compartments filled up—by some unwritten law whoever could first climb into the upper berth and lie down was generally allowed to stay there, although sometimes another would insist on climbing up and lying down beside him—corridors and vestibules filled, and so people stayed, not stirring often until their journey's end. Indeed, it was not infrequently impossible to get out, and people who had brought nothing to eat or drink with them had simply to sit tight and go without. On the way to Moscow one night, on a train jammed like this, we had ten people in our compartment. Next to me was a peasant woman in a sheepskin coat, with three little children, one a baby in arms, and a husband who sat on the floor with the usual pack: teakettles, pickles, sausage, bread, and so on. It was impossible to lie down or get out for anything to eat or do aught but sit bolt upright for sixteen hours on end. As it was chilly outside, every window and door was, of course, hermetically shut. Russian fashion, and in an atmosphere you could have cut, with water dripping down the windows even before we left the station, we sat and stewed.

You must imagine trains like this pouring continually into Kiev, for it is the junction point for all Little Russia, for Moscow, Petrograd, and the north, as well as the main feeding point for the southwest front. Although fighting had all but stopped at the front, and tens of thousands of deserters were beating their way eastward, yet, somehow or other, by that same left-over momentum which kept so many things going in Russia, troop trains with

# THE CRUMBLING

C O L L I E R ' S S T A F F C O R R E S P O N D E N T

horses and guns and men kept shifting through Kiev. Things that ordinarily take minutes—tickets, baggage, and so on—now took hours. Coming off the Mogilev train, for instance, arms full of luggage, I started to check it while I went out to find a place to sleep, and ran into a queue, thirty or forty people long. One drowsy old man was trying to mark the checks and put away the baggage in a room already overflowing with it. Why, everybody knowing perfectly well what conditions were, should one old man be left to handle such a job? There must have been plenty of boys and idle able-bodied women in Kiev. No reason at all, except that this was Russia in the year 1917. After waiting in line for nearly half an hour, the old fellow struck altogether and sent the crowd away to another part of the station where the same performance was repeated. It was only after working up through a third line of people to a third window and wasting an entire hour that I finally got rid of my baggage and could begin to look for a room. And it was several hours later, after spending most of my substance in *izvoschik* fares, and trying in vain all the hotels and various lodging houses, that I threw myself on the mercy of a Russian family, friends of a friend of mine, and they, with the usual Russian hospitality, took me in.

Things like these—which do not happen to Root Commissions or even on the usual journalistic Cook's tours—repeated endlessly, pounded into your flesh day after day, are decidedly illuminating. Simply to put on one's hat and start for the front in those days was a good deal like jumping off a liner in mid-ocean and starting to swim ashore. For a correspondent who needed to cable home every night, it might have been useless, but as a means of working oneself into the psychology of the moment, there was a good deal to be said for it. I met the usual number of charming officers in the next fortnight, and enjoyed the usual hospitality, but between times was, as near as an outsider could be, one of the *tovarishi*—one of that helpless and hopeless mob which overflowed every station, disillusioned and embittered, at once defiant and ashamed. It is difficult to be patriotic when seasick or standing on a tack, and foreigners can scarcely understand Russian behavior in these days without remembering that the usual patriotic arguments are heard through the dragging weight of every conceivable kind of discomfort from the moment you get up in the morning and try to get breakfast until you find a place to sleep at night—a weight that becomes so unbearable that after a time people can think of little else.

### The Shooting Is Real

**B**UT there was more than mere discomfort here in the beautiful old city of Kiev. We were sitting at tea next evening in the cool apartment of my Russian friends, when suddenly, through the long French windows, opening on the balcony, there came the sound of shots and the rat-tat-tat of machine guns. My hostess—her husband was away at a meeting, for Kiev, as the center of the Ukraine, was hot with separatist and antiseperatist talk—put her hands to her ears and we both ran to the balcony. She feared that the deluge had come at last, but I told her that we were used to such interruptions in Petrograd and thought little of them.

The shots, which seemed to come from the neighborhood of the railroad station, did, indeed, cease after a few moments, and when our host had telephoned that he was on his way, I found an *izvoschik* and started for the station. I had gone into the commandant's room to arrange about my pass for Berdichev, a night's journey farther on, and the headquarters of the southwest front, when, without warning, a regular fusillade of pistol and machine-gun shots began, apparently just outside the open window. I dropped down behind it, and the commandant behind his desk, and there we crouched for several minutes, not knowing what was coming next.

The noise stopped, and when I looked out, expecting to find a street full of dead and wounded men and cab horses, there was nothing to see—the shots, echoed by the walls opposite, had come from a little way down the tracks. The commandant made out my pass, and we pulled out for Berdichev without knowing clearly what had happened.

The trouble, it appeared later, had started over the sending of a Ukrainian regiment to the front. The agitation for Ukrainian independence had been growing more and more vociferous, the Ukrainians had called together in Kiev their Rada, or Congress, and it was now meeting daily and passing laws as if it actually had authority to do so. The feeling against Russia proper, "Great Russia"—Kerensky,

originally sympathetic to the Ukrainian movement, had recently talked of treachery and "thirty pieces of silver"—was growing more and more bitter.

The Russian story was that the Ukrainian regiment had mutinied and refused to go to the front. The Ukrainian story, or at least one of them, was that provocateurs had started the row, and that after shots had been exchanged and the regiment was aboard the train and moving out of the yards, Government troops, lying in wait a little farther along, had opened up on the train with machine guns. A score or more of Ukrainians, they said, had been killed.

Both stories might have been true, depending on whether the Ukrainians were looked upon as rebels or as oppressed patriots. The shooting was real, at any rate, and suggestive of conditions all over Russia and the difficulties of army officers who had to act as if Russia were still Russia and the army a unit and ready to fight for it.

### Into the Armies' Zone

**A**T Berdichev next morning, on the border of Podolia, one left the civilian world and pushed into the zone of the armies. From here it was a case of either motor car or military train, and the amiable officer who made out my permission at the Front Headquarters advised me (Continued on page 24)

The commissaire was, in fact, a husky, good-natured, very "human" sort of person

And then, after the war had rumbled below the horizon for a couple of years, came the French flying men. They had all seen service on the west front and flew like swallows

"About one-tenth of the soldiers are first-class... there are about 10 per cent bad. The most, the great mass in between, are just peasants, ready to be swung this way or that"

# Collier's

## The United States as a Nation

**I**N those far-off days, that other age which preceded the Great War, we Americans were often asked to tremble for our future. Once it was the outraged American aristocrat who said: "Look here. We are altogether too generous to immigrants. All the nations of Europe are diluting our native population. We have now more Germans than we have original English, Scotch, and Irish. Soon we will have more Scandinavians, more Slavs, more Italians and Greeks. How are we transplanted Britishers going to maintain the free institutions for which our ancestors fought in the face of this influx? They are unaccustomed to edged tools like universal suffrage and free speech and public assembly. Why should we give them all votes they don't know how to use? Why should we reduce ourselves to an insignificant minority? These people have not learned to love liberty."

Our answer was that the love of liberty was common to mankind and America was the melting pot into which all the nations could be poured to make a new nation born to liberty and devoted to free institutions.

Again it was the cultivated son of that New England which produced LONGFELLOW, transcendentalism, and the "Atlantic Monthly" who arose to protest in this fashion: "Our language, our morality, and our social standards are disappearing under this flood of aliens. We no longer speak English undefiled. Indeed, large sections of our population speak and read no English at all. They take in newspapers printed in a foreign language; they send their children to schools conducted in a foreign language. Our sober and thoughtful Sunday has given way before the Continental holiday—we are degenerating from a God-fearing, churchgoing people into one which supports Sunday baseball, beer gardens, and public dance halls. Our standard of living is going down. These people do not bathe, they sleep ten in a room, they feed their children beer instead of milk."

And our answer was that the aspiration toward a better life was common to all mankind and America was the melting pot into which all the nations could be poured to produce a new nation born to plenty and devoted to education.

Again it was the student of world politics who said: "Some day there is going to be a great war. All Europe will be engaged in a death grapple. We will be inevitably involved in this struggle. Our native stock, our English, Irish, and Scotch, will be drawn to the mother country by the strongest of all ties—the ties of a common blood, a common language, and a common tradition. So our Germans will be drawn to Germany, and our Swedes to Sweden, and our Russians to Russia, and our Italians to Italy, and our Austrians and Hungarians to Austria and Hungary. What are we going to do? Fight on all sides at once? Eventually we may have to defend our right to exist as a nation against half Europe! Do you imagine that our insignificant minority of native Americans can unite all these alien elements, half of whom must inevitably sympathize with the enemy, into a nation with one soul, one will, and one united front to the enemy?"

And our answer was: If the time ever comes when we must defend ourselves, we shall be united by our common love of liberty, our common aspiration toward a better life, by our common home. For America is the melting pot into which all the nations have been poured to produce a new nation, stronger, freer than any other.

Yet if this was our invariable answer to the charge that we were not a homogeneous and united people, but a mere polyglot of the nations, it was not an answer based on a tried and tested knowledge. It was our hope and our conviction. But we had our doubts and our fears. A year ago we were all talking about hyphenated Americans, and the more we talked the more we feared. What if we had been wrong from the beginning? What if it was all a dream?

To-day, on the first anniversary of our declaration of war against Germany, we know that our answer was the true answer. We know that the only dream was the bad dream of our fears, the dream that we were not a nation. We know that we are a nation.

## Crime Calls for Justice

**A**T a more or less international labor meeting held at Nottingham, England, recently, the Prussian acquisition of Alsace-Lorraine was spoken of as a "brutal crime of conquest," and resolution passed that the public opinion of the provinces must

April 6, 1918

be ascertained! Isn't that rather overdoing the logic? Crime should be made right without waiting for any elaborate plebiscite. The trouble about Alsace-Lorraine is that Prussian greed wants its wealth, Prussian tyranny hates its ideas of freedom, and Prussian militarism has made those two provinces the symbol of Potsdam's glory. Those who sympathize with the Allies, but are not willing to face the three facts just stated (and the bitter conclusion that follows therefrom), had better keep still about Alsace-Lorraine.

## Food That Costs Less

**O**NE real service that we can all render this year is to buy so as to help new products get into the market rather than to help raise the prices of well-known things. Fish (any kind) is practically a new food for nine-tenths of us in this country. The average American does not eat enough of it in a year to fill a tin lunch pail. Why not get better acquainted? What do you know about grayfish or sable or tile and the rest of the new varieties, and have you put in an order for some canned whale? No doubt there are numerous other sorts by this time, and every live market man is keeping posted on the finny situation. That is about as much as the individual can do, but enterprising communities can do more. Nearly all our towns and villages are on or near water (sometimes unpolluted), and fish culture is about the easiest, cheapest, laziest way of growing food that has ever been practiced. It would be no bad thing if inland regions, especially, made some effort to find out what can be done by farming their waters. The Bureau of Fisheries at Washington, D. C., is anxious to help in the matter, and many of the States have similar agencies. The offshore and deep-sea fisheries in this country have yet to be organized and run so as to give fishermen and consumers alike the whole benefit of Neptune's riches, but local effort need not wait on that development. The typical townsman may and probably never will hatch anything but mosquitoes in the maritime areas of his back yard. Nevertheless, fish is food, and those who know how in the fin and scale business will have more to eat later on. What are you doing about fish?

## April Eggs

**A**S a city friend always and dolefully puts it, this is the time of year when the eggs all taste alike and not much of any taste either. April's half-open buds and thin grass do not put such flavor and tang into things as do the later months. So our friend says, and seemed to cheer up when assured that the storage companies would probably do something to relieve the situation if not interfered with too much.

## The Small-Town Mind

**E**VERYBODY knows that little towns are full of people who believe everything they hear, especially everything that sounds awful. Isn't it the little town that is the home of the silly sort of clacking we have had occasion to refer to in these columns? For instance. Here are the first three paragraphs of a letter sent out by the neighborhood association of Yorkville:

As a patriotic duty we save food in our homes and public eating places; through lack of patriotic vigilance, \$30,000,000 worth of food is destroyed right at our doors within thirty days.

We defend democracy by sending men and supplies to the front, but we imperil the cause by failing to supply them with ammunition. This is because of disloyalty and destruction within our shops.

Over 2,000 of our boys intrusted their lives to our care on the *Tuscania*. Why were these lives endangered and lost? The enemy at home furnished information that resulted in torpedoing the boat. Other boats are to follow. Are they to be torpedoed?

Three awful stories—and every one a canard—in three brief paragraphs. And what does Yorkville propose to do about these horrors of its own invention? It proposes "Americanization."

Americanization from this standpoint is as vital as the work of sending men, supplies, and relief abroad or subscribing to Liberty Loans and War Stamps at home. Washington cannot do this Americanization for us. It has to be done in every neighborhood and home in this city. Yorkville has a large enemy alien population—it has a long water front, city gas houses, bridges; it is a strategic point.

Well, we suppose Yorkville is a strategic point. It is one of the most closely populated sections of Manhattan Island. In short, this small-town stuff comes from the middle of New York City.

## *The Desirability of Not Rushing the Russians*

IN the eminently practical business of winning a war, one is likely to encounter many more unpleasant duties than the occasional need of swallowing one's pride. In this respect we might well learn from WILLIAM II. Having a very definite object in view, he did not disclaim to go to Brest-Litovsk and talk business with the rough and unmannerly Bolsheviks. As long as it suited their purpose, the Kuehlmanns and the Czernins found it quite easy to remember that if fine words butter no parsnips, harsh words break no bones. They listened with perfect good breeding to TROTSKY's fervent little travelogues about the iniquitous Teuton bourgeoisie and their far from perfect Imperial master. Only when Bolshevik oratory had talked itself precisely into the corner where they wanted it, the Teuton delegates acted. After all, a couple of hundred thousand square miles of territory was worth a dozen frank allusions to infamous Junkers and criminal Hohenzollerns.

Consider, on the other hand, the injured vanity, the futile scoldings about spilt milk, the empty satisfaction of calling names, that have entered into so much that we have said and written about the unhappy Russians. It is true that they have made a dismal failure of their war against German imperialism and seem in a fair way to lose their revolution. It is true that the Bolshevik nightmare has piled up heavier burdens on our shoulders and a bitter price to pay. But since when has it been the American habit to sit down and wail instead of plunging in to put out the fire and save what can be saved out of the household assets? For the Allies and Russia it is not a question of grin and bear it. It is a question of smile and wait—wait for that return of the Russians to common sense and the enlightenment of hard fact, which is as sure to come as the hard knocks which must come before Germany is beaten. Suppose it were a question of winning an ally which, after a year, say, might put a million men into the field against Germany. Would it be worth while making the attempt? Russia may offer a million men in the field against the Kaiser within a year.

The Russians are learning already. Give them time. Let them try to work out their revolution in the eviscerated territories which the Kaiser has left them. Let them find their revolution hampered and hamstrung and strangled by the Kaiser and his merry men. They will learn the distinction, which they formerly refused to recognize, between German capitalism and Allied capitalism, between German imperialism and Allied imperialism. With regard to America, the Bolsheviks have already discovered that we are not as bad as they thought. The Kaiser can be counted upon to facilitate the education of the Russian democracy. Give him time.

## *Potatoes: Thirteen Cents Per Bushel*

UNLESS wonders are done between now and the time of need (and farm miracles are scarce!), there will be fewer people to raise our food this year and more raising to do. The answer is to make every stroke count. That means cooperation. The "New England Homestead" has a mighty interesting article on how they did just that up in Bennington County, Vermont, last year. F. C. SHAW, the agricultural agent of that county, got after the farmers to form defensive associations against the potato blight, bug, etc. They figured the thing out carefully, got the machinery and materials, and laid out a route for the sprayer to follow. Three such working groups were organized, and they certainly obtained the results desired. In the larger association, which had the higher costs, for example, the spraying outfit was hauled about 125 miles during the season in doing its work on twenty-nine farms. These potato patches averaged rather small according to Middle-West notions, and the total number of acres sprayed (about three times each) was fifty-three, at an entire cost of \$329.91. This included machinery, labor, materials, and incidentals for the spraying outfit, but did not include anything for time spent by the owner in assisting when the work was being done on his place. If this were reckoned in, however, it would not add much of anything to the average cost of around \$6.25 per planted acre. For this expenditure the members of the association got in fifty bushels more per acre than were gathered on the unsprayed fields. The potato pests were badly beaten, and it is worth noting that most of these patches had never been sprayed before, as one farmer could not afford the equipment. Work together that way and use your brains and we'll whip the Kaiser just as if he were a potato bug.

## *Blocking a Useful Road*

THOSE who study such things say that in the old Indian times peace pipes from stone quarried in the Minnesota country were traded south to the Mexican Gulf and that copper ornaments from around the Great Lakes added to the social distinction of the early Virginians. Even then there was trade across what is now our nation. How it came about, in spite of ignorance and hostility, and by what devious ways of barter and sale, is impossible for us to imagine. The means of such far-flung exchange are ready to anyone's hand to-day in our postal, railway, wire, and newspaper services, and are most enormously used. It seems a partial return to savagery, then, that the Postal Zoning Act should set out, as it does, to cripple one of these services. Nation-wide advertising in periodicals of extensive circulation has done much to bring our buyers and sellers into conference, and a deal of sound business has grown up in consequence. As far as we know, the good of all this has never been questioned. Why shouldn't a consumer have some regular, easy way of finding out who wants to serve him in various lines of trade and what it is they have to offer? That is precisely the function of nation-wide advertising as it has been developed in our country. And now the Postal Zoning Act purposes setting up barriers along certain district lines, piling up the publisher's postal costs and making the advertising service which we have described either difficult or impossible. The United States is supposed to be devoted (and perhaps overdevoted) to business, but in this instance a rather important aid to commerce is to be sacrificed to the blind philosophy of provincialism for provincialism's sake. Even an averagely clear-headed Iroquois would have known better than that. Keep the paths of trade open!

## *Rhetoric*

A FRIEND of our school days defines rhetoric as the art of adapting what you have to say to the time, place, person, etc., concerned with your saying it—in other words, of making your meaning real. Old DON MARQUIS of the New York "Evening Sun" got stirred up about poetry the other day and offered this epigram:

Poetry is the chinking of a couple of unexpected coins in the shabby pocket of life.

Can you imagine sixteen words doing any more than that to put the nature of poetry clearly before the soul's eyes of this generation?

## *The Silence of the Farms*

IN WASHINGTON'S day, when more than ninety of every hundred Americans lived on the farm, the thinning out of the noisier ones had hardly begun. A few of the most genial had drifted into keeping the village inn; there were lawyers and preachers, sea captains and politicians with divers gifts of speech, each after his kind, but the farmer's hardly less than theirs. Machinery is what did it. Industrial civilization has ten thousand sorts of jobs for the voluble, everything from auctioneering to yodeling, with interviewing, salesmanship, and vaudeville thrown in. Some left the farm to announce trains and others to coach in baseball. Those who stayed to grow the crops had fewer associates to talk with and less inclination. No one ever sang the husbandman's songs of sowing in chorus with a tractor and a seed drill. The isolated farm system of agriculture spread people apart, and so did THOMAS JEFFERSON'S scheme of rectangular surveys as it gridironed the Western lands. A rural banjo was significant of shiftlessness only; country dances and folk songs became subjects for instruction in city high schools; and the old silence came back to the farming places. Summer boarders break the hush where they frequent, and so does the horn of an all-around farm motor car, but neither the landlady nor the person at the wheel has much time for idle chatter. Everybody takes the city paper, and the news is all in it; everybody has a telephone, and all personalities go over it direct to the other party. What is there left to talk about? Modern agriculture is improved by observation and study in somewhat the same general way as astronomy, and the process is just about as jolly. When our war-return soldiers come back to the open country we hope they will bring with them the soldier habits of comradeship and of joy in it. Otherwise we may have to have a national commission on the alleviation of rural silence. Even the deepest life can be a little too still.

*Part of the winter quarters of the Union Army, Brandy Station, Va., February, 1864*

*This clumsy affair was considered the last word in heavy artillery back there in Civil War days*

## HALF A 1864

IT means a good deal more to go to war now than it did in the well-known days of '61. Warfare in those times was still more or less of an informal affair, and uniforms and equipment were often sketchy to a degree that would never, never do to-day. The log huts in which the Union army spent its winters have given way to the less picturesque but more satisfactory huge cantonment buildings in which our present National Army is housed. The clumsy cannon that hurtled its round shot upon Petersburg and Richmond seems puny beside the modern coast-defense rifle or heavy field

gun. The picturesque, canvas-topped wagons that carried supplies for Grant and Lee have been replaced by fleets of huge gray motor trucks. The price of war has changed too. The total cost of the Civil War was approximately ten billion dollars. According to recent estimates, the total cost of this war to date is not far from ten times that sum. Our appropriations for the first year of our participation amount to twenty-three billions. In other words, in our first year of this war we are preparing to spend more than twice as much as the Civil War cost both sides in five years!

# THE ADVENTURES OF COLIN O'RELL

BY ARTHUR SOMERS ROCHE

## SIXTH ADVENTURE—THE LAST BULLET

ILLUSTRATED BY HENRY RALEIGH

**DISHEVELED**, panting, Fernald stared into the blinking eyes of the Marquis. The sudden attack had been unexpected; he had been seized and his automatic pistol taken from him before he could move a finger. Too late he had begun to struggle; then, realizing struggle's futility, he had ceased.

The Marquis smiled blandly. "You are not trustful of us, Lord Fred," he said.

Fernald shrugged his shoulders. "Suspicion breeds suspicion. If you had asked me for my gun—"

"You would have used it, eh?" The Marquis's smile was still bland, but his voice was chilled. "I am not used to doubts of those about me," he said. "And when I have doubts I try to set them at rest. These men here"—with a wave of a plump hand he indicated the men who had overpowered Fernald—"insist that you are Lord Fred Jevons and that last night you killed the man Fernald who has intruded into my affairs."

"And hasn't Lady Beth assured you that I am Jevons?" asked Fernald indignantly.

The Marquis's smile grew blander. "She has," he stated, "but even Colin—I am not so sure of her as I will be within half an hour. Things have gone wrong. Whether by accident or design, I cannot tell for certain now, but I have sent her to talk with one whom she believes to be a French officer, in this country on a military mission. If Colin has been honest with me, the man with whom she talks will know it, but if she is dishonest, if she is really an agent of the American Government, then she will betray herself to him."

Fernald fought to keep a quaver from his voice. "Ah-surd! She is Lady Beth," he said.

"I hope so," said the Marquis, "as I hope that you are English Fred."

"Why do you think that I am not Jevons?" demanded Fernald. His simulated indignation sounded convincing to his own ears. But the Marquis shook his head.

"Last night a man apparently was killed in Colin's apartments. Those of my men who were there were certain of the killing. But I—I do not trust too blindly when suspicion has been once aroused in me. This morning I have learned that the body of the slain man has disappeared from Colin's rooms, and yet I know for certain that there has been no report to the police of a homicide. But there need be no recriminations now. There may be explanation for the disappearance of the body. When French Gouraud has finished talking with Colin, then I will know where she stands and where you stand. In the meantime, if you are faithful to me, this little affair will mean nothing to you. But if you are an American spy, then I would commend to you the uses of meditation. You have half an hour or so in which to prepare yourself for whatever hereafter in which you may chance to believe."

His voice was almost benevolent in its gentleness; it was hard to believe that this grotesque fat man was the merciless criminal that Fernald knew him to be. His tones were almost a benediction. But Fernald, as the door closed upon the master spy, knew that the end was close at hand. For a moment the

wild impulse to leap upon the man left behind to guard him almost overpowered him.

But the significant manner in which the guard lifted the revolver that rested upon his knee taught Fernald the absurdity of the impulse. He mastered it and walked to the window. It was not the window which looked out upon West Street and its docks and the river teeming with life and the Jersey shore beyond. It was a window which looked upon a blank wall. Fernald's eyes lighted. It was not entirely blank. Diagonally up its side ran a fire escape; its nearest platform was outside a closely shuttered window twelve feet below him and half a dozen feet to the right. And the distance between the two buildings was only about eight feet. For a man in the prime of youthful strength and agility the leap was not too great. Of course there was the danger of missing the platform and tumbling thirty feet to the brick courtyard between the buildings. But that risk was negligible. The real risk was that of being shot like a fleeing rabbit as he made the leap.

Something of his quivering excitement communicated itself to his guard. "Come away from that window," he growled.

Fernald stared at the man. It was absurd to think that he could cross the room before the man could fire the weapon so ready in his hands. But if he could make the man cross the room to him? Un-

It followed that the man left to guard Fernald would not shoot except in self-defense. And if Fernald could feign an attempt at suicide— Over his shoulder he returned his guard's belligerent glare.

"I suppose you think I am going to stay here to be killed at leisure," he cried. He threw open the window and had one leg across the sill when his guard grappled with him.

His ruse had worked! A man so crazed by the fear of death that he would anticipate it was not the sort upon whom it was necessary to use a weapon. The guard was big and burly; had Fernald attacked him, he would probably have used his revolver; but he disdained to use it upon a maniac attempting suicide. Moreover, Fernald had guessed the Marquis's thoughts. The guard would suffer the extreme penalty if Fernald dashed himself to death before the Marquis had an opportunity to wring from Fernald's lips what information the prisoner might possess.

**FERNALD** smiled grimly as he turned to meet the other's charge. If only the army doctors who had refused him admission to his country's service because of a murmuring heart could know the various adventures that he had passed through in the last two days! There was no question that his guard was a good rough-and-tumble fighter, but there are tricks taught in college gymnasiums that are much superior to those practiced in the brawls of the barroom.

His guard had been too surprised; the need of haste had been too great for him to waste time in calling for help. The struggle was brief and soundless.

Shaken, breathless, Fernald clung to the trembling platform of the fire escape to which he had leaped. He glanced upward and over his shoulder. There was no hue and cry raised behind him. For a moment at least he was safe. The noise of his landing had passed unnoticed. He glanced below him. The fire escape went down to within a few feet of the ground, and his first impulse was to descend to the brick courtyard. Then he remembered that men loitered outside this building, that the doors that led into the courtyard were open. The chances of being observed were too great. He looked upward; instantly he mounted the narrow ladder. A dozen feet above was a platform; he reached it and lay upon it, for through an open window came the voice of the Marquis. Fernald could not distinguish his words, but daring to lift his head he saw that the sinister crook spoke into a telephone. It was Fernald's chance. The Marquis's back was to the window. Had Fernald in the excitement of battle thought to possess himself of his guard's revolver he could have ended now, once and for all, the menace of the master spy. But he had not done so. And while

he had been able to gain a lower platform by leaping from a window it was impossible for him to leap from this platform through the narrow opening of the window. Even had he been confident of his ability to do so, the noise that he would make would be ample warning for the Marquis. The Marquis would kill him as he struggled for balance on the window sill.

But the Marquis's absorption at the telephone gave

*He stepped to one side that he might cover Fernald with his revolver*

doubtedly the Marquis would kill Fernald as soon as his suspicions were verified; and those suspicions would be verified very shortly. But the Marquis, cool and merciless though he was, was not the man to act on murderous impulse. There was not a shadow of doubt that the Marquis would postpone Fernald's death if he thought that his prisoner might be forced to surrender information.

One of the two he could not be sure which—

him a chance to further his escape. Catlike, he crawled across the platform and mounted the next ladderlike slanting flight. In less than two minutes he had gained the roof. They were minutes that seemed like hours in the passing. And he was breathing heavily as he ceased climbing. No last quarter of a football game had ever been so strenuous as this easy climb, for fear had ridden on his shoulders weighting him down, holding him back—not fear for himself, for now he felt safe, but fear lest Colin's true identity be exposed to the Marquis before he could take the measures that would save her. There was a skylight upon the roof, and to it Fernald made his hasty way. Swiftly he opened it and began descending a narrow flight of stairs.

He proceeded cautiously. For all he knew the Marquis might be entrenched in this building as well as in the one from which Fernald had escaped. Yet caution deserted him after a moment. He moved quietly, but his wits were not alert. This, the final adventure (for it was certain that wherever the paths of himself and Colin O'Rell might lead, whether to death or safety, these two would never again pose as treacherous associates of the Marquis) of the many that had been crammed into the past few days was so like their first in one particular—that first day on which he had met Colin! They had escaped the espionage of "Snap" Berwind, the dishonest little plain-clothes man, by means of a fire escape. But they had been together then, and fear was not really in the heart of either. Love had been in their hearts, and both had been exalted by its first recognition.

His eyes dimmed for a moment. Brave Colin! Sweet Colin! Colin who never faltered when facing danger! Colin who had been brave enough to admit her love, who had not been pettily conventional in withholding that admission until time should have elapsed! Fernald's lips twisted in a whimsical smile as he remembered how impetuously he had wooed her, and how the storminess of his own passion had awakened response in her. And, bless her heart, she had a sense of humor. She could laugh at love as she could laugh at death, and—well, she was Colin O'Rell, the only girl in the world, and in a few minutes, God granting, the Marquis would be captured, and—

HE had been quiet, but the building was so evidently deserted, and thoughts of Colin, the violet eyes of her, the blue-black hair of her, had been so enticing, that he had been proceeding with a caution that was mechanical. And mechanical things cannot cope with the unexpected. He turned a corner in a hall, three flights down, and stepped right into the spread arms of a burly watchman.

"Gotcha," grunted the watchman. "Thought I heard some one coming—you would, would you?"

April 6 . . .

The ejaculation was brought forth by Fernald's desperate movement.

And years ago the watchman had been a wrestler. His grip was too powerful to be broken.

"Listen!" pleaded Fernald.

Rapidly he sketched the outline of the events of the past few days. The watchman grinned.

"I rang the police alarm on the floor below the minute I heard ye," he grinned. "I suppose ye don't know that this is a warehouse stored with cotton, do ye? I don't suppose y'e'ver dreamed of anythin' like that? Wasn't intendin' to look it over and plan out how to run a few trucks up here some fine night, give me a wallop on the back o' me dome, and make a haul, eh? Certainly not," he jeered. "And tryin' to put over a yarn about the Breen Brothers next door. Them! Spies!" He spat contemptuously. "There's the wagon now," he exclaimed.

THE door to which the police automobile came was on a side street. Fernald was not visible to any possible watcher from the building of the Marquis as he was hustled across the sidewalk by the watchman and two officers. There was that much to be grateful for. And the watchman rode with him to make the complaint at the station house. He could not visit the "Breen Brothers," and tell them of the cock-and-bull yarn spun by a burglar. If only the sergeant at the station-house desk would grant him the credence that the watchman and the policemen refused!

But it took time—precious time! It took five minutes to reach the police station. It took ten minutes to convince the doubting desk sergeant that he was neither crazy nor a liar. It took five minutes more to get the ear—by telephone—of an extremely busy deputy commissioner of police. Twenty minutes gone! It took ten minutes more to reach headquarters. True, policemen had been detailed to go to the Marquis's lair immediately Fernald had ceased talking with the deputy commissioner, but they returned to headquarters while Fernald was still convincing the deputy that he spoke the absolute truth. And they reported that the building was empty!

And now the deputy believed absolutely but it was too late. The Marquis had discovered Fernald's flight, and—Colin O'Rell was gone!

IT was late at night when Fernald was dismissed from a gathering that comprised Richard Hassager, the multimillionaire as whose secretary Colin had posed in order that she might make the Marquis think her able to gain access to vital industrial information, and various police, Federal, and military officials. It was a despondent group. True, Colin had checkmated the Marquis more than once, but as long as the master spy was at liberty, menace remained to threaten the nation.

And there was no trace of Colin. The Regent Hotel, where she had gone to confer with the pseudo Colonel Dufresne, was visited, but its employees could only state that a young woman, answering her description, had been there in the morning and had left soon after. As for the one-armed impersonator of Colonel Dufresne—he was gone.

There was commendation for Fernald for the part he had played, and a tactful withholding of censure for any of the clumsiness of action of which he felt guilty. Moreover, Bigbee, city editor of the "News," called in to identify Fernald, offered his cub reporter a permanent place on the staff at a hugely advanced salary.

No, materially Fernald had suffered no loss through the adventures of the past few days. Indeed, his stories—if he chose to write them—on German intrigues in America were almost certain to make his journalistic reputation. But these matters, praise from high officials, offers of unlimited space in the "Morning News," rebounded from Fernald's consciousness unnoted. His whole brain and heart seethed with but one idea—the life of Colin O'Rell had depended upon him and he had failed her.

Had he been less of a moonstruck youth! Colin had thought that she loved a man, a man of decision, of action. And he, who should have put her safety above the thought of his love, even—he had permitted a stupid watchman to overpower him and keep him prisoner while Colin was made away with by the Marquis.

Had it not been tragic, it would have been humorous. He had coped with the best of the brains that Germany could purchase in the United States, and had not come out any the worse. And then a stupid, fat old man, endowed with no brains, but merely a huge strength, had brought to naught all that Colin had done in the past.

Dreadfully he went to his apartment near Gramercy Park. He tried to solace himself with tobacco, but could not. Here, in this apartment, he had made love to Colin, had sensed the response to his lovemaking in her heart. And now—not only had the Marquis escaped, but Colin was his prisoner—or worse.

Well, he should have known better than to think that he, James Fernald, could have been of assistance to Colin O'Rell. Had he let her attend to her own affairs, had he not intruded into Government business, Colin might be safe now, and the Marquis

emerged from the building, half carrying the other

imprisoned or dead. He hated himself as he restlessly walked up and down his little living room. And then, midway in his pacing of the room, he stopped and stared at the door. He made no sound as it softly opened.

THE Marquis, or one of his followers, undoubtedly, came to wreak vengeance—softly he fingered the revolver that the deputy commissioner had given him. He hoped that there were several of them; it would make a better fight, and—he wanted to be certain of losing in the end. He did not wish to live. But he lowered his revolver as English Fred Jevons, a finger on his lips, tiptoed into the room.

"Sh-sh," whispered Jevons. "Don't know that anyone's about, but—"

Fernald seized him by the shoulder; he shook the Englishman savagely. "What do you want?" he whispered. "What do you want?"

Jevons grinned at him. "Money, mostly," he said. "I know where the O'Rell girl is; and the Marquis too."

The deputy commissioner's revolver pointed at English Fred. Fernald's voice was very soft.

"If you think, Jevons, that this is the time to make bargains—"

"Easy," counseled Jevons. "And point that thing somewhere else; I don't like it. Be sensible, Fernald. I'm on your side. I proved it well enough last night, didn't I? I was sent into a room to kill you, and—I let you come out alive. If I hadn't been with you, you'd been a goner; you know that."

Fernald lowered the revolver. But now his voice was no longer gentle; it was vibrant with excitement. "Where is she?" he demanded.

"And where do I come in?" queried Jevons. He met Fernald's glare unfalteringly. "I'm up against it, Fernald," he said. "What with you having me pinched instead of yourself—I'm a marked man. The police have nothing on me, but they've got their eyes on me. I can't pull a trick in this city."

"Come in? You?" Fernald smiled. "You have the clear conscience that comes with having done the decent thing."

Jevons laughed. "That'll pay the rent, you think? Guess again. Money is what I want; and if you haven't it—nothing doing."

Fernald's smile grew broader. The man must be insane to think that he could withhold from the man who loved Colin O'Rell information as to where she was held prisoner. He weighed the gun in his hand; it fitted beautifully against the heel of his hand.

"Jevons," he said slowly. "I've never killed anyone; I've never expected to kill anyone. But if you don't tell me at once—"

"And you'll find the girl by yourself, eh?" jeered Jevons. He had the whip hand and knew it. He could not be bluffed.

# NED'S PANCAKE GAL

BY RICHARD FISGUILL

ILLUSTRATED BY W. E. HILL

THIS story is largely the question of a soldier's stomach, on which the greatest of captains said an army crawled. And Private Clagget's crawling wasn't much. If he'd been a quarter of an inch taller, the War College would have objected to his length and left him in peace down there on his daddy's farm, which was good for but two blessed things—sweet potatoes and longevity.

Ned had been raised to say "taters," for the Claggets had been raised, not reared, nor brought up. They also pronounced where "whar" and there "thar," in accordance with an old phonetic law that still obtains in certain parts of Great Britain, and in the speech, I'm informed, of two of England's proudest noble families.

Ned Clagget looked like an aristocrat. He was lean and bony. He seemed to have about twice as many vertebrae in his back as an ordinary seeker after happiness. And up and down this noble neck an octagonal Adam's apple moved with all the hitchy, zigzag motion of that curious elevator in the Tour Eiffel—which means that Ned went about talking with precaution. He brought you up a good, for instance, from somewhere down about the base of his tower, and after you'd duly received this consignment Ned would lower his God upon your waiting consciousness, and you felt right off the weight of a wrong-going world.

He started out attributing goodness to the Divinity when they informed him that his time had come to die for folks in general. And he stuck to his assertion all through the dusty training camp. Ned had never seen any dust before. Nothing but a tornado could raise dust on the Clagget farm; and when that came, why, they all retired to the cellar and went to sleep.

But Ned got rid of his camp dust on the army transport. He also got rid of everything else that could possibly be detached. Never had his Adam's apple made so many trips in the same length of time. He was passing away, he felt sure. But all he remarked to the wind and the waves and the smell of tar was: "Good . . . God!" Every time a dolphin shot out of the water Ned was sorry it wasn't a torpedo bent on an errand of cultural mercy. And the usual thing happened. Three days before Private Clagget saw France he was hungrier than he'd have ever thought a white man could possibly be. His seasickness was gone. But his hunger was worse than seasickness, and this was due to his raising.

Before sallying forth to die for the heavy-laden, Ned had never tasted any canned food in his life. One day he'd watched a drummer eat oysters out of the tin, and waited round the country store to see what would happen. That will give you a pretty fair idea of the Clagget dietetics. Ned's turkey had always been wild turkey. His chicken had been of the kind ma took an hour to select—shut up with her flock in the henhouse long before daybreak, so she could feel them all over and choose with wisdom the right sort of parson's nose. As for rabbits, Ned caught them in a bee-gum trap. And when the Clagget family felt inclined to fast on fish—well, that's where Ned's noble sire came in.

OLD man Clagget could button up his beard in his vest (so he wouldn't leave it round on the bushes for orioles to make their nests out of) and go down to the creek and bait there a hole with such unerring science that when he sent his son over to catch a mess all Ned had to do would be to stick a worm on his hook, spit on the worm, and then drop her in. Out came black perch, suckers, trout, and occasionally a catfish that had swallowed the sinker. It was old man Clagget's secret. But he put something in the dough he baited the hole with—"bitters," he claimed—that just made fish tired of staying in the water.

As for bread, the Claggets didn't believe in baker's bread. Ma had once brought back from the store a loaf of baker's bread, thinking that possibly she'd

"What kind of nonsense is this you're hiding in your curly little numskull?"

found a short cut to leisure. The whole family inspected the loaf, smelled it, cut it open, and then voted unanimously: "Nonirree!" And they were afraid to give it to the chickens. Ned stuffed the poison down into a hollow snag on the edge of the woods where an old coon lived that sucked eggs—an old four-legged raccoon.

Nor had the Claggets a better opinion of Irish potatoes. There "wasn't but one kind of potatoes" for them, and that was "taters"—sweet potatoes. Irish potatoes didn't taste right. They'd tried the weeds one spring; did their level best. But the bloom of the Irish potato was too much like nightshade to please old man Clagget. And, after the family had got sick off of the Early Rose variety, ma rolled out on the back of a plate a supply of calomel and rhubarb pills, plied them up in the clock on each side of the pendulum, and then Ned and his pa removed from the garden and from their systems every vestige of those Irish potato vines—that weren't anything, anyhow, but some more of those Yankee notions which were spoiling the South. The Claggets said "spilling." And I fancy that by this time you have a pretty fair idea of how desperately good God got when Ned ran up against the cold-storage flavor and the tin-can taste of an army transport. The training camp, to be true, had broken him in a little. There, however, he'd been so stopped up with dust that he'd never felt really hungry. But now—

"Good . . . God."

He swallowed the transport stuff all right and begged for more between meals. But down in the bottom of his heart he knew what he was eating: "pisen—jes' reg'lar pisen!" And he used to climb up in the crow's nest and gaze back over the sea toward that Eden the Government had jerked him

out of—toward that paradise of fried chicken and barbecued rabbit, spareribs and cold chine, egg bread and hot biscuit, hoecakes and—and, please, sweet potatoes.

"If I jes' had one single good ole tater!"

That's the way you are on ship-board if you haven't traveled much. Some one single article of food rises up before you day and night and seems to synthesise all your past joys, all your present needs, all your future hopes. And, what made matters worse for Private Clagget, he happened to hear an officer say that sweet potatoes were practically unknown in France, and that they took up so much room in proportion to their food value that they wouldn't be shipped over to the men. That was the last straw on the camel's back. And when they pointed out to Ned a strip of horizon that looked as straight and black as a bayonet, and told him it was France, all he did was to swallow his elevator down as far as it would go and then let his soul off at "Taters—if I jes' had one single ornery one!"

And, noticing that the other fellows were all writing home for this, that, or some other thing—chewing gum, chocolate, peanut brittle—Private Clagget applied to his earthly father and mother for a sweet potato.

"Jes' one," he wrote. "But a whopper, for Heaven's sake!"

NOW this is the story of a girl named Yvette, whose universe was a little French valley and whose world was a farm about twice as

big as an ordinary American back yard.

Ever since doll days Yvette had believed in marriage, and when she got to be twenty she picked out a mate with all the care of a motherly robin that had reached April latitude. That is, Yvette became engaged. And she and her *gars* billed and cooed together just before daybreak every morning, after the manner of French peasants who don't like to let birds beat them to the fields.

Yvette and her *gars* also went to Mass together, played dominoes with the curate every Thursday evening, and finally, after very careful calculations, decided that the next St. Martin's should be the day of all days for them.

One reason for their choosing November 11, St. Martin's Day, was that Yvette's mother always killed the pig just before St. Martin's—not a pig, but the pig. And Yvette knew that her marriage dinner would be a much bigger affair with fresh pork and hard cider than with hard cider and ordinary ragout.

Then there was a spiritual reason for picking out St. Martin's. Nine days before St. Martin's came All Souls' Day, which in France is called the Day of the Dead, and that's the most solemn event in the whole French year. On that day, the 2d of November, you remember your dead, go to see them, talk about them, pray for them, and resolve that you're going to do your very best to come up to your ancestors. Yvette and her *gars*, therefore, with that deft combination of the spiritual and physical which constitutes the secret of French life, harmonized hog killing with the high resolves attendant upon ancestor worship, and picked out the next St. Martin's as being just exactly the right day for the filing of their claim.

But St. Martin's never came. The Day of the Dead didn't

He and his "tater" talked to each other about times when it was good to live

wait for the 2d of November that year, but started in August. And when the date for St. Martin's did finally come round, that grim festival of the dead was still being celebrated—that unending Jour des Morts. Yvette was not only without a betrothed, but without even a single hope of ever finding another one. They were all gone that would have married her—all but one, Alain Brinbajoue, who, armless now and legless, stayed in a box full of straw on the church steps, chanting out monotonously the cries of rage, the curses, and the prayers of his comrades who, in his mutilated memory, were still falling about him, one by one, "for the sake of the Father, the Son, and the Holy Ghost, and France."

YVETTE put a clean sou in the cripple's box every Sunday morning, and then ate a little less ragout at dinner to make up for her charity. And the war wore on. It was like a winter night that wouldn't end. Ragout was precious now. A full-grown hog sold for three hundred francs. Instead of killing her pig just before St. Martin's Day, Yvette's mother sold it. Instead of beating out her wheat with a flail, and then standing up on a barrel to let the wind do the threshing as she slowly poured the grain down into her dishpan, Yvette's mother sold her crop as it stood in the field to Government agents who were moving about the country equipped with an American steam thresher.

Yvette and her mother also sold the potato crop. But they still ate their own turnips and leeks, their carrots and artichokes, their string beans and parsley, their cabbage—all that wasn't needed absolutely for the feeding of that splendid little new white pig of theirs, which the mayor (who had sold it to them) pronounced as being the most noble animal that had ever been born on his farm.

"If you treat him right," the mayor told Yvette, "and if the war keeps on, I wouldn't be surprised if your mother were to sell that pig next fall for as much as five hundred francs. You see, child, that's not an ordinary hog; it's a pig of vast capacity!"

The first thing Yvette did was to choose a name—such as would ward off the various forms of bad luck that usually waited on pigs. And she called the animal Christopher, the curate pronouncing this a most excellent name for either folks or hogs. Then she crawled into the sty and scrubbed it as clean as a stewpan.

Just before sundown every day Yvette let Christopher out to stretch his legs. And the best breed of French hogs have legs that are astonishingly long. Christopher belonged to the nobility. And the shines he cut up of an evening when they let him out—jumping over the tub, rearing up, racing about, curling and uncurling his tail, and emitting the most amazing little squeaky grunts of joy—suggested a sort of combination colt and kitten with the instincts of a puppy. There wasn't any doubt about his being a pig of a vast capacity, just as the mayor had said. And with lukewarm water Yvette gave her pig a bath in the washtub every Friday afternoon, using a strong kitchen soap that made his red skin glow. And she always kissed Christopher after his bath.

In fact, there happened what I don't believe could possibly happen to anybody else except a French peasant girl. Yvette solved her life problem with the pig—got her dreams out of Christopher, put her dreams into Christopher—and gradually evolved many excellent reasons for living, working hard, and believing that somehow, somewhere, everything would turn out all right in spite of that awful litany of death cries which was still trickling like blood from the chapped lips of Alain Brinbajoue, who stayed in a box full of straw on the steps of the Church of the Sacred Heart:

"And René Chamberton, the one with black eyes, here's what he said— And Adolphe Touardel, who sang in the choir, when a shell splinter stuck through him, he— And Pierre Granvier, who had a neck like a bull, he just doubled up and hissed— And Victor Lemanair, with those crazy eyebrows; oh, look at him, God, standing up there like a target full of holes, bleeding out his France—Fran—Fra—" For not only did Alain Brinbajoue give all the curses

and prayers, but even the death gurgles of those dead comrades of his, and he imitated their voices as best he could, ending up eternally with: "For the Father, the Son, and the Holy Ghost, and France."

But Yvette's heart heard something else—something that throbbed on in spite of that everlasting Jour des Morts. And with a queer, far-away look in her eyes one day she told the curate:

"Father, you know Christopher is promising me a great many things—a wonderful husband and an automobile!"

But Father Rassec was a very practical man who had sprung from the peasant class himself. And the thing about the war that worried him most was that they wouldn't let him join his regiment. He was too old. Father Rassec didn't want to say Mass; he wanted to use a bayonet. And, frowning at the dreamy look that crept out of Yvette's eyes and overspread her face, he remonstrated:

"Now, look here, Yvette Boubanec, don't you go and be a fool! It's bad enough for all our boys to get killed without you girls getting flighty. You and your mother have a fine pig, and that's all there is to it. If you sell him for as much as five hundred francs, it will be another one of St. Eloi's miracles. Your mother will then buy a Government bond, you'll start in with another pig, and I'll be just that much older. So there you are, and that's all there is to it. What kind of nonsense is this you're hiding there in your curly little numskull, Yvette? I'm not in the confessional, daughter, but out with it."

Yvette laughed, took the priest's hand and kissed it—biting him a little just to show she wasn't crazy, and then went down the road, singing:

*Le mariage est doux comme une fleur nouvelle,  
Le mariage est doux,  
Filles, mariez-vous!*

And Father Rassec, who was like most fighting men and had the heart of a child, wiped his eyes with the back of his hand and swore out loud in Latin.

"Enter and git outside the damfine pancake the mother make"

sulted in very hard multiples for American arithmetic. In that chill, damp air, after a twenty-mile hike, seven, eight, or even nine pancakes felt to the American stomach like a gossamer lining only. But that unnatural seven times four, eight times four, nine times four—There's where arithmetical cramps began that changed for the worse into well-nigh logarithmic agony when a bank note was given in payment and the change had to be worked out in accordance with those scrappy little twenty-cent francs which were worth but seventeen cents and a half.

Dare-devil young lieutenants who were making the first money of their lives, and expected to get killed anyhow, refused to fool with French change, and told Yvette to stuff it in her stocking. That was the first English phrase she ever learned. Sergeants imitated their lieutenants, as did most of the corporals. But privates soon learned they couldn't shoot up the French kitchen with thirty dollars a month. And there's where the trouble began—disputes, quarrels, accusations of cheating lodged against Yvette and her mother.

Father Rassec decided that there was but one way

out of it. Yvette just had to learn English, so she could count out loud with her customers. And the old priest, who knew only his Breton, French, and Latin, bought grammars and dictionaries, and started out giving Yvette lessons in the structure of English, leaving her to learn pronunciation from her customers.

YVETTE didn't sleep much. She sold pancakes by day and worked on English at night. It wasn't long before she learned that Americans pronounced "curse" as if it were written *cusa*, "girl" as if it were *gal*, while, instead of Father Rassec's literary "very," she noticed that her customers preferred the dialectic form *dam*. So in the sweetest tones she could command Yvette cried out her wares to the passing troops:

"That sirs approach themselves, enter in, and git outside the damfine pancake which the mother make before the eye! But four cent one, one but four cent! Step lively, men, when hot! Attention!"

Father Rassec was delighted. He could readily understand Yvette's English, and he used to stand there for hours at a time, watching Americans eat pancakes, taking off his hat to all the officers, blessing the privates with a sign of the cross, and praying silently for all those American bayonets that made such pretty hatchwork for France's fields.

Yvette soon became so fluent in English that she didn't have to study at night. Nothing to do now, in the evening, but squat in the kitchen with her mother after the shutters had (Continued on page 34)

She dropped on the ground and sobbed: "O Edouard, mon Edouard—he starve to death!"

Now this is the story of a French pig and an American sweet potato. The fourth year of the war had begun—the fourth year of the Jour des Morts. And it was November, especially in France.

Christopher had reached his majority, but his appetite hadn't stopped growing. Instead of playful antics, this pig of a vast capacity now utilized his daily half hour of exercise in scouting hither and thither, up the road and down, under this hedge and that, in search of any American canned food that American soldiers had chanced to bless and throw away.

The valley was full of Americans. And what had been a community of French peasants, bent over

# How to double the life of your engine

**T**HE life of your engine depends on the lubrication it receives.

This fundamental fact has been proved by hundreds of scientific experiments carried out in laboratory and road tests by leading automobile engineers.

Any well-built engine can run, after a fashion, for weeks, sometimes for months, on inferior oil—but with rapidly decreasing efficiency. And then come troubles, in endless succession; worn and broken parts, requiring costly replacements, and eventual relegation to the scrap heap.

Do you want this to happen to your car?

Year after year the properly lubricated engine will give good, steady, efficient service, both operating cost and wear on the parts being reduced to the minimum.

## Sediment in ordinary oil causes wear

The use of ordinary oil results in rapid wear because it breaks down under the terrific heat of the engine, 200° to 1000° F., and forms large quantities of black sediment. Sediment is the greatest cause of friction and consequent shortened

life of the parts in automobile engines. It crowds out the good oil that should form a protecting film between moving metal surfaces. As sediment has no lubricating value, these metal parts grind together, producing friction and wear.

## The tiny teeth of friction

Suppose you could examine a bearing, wrist pin or other working part of an engine through a strong magnifying glass.

You would find its apparently smooth surface literally covered with millions of microscopic teeth.

When sediment crowds out the cushion of lubricant that separates two such moving surfaces, these tiny teeth grab and tear at each other.

*Showing sediment formed after 500 miles of running*

## How the sediment problem was solved

Hundreds of laboratory and road tests were required to solve this sediment problem.

After years of labor and research by prominent engineers and chemists, a new method of refining lubricating oil—the Faulkner Process—was discovered. By this process—exclusively used by this company—was produced Veedol, the lubricant that resists heat.

## The famous Sediment Test

The advantage of Veedol over the average oil is strikingly shown by the famous Sediment Test—illustrated in the two bottles at the bottom of the page.

In the bottle to the left is a sample of ordinary oil taken from the crankcase after 500 miles of running.

The right hand bottle contains a sample of Veedol taken under identical conditions.

## What airplane engineers learned about lubrication

During the past two years, airplane engineers have learned that their greatest problem is one of lubri-

cation, so intense is the heat in airplane engines, and so rapidly does it cause lubricating oil to break down and sediment to form. They have proved the great value of the Sediment Test and of a lubricant that resists heat.

By showing that the use of ordinary oil will reduce the life of a high-powered airplane engine from 500 hours to two or three hours, airplane engineers have demonstrated what happens to an automobile engine after weeks of running with ordinary oil.

### Be sure you know what kind of oil goes into your engine

Experienced motorists are rapidly coming to insist on knowing what kind of oil goes into their engines. They find out exactly what oil is best for their particular engines, and stick to that oil.

Uniformity of lubrication is of the utmost importance.

No matter when, where, or how you buy it, you will find every gallon of Veedol the same.

### Try this road test with your car

Drain the oil out of your crankcase and fill with kerosene. Run the engine very slowly for 30 seconds and then clean out all kerosene. Refill with Veedol and make a test run over a familiar road including steep hills and level straightaways.

You will find that your engine has acquired new power, hill-climbing ability and snappy pick-up. It will run more smoothly and quietly and will give greater gasoline mileage.

Users of Veedol find that, besides increasing the life of their engines, Veedol greatly reduces their operating cost.

### Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he does not, write us for the name of the nearest dealer who can supply you.

### TIDE WATER OIL COMPANY

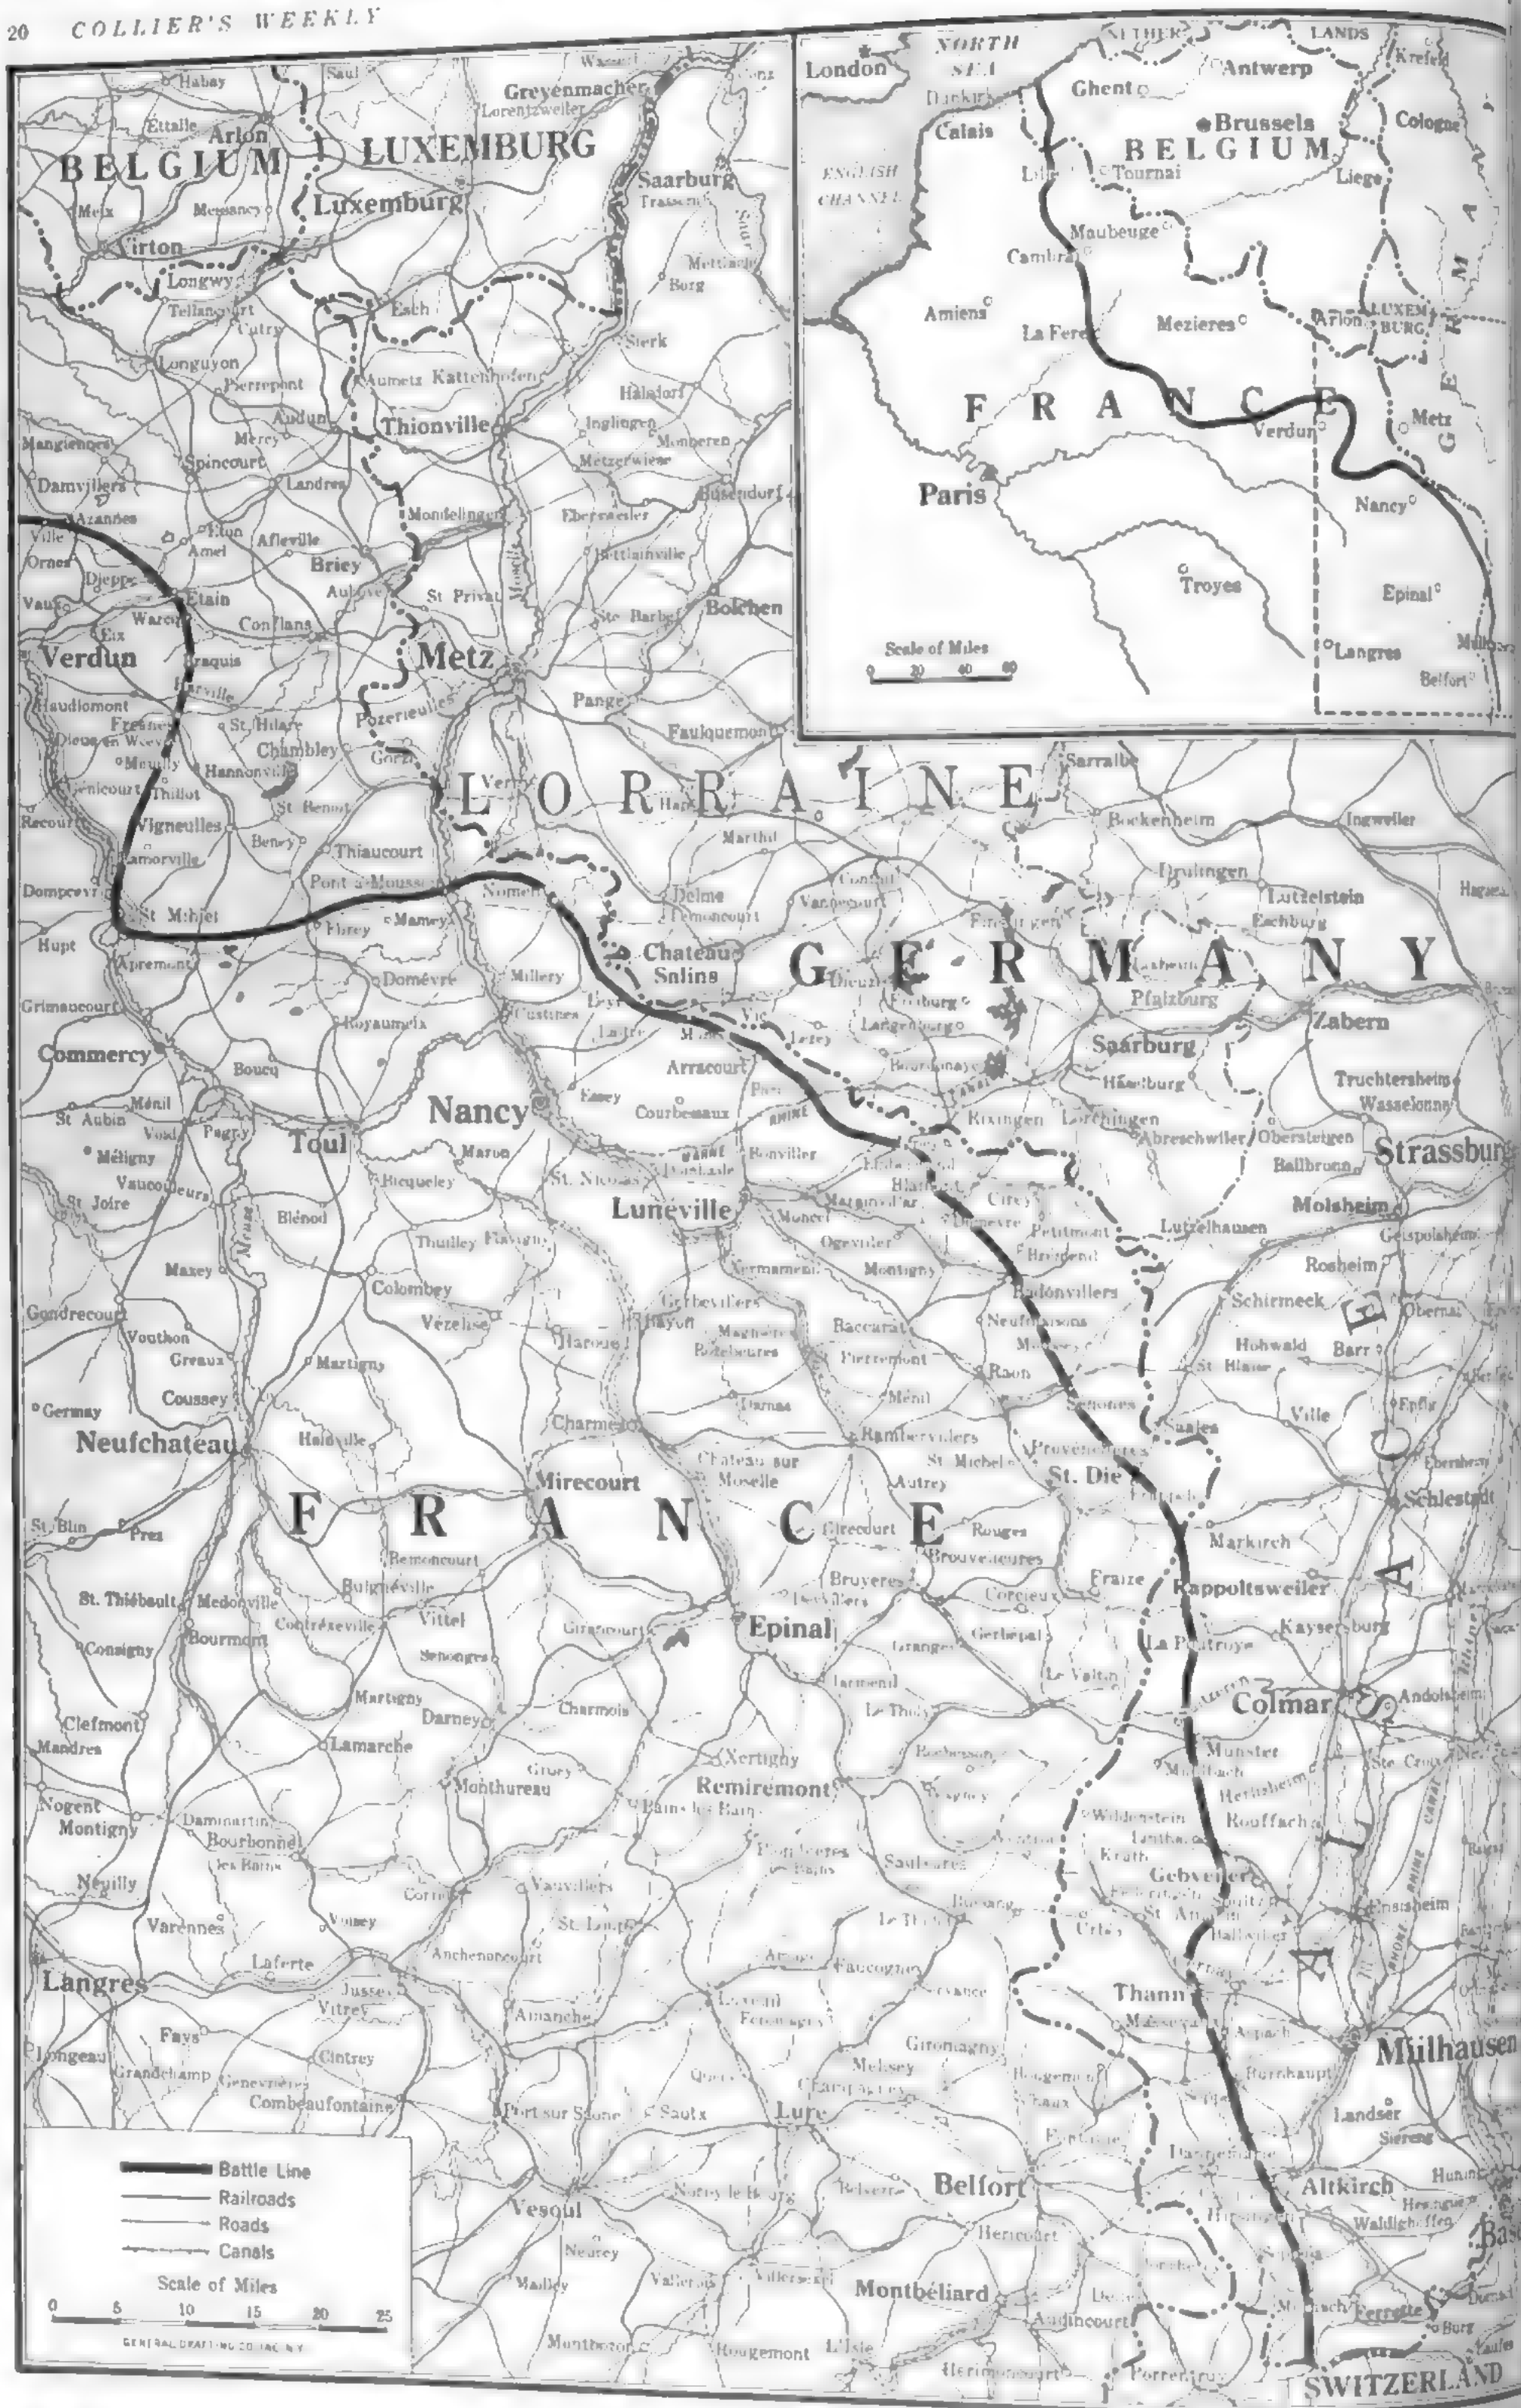

Veedol Department  
1729 Bowling Green Building, New York  
Branches:

### An 80-page book on lubrication for 10c

The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as a text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

## WHERE WE STAND

The heavy black line shows the battle front along part of which American troops are now fighting

of our aviation fields is in Texas. Like all the others, it covers several square miles. It was bought, and the hangars were erected within the past year. Like everything that Mr. Howard Coffin has done, this plant was made for the future. But a few weeks ago several accidents happened at that field. They all happened during the hour when the students were coming in at evening from their flights. It turned out that the air over Texas had literally become crowded. And so the authorities are now buying several other fields, distant about ten miles from the mother field; and the aviation camps of the future will be arranged according to this system, a central plant surrounded by a circle of smaller fields.

The result of the Aircraft Production Board's policy is that we shall go on the western front, beginning in June, with a single-type airplane engine. The British and French between them are using at least six times as many types as the Germans.

#### Airplane Needs

NEITHER the Aircraft Production Board nor the Signal Corps has done what it was freely prophesied it would do in the first year of war. Like everybody else, the service oversold itself. And then the public doubled the figures. And so an impression has somehow got abroad in this country that we should have 100,000 airplanes on the western front this summer. Well, in the experience of the British and French, it takes forty-seven men for every active fighting plane, and four machines in reserve for each one active. To put 100,000 fighting planes in France this summer we should have had to produce over 4,000,000 planes and enlist more than 4,000,000 men in the Aviation Service. Actually, there have never been more than 2,500 planes active in the whole Allied army on all fronts. As a matter of fact, our original hope was to build from 20,000 to 22,000 planes all told by next summer. We shan't do that. Nevertheless, our achievements in this branch of the service have been fair. What we are liable to realize very soon is that we should revise all our views about the airplane, that we should enlarge this branch of our activity enormously.

There is one department of our year's preparations that cannot well be reduced to figures. Director Gifford of the Council of National Defense speaks of it as "the creation of relations." It really includes most of the intangible things in the way of adopting policies and getting the country mobilized for war along the lines of those policies. In the one great field, labor, we have been slow about getting a policy. Six months after war began England had her workers and her great employers in an agreement by which no strikes were to be called during the period of the war, an agreement acceptable to labor because on the one hand previous standards were guaranteed by the Government and on the other four-fifths of the employers' profits went to the empire.

One year after we have declared war we are beginning seriously to talk about a labor policy, and now only because we have been forced to it by the serious curtailment of man-power in the shipyards. Policies ought to precede events; they ought not to be improvised in the hurrying of meeting events.

#### Prices and Food

TWO other policies which were adopted with reasonable promptness were price fixing and the regulation of food. There are plenty of persons, many of them economists of high standing, who don't believe in these policies. But, the policies having been adopted, there can be no doubt that they have been put into effect with obvious results. Director Gifford of the Council of National Defense put on record before the Senate Investigating Committee an itemized statement showing that the amount saved to the Government by the price fixing of supplies is approximately \$3,112,000,000. At the moment we entered the war, prices in this country were rising very fast, due to the urgent buying of the Allies. Coffee was about 30 cents a pound; price fixing made it 23½ cents. Lead was 11 cents a pound; price fixing made it 8 cents. Pig iron was \$55 a ton; price fixing made it \$33.

As to food, when Mr. Hoover received his appointment wheat was selling at \$3.50 a bushel; sugar was actually sold in one place at 5 cents an ounce or 80 cents a pound. Mr. Hoover subsequently said that sugar would have gone to 25 cents a pound if it had not been for prompt action on the part of the Food Administration. Experts in the sugar business say 50 cents a pound. Sugar went to 35 cents a pound in the Civil War, when there was neither a national nor a world shortage of sugar. Flour might very well have gone to \$35 a barrel.

Mr. Hoover started in with none but advisory powers and no appropriation. His principle was that nobody should make money out of this war. His first object was to encourage production and proper distribution—lest the Allied world starve. The sugar refiners agreed to a differential of \$1.30. This meant that whatever raw sugar cost and however high the price of refined sugar went they would not charge more than \$1.30 per hundred pounds for manufacturing it. It meant that the refiners had no financial interest in the price of

Judging the landslide by a pebble

either raw or refined sugar; they were agreed to a \$1.30 differential, or 54 cents less than they had previously been getting. And when Mr. Hoover got his powers in August they were licensed on this basis.

The net result so far as prices are concerned of the Food Administration's efforts is a reduction of 14 per cent from the figures of May 17, 1917. The net result so far as the conservation of food is concerned is more difficult to compute. One specific task Mr. Hoover set out to accomplish was to reduce our consumption of wheat in favor of corn. We produce approximately 600,000,000 bushels of wheat a year and consume nearly that much. Our per capita consumption in the form of wheat flour alone is four and a half bushels. But we must, Mr. Hoover says, eat no more than three and a half bushels of wheat per capita this year, using corn instead, and releasing 100,000,000 bushels of wheat for our allies. The Food Administration is accomplishing this purpose almost wholly by persuasion. Within a year after our declaration of war we, a nation devoted to white bread, to eating wheat and only 60 per cent of the grain, are eating war bread.

#### The "Neck of the Bottle"

IF you ask the question: "At the end of the first year, just where are we—how well have we done?" the answer is not easy to express, for there is no standard of comparison. In trying to get something definite I put to a dozen men in the high posts of responsibility the question framed in this form: "Compared to where you yourself expected to be, judged by the standard you set up for yourself at the beginning, just what percentage have you been able to accomplish of what you expected to accomplish?" An average of the answers indicates that we have done about 75 per cent of what we hoped to do; that it will be July before we reach the degree of preparation we expected to achieve by the first anniversary of war.

But the measure of the nation's preparedness as a whole is determined by the preparedness of that one of the departments which is least well prepared. For the nation fights as a whole; the necessity is for the nation to become a single great war machine. And it so happens that the department in which—after three years of warning and a year of preparation—we have done most badly is that which is of the first importance. No matter how situated, the first concern of a nation and of an army is its transports, the line of communications that joins the army with its base. To every professional soldier this is A, B, C. Its maxims are drilled into him from every textbook. Napoleon put it compactly: "The secret of war is the secret of communications." All the standard military writers put it as strongly: "Any organization intended to maintain the efficiency of armies in the field must depend on communications with home being properly maintained," says Von Schellendorff.

"It is an axiom that no army in the field can exist for a long time in an efficient condition unless it has safe communications with the base," says Furse. "The lines of communication should be made clear before everything," says Von der Goltz.

A phrase frequently heard at Washington just now is "the neck of the bottle." The neck of the bottle is shipping. And that neck is much too small. There are in this country to-day supplies which cannot be delivered to our army in France for two years, even granting that the most optimistic forecasts about our ship program are made good. There was a good deal of justification for the cynic who remarked one day when the morning's news included a message of sympathy from President Wilson to Russia and a new loan to England, that there are two commodities which we are able to send in unlimited quantities, talk and credit; they don't consume much shipping space.

#### Equipped with the Best

TO a certain extent you are always compelled to make a choice between speed and thoroughness. Some of our slowness has been without adequate justification; at the same time mistakes of speed can be made which are disastrous in the long run.

In the providing of equipment we have been slow. We haven't yet any quantity of machine guns—we won't begin to have quantity until the coming summer. We haven't got field guns. And many a man in the National Army drilled the first weeks with a broomstick instead of a rifle. But our equipment, however slow, will be of the best when it comes. No nation has a better rifle than ours. No nation will have better machine guns. No nation will have better ammunition. In the Spanish War a regiment of Massachusetts volunteers were using ancient single-shot rifles, weapons ridiculously inferior to the Mausers of the Spanish. They were loaded with black powder, and the black powder so plainly marked the position of our attacking troops that the volunteers had to be withdrawn in order to save the regulars who were shooting smokeless. In that same battle of El Caney we had four field guns, a number so small that they did more harm than good, for the smoke of their black powder betrayed their location immediately to the Spaniards, and the shells they were able to fire were too few to count.

# KEEP YOUR SHOES NEAT

# 2 IN 1 SHOE POLISHES

## PRESERVE THE LEATHER

In addition to giving a quick, brilliant, lasting shine, 2 in 1 Shoe Polishes keep the leather soft, help to prevent cracking and thus make your shoes last longer. The use of 2 in 1 Shoe Polishes will best offset the present high cost of leather.

BUFFALO, N. Y.

The Spanish-American War lasted not much over six months. If you are old enough to recall, or if you look up the history of that six months, and compare it with our year just past, you will find much to cheer you. In the Spanish War you will find a record of epidemics of typhoid in the camps. You will find that volunteer soldiers went into battle in tropical swamps on the Fourth of July wearing the same heavy clothes in which they had left their homes in Montana and North Dakota at the end of winter; and you will find that the War Department of that day got around to furnishing light summer clothes to the soldiers just as they arrived at Northern camps, their active service done, at the beginning of autumn. You will find the record of a famous "round robin," signed by the principal officers in the field, demanding that the army be taken out of the field to escape disease. And you will find the scandal that put into our American vocabulary the phrase "embalmed beef." Against this it is good to balance the testimony of one of the leaders of the criticism of our present War Department, Senator Wadsworth of New York:

"Another thing that we ought to remember at this time is that the American army has been fed as well as, if not better than, any other army on the face of the earth during this period; and the credit for that great task, the training of soldiers' cooks in the quartermaster's cooking schools, and putting them to work in the cantonments in time to serve a hot meal, the first meal, to the soldiers as they arrived in the cantonments—the credit for that ought not to be denied. It is one of the things in which foresight and organizing ability were shown, and we ought to be grateful for it, and I am glad to pay tribute to the officers and men who accomplished that great feat."

At the same time, although his speech was in the main directed at the defects of the War Department's year, Senator Wadsworth covered another point, the main point of all, with quite sweeping praise:

"When one considers the mental attitude and psychological condition of the American people at the time we went into this war, then considers the revolutionary character of the Selective Draft Law, and then follows down and traces the operation of that law, I think everyone will gladly admit that the operation of that law and the working of its machinery have been a remarkable and conspicuous success, far beyond the expectations and hopes, I think, of a great majority of the men who sit in this Chamber."

If you take our preparedness situation as of the day we entered the war, April 6, last year, and compare it with our situation to-day, the enlargement has been very great. But as in many cases of the use of statistics, you can make a good showing by starting from a very low point. In taking the day of our entrance into the war as the standard of comparison, you are being very generous to the Administration. You are in effect creating a statute of limitations on that date, and forgiving all the sins of commission and omission that happened before. We had had nearly three years of warning. We had the benefit of all that the Allies had learned through experiment and mistake. And, as to the turning out of munitions and supplies by our American factories, we had the benefit of the hundreds of millions that had been spent here by our allies. Our allies had taught our factories how to make war munitions, and had paid for the installation of equipment and the erection of new buildings.

### A Policy of Thoroughness

A PART of the delay, of course, has sprung from inefficiency. Another part has been a matter of conscious policy. We have sacrificed speed to thoroughness. That feature has been largely the personal equation of Secretary Baker. Whether this was expedient under all the circumstances is a subject for honest difference of opinion. It is the basis of much of the complaint and recrimination that we have gone through. It may or may not have been best; but I, at least, get pleasure out of reflecting on it. It may not make for accomplishment in the present, but the thing it does reflect is determination for the future. And this war has now taken a form in which determination for the future is of prime importance. The anniversary of our entrance into the war is exactly the low point of the Allies' fortunes. But this has happened through causes that the United States is not responsible for. Of course, if we had entered the war one or two years earlier, the situation might well have been different. But it does not seem to me that anything we could have done since last April in the way of speed would have ended the war victoriously, and if that be admitted, then it is good to feel that Germany, as she now looks over the field, should have it borne in upon her that from the first, as the normal and spontaneous expression of our state of mind about it, we had a policy of thoroughness independent of time, a policy which aimed steadily and confidently at ending the war victoriously.

## A CITY OF REFUGE

*Something Our Troops Are Doing  
in the Orient*

BY HENRY JAMES FORMAN

ANYONE who has occasion to observe the United States army in the field—in any field, anywhere—is immediately and immensely cheered. No accounts of red tape or bad management in Washington can alter the obvious fact that our men are competent, self-reliant, capable, responsible, gifted, in short, with exactly those qualities that free institutions should develop. Common sense and responsibility in the officers, responsibility and common sense in the men—those two qualities can do more than any other to make the world yearn for democracy.

A certain United States regiment of infantry, whose number I shall withhold for the censor's sake, happens just now to be stationed at Tientsin, China. Why we keep a regiment of soldiers at Tientsin is a long story. Here I can only say that other nations also keep troops in China, to protect their respective national interests, notably since the Boxer trouble. The legation guards in Peking are comparatively small bodies; Russia, for instance, at this moment, has only seventeen Cossacks there; the United States has something less than three hundred marines. These and the guards of other nations could, perhaps, hold the quarter until the troops at Tientsin could come up.

There, in any case, the regiment is, and it is by no means lying idle merely waiting for trouble. It is busy at this moment saving thousands of Chinese lives as a regular part of its day's work.

Everybody has heard of the Tientsin floods of last autumn, when a great number of villages and farms, hamlets, and homesteads in the region of Tientsin were suddenly swept away and some 15,000 square miles became an inland sea. The floods were caused by the rising of the Peiho and other rivers in the flatlands surrounding Tientsin, which means near to Peking, for the cities are only ninety miles apart.

How many thousands of lives were lost no one will ever know, since nobody has as yet succeeded in keeping any vital statistics in China. Nor is it known how many refugees drifted into Peking and into the surrounding country. It is known that nearly 100,000 came into Tientsin during the first days after the floods.

When I was there at the beginning of the winter, I still saw box cars of families clad in rags and gunnysacking on railway sidings, headed in the direction both of Peking and Tientsin. Sampans, junks, barges, and even tubs were navigating among the tree tops of this inland sea, and every hilltop was a little island, with here and there a thatched mud hut perched upon it, and Chinese life going on somehow.

For the Chinese may be described as masters of misery. No one can be so miserable as a Chinaman or show it so little. He can put up with anything, and generally does. If what is there is a thousandfold worse than nothing, he puts up with that. If his children have

clothes, they wear them. But even in the crisp, early winter weather of northern China, I saw some of them go nude, and, whatever the parents may have felt, their faces betrayed no signs of emotion.

#### The Army Takes Hold

IT was to mitigate some of these conditions that the American Red Cross asked the War Department authorities to assume the care of some thousands of these refugees, and promptly the regiment at Tientsin was ordered to undertake the work.

The first thing the army did was to lay out a camp in the German concession. Tientsin being a treaty port, the various nationalities, including Japan, have portions of the town assigned to them as concessions. Every concession is really a little piece of its particular nation in the midst of China. The English concession, for example, looks like the Baywater section of London, the French looks like provincial France, and so on. The United States never took advantage of China's offer of a concession, although recently we have acquired some new barracks there. But, strictly speaking, we do not contribute to the crazy quilt of concessions that makes up Tientsin. All the same, it is very cheering to see the American khaki in the streets, even though our particular architecture is not represented.

The German concession, which has the newest and most imposing buildings, is just now denuded of its goose-stepping troops because Germany and China are at war. There are still plenty of thick-necked Germans in Tientsin, but it is the United States which dominates that concession, and there the city of refugees was laid out. It is laid out in streets and cross streets, military fashion, just as though it were an army camp.

#### All Work but No Duties

A CHICAGO architect, Mr. Henry Hussey, who happens to be in China building the \$2,000,000 Rockefeller medical school, volunteered his service in designing a species of hut peculiarly adapted to Chinese needs and Chinese building materials. One thousand huts were built in blocks of twelve on streets twenty-one feet wide. The materials are mud and reeds, with just enough of lumber to support them. They all face south and, being built in the form of the quadrant of a circle, the rear of the ceiling and the floor touch and meet in the most affable manner. The sun, moreover, shines on the ceiling. It took just three weeks, from September 25 to October 16, under the supervision of the soldiers, to complete these residences for 4,000 people, and every hut costs something less than \$15 Mex. apiece.

Space and sanitation have probably never before received such scrupulous attention in China as our army officers gave to these refugee shelters. There are no dark corners or crannies so beloved of the Oriental, and as much as possible outdoor life is made compulsory. Every hut is supplied with a *kangue*, or brick stove, for both heating and cooking purposes, and Chinese women, who do things in the way of three thousand years ago, must suddenly adapt their pre-Biblical ways to military regulations. They look with surprise at the great pains being taken by the engineers and the doctors in the matters of water supply, hospital facilities, and preventive measures, and seem to ask themselves as in a dream: "Are our lives, then, so very dear?"

The American soldier's answer is yes, and boys from New England and Middle Western farms, where the only Chinaman they ever saw, if any, was the mysterious laundryman, are governing several thousand Chinese, to the great delight of the Chinese.

"How do you like this work?" I asked the rookie who was conducting me through these strange streets, among the swarming yellow children and trousered almond-eyed women.

"Oh, we like it fine," he exclaimed with enthusiasm. "You see it relieves us of all duties." Colonel Sigerfoos, who was in command of the regiment when this work was begun and who organized the work, has since then been ordered to other duties and was succeeded by Colonel Edward Wilder. The work, however, is proceeding just as satisfactorily. It is the American army way rather than the personality that counts.

To begin with, everything is done with immense good humor. With good humor a private from Kalamazoo or a sergeant from Missouri, without a word of Chinese, can exercise perfect author-

The biggest word in Buying and Selling is Value. It looms bigger than ever in this year of upset and uncertainty.

Kahn Made-To-Measure Clothes, Civilian or Military, for Spring 1918, are the fullest value in Woolens, Tailoring, Style, just as they have always been.

The assortments will include many rare patterns from the famous mills of England, Ireland and Scotland.

ity over any number of Chinamen or Chinawomen, and no one dreams of questioning it.

Idleness is not encouraged. There is a complete system of government with an executive department, police, purchasing, and supply departments, and even an employment department. For the unorderly Chinese no better object lesson could be devised than an orderly little city like this camp, with practically no loose ends. It is as good as a liberal education for them. Broad as the government once they are settled in the camp, so in proportion is it strict and rigid at the gates. Nobody is refused admission, of course, but every man, woman, and child has to undergo a rigid examination and a purification. And, being a matter of army discipline, sentimentality does not enter into the conditions.

Every arrival, man, woman, or child, is bathed, washed, carefully shampooed—queues and all—examined, and vaccinated. When they first began to pour into Tientsin from the surrounding country there were many cases of small-pox going freely about in the streets. The American army doctors soon put an end to that. After vaccinating the new arrival, new clothes are given to him or her, the old clothes are fumigated, packed into a bundle, and put away in a godown, or storeroom, to be returned to the owner when he leaves the camp. Owners, however, are not anxious to leave the camp since their village homes have in many cases been completely swept off the map of China. They want to remain, and the employment department

sees to it that able-bodied men have employment, and the supply department, thanks to the American Red Cross and Mr. Roger Sherman Green, its representative in China, sees to it that the women have fires in the *kangens* and food boiling in the pots.

Every inhabitant of the camp is catalogued, not only as to ordinary vital statistics, but even as to skill, capacity, and characteristics. Inhabitants of the camp are employed on camp work before labor is sought anywhere else, and whenever an employer needs workmen or workwomen the employment department knows how many it can give for each particular job.

All this is only a sort of side job for a regiment of our infantry which, as the rookie said, is "relieved of all duties." But the common sense and ability with which that work is done, to my mind, deserves recording as a sample of the versatile capacity of our troops in the field. We all feel that they possess the capacity, but there is nothing so convincing as a concrete case.

Yet the night I left Tientsin on the Peking-Mukden express two boys of the regiment were doing military police duty at the railway station, and I asked them how long they had been there.

"One year three months seventeen days," said one.

"Don't you like it here?" I asked him.

"No," he replied, "it's fierce!"

"Where would you rather be?" I queried.

"Where do you think?" he answered.

"Where there's something doing of course—in France!"

## With the Crumbling Russian Army

*Continued from page 2*

to get a motor if possible. That way—possibly some of the British armored motor-car people might be going down to Army Headquarters—the trip would be a matter of a few hours. Zigzagging round the map on military trains might take a couple of days.

The Britishers had no car, unfortunately, and there was nothing for it but to camp out in the station chief's office and wait for him to put me on a train. It was wilting hot. I had tramped over the shabby little town, like so many of these towns in the Pale, all Jews and jargon and dust, with an overlay of Russian officers and—quaint suggestion of how matter-of-fact the war had become here—Austrian prisoners still in their blue-gray uniforms driving the little horse cars with the hored air of old inhabitants. Bored too, and weary, I sat down on a leather sofa opposite the station chief's desk and waited for something to turn up.

### "Right Away"

**HE** was a youngish officer who combined the usual good nature with a complete lack of interest and concentration in his job. Scratching matches, drinking tea, hunting for cigarettes, he proceeded by a series of rapid zigzags, as it were, through his afternoon's work. A good deal of his time was spent in ringing one or another of two telephones, neither of which seemed to have any central. All sorts of irrelevant people kept calling him. His sister wanted him to get her some bread. A friend wanted to know if he didn't have a way of getting some vodka—"How in Heaven's name," he groaned, "would he have any vodka?" Then, running his hands through his hair desperately, he suddenly announced, apropos of nothing, that he wanted to go to America—"the *torarishi* made too much work for him here!"

The place was hot and full of flies; there was nothing to read, no one to talk to—it got on one's nerves after sitting there hour after hour. He must have had some general notion of the time the Preskurov train would be starting, but although it was nearly sundown before it did start, every time I ventured to inquire he flung back the usual petty official's "*Skoro budit!*" "*Sichón!*"—"Soon will be!" and "Right away!"

Many officers came and went; once a soldier who whacked his heels and saluted. The station chief didn't see him apparently, and the soldier, a rather short and stocky oldish fellow, much awed by his surroundings, stood at attention, the heels of his clumsy boots held tight together, his eyes watching every movement of the young officer as if his life depended on it.

Here, plainly, was one of the "10 per cent who wanted to be good." The very tone of his "*tak tochno*"—a sort of "Aye, aye, sir!"—a good deal neglected

in these *torarish* days—and his bone of doglike trust showed him a soldier of the old school. He had that peculiar dignity often seen in the unspoiled Russian peasant, something in comparison with which education seems shallow and man-made—something of the all-there-ness of rocks and trees.

As he stood there, minute after minute, like a statue, while the young station chief smoked and fussed and fumed (you remember Kropotkin's story of the Grand Duke Mikhail in Nicholas I's time, who after keeping a regiment for an hour at "Present arms" said, "Very good—only they breathe!"), one thought of the generations of Russian patience and long suffering, of the millions of serfs and soldiers of the days, whipped and driven as something rather less than cattle, of the hundreds of thousands like this man, ground down in Polish marshes or fed to cannon and machine guns like straw to a furnace.

Where was it now, that old Imperial army, that came rolling down from the eastern horizon in 1914, a sard-colored flood, as if it had no end? To treat men like this thoughtlessly was like deceiving children, and yet how many—in spite of the splendid young officers who matched the devotion of their men with an almost medieval gallantry—had been sent on fool errands or kept senselessly waiting, as I was waiting there that afternoon, not for any purpose or reason, but simply because some one was late, or forgot, or didn't take the trouble to carry things through!

It was near sundown when I finally got away, and at the last minute, when it seemed likely I should miss the train altogether, the station chief all at once bethought himself and in true Russian style proceeded to break every rule in my favor and overwhelm me with kindness.

He shouted for an orderly to carry my luggage, himself led the way—not without first shooting past the first-class coach car to the third-class coach at the end of the train and then shooting back again—insisted that the guard should open up a compartment reserved apparently for officers, and put a sign on the door that the place was for the exclusive use of the *Amerikanski attaché*, who was on no account to be disturbed. Then, clicking his spurs and saluting as if I were commander of a corps at least, and with the most charming and undoubtedly sincere smiles and good wishes, he left me master of a whole compartment while a corridor full of civilians who had not even a place to sit glared at and wondered who on earth this exalted foreigner might be. For so things happen in Russia. And crowds of people suffer for necessities while individuals are being overwhelmed with

### What town will be next?

JUST think back. How often has your newspaper, fresh from the press, cried out the news of another fire and for days after, fed you piecemeal the whole tragic story of death, loss, privation and distress?

Fate seems to time these shocks by some weird schedule so that ere one horror dulls in memory, it strikes again.

What town will be next? Who knows? It may be a quiet hamlet, or a busy factory town helping to build America. It may be a great city.

But the day is coming when we shall not consider what town will be the next, because roofs will be fire-safe. Buildings will no longer be topped with tinder, and when that day comes, fire's path will be blocked. You can see this working out in your town.

Up the street there's a cottage shingled with Johns-Manville

Asbestos. Through the trees you see a stately mansion with its beautiful roof of these same shingles in specially blended colors. Here's a garage—over there a great factory with a roof of the same material. All Johns-Manville Asbestos. All roofed for safety.

The demand for the fire-safe roof is growing fast, and with your own interest at heart you can help it by using any of the roofings listed below.

Johns-Manville Asbestos Roofings; Asbestos Built-Up Roofing; Asbestos Ready Roofing; Corrugated Asbestos Roofing; Colorblende Shingles; Transite Asbestos Shingles.

hospitality, and men continually neglect their public duty while putting you into a private debt.

Tales of travelers' difficulties in war time are as tiresome as those of bridge hands or automobile accidents, and I have no intention of detailing mine. That afternoon at Berdichev was so characteristic, however, and repeated in various forms so many scores of times during the next few weeks, and altogether they ground into one so definite an impression of what might be one of the contributing causes to the army's collapse, that I have ventured to recall it.

One could describe hours of unnecessary waiting, days lost because somebody was late or didn't do what he said he would, or, in the blandest fashion, forgot the next minute what he promised this, and all mixed up in so bewildering a way with personal charm and hospitality that the despairing outsider began to wonder whether there was much choice in being killed by Prussian thoroughness or driven to suicide by Russian lack of it.

### "There Was No Plan"

AN Englishman may be as arrogant as you please, and rub one the wrong way, as Englishmen often do, but if an Englishman asks you to go hunting with him in Africa and says that he will meet you six months from now in latitude 3° north, longitude 37° east, you can go right along getting your outfit ready. The natural assumption on both sides is that he will be there. If General Hindenburg should tell you that you had broken Rule 772 and would be shot at sunrise, there would be no chance of escape because the commandant overslept or forgot it, or got a present of ten thousand rubles, or was told by some soothsayer overnight that capital punishment was wrong. And this ruthlessness is undoubtedly disagreeable. But if Hindenburg should tell you to attack at sunrise and that you would be supported by the 165th Landsturm Regiment, undoubtedly the 165th Landsturm would be there if there was any way to get there, blow high, blow low, hell's bells and Donnerwetter to the contrary notwithstanding.

This particular kind of dependability is something largely lacking in Russians. If a Russian says ten o'clock to-morrow morning, neither you nor he necessarily expects him to be there—he merely approves in a general way of the ten-o'clock idea. I do not use the word "dependable" in a moral sense, but merely as a measure of practical efficiency as you might use it in speaking of a watch that did or did not keep time or a machine that does or doesn't "work."

In the things in which Russians are great this quality is not important. When you are reading a Tolstoy novel or watching a Chekhov play or looking at Levitan's landscapes or Riepin's portraits, it doesn't enter in. Dostoevski, for all one knows, may never have kept an engagement in his life. These men take you close to realities more vital and nourishing than those measured by clocks and foot rules.

But in the special and highly technical game of making war, dependability is indispensable. The whole structure is built on it. The only reason that it is a soldier's duty "not to reason why" is because some one in whom he can trust has weighed and considered and done his reasoning for him. There is a plan. But suppose, after three years of war, the cumulative effect of all the times he had been sent on fool errands or brought up too late, or gone without ammunition or food without reason, should come flooding back over him until it smashed into his slow peasant brain the conviction that there was no plan, that the man he had obeyed and looked up to didn't know, or care, and couldn't be depended on. When people ask how it is possible that the good-natured, obedient Russian soldiers should turn on their officers and do the outrageous things they have been doing since the revolution, possibly part of the answer could be found here.

### Seventh Army Headquarters

SLOWLY, from one military train to another, we worked down into Podolsk—splendid high-rolling country like the prairie seas of Kansas or Nebraska under a deep ground swell; long billows of rich farm land sweeping up and over the horizon, with the hard white line of the chaussée laid across their shoulders like a strip of tape.

No one bothered me for papers when, toward the end of another baking day,

the train pulled up at a station bristling with soldiers and Red Cross cars, and after bargaining with a Jewish boy who drove a dilapidated cart held together with ropes, I started across the prairie toward a cluster of trees and a chum a couple of miles away—the headquarters of the Seventh Army.

It was one of those Jewish settlements not uncommon in this southern end of the Pale, where Russia, Galicia and Rumania meet, with here and there a lingering touch of the Turk. A pleasant prospect of trees and thatched roofs at a distance, within it was as square as Central America. Hogs wallowed and snoozed in greenish mudholes in the middle of the streets, and arm motor trucks and staff automobiles flung a more or less continual cloud of dust over one-story houses and frishops, patched, propped up, and hanging at angles as incredible as if they had been struck by a cyclone.

An army headquarters is not, of course, a place where an army is found, but an executive center for the army division, and regimental headquarters farther up toward the front. The district covered by this headquarters was that part of the front extending, roughly, along the line of the River Zbrucha on the frontier between Russia and Galicia from a point about thirty miles due east of Tarnopol, southward to the Dniester and the quaint old half-Turkish city of Kamenets Podolsk.

An American military attaché, whom I had been pursuing for several days as he flitted about like a rabbit in special cars and automobiles, was about of me, and there was no good reason why, after finding out where he was through the headquarters telegraph, he shouldn't have overtaken him that same day. But the headquarters was a maze of clacking typewriters and telegraph instruments scattered through the large houses and commandeered barns, and it was part of the general jumble of things that the gentlemen of the "political cabinet"—a new, semicivilian group of advisers to whom, for some reason, I was referred—should know nothing of local geography and send me off on a four days' wild-goose chase to Kamenets Podolsk.

### Sonia

IT was too late to start that afternoon, however, and after an hour or two of waiting an orderly led me to a cottage on the outskirts of the village where a group of French aviators had been living—I was to go down with them next day—and where, as the great old Jew who owned the place was told not greatly to my joy, I was to be made comfortable for so long as I chose to stay.

He was a patriarchal old gentleman in a black skullcap, with a long beard and mild blue eyes, who sat most of the day on the veranda of his clean little house, very like an old-fashioned farmhouse at home, and gazed calmly into space. He owned a bit of land somewhere and lived, it appeared, by renting it, and was evidently, according to the village standards, rather a distinguished personage. Sometimes, in the evenings, other old Jews came to see him, trooping in gravely in single file to sit around the low hanging-lamp in the dining room with their hats on, Hebrew fashion, and try, in their throaty Yiddish, to borrow money of him.

I had just taken a sort of bath in the kitchen washbasin—the old patriarch and his wife considerably mystified by this unusual performance—dressed and started through the dining room, when I found myself confronted by a solid young woman, rather odd, attired in a white boudoir cap and sacque, generously revealing a robust throat and plump arms covered with freckles, white skirt, and white, high-heeled low shoes. Her straight, thick, dark reddish-brown hair was cut short about her face and reminded one a bit of Du Maurier's pictures of Trilby. And she stood squarely in the way, with much the air, if one might not ungraciously say so, of a cow in a meadow path, and showed no more inclination to get out of it.

This was Sonia, the patriarch's daughter and only child. I slid past, somewhat disconcerted by that slow, determined stare, and not recalling that the village was a long way from the world and an American as curious and unexpected an animal as a kangaroo. It was not until after dinner that evening, as I was returning from the officers' mess, that I passed her again as she sat in the path of the dining-room lamplight on the little low vine-covered veranda listening to two young Frenchmen—aviation mechanics, it later turned

**AMERICAN & IDEAL**  
RADIATORS & BOILERS

Phone your local dealer to-day for estimate to put IDEAL heating in your building at once.

IDEAL Boilers are fitted with automatic regulators which stop all fuel waste by constant control of draft and check dampers. Besides, fuel is saved by turning off radiators in any room where warmth is not needed steadily.

**Heats most—burns less—lasts longest**

There is no continuing heating value in thin sheet-iron and tin equipments, for their short life makes them costly, and the forced over-heating of one or two rooms in the effort to drive needed heat to exposed rooms makes them fuel wasteful, as well as being unhealthful agents.

IDEAL-AMERICAN heating outfits will wear for a century or more; require no annual over-hauling to keep in order. Consider low cost of upkeep and absence of repairs, with the fact that our outfits increase rental and sales values—and you will see that the outfit is more than a choice—it's a **big paying investment**.

**Easily put in OLD buildings**

Put a new heart into your home—which is ideal heating. Our booklets (mailed free) and special information will be worth your while—put you under no obligation to buy. Act now!

out—who were lounging on the sofa where I was presently to sleep.

Scarcely had I gone inside when Sonia followed and, sitting calmly down and fixing me with that same look of elephantine archness, asked me if I spoke French. She asked what I thought of the Frenchmen, if I did not find them very "beau," and after a few more phrases, what was my opinion of French "amour." There was no beating about the bush with Sonia. She had the persistence of her race, although her way of putting it was that "Russian girls always said just what they felt." And "amour" was the one thing that then absorbed her.

*"Je Souffre"*

SHE had gone from that squalid village to the gymnasium at Kamenets Podolsk—which is as pretty as some old town in southern France or Italy—and there learned what she knew of the world outside of books, and a little French. Then she had come back to the ramshackle houses and dirt of her native village—their own house was better than the rest—where the boudoir cap stood out like a searchlight and there was nobody to practice French with but the girl who kept the post office. And then, after the war had rumbled below the horizon for a couple of years, came the French flying men. They had all seen service on the west front, flew like swallows, and were as perfect young knights as ever stepped out of a storybook. The most elegant of them all, a young captain with a "de" to his name, had been quartered in their house. Sonia's room had gone to him, and she had slept on a couch in the dining room, and there he had lived, with his smart uniforms and his silver knickknacks and the photograph of his pretty young wife in Paris. Now he had gone to Kamenets, and the whole escadrille was soon to follow, and she no more than the paper on the wall, but to her he was a being so perfect and beautiful that even to talk of him to somebody else, especially if she could tell her troubles in French, was a pleasure and almost a sort of pride.

She had never told him how she felt, but that was not necessary—he could see it in her eyes. These Frenchmen were the most intelligent men in the world—they knew everything at a glance. The very fact that he didn't notice her and was gone away forever, perhaps; that he had that pretty young wife in Paris, so that, as Sonia gravely explained, she "had no right to love him," possibly made the whole experience more romantic and complete. She would come out on the veranda—for I got to know the village well in the next few weeks—and clasp her capacious bosom with her rather ample hands, with their freckles, and say "Je souffre" with a tremendous sigh. To be asked whether her sufferings were lighter to-day than yesterday, or to receive a mournful nod of sympathy when she replied that they were, if anything, even worse—all this delighted Sonia beyond words. It became, indeed, a sort of play with us, with certain rules and etiquette, and was most restful and comforting after hours of waiting and wrangling for motor cars that were not ready and messages that never came.

In her absurd French Sonia talked of other things—books she had read, and even things she had tried to write herself, sitting under an apple tree in the garden; cities she had never seen, and the world beyond them. There was something a little comic about her that slow persistence, her Didolike sighs, the white shoes in the village dust, the big-boned arms with the short sleeves that showed her freckles. But underneath was something unmistakably "nice"—something fine and generous and true. She was one of those who make the world a smaller and more friendly place, and when people tell of the Pale and its filthy Jewish villages, I shall remember the little veranda, and Sonia coming down to the gate to wave good-by, and the last we saw, across the dust and hogs and mudholes, of the boudoir cap and white shoes.

*Officers—from the "Nobility"*

THE detour to Kamenets, of which I shall speak later, was completed finally, and, on the right road at last, we hurried westward, past green beet fields and yellow wheat, past a position they were intrenching in case the retreat carried still further, and finally down a hill to a mill and a pond and the headquarters of the Second Guard Corps. The house looked like the country place of the typical Polish landlord of these parts who gouges his peasants

ants in order that he may live pleasantly at Kiev and Petrograd and Paris, although it was, as a matter of fact, a hunting lodge for the wild-boar hunts that took place near by. Miles of good land had been set apart for this and covered, except for the long straight runways cut through them, with small trees growing as thickly as bristles in a brush.

There were the usual amenities of a corps headquarters: orderlies who combined soldierlike quality—they all wore service medals—with the tact of well-trained club servants, young officers with charming manners who spoke every language under the sun, and promptly invited me to a pavilion under the trees and ordered coffee.

The officers of the Guard regiments under the old régime were all from the nobility (which, in Russia, does not necessarily mean a title), and in spite of war and the revolution a staff of this sort retained a good deal of its original quality. The one who acted as a sort of host was a young Beasrabian prince, but the one who later proved most practically helpful was not noble at all, but the son of a Petrograd merchant of the class known in Russia as "honorable citizen." He spoke English easily, had come into the army, I think, since the revolution, and in his frank and amusing comments still retained something of a civilian's detachment.

The pavilion on the lawn was pleasant, the coffee delicious, the obvious interest and curiosity in a strange guest flattering, and one promptly sank back into that soothing sense of security and well-being which easy manners, polite surroundings, and plenty to eat and drink, engender, after one has been knocking about on the loose without food or sleep for a few days, among strangers, in a strange land.

### Behind the Mask

THE tragic sickness of the Russian Army lay close behind this pleasant mask, however, and I had, as it happened, landed in the midst of it. The night before the colonel of one of their regiments and one of its captains—and the Guard regiments are, of course, supposed to be corps d'élite—had been murdered by their own men.

This episode—the stupid naïveté with which it had begun, the helplessness of the young guardsmen, who began to talk of it as soon as we had exchanged greetings, the final disposition of the case—was typical of what was happening along the front, of what might break out at any moment anywhere.

A medical officer had been sent out to requisition grain. All over Russia there was difficulty in getting peasants to sell their grain because the rubles in which they were paid were worth so little that they could buy little with them. The things were not there to buy even if they had had enough money. If you could have taken cotton cloth down to the country, it would have been an easy matter to barter it for wheat, but as it was they preferred to keep their crops. Already hostile to the general idea, they got the notion from the doctor's accent that he was a German, and when they demanded his papers it appeared that he had a German-sounding name. The rumor flew across the countryside, as such rumors do fly in these days in Russia, that their grain was to be seized and sold to the Germans.

The peasants held the doctor, soldiers sided with the peasants, and the doctor was put under arrest. When the general heard of it he had him released. A dispute followed. The general drew his pistol, and whether he had shot himself when threatened by his men or was shot accidentally in a scuffle was not clear. The sight of blood evidently finished the matter, for the soldiers clubbed him to death with their guns. The captain was killed while trying to prevent other soldiers from crossing a bridge, which spanned a little stream flowing through the camp, to join their comrades. The crime seemed the more inexcusable inasmuch as both men were said to have been especially good officers. Our military observer had been boar hunting with the murdered captain only a day or two before, and had been particularly impressed with his interest in his work, his seriousness and enthusiasm.

### The "Commissaire"

IN any army in the world, under normal conditions of discipline, there would have been but one thing to do. The ringleaders would have been shot or hanged at once. Even though all were not equally guilty, even though innocent men were to suffer, the ortho-

view would have been that the indispensable thing was to strike while the iron was hot, make retribution follow so swiftly that there should be no mistaking it. Whatever happened, soldiers must understand, once and for all, that they could not murder their own officers. Yet this, under the new democratic régime, was precisely what could be done. Aside from the fact that the death penalty as a means of discipline had been abolished, they must first send the commissaire—the half-civil, half-military official who acted as intermediary in disputes between officers and men. The commissaire was at Army Headquarters. He did not go through Corps Headquarters until that afternoon, and nearly twenty-four hours had passed before he got to the scene of the crime.

When he returned the next morning on his way back to Army Headquarters, without, apparently, having accomplished anything, it was not unnatural to accept the orthodox point of view, that the situation was impossible and the commissaire himself a meddling meddler whom all sensible men would like to see the last of. It was not thought desirable for strangers to attempt to visit the regiment then, and so we were obliged to leave the matter and set about our rather futile visiting of various front-line positions where things were about as enthralling at the moment as the average city park.

It was not until a fortnight later, and after another trip to Kamenets Podolsk and some of the front-line positions along the Dniester, that I was able to see the commissaire himself and get his side of the story. He could not change the fact that the situation was impossible, but he was not at all the long-haired fanatic one might have fancied. He was, in fact, a husky, good-natured, very "human" sort of person—quiet, simple, and direct, with the air of a man trying hard to do his best. He had been mixed up in politics and journalism, and had his term in Siberia with the rest, and it was the evolution and the new world he hoped it would bring that obsessed him now.

#### Rebuilding an Army

THERE was an interesting lack in his greeting of any bureaucratic or military "side"; he listened intently to my questions, and instead of replying at once asked what I, as an American, thought they should have done. I repeated what our military observer had said, that the important thing, plainly, in such a case, was to strike hard, and at once. That was true, he said—and he then gave his version of the beginnings of the affair as I have repeated it here—but it was not so easy to act quickly as one might think. The thing had happened in the middle of the night. The troops were scattered through a village, only those immediately concerned knew the facts, and neither they nor any of their comrades would tell.

It was all very well to talk of hanging, shooting, guillotining or not, twenty or thirty men, but just who could be got to do it? In the army's present state of mind it was doubtful if any such order would be obeyed. And was it, after all, certain that that was the best thing to do? There was, he thought, a limit to what could be beneficially done with the iron hand. Remember what the Russian soldier had endured. He had unheard-of patience. He had cheerfully put up with living conditions that perhaps no other troops in the world would have stood. He had had much less leave of absence than soldiers in the other armies—many had not only not been home since the beginning of the war; they had not even been in Russia. They had fought without artillery, without guns or ammunition—fought with clubs sometimes. There was a point, a sort of saturation point, beyond which you couldn't drive any animal—when whips and blows were of no avail. The Russian army had, to a large extent, reached this point. The reason men like himself were thought to be necessary was because the men had so frequently lost confidence in their own officers. They needed some one in whom they could trust. I recalled that according to report even the men had admitted that the colonel and captain were good officers. "The men said that they were brave," corrected the commissaire; "they did not say they were good."

I asked him what he had done finally. The regiment had been withdrawn, he said, from its original position. After every attempt had been made in vain to get some one to tell the names of those concerned in the killing, they had

## Today's Need for a Good Car

AT no time in your experience could a man less afford the dubious economy of a cheaply priced article than today.

What you buy now, choose on the ground of its worth and usefulness in your service, and choose it on that ground alone.

This holds as true of the motor car to serve you, as of the machinery you may purchase for your factory.

The economy that stints in first-cost only to be undone in needless expenditures later, is an economy without basis in fact.

National cars cost a little more to buy than middle-class cars, because they are built to return

a larger measure of usefulness to the owner.

They are made with the idea that they are to last several seasons, and require the minimum of attention and cost.

With either the six-cylinder or the twelve-cylinder airplane-type motor they are conspicuously able performers, and their gasoline and tire mileages are surprisingly high.

If you seek the combined efficiency and economy essential to present needs, you can make no better choice than a National.

surrounded the regiment—a battery on one side, a bicycle squad on the other, infantry on a third, and machine guns on a fourth. Eight shots were fired from the battery high over the men's heads. They would say nothing. Four shots were fired low over their heads. Still they refused to speak. Four shots were fired into the regiment itself and two men were wounded.

The men then sent out a deputy who suggested that each company be questioned separately. This was tried, and after the better part of the regiment had been examined the names of two of those concerned in the clubbing were given.

This was as far as the case had then progressed—the spectacular ordeal had taken place only a few days before—and what finally was done to the guilty men I never heard. Enough has been told, however, to suggest the sort of smoldering volcano officers were living over, and the efforts made by the unorthodox to rebuild the army in the only way that seemed to them consistent with the ideas and ideals of the revolution—to treat the soldiers as well-meaning and patriotic men who would do the right thing if they felt that the right thing were being done to them.

#### Justice for Individuals?

THIS was Kerensky's hope. When Verkhovsky, a young educated man of the professional officer type, became War Minister in the autumn, after the Kornilov fiasco, and in his first address to the army and people said that officers of the old school, like Kornilov and Alexiev, however accomplished they might be, were useless in the present emergency because they "didn't understand the psychology of the present-day soldier," there was momentary encouragement. Here was a man who belonged, socially, with the orthodox officer class, and yet was trying to reach out and bridge the gap. But Verkhovsky went the way of the rest, after a time—resigned, that is to say.

The forces of disintegration had acquired a momentum that nothing, it seemed, short of a miracle could change until they had run their course. Most of the talk of a democratic army which we were hearing in Petrograd was a contradiction in terms. An army begins when the wills of the many submit to that of the few—it is necessarily autocratic. If the Russians were to begin to insist on complete justice for the individual, what was to become of the individuals in the enemy's army, who were also brave and self-sacrificing men, fighting for their country? War is an abominable fact which people are forced to accept sometimes because it is a fact—they were asking a little too much to insist that it become reasonable.

Mr. Ruhl will describe further adventures on the Little-Russian front in an early issue.

#### LATE COPIES

If your copy of Collier's does not reach you, on Tuesday, do not assume that it has gone astray. The congestion in the New York Post Office and the condition of the railways combine at this time to delay the delivery of papers to subscribers in some cases for several days. We regret these delays and hope our readers will recognize them as part of the necessities of war time.

#### EXPIRATION DATE

Be sure to notice the date beneath your name and address on the wrapper. It shows how long your subscription has yet to run. Unless renewal notices are promptly removed from the mailing list at expiration.

#### RENEWALS

Do not wait for the last issue to reach you before renewing. Do not miss an issue. Look at the date on the wrapper now, and if it is close by, drop us a note, so we may enter your renewal at once.

## Colin O'Rell

Continued from page 18

Fernald dropped into a chair. "I've a few thousands in the bank, Jevons," he said. "I'll give you a check."

"Fair enough," commented Jevons. "And something else: the police, as I've said, have nothing on me. I don't want them to get anything on me. I'm to be left out of any story you tell them after you've found Miss O'Rell?"

"I'll guarantee that there'll be no prosecution of you if that's what you want," said Fernald.

"Fair enough again! Just let me have that check."

Fernald turned to his desk. His fingers shook as he opened a drawer. His check book was half withdrawn from it when something struck him just above the nape of the neck. He tried to rise, but pitched forward. He lay quite still when Jevons, sweat dripping from his forehead, bent over him. . . .

HE awoke from unconsciousness to meet the nearsighted eyes of the Marquis. The grotesquely fat man was smiling at him.

"Awake? That is well. It is quite true that English Fred shrinks from killing. He does not strike too hard. Also, he shrinks from being killed." The Marquis's voice grew harsh. "So you thought that once you had gone to the police all would be ended for me, eh, Fernald? You never thought to distrust Jevons? Because he had failed me once he would fail me always, was your reasoning. Fernald, you are not so clever as I had begun to think."

Fernald could make no reply. He hardly heard the Marquis's words, was barely conscious of the gloating triumph in his eyes. He only knew that once again he had shown himself mentally incapable of coping with the Marquis, and that the last chance—if there had been any at all—for Colin was gone.

"You wonder, perhaps, why I should have been anxious for your quick recovery, why I did not wish Jevons to kill you, eh?" He raised his voice. "Come in, my Colin!"

For a moment Fernald closed his eyes. Although he knew that there would not be the faintest shadow of reproach in the eyes of the girl he loved, he had failed her so utterly, so completely, that in very shame he could not at once look at her.

But when he did! Between him and Colin O'Rell could never be shame, could never be censure. He should have known it; indeed, he had known it, but the knowledge had been submerged in the recognition of his own inopitess. But as he met her eyes the message that he read in them made him forget his own failure, made him forget even that his failure meant the end of life for both of them. For she cared for him more than for life, and death with him, her eyes told him, would be sweeter than life without him. The Marquis broke the silence that ensued upon her entrance.

"Love is a marvelous thing," he sighed. "I envy you, Fernald. Were I twenty years younger, there would be more than ample necessity behind my intention to end your earthly troubles. I would feel that I would be removing a most dangerous rival from my path. But, alas, I am old and fat and—gaze on each other, my dears, and let us hope that in the next world true love flows smoothly and unitedly."

He sighed again. "Ah, if only you two could have been content to labor with me, to accept the rewards that I should cheerfully have given you! Had you possessed that individualistic philosophy so essential to success! But you prefer the philosophy that is taught by fools: the good of the many. And so—you clash with me. It is sad, for we could have done so much. You see to what your patriotism—you call it that, I presume—has led you?"

"And soon enough you will find where treachery leads," said Colin.

THE Marquis laughed. "You are stilted, my Colin. Why try to preserve a calm that you have lost? Within, you are raging at me; you would like to dig your pretty finger tips into my throat. And I am not at all certain that that would be too unpleasant, by itself. Only that it might interfere with certain other joys I contemplate. Colin, you realize that this is the end of your game?"

She met his glance, suddenly venomous, coolly. "Well?" she asked.

The Marquis brought his fingers

# Why miss the Super-Pleasures of Life?

Why not enjoy yourself as others enjoy themselves who are more highly alive and who have super energy, super health, super vitality and super powers of every character? Why deny yourself the keenest of pleasures? Why miss the extreme joy of life? Why miss the super pleasures?

IF you cannot exert your greatest possible brain and body power for long stretches at a time; if you cannot complete big tasks without feeling the need of rest afterwards; if you cannot be just as alert, as quick, as vibrant, as energetic at bed time as you are in your freshest morning hour; if you cannot resist and throw off the fatigue elements so that you are never compelled to rest or even let down in your activities of mind or body—if you cannot do these things you do not know what it is to LIVE! You are sacrificing golden treasures and golden pleasures, you are giving up at least one-half of your rightful proportion of joy, happiness, pleasure, health, energy, vitality, strength and success—you are missing at least fifty per cent. of what you could easily secure out of life simply because you are so easily overpowered by negative elements.

## Are You Only One-Fourth to One-Half Alive?

If you are inclined to lean up against something when standing—if you are inclined to let your shoulders droop when sitting—if you want to go to bed early—if you are tired upon arising—if you feel that you must "be careful" not to do things that you would like to do—afraid to eat what you like, or work late and hard; or if you have a pet list of mental and physical "don'ts"—you are missing at least three-fourths of what life holds for you!

You are only one-fourth to one-half as alive as you think you are! The billions of tiny cells of which your body and brain are composed, are of varying degrees of activity—some are alive, some are weakened, some are practically lifeless and some are totally dead. The activity of your body and brain, their resistant powers against fatigue, their ability to think, create, accomplish, are entirely dependent upon the degree of activity of all the cells. Most people have a predominant quantity of antagonizing, non-alive cells, which master and overpower the live elements, making them easy victims of "averagitis."

## Are You Suffering from Averagitis?

Averagitis is the disease of being only an average, or below average person instead of an exceptional person. Most people are only average in health, average in wealth, average in mental capacity, average in every-

thing instead of being exceptional in health, exceptional in wealth, exceptional in mental capacity, exceptional in everything.

Perhaps you think there is no hope for you—that Nature has made you what you are—that it is natural for you to get tired—that Nature governs your destiny—that nothing you can do will change your position or prospects. The truth is that Nature makes us only as great, as mentally alert, as physically powerful as we compel her! We hold in our hands our own fate. One man molds clay into ordinary nothings while the sculptor molds the same clay into magnificent masterpieces. So do some of us mold our own material into ordinary nothings while others make of themselves locomotives of energy, power, activity, and giants in mental equipment.

You are Nature—Nature is You. The material with which you have to work is the billions of cells in your system. By cultivating and developing these cells through CONSCIOUS EVOLUTION you can become as exceptional as you desire in every department of the body, including the brain, mind and personality. Conscious Evolution can make you wish for a hundred hour day and no night! Conscious Evolution can so develop the brain and nervous system, the heart, the liver, the kidneys, the muscles, the stomach, in fact every organ and part of the body so that you will not know what it is to feel tired or listless, you will not know what it is to have indigestion or any of the ailments or complaints that sufferers from

"averagitis" must have! Conscious Evolution will make you look better to others and to yourself. Conscious Evolution will so supply you with reserve energy that you will not suffer from over-eating or over-exertion,—you will be able to withstand excesses, break Nature's laws,—make your own laws of Nature. And the most remarkable thing about Conscious Evolution is that no drugs, medicines, appliances, apparatus, cold baths, violent exercise, or any other dangerous or disagreeable element is required—there is nothing to give up, nothing to do that you will object to, it requires an average of less than fifteen minutes a day, and the beneficial results are noticeable after the first few minutes!

## Don't Labor Under Handicaps

Conscious Evolution can make your brain so quick-acting, so powerful in thought, so fatigue-proof, so eager to grapple with problems that your material success will amaze you! Conscious Evolution will make you so great in health and mind power that it will never be late enough for you to feel sleepy, or early enough for you to want to remain in bed, and no task will ever be dreaded. You will not be handicapped by detracting physical disorders or mental inefficiency because you will have left them behind. You will not know there is such a thing as failure. Without the knowledge of how to Consciously Evolve every cell, tissue and organ of the body, you are depriving yourself of pleasures and advantages for which you have been wishing all your life—you are living an inferior life, you are denying yourself the success that can easily be yours. Why deny yourself the super-pleasures and super-joys, the real and substantial happiness? How long will you let your negative elements rule you?

## These New Copyrighted Books Free

"Conscious Evolution" and "The Science of Life," are the A, B, C of evolution and persistent youth. These books explain Conscious Evolution and the human body as it has never been explained before. They explain the Swoboda theory and the laws of mind and body. They startle, educate and enlighten. They explain as never before the reason for the evolution of the mind and body.

They tell how the cells and their energies build the organs and the body, and how to organize the cells beyond the point where Nature left off for you, and where you, as Nature, may continue your self-evolution.

These books will give you a better understanding of yourself than you could obtain through reading all of the books on all of the sciences and philosophies on the subject of mind and body.

"Conscious Evolution" and "The Science of Life" will show you how you can increase the pleasures of life to a maximum—how to intensify them and how to make your life more profitable, pleasurable and joyous.

These essays will show you the way to the full life, the superior life, the more satisfactory life, the lively life. They will show you how to overcome the inferior life, the feeble life, the negative life, the unsatisfactory life.

"Conscious Evolution" and "The Science of Life" will show you how to increase your pleasures and happiness to a maximum, and how to reduce your troubles of every character, mental, physical, physiological and conceptual to a minimum. Conscious Evolution will show you how to intensify, prolong, increase and magnify your pleasures.

"Conscious Evolution" and "The Science of Life" will show you that you have not as yet experienced the real and highest pleasures of life, and will show you how to attain the super-pleasures of life. Life will mean much more to you when you intensify your pleasures through Conscious Evolution.

## Why Deny Yourself Super-Pleasures, Super-Joys and Real Happiness?

"Conscious Evolution" and "The Science of Life," which Swoboda has written and copyrighted, will be sent to you free of charge and free of all obligation to Swoboda, if you will write for them.

Just write your name and address on this page, tear it out and mail it to Swoboda or drop a ring about your name on your letter-head, or merely send a postal, giving your name and address. Do it today! You can not afford to live an inferior life!

ALLOIS P. SWOBODA  
2133 Berkeley Bldg., New York City

ing of remorse. Instead, he was filled with a black hatred of Fernald. Further, not knowing all the details of what Fernald had told the deputy, he refused to believe that Fernald was the innocent person that his superior believed him to be. If he only had something on Fernald! If he could "get" something on him!

It was in pursuance of this highly audacious design that he lurked outside of Fernald's rooms near Gramercy Park. From a corner he saw English Fred Jevons enter the old-fashioned house that had been remodeled into bachelor quarters.

**I**MEDIATELY Berwind felt justification of his suspicions of Fernald. If Fernald was innocent of criminality, despite that the whole police force had been looking for him, why did the notorious crook Jevons sneak quietly into the house? Undoubtedly he intended visiting Fernald. It was with this intention, despite the fact that he was under suspension, of arresting the two that he advanced toward the apartment.

But while he was still fifty feet away, one of the two—he could not be sure which, so much alike were they, and both were wearing dark clothes and soft gray hats—emerged from the building, half carrying the other. In amazement, Berwind paused a moment, as he did so an automobile at the farther corner sprang into life. Before the plain-clothes man could attempt to top it, the two men whom he suspected were inside the car, and the car was bowling away.

But Berwind scented something; he knew not what it was, but, pursued, it might prove something to his advantage. On Irving Place he hailed a passing taxi; the automobile containing Fernald and English Fred was still in sight; Berwind's taxi kept it in sight for the next fifteen minutes, at the end of which time it stopped before a house on over on the lower West Side.

Berwind watched the two men enter, one still carrying the other. The automobile drove off. His own taxi had topped at the corner. In indecision Berwind waited. He could not decide what to do; whether to telephone headquarters or investigate further. Suddenly had gone from him all hatred of Fernald. The matter was impersonal now: there was some sort of mystery, and Berwind, after all, was a capable policeman, interested in his work. Moreover, there was the chance of reinstatement in the good graces of the deputy.

But, as he hesitated, decision was taken from him. He saw one of the men emerge from the house. And as he approached Berwind drew his revolver.

English Fred was frightened. The Marquis's emissaries had located him; he had been told that his one chance of escaping vengeance for his betrayal of the Marquis was by capturing the man whom he had pretended to kill last night. He had trapped Fernald. He had been permitted to leave the house of the Marquis. But, for all that he knew, that permission might have been granted because the master spy preferred to have Jevons killed somewhere else. And at Berwind's sudden leap before him the nerves of English Fred gave way. He would not have been driven by fear or remorse to the police, but now that the police had come to him—he told Berwind all that he knew.

**T**WENTY minutes later the neighborhood swarmed with plain-clothes men, and Berwind had been told over the telephone that the charges against him were dismissed. The gorilla-armed detective was the first to batter through the doors of the final lair of the Marquis. The Marquis's ears, perhaps because of his nearsightedness, were more acute than those of his followers. Whether or not he would really have let Fernald to torture would never be known, for the men who advanced upon the wounded prisoner were halted by their chief's command.

The Marquis waited a moment. Then a crash of wood upon the outer door told him that his ears had heard rightly a first time. He was the last to leave the room, and he slammed it shut after him. Colin leaped to it, but the turning of a key was accomplished before she reached it.

Outside, below stairs, in the hall, it reigned. Revolver shots, the curses of fighting men. . . . The door opened; feeling, the Marquis stood before them. He shut the door; he smiled at them.

## The P. A. X. Makes Each Desk a Related Unit

"The place of a deskman is at his desk; anything that makes a deskman independent of his feet, increases the fruitful labor of his head and hands."

**T**HE aim of efficiency methods is to make clear-cut and definite the function of each desk or other station in a business.

The more this is done, the more need is there for getting information or for giving it—for linking man and man.

When the linking of unit with unit is not taken care of, the familiar failure of seemingly sound method takes place.

Hundreds of organizations realizing this are using the P. A. X. to make efficiency methods workable.

P. A. X. is our own familiar term for Private Automatic Exchange, and an outstanding advantage of its automatic telephones over the hand-operated private branch exchange is speed.

This speed invites use, thus linking all producing and control stations together by

the most effective of all communication, the word-of-mouth.

To the organizations which during the last 25 years have installed the P. A. X. this great advantage is even more important than its 24-hour service without an operator.

After installing the P. A. X. there is invariably a decrease in procrastination, in "passing the buck," in walking about to get information instead of asking for it from the assigned desk or station.

The most tangible proof of the value of the P. A. X. in getting results from men and equipment is the character of the organizations using it.

This year our production will again be doubled so that in spite of heavy government and preferred-industry requirements, we can supply P. A. X. equipment promptly.

# Why I Am Paid \$50,000 A Year

*How a Poor Young Man Trained for a Big Job—and Got It in Three Years*

AS TOLD TO S. D. HOPKINS

**T**HERE are only a few \$50,000 jobs—yet of all the men in the country it is difficult to find enough to fill the few big jobs available. There are plenty of men for the \$25-a-week positions—but the thousand-dollar-a-week openings "go begging." How this young man trained himself for earnings of \$50,000 a year is one of the most interesting chapters in the annals of even present-day fortune making. This is the story told me, almost word for word, by the young man who did it.

"Three short years ago I was \$5,000 'in the hole'—and earning \$30 a week. I had a wife and two children to support, and I used to worry myself sick about the future.

"To-day—it seems like a dream—all my troubles are over. I am worth \$200,000—enough to keep me and my family in comfort for the rest of our lives. I own two automobiles. My children go to private schools. I have just purchased, for cash, a \$25,000 home. I go hunting, fishing, motoring, traveling, whenever I care to.

"Let me say in all sincerity that what I have done I believe anyone can do. I am only an average man—not 'brilliant'—have never gone to college—my education is limited. I know at least a hundred men who know more than I, who are better educated and better informed—and their earnings probably average less than \$50 weekly while my income is over \$1000 weekly. I mention this to show that earning capacity is not governed by the extent of a man's education—to encourage those who have not had the advantage of a comprehensive education.

"What, then, is the secret of my success? Let me tell you how it came about.

"One day, about three years ago, something happened that woke me up to what was wrong with me. It was necessary for me to make a decision on a matter which was of little consequence. I knew in my heart what was the right thing to do, but something held me back. I said one thing, then another; I decided one way, then another. I couldn't for the life of me make the decision I knew was right.

"I lay awake most of that night thinking about the matter—not because it was of any great importance in itself, but because I was beginning to discover what was wrong with me. Along towards dawn I resolved to make an experiment. I decided to cultivate my will power, believing that if I did this I would not hesitate about making decisions—that when I had an idea I would have sufficient confidence in myself to 'put it over'—that I would not be afraid of myself or of things or of others. I felt that if I could smash my ideas across I would soon make my presence felt. I knew that heretofore I had always begged for success—had always stood, bat in hand, depending on others to give me the things I desired. In short, I was controlled by the will of others. Henceforth, I determined to have a strong will of my own—to demand and command what I wanted.

"With this new purpose in mind I applied myself to finding out something

more about will power and in my investigation I encountered the works of Professor Frank Channing Haddock. To my amazement and delight I discovered that this eminent scientist, whose name ranks with James, Bergson, and Royce, had completed the most thorough and constructive study of will power ever made. I was astonished to read his statement, 'The will is just as susceptible of development as the muscles of the body!' My question was answered! Eagerly I read further—how Dr. Haddock had devoted twenty years to this study—how he had so completely mastered it that he was actually able to set down the very exercises by which anyone could develop the will, making it a bigger, stronger force each day, simply through an easy, progressive course of training.

"It is almost needless to say that I at once began to practise the exercises formulated by Dr. Haddock, and I need not recount the extraordinary results that I obtained almost from the first day. You already know the success that my developed power of will has made for me.

"People sometimes worry because they cannot remember or because they cannot concentrate. The truth is, will power will enable them to do both. The man who can use his will can not only concentrate and remember but can make use of those two faculties. And I want to leave this one word with you: no knowledge, no plan, no idea, is worth a penny unless it is used, and it cannot be used unless someone's power of will does it!"

Prof. Haddock's rules and exercises in will training have been placed in book form, and I have been authorized by the publishers to say that any reader who cares to examine his startling book on will power may do so without sending any money in advance. In other words, if after a week's reading you do not feel that "Power of Will" is worth \$3, the sum asked, return it and you will owe nothing. When you receive your copy for examination I suggest that you first read the articles on: The law of great thinking; How to develop analytical power; How to guard against errors in thought; How to drive from the mind unwholesome thoughts; How to develop fearlessness; How to use the mind in sickness; How to acquire a dominating personality.

It is interesting to note that among the 225,000 owners who have read, used and praised "Power of Will" are such prominent men as Judge Ben B. Lindsey; Supreme Court Justice Parker; Wu Ting Fang, ex-U. S. Chinese Ambassador; Lieut.-Gov. McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christenson, of Wells Fargo Express Co.; E. St. Elmo Lewis; Governor Arthur Capper of Kansas, and thousands of others.

As a first step in will training, I would suggest immediate action in this matter before you. It is not even necessary to write a letter. Use the blank form below, if you prefer, addressing it to the Pelton Publishing Company, 27-H Wilcox Block, Meriden, Conn., and the book will come by return mail. This one act may mean the turning point of your life as it has to so many others

"Two shots," he said. "One for myself, and the other—shall it be you, my pretty cat, Colin, who have betrayed me, or shall it be Fernald?"

The girl moved stealthily in front of the limp form of Fernald.

Fernald touched her; vainly he tried to push her aside.

"Don't, dear," he cried. "Let me—"

"That is better," cried the Marquis. His great body shook with wrath; the blood that flowed from a wound on his scalp made him demonic in appearance. "To be a widow before ever you have been a bride, my Colin! That is better."

He stepped to one side that he might cover Fernald with his revolver. And then, with a scream, Colin sprang for him, her fingers widespread, clutching

at him. The Marquis slid aside; for a his bulk, for all his loss of blood, he was active still. Colin crashed against the wall. Against the door something tattered. Voices cried encouragement. And suddenly the Marquis's face lost its look of fury. He smiled, the blood rendering his smile grotesque.

"After all," he said, "to lose gracefully is the part of one well-born, and I—I am the Marquis. My Colin, I give you this man." He bowed toward her. He was dead before the door swung. And there was still one fire-chamber in his revolver. And above his body, forgetful already of tragedy, the eyes of the girl and the youth met. Life is love, and love laughs at death.

THE END

## Ned's Pancake Gal

Continued from page 17

been closed, sort out the money that had been showered upon them, count it, look up and thank God, and then crawl, both women, into their kitchen beds that were built into the wall, one over the other, like berths on a ship.

And into Yvette's berth there began to steal with her the mental image of an American private that reminded her of Christopher, the pig. Yvette still loved Christopher. She'd stopped kissing him, as she no longer had time to wash him with strong kitchen soap. But Christopher retained his noble appearance in spite of his need of a bath. French hogs are esteemed for the flavor of their meat, not for lard-making properties, and Christopher was still lean as a race horse, long-legged as a pony colt, and agile as a goat.

**N**OW, there was one American soldier—one single one out of all those thousands that reminded Yvette of her Christopher. He was as slender as the shadow of a lamp-post, but so tall that Yvette's eyes were only on a level with the third button of his coat. And his appetite had all the vast capacity of a Christopher. Yvette felt perfectly sure he would have eaten every pancake her mother cooked had he only had the money to pay for them. And once or twice she dreamed in her kitchen bed that she and her mother were rich and had nothing in the world to do but make pancakes all day long and feed them to that poor tall hungry love of a boy who was starving to death—yes, starving. Yvette knew full well! but who was ever and eternally insisting that his God was good.

At first Yvette thought Ned was some sort of American Mohammedan, and she asked him one day about his religion. Ned said he was a Hard-Shell, his mouth being full of pancake at the time. And Father Rascoe is still ransacking dictionaries, trying to locate that faith.

But Yvette didn't mind about Private Clagget's untraceable religion. She felt merely that he belonged to her caste, that he and his people, like hers, lived and had lived for centuries very close to the ground among the whispers of things that grew. In short, Yvette recognized Ned just exactly the same way one robin recognizes the other in April. And Ned recognized Yvette. But Private Clagget had been so disturbed by such things as ocean waves and bayonet exercises—he had been driven so far from that paradise of a sandy American farm—that he felt justified in being certain of but one single mortal thing: a hunger he couldn't satisfy. He knew Yvette was the most beautiful creature on the face of the earth, and that she got mighty close up to him as she sprinkled sugar on his pancake, but he forced himself to suspect that she was flirting only and that she did the same thing with everybody else.

"In French thy name is Edouard," she told him one evening, and if Private Clagget had only known enough French to measure all the heights and depths of Yvette's inexpressibly sweet lispéd thy, both he and Christopher would have been saved considerable trouble—to say nothing of the loss of the biggest sweet potato that had ever been raised on the Clagget farm.

For it got to France all right, that "whopper of a later," thanks to the maternal instincts of the American eagle for her fighting young. And when Ned saw it—held it in his hands—he made out he wasn't well and sneaked off to a sheltering hedge where he and his "tater" talked to each other about times when it was good to live.

The sweet potato smelled to Ned in his birthday, felt like the first time he went barefoot in the spring, and its color reminded him of the pond where he had learned how to swim. A sort of crystal sphere—that's what his big "tater" was. And Ned got to laughing, and crying, hugging his sweet potato—as none could possibly understand who hadn't, like him, been snatched from the still small peace of tremendous solitude and dropped as so much human timber into all that swirl and whirl of apparently inhuman soldiery.

He made up his mind he wouldn't cook his potato for a while—just keep it buried there under the hedge, and that the boys wouldn't kid him—couldn't steal it. Ned was digging a hole with his bayonet. And he made a nice bed of dry leaves for his treasure in the bottom of the hole, put the dirt back, covered the place over with the prettiest moss he could find, took a good look at that part of the road, so he'd be sure of finding the spot again—took a second good look, and perceived, coming his way, the lean form of a very tall pig. Christopher was grunting hopefully, curling and uncurling his tail, saluting snails with his snout, pausing at every tin can.

"Now, I jes' wonder," Private Clagget mused, "what sort of grub that kind of a shout is looking for." And he decided to wait and see.

Ned didn't wait long. The rapidity with which Christopher unearthed the sweet potato, once he'd reached the freshly made hole, reminded Ned of an American hog killing a garter snake, reminded him of that as he jumped at Christopher to save the potato. But Christopher was something of a jumper himself, and, evading the first onslaught, proceeded leisurely to lunge homeward leisurely for Christopher—crunching Ned's "tater" as he went.

Private Clagget's fastest runner kept him only in sight of Yvette's noble pig. But he saw the thief enter his sty. When Ned got there he was completely out of breath, so without a word he merely reached in, caught a hind leg, and pulled. But Christopher was not out of breath, and the squealing he emitted would have drowned a lugie corps.

"On vole mon Christophe! On vole mon Christophe!" And Yvette's cries were also pretty loud and clear. She thought it was theft. But when she got to the sty and saw who was after her pig, all she could do was to drop on the ground and sob: "O Edouard, mon Edouard—he starve to death!"

**N**OW this is the story of a parting—and wars have many of these. The Americans were leaving for the front, trains panting, and corporals too. Ned and Yvette were on the platform. One minute and no more, the corporal had warned them. And the lovers made thus their will: "Now, Yvy, there's going to be a whole lot of other Americans coming here to this camp."

"Not for me, Edouard."

"You're going to keep on selling them pancakes."

"Not kiss them, Edouard."

"And when I come back, if I ever do."

"Oh, what then mean?"

"I mean if I don't git killed I'll sure come back, and maybe you—you won't be no more round here 'till."

She smiled an instant, her face close to his—for she'd pulled his head down to her. "Forever I wait, Edouard. I wait, widow. I wear the black, and the black with say: Already she love sufficient! Then, opening her eyes, Yvette added: "Ah, voilà, the corporal who ruse!"

Galli-Curci as  
Gilda in Rigoletto

## Galli-Curci *makes Victrola Records exclusively*

"When she started the great aria of the second act she was still an unknown quantity. When she had finished it the first time she was the idol of the house."

Thus wrote a reviewer of Galli-Curci's American debut at Chicago as Gilda in Rigoletto. That debut was historic. It was a scene of tumult and wild enthusiasm. Seldom has any singer received such an ovation on her first appearance. And seldom has any singer's subsequent fame spread so fast and wide as Galli-Curci's.

Galli-Curci makes records only for the Victrola. That was a foregone conclusion when she took her place securely among the greatest singers of the world.

No lover of truly great and beautiful singing will long deny himself the pleasure of Galli-Curci's Victrola Records—true transcripts of her vivid and ranging from the most complex and thrilling coloratura arias to the tenderest and simplest lyrics of the heart.

Ask your Victor dealer to play them for you. Victors and Victrolas—\$10 to \$25.

## The Roads Must Help the Railroads

Roads were never so vital as now  
—they will help us win the war

**P**RECIOUS shipping is waiting in the harbor because cargoes are clogged on the railroads.

Factories are laying off their labor and closing because they cannot get raw materials through the railroad embargoes.

The whole internal commerce of the East is in a snarl, and it will be so intermittently till the end of the war and after.

Parallel with every railroad run the public highways.

They are *not* clogged with traffic.

But they *are* clogged with mud or with neglect in various sections of the through-routes and the great swarm of motor-trucks traverse them slowly and with difficulty.

*Clear those roads, the nation needs them!*

Make your town, your country, keep up its part of the great arteries.

Don't let your locality be the weak link in the chain where an

impassable mile puts the whole interurban route out of commission.

Don't wait for the next county to act first; they may be waiting for you!

It is no time to be building roads for mere beauty or comfort.

It's no time to tolerate poor roads that might be easing the overload of the railways.

Such roads call for labor and materials that are needed elsewhere.

*Build and treat your roads with Tarvia.*

In England and France that is just what they are doing: making their roads last longer by tarviating them on a greater scale than ever.

They figure that it saves labor which is scarce and public money which is scarcer.

The Nation's plea to our local governments to refrain from public works that can wait till the end of the war does not apply to roads.

*Roads were never so vital as right now. They will help us win the war.*

### Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department which keeps on the minute on all road problems. If you will write to the nearest office regarding road conditions or problems in the vicinity, the matter will have the personal attention of experienced engineers. The service is free for the asking.

If you want better roads and less expense, this Department can greatly assist you.

*Illustrated booklet describing the various Tarvia treatments free on request.*

*Address the nearest Barrett office.*

## *The Power to Win- Abroad and at Home*

Every day of the Great War demonstrates more forcibly the value of motor-power. Aeroplane and tank, passenger-car, and motor-truck—all are the children of the motor; all supplement indispensably the power of man.

No less in America does the motor manifest its power for good. No individual owns a motor car but is the better, the bigger for it. No business uses a motor truck but thereby increases its efficiency. Already our nearly five-million motor vehicles annually carry many more passengers than all our railroads, and do more than half as much haulage.

Among all motors, the Continental has won the pinnacle place and maintains it unchallenged. Your purchase of a Continental-equipped car or truck will increase your power to win.

*But when gas bombs explode on the western front the men from the west "are goin' to do somethin' besides die"*

# HOW DOES THE FAR WEST STACK UP? BY WILLIAM SLAVENS MCNUTT

**D**RAW a line north and south through the geographic middle of the United States, up through Texas, Oklahoma, Kansas, and on to the Canadian border. Directly on or east of that line there are fifteen National Army camps. West of that line there is one National Army camp, and one only—Camp Lewis, the great cantonment at American Lake, Wash., about 1,800 miles distant from its nearest military neighbor, Camp Funston.

There in that great cantonment, far on the yon side of the Rockies, beyond the desert wastes and the Cascade snows; there in the brilliant wet green of a Puget Sound prairie, the men of the entire West are learning war. The men training at Camp Lewis come from Washington, Alaska, Oregon, California, Nevada, Wyoming, Utah, Idaho, and Montana. Some of them traveled 2,000 miles from their homes to camp.

There in that National Army camp one finds every remaining human element of that which gave magic to the pen of Bret Harte and the brush of Frederic Remington—the cowboys from all that's left of the storied range; prospectors and miners drawn clear from the Arizona deserts to the Arctic snows of northern Alaska; timber cruisers and loggers, river drivers and construction workers; hard-rock men and a powerful leaven of world wanderers, adventure lovers, from the four corners of the globe, to whom the West has ever been a magnet.

The men at Camp Lewis have no near-by military neighbor wherewith to measure themselves. They want to know how they stack up with the other divisions. Everybody remotely connected with the division asked me that question: privates and officers, correspondents and civilians at work about the reservation, the janitor at Division Headquarters, the newsboys and the boot-blacks, business men in near-by cities, and just people whose names and occupations I don't know. Their desire for knowledge of how the division at Camp Lewis compared with others was as unanimous as Belgian opinion of the Kaiser. The men out there from one-third of the entire territory of the United States want to know how they stack up with the other divisions, and the people of the remaining two-thirds of the United States want to know the same thing.

Let us first con-

sider the geographic equipment of the Far West in training for the fight. Western and superlative are practically synonymous terms. The West has the biggest apples and the highest mountains, the swiftest rivers, the most valuable town lots, the coldest places and the hottest.

In keeping with Western tradition, Camp Lewis is the biggest cantonment in the United States. It took more lumber, nails, electric wiring, water pipe, energy, character, tar paper, oratory, window sashing, and printer's ink to construct it than went into the building of any other cantonment. It is built to accommodate 50,000 men.

You see? Superlative! Can't be dodged. The reservation encompasses something like 102 square miles of territory. It offers a greater variety of terrain for training purposes than any other camp in the country. It has a huge parade and drill ground, as flat as a billiard table; it has rolling prairie and dense forest, mountains and rivers, salt-water inlets and fresh-water lakes. The magnificent camp site was a gift to the Government by the people of Pierce County. The county voted a bond issue of \$2,000,000 to buy the site and turned it over to the Government gratis.

Camp Lewis is the healthiest cantonment in the United States. The figures show it. The death rate in Puget Sound cities is always exceptionally low. Seattle, at various times, has had the lowest death rate of any city in the country. The death rate at Puget Sound ports has always been close to the minimum. With more than 30,000 men in camp, the division medical report for the week

ending February 16 contained the following significant statement: "There have been no deaths during the last two weeks." The latest report from the surgeon general's office shows Camp Lewis below the average of all camps for admission for disease to the hospital and the noneffective rate. And there is another point. The Washington climate is best suited for the training of American soldiers for work in France because it most closely approximates the prevailing weather conditions of the western front.

It rained on the day of a division review. A cowboy sitting hunched up on his horse in the down-pour, watching the marchers pass, said sadly: "I knew it was goin' to rain to-day. The sun set in the west last night. That's a sure sign in this country."

## *That Snappy, Smart Salute!*

**O**F course you don't expect to find a very strict observance of discipline in a division made up of men from the Far West. That is, you don't expect to find them saluting quite as smartly, standing as stiffly at attention, or making as frequent a use of a ceremonial "Sir," in addressing an officer, as the men of some of the other divisions. You don't expect to find the men of the Far West excelling in all those niceties of military courtesy; but that is precisely what you do find. I found a more general and marked observance of all forms of military courtesy at Camp Lewis than at any other cantonment I have visited. Not only that, but I found the cowboys out in the Remount Depot rendering a salute more smartly and standing more stiffly at attention in

the presence of an officer than the men of any other unit in the division. Out there in that great Remount Station, covering over 500 acres, and capable of accommodating 15,000 horses, where chaps and spurs are working toys instead of curiosities, and the shrill cry of "Ride him, cowboy! Stay with him!" is familiar, I saw men time after time exceed the demand of regulations in rendering a salute. I went over the depot with the commanding officer, Captain Jackson, a ranch owner of Williston, N. Dak. Cowboy soldiers passing us at a tangent on horseback, much farther distant than thirty paces, would twist in their saddles as they went by, watching the captain

*Powder River Teich and Sandy Hilton from Crow Reservation—the entire West is learning war*

eagerly; and if it so happened that they caught his eye, they would snap off a salute smart enough to win praise from a Prussian drillmaster.

Some years ago I was busy picking up a few of the most honest dollars I ever earned, doing long-shore work at a mining port in southeastern Alaska. Working with me at that time was a slim, blond, blue-eyed young hellion, whom for purposes of identification I shall call Jim Jones. Jim was originally from the Michigan timber country, but he had spent most of his young life adventuring up and down the Pacific Coast, working at everything from faro to longshoring, tending bar to hard-rock work, and riding the range to halibut fishing. He was one of the most actively pugnacious human beings I had ever seen. He was easy to start and hard to stop. I used to put in most of my spare time trying to convince Jim that no *causa belli* existed. It was a hopeless job. Jim believed himself to be just as good as anybody else, and he insisted on other people sharing his opinion. He was always on the lookout for those who might doubt his status and ever ready to argue them around to his way of thinking. Jim's idea of argument was not oratory. No! He believed in converting a man to his viewpoint, and the only method he understood was the evangelism of feet and fist.

The last week I was in Alaska, I was longshoring a freighter with Jim. Her winches were disabled, and the men aboard were passing lumber over the side to us on the dock. The mate of the freighter, a big, red-mustached Irishman, decided that we were not packing it away fast enough; and, storming down to the rail, he proceeded to give a peppered imitation in the manner and tone of William J. Bryan speaking of booze. He had just stopped to get his breath for a fresh bellow when Jim walked briskly back down the dock, stopped at the ship's side and, looking up at the rail, drawled out: "Say, young fellow, who you talking to? Me, or some o' the hired help around the place?"

#### Playin' the Game Right

THE mate said something that mates often say. I heard a yip, and saw a thin streak of activity disappearing over the ship's rail. The streak was Jim, going to work at his chosen profession of proving that he was just as good as anybody else, and a little shade better. He had to work fast because the second mate and the captain and some of the crew came to the mate's assistance. Jim was no hog. He liked a lot of trouble, but enough was plenty. When reinforcements arrived, he let loose of what was left of the mate, vaulted over the rail, grinning happily, and together we took it on the run, followed by remarks from the captain and such stray ship gear as he was able to lay hands on and heave.

"I didn't have much time," Jim said regretfully when we stopped for breath in the timber above the

Recently I was standing in regimental headquarters at Camp Lewis, when Sergeant Jim Jones of the National Army came in with a message for a captain.

He didn't see me. He saluted and came to heel before the captain as rigidly as any Prussian goosestepper. He monotoned his message in the third person, saluted again, snapped around on his heel as smartly as a whiplash, and went out. I followed and called to him, and we had a reunion in the lee of a company barrack.

"Whatever you doin' now, bo?" he asked me. "What's the C on your arm stand for?"

"Correspondent," I told him.

"Oh, you're writin' us up, are you?" he grinned. "Soldier boys make merry at Camp Lewis, and all such like."

"I'm surprised to hear you speak up in meetin' an' try to josh anybody, Jim," I kidded him. "When I saw you steppin' around up there at headquarters, stiff as a little ramrod, I figured they had you too well tamed to try to kid anybody."

The minute I had said it I was sorry. His face went tired and stern, and he drew a long breath.

"They ain't nobody got me tamed out none, bo," he said very gravely, squinting into the distance. "Not me! I never did hate nothin' in all my born days as bad as I hate this thing o' steppin' high when somebody says 'Hep!' an' whippin' my arm up to my forehead every time I see a gold hat cord with anything alive beneath it, an' sayin' 'Sir' to many a guy that I wouldn't stop on the street to slap if we was both civilians; but we ain't both civilians now, bo; we're both soldiers. Get me? An' all this salutin' an' other stuff is a part o' the soldier game; see? An' because I hate it all so damned bad, I want to play it well so it'll be over sooner. Do you get me? Them Germans have got the jump on us, 'cause all that stuff comes natural to 'em. It don't come natural to me, bo, and never will. But as long as I have to learn it to help lick the — Germans that started this mess, you bet I'm goin' to learn it well. I ain't goin' to pass up any beta that may help out; see? Nobody ever put anything over on me before I came into the army, and there ain't nobody ever put anything over on me since. I don't salute these officers because they're better men than I am; they ain't. I salute 'em because salutin' is a part of this military game, an' as long as I got to play it, I'm goin' to play it right."

A battery of the 347th composed entirely of scrap-pers from the Mission District in San Francisco

beach, "but I bet I taught him a part o' the alphabet. I bet he won't figure he's better'n the next man that happens to be buckin' lumber on some dock where his ol' seagoin' fryin' pan's tied up. I wasn't with him long, but I bet I taught him not to think he's a better man'n I am just because he's got himself a salt-water job and a blue coat with brass buttons on it, like an elevator boy. Let's you an' me get our time un' go to town."

We got our pay and went to town. A few days later I "came below," and Jim was only a remembrance.

between officers and men in the American army. I find so many good Americans who think that the insistence on that division is an obnoxious, that it is the result of an attempt to place the officer on a pedestal and the man in the pit. Not at all! That absolute division must exist in the American army for the protection of the American soldiers. Suppose the captain of a company let down the bars and associated with some of his men socially, in town, at dinners or balls, or wherever it might be. He couldn't associate with them all. If he were a college man,

he would naturally associate with the college men in his company. What would the rest of the men think about it? They'd think: "Why, we've got a fat chance of getting to be noncoms with this outfit. Why, we saw the captain eating dinner down at this or that hotel last night with private So-and-So and private Such-and-Such. What chance have we got with them?"

© Committee on Public Information

Newqually salmon add variety to the camp menu - catching them means mighty good sport for the men

And, quite frankly, what chance would they have with them? If a captain associates socially with some of his men off duty, the probabilities all are that that captain would be influenced to a certain extent in favor of those men, his social friends. Even though he be absolutely unswayed by sentiment, the other men of his company, the men with whom he does not associate socially—he can't associate with them all—will feel that they are being unjustly treated and that they haven't got a fair chance. And when they begin to feel that, the fighting value of the company is on the wane. Just remember that, Mr. Democratic American. Remember that that division between officer and man in the American army is absolutely necessary to insure a maximum of justice to the American soldier. And you, whoever you be, who are worrying about the possibility that men may be bloodthirsty after this war as the result of their experience, remember this: The effect thus far of military training on the average American has been in many cases an absolute reversal of expectation. I refer you to the excellent discipline among the men of the Far West as an example of this. I give you another instance—I don't attempt to explain it or draw from it a moral. I simply mention it: Picturesque profanity has always been a characteristic quality of the average men of the West. In Western lumber camp and mill, in mine and on railroad grade, I have heard profanity so skillfully expressed that it ceased to be a string of oaths and became an outpouring of Art. I had been at Camp Lewis among the men of the entire West for nearly two weeks when it came upon me with a shock that in all that time I had not heard a soldier, officer, or man utter an oath. I'm not mentioning the abstinence from profanity as a virtue. I simply mention the fact. It's a reversal of expectation. Think it over.

#### Typical of the West

THE men of the Far West are training not only with the idea of doing their duty. They're keen on doing some damage. A nosey civilian, poking around camp last fall, got into conversation with a big Oregonian logger.

"And are you willing to die for your country, my man?" he inquired.

"I am not!" the big logger declared emphatically. "I want to make some German die for his."

At Camp Lewis one finds Captain Resher W. Thornberry, a world wanderer and adventure hunter. Captain Thornberry taught jujutsu to the Japanese police. He studied the art for several years under the greatest masters in Japan, and was graduated as the master of them all, thereafter being engaged as an instructor by the Japanese authorities. You will find him in an open park in the fir forest on the hill, busily teaching all he knows to the men of the Far West for use at close quarters in the German trenches. At Camp Lewis you will find Lieutenant Allen Duncan, a graduate of Oxford and the Saint-Cyr Military Academy in France, who hasn't missed a war for the last fifteen years. He got the V. C. for gallantry at

(Continued on page 35)

# WILSON AND THE ENEMY

BY RICHARD WASHBURN CHILD

I HAVE asked the Administration officials in Washington two main questions and for additional evidence to support the answers I have gone to the bureaus of the State Department. I suppose the American people are asking these questions. They are of real consequence:

1. What are the chances of reaching the German people with an appeal which at last will affect even the German army, the controlling factor, and will thus result in breaking, from within, the German military ring?

What does the President know of the facts?

2. What are the dangers of trying to do it? Will the attempt weaken our national war spirit? What is to be said of the propaganda of hate?

## "The President Knocks and Speaks"

SEVERAL months ago, before I had any idea that I should ever be presenting a part of the evidence upon which the President bases his attitude toward the German people, I was talking in Peking with the Russian minister to China.

"Your President is the world's greatest propaganda maker," he said. "Unlike the Germans, he spreads his propaganda openly and frankly. The Germans slip their message under the door and hide; the President knocks and speaks."

Many Americans believe that the President's voice is becoming stronger and stronger as the voice of the Allied peoples, and that unless we accept the theory that the people of Germany are biologically different from other human beings, as some persons think, the day may come when the President's voice—filtering through the steel bands of Germany's battle fronts and slipping in between the fingers of her censorship—will interpret the population of Germany to themselves. From them the President's voice might reach the German army.

The close advisers of the President understand that the crushing of the German military power is the objective of the war, but that (1) it is not proposed to exterminate the Germans or blow up the scenery along the Rhine, on the one hand; or (2) on the other hand, to hope for any honorable or permanent peace as long as the German military ring leads the German people.

Suppose, however, the German people were able and willing to crush the autocracy, abolish the military ring, and so make a durable and just peace possible.

The President has encouraged them to do so, and will continue to encourage them. No one whom I have found close to him believes that he will easily relax his efforts to make constantly an open appeal to the German people to overthrow the present policies of German leadership.

The President is perplexed that Americans understand him so badly that they do not accept the fact that he believes victory from within Germany is to be considered as well as victory from without, and that he is making a drive, not for immediate peace, but for both kinds of victory. He would say that he was desiring and attempting to use against the enemy not one weapon alone, but every weapon he can lay his hands on.

"The grim job before the world is to wipe out the German military structure," he might say. "Can't you understand that I know as well as you do that

a peace with that ring would be a property the title to which would be about as valuable as a title to a school of herring in the North Sea? But if the German people are awakened and do the grim job? The German people will have bought their peace and their democracy at a price which will give peace and democracy a value which it might take years for foreign victors to interpret to embittered and apprehensive souls."

So far the people of America have had at their disposal a very slight knowledge of the basis for the President's position. He has tried to make his policy clear in the midst of changing events which distract attention from his fundamental purposes. In speaking to the American people he has been speaking to an audience which is educated none too well in international politics, and which, except for Colonel House, has not produced a single man who has the "feel" of intimate contact with European politics of to-day and to-morrow rather than the politics and policies of yesterday with all their junk pile of old-fashioned diplomacy.

Finally, facts gathered from overseas have not been set forth clearly in order to make a background for American opinion. Consequently many Americans wonder whether the President is not paying too much attention to his campaign of education and too little to campaigns for gunfire. They even wonder what are the real value and the real opportunity for success in the campaign of education. They want the facts the President has at hand.

## A Rising Tide of Revolt

ONE man in Washington has access to the most complete collection of facts and testimony bearing upon this question: Are the Germans growing stronger in their belief that their Government is leading them astray? He summarized these facts as follows:

"To be sure, testimony of our representatives who were in Germany before we were in the war is that we must not count now on any revolt, either peaceful or violent, from the army, or even from the civilian population. But it must not be forgotten that these representatives drew their opinions from those they saw the most and knew the best—that is, the governing class. Furthermore, the tide of revolt, no matter what its stage, is rising—not falling. The evidence of that is conclusive."

The State Department information, a part of which has been opened to me, bears out this opinion. It is information gathered from five principal sources: (1) Military and naval intelligence, including examinations of prisoners. (2) Reports of diplomatic officers stationed in Allied or neutral countries. (3) Secret reports from Allied sources, including Russia. (4) Reports made by Germans, neutrals, or Americans who have come out of Germany. (5) Published news and opinions in the German press.

First, then—have general discontent, active liberalism, and the Wilson doctrine reached the hearts of the masses of the German army?

They have not. That is the short answer, but there is in Washington ample evidence tending to qualify it.

For instance, it is known that inactive fronts and sectors are recognized as places where discontent in the German army has in fact taken a hold. Where there is activity, fighting, wounds, blood, death, the

military machine is complete master of men's minds. Elsewhere discontent and disheartenment grow up like weeds; consequently, as we learn from British secret sources, the German leaders take cognizance of the dangers of giving men time to talk and think, and there is positive knowledge that drives are dictated by social as well as military strategy.

## Breaking the German Machine from Within

ONE of the most recent reports shows that another exception is the case of the German army which has been on the eastern front. The very fact that the military autocracy fears that this army had, through contact with Russians, been permeated with revolutionary doctrines is a measure of the spread of those doctrines. To such an extent did this fear go, as reports from Germany show beyond a doubt, that army units sent from the east front to the west front were disbanded. The men were sent to their homes, and were at once gathered in again and scattered among divisions and units of undoubted loyalty. And this was because the military leaders were afraid of mass revolt in units which had learned liberalism in the East.

\* In fact, the summary of reports from Allied and American sources, drawn from interviews with prisoners and with individuals coming out of Germany, is in extraordinary parallel with a report I brought back on the condition of the Russian army after I had been at the Russian Staff headquarters and various army posts and hospitals in Russia in the winter of 1915-16:

"The rank and file are not clear as to the reasons for their fighting. They fight for no aim except for the supposed defense of their nation—for the belief transmitted to them that safety of home, race, community, welfare, family are at stake and that the enemy are ruthless in hate. There is no intelligent pleasure expressed in the giving of service—no such attitude as one finds among British and French regiments. But those who deny that there is will to fight are wholly mistaken. To be sure, there is discontent with the autocracy. As usual, this is not with the Emperor as much as with the ring around him, which really has the power. On the other hand, the opinion is general that during war there is no time for reform."

"The peasant soldier, however, by being moved back and forth from home to training post and from there to front and from front to hospital, is continually in a state of education through new contacts. There is a growing determination to remedy evils of autocracy—when the war is over. For the seeds of revolt the army is now a soil being fertilized every day. But that is the most which can be said, and no revolutions will gain headway without the army, for it is the army power which at first, ruthlessly and with the voluntary assent of the privates, will suppress any attempt to weaken the service rendered, by industry and by the civilian population, to the army's support. The doctrine of 'The people at home must stand behind you' is preached constantly by the officers."

That was Russia. The morale of the German army now, as Washington knows it, would be no higher if it had to lean upon a bureaucracy corrupt, complacent, idle, and delinquent.

The immediate spread of the revolt in the German

army is not a prospect upon which we can rely. Information which holds out that immediate prospect has been shown me. But it comes in small, sensational doses; there is not much conviction in it. The real barometer of future possibility, however, is the amount of fear of weakening of morale as expressed in the actions of the German military and secret-service machine.

For instance, it is a fact that the German Secret Service, foreseeing the release of German prisoners in Russia during and following the Bolshevik carnival, has gone to great lengths in sending agents among the German prisoners in Russia so that estimates could be made of what "corruption" these men might spread if returned to the German fighting fronts! In other words, at the very moment that American newspapers were bewailing the fact that some hundreds of thousands of Germans and Austrians would be released to bear arms again for the Central Powers these powers were estimating whether these prisoners would strengthen or weaken the fight.

If one can imagine the British or French fearing the return of released prisoners from Germany, one may estimate the comparative superiority of the Allied morale and see thrown into high light one of the things the President knows about the fighting chance to break the German machine from within.

### Strike Follows Strike

AFTER all, the road to the mind of the army is not direct. It is through the civilian population. The mere passage of time makes this road well traveled; men return wounded from the front and are released for a period from the intoxication of conflict; they absorb ideas and return as sullen disciples of liberalism. If a civilian population rises against the German war machine, the army is used to suppress the uprising; at first the soldier bears resentment that the civilians should fail to give him support. But strike follows strike, and after each one the army leans a little more toward the "home folks" and a little away from the military ring.

The evidence in the possession of the State Department and its agents, however, does not show that there is yet any general willingness, even in Germany's civilian population, to engage generally in acts of protest.

"The determination of the measure of discontent is best made by the circumstantial evidence," an officer of the State Department told me. "Perhaps the most disappointing evidence we get is direct; the testimony of those who come out of Germany, whether spies or not, and the interviews with prisoners are hopelessly conflicting. The War College has a mass of this information, and we have it. But it will not add up to any sum total. It is contradictory; it is loaded with personal viewpoints and rumors and lies and intentional deception. The circumstantial evidence, however, all goes one way. No one can manufacture it. It is drawn from the German press, from documents intended only for German eyes, and above all from the action of the German authorities, showing their fear of the first movements of a protest which might become an avalanche."

For instance, the public of the United States was informed over and over again by those who are pessimistic about breaking down the Prussian military ring that the strikes of German laborers at Berlin, Kiel, Hamburg, and northern ports were not serious. It was even insinuated that these strikes did not happen and that the news allowed to go out about them was German propaganda intended to raise false hopes and delay American military preparation. Others admitted that there were strikes, but said they were not political in nature.

What does the President know? There is available to him the same evidence which I have seen. He knows that such opinion is complete nonsense. He knows there is growing discontent with autocracy in Germany and must be amused when Chancellor Hertling says, as he did on February 24:

"With us princes and governments are the highest members of the nation as a whole, organized in the form of a state, the highest members with whom the final decision lies. But, seeing that they also, as the supreme organs, belong to the whole, the decision is of such a nature that only the welfare of the whole is the guiding line for a decision to be taken. It may be useful to point this out expressly to President Wilson's countrymen."

He knows that the Kaiser is not the real rock of autocracy in Germany; that the military and capitalist powers have even ceased to use him as a mouthpiece; have, in fact, been driven by the fear of discontent to use the ministers as their dummies. These are facts.

He knows that the strikes of January and early February were of great significance and that the franchise extension is delayed because the military ring fears the people.

Two years ago there were not so many secret revolutionary pamphlets and leaflets circulated in all Russia as there have been in the last months in Berlin and Hamburg. Here are extracts from two or three of these which have reached the State Department. It is to be noted that they are aimed directly at the very points of unrighteousness in the war policy of the German military machine which the President has been emphasizing:

From a leaflet sent out in various cities of Germany on January 10, 1918:

*"To the Men and Women of the Laboring Classes:*

*"We have reached a turning point in history. The Government's war aims are now brought to a head at Brest-Litovsk. It has been insisted in the past that the German Government only wanted to protect the empire's borders and had no intention of making annexations. No true-thinking man can longer believe this statement. If Germany should succeed in a peace of might against the Russian people, this would be fatal to the Russians and the Poles, the Lithuanians and Letts, but still more fatal to ourselves. The consequences would be a postponement of general peace, new threats and desires for revenge, increased armaments and intensified reaction in our country.*

*"This calamity must be avoided. The parties of the laboring classes are now excluded from the Reichstag. This was the only place where we could attack and explain the danger growing out of annexationist agitation. Thanks to the state of siege, our party and other adherents of a democratic peace have been brutally gagged, outside of the Reichstag. All efforts to end this suppression have been checked. All the Government's promises to mitigate this state of affairs have been idle words. Our peace meetings have been suppressed, and there remain no means of*

Indeed, the masses of the people think and feel differently. They want the bloody murder, devastation, sufferings, and hunger brought to an early conclusion. This is only attainable upon the basis of a democratic peace. Only peace without annexations and compensations and upon the basis of people's self-determination can save us. It is time now to raise your voices favoring such a peace."

This leaflet was concurrent with the outbreak of the strikes which later were suppressed by threats to draft all male workers and send them to the front as soldiers or trench diggers.

### 300,000 Workers in Revolt

SOME of the information coming out of Germany, perhaps stimulated by the German military party, was to the effect that the strikes were no different in character from the strikes going on in England or in the United States; i. e., that they were merely industrial.

The President knows better. The actual demands made by the strikers are available in documentary form. Here they are (translation):

"(1) Peace without annexations or indemnities on the basis of the right of self-determination. (2) Active participation by the workers of all countries in the peace negotiations. (3) Seizure of all food supplies in order to effect just distribution. (4) Removal of the state of siege and militarization of the factories. (5) Liberation of persons imprisoned for political offenses. (6) Democratization by the introduction of equal suffrage in Prussia."

Nor is that the most weighty of the evidence. Still more important is the positive information that the Pan-German herders of the people are not only driven back upon the policy of military suppression, but that the military machine is secretly behind the wide distribution of newspapers supporting its own policy and trying to stem the increasing discontent. One Berlin paper suddenly has begun to print four times the usual number of its daily issue. The increase was for distribution at the front and in the northern ports! Imagine the conditions which would be indicated if vast issues of London or New York daily papers were bought and circulated by the British and the American Administrations—especially if they were distributed among the British and American soldiers in France!

The information at the President's hand is that during the strike at least 300,000 workers actually laid down their tools, not in an industrial but in a political revolt.

Following the strike the whole press of Germany, radical and conservative, reflected the seriousness of the condition. To my mind one of the most interesting disclosures made by an inspection of this mass of material is that the German censorship has gone into a panic and the efforts of the military ring to make public opinion have become hopelessly disorganized. Half of the organs of the Pan-German crowd are holding out as bait the so-called German conquests of the Ukraine and Russia and Rumania to intoxicate the people with triumphs while the other half is clamoring for the people to put forth the utmost in loyalty and energy at a time when Germany's "power of resistance" is threatened—when her back is to the wall.

### Ample Evidence

IT was following the strike that the story of the "Allied Propaganda Committee, composed of Senator Stone of Missouri, Lord Northcliffe, and Lord Reading," appeared in so many of the German papers, and yet it is evident from the reports in the State Department that this kind of inspired story is no longer absorbed by the German people. It was ridiculed in Germany just as it was ridiculed outside of Germany. For instance, one prominent writer said on February 3: "Charges

that enemy agents propagated the strike are best refuted by the fact that a strike at this time has less injurious consequences respecting the production of ammunition than a strike started at any other time would have had."

The suppression of free public opinion and the increasing eagerness of the people to express themselves are both reaching extremities.

A reprint from "Vorwärts," a socialist paper, is being circulated far outside socialist circles in Germany, and some of the following phrases are not without clear meaning: "We, who still live, have suffered the

### WHICH WILL SEVER?

*Both blades are tempered in the fire of human nature.*

*setting forth our criticisms and persistent complaints. Anyone making himself disliked is condemned to temporary imprisonment or placed under the rule of the military authorities. The militarization of factories is being extended and the rights of laborers steadily restricted. Examination of houses, persecution by police and courts and draconian punishments are the order of the day. If the laboring classes now fail to emphasize their position, it will probably be taken as approval of this agitation, or it will be thought that the masses of German people are not yet tired of this terrible war and are willing to give support to continue the terrible war on a still greater scale.*

# Collier's

## Men Wanted!

**S**TATISTICALLY speaking, there is no shortage of labor in the United States. Every important industry in the country is short of men. But there is nearly as much unemployment as usual. In peace times, on the average of the years, there have been 6,000,000 wage earners idle one-third of their time. Or to put it in a less precise but more easily comprehensible form: there are, on the average, 2,000,000 persons out of a job in the United States. Moreover, there are at least 2,000,000 "floaters"—men who have become incapable of remaining in one job for more than a few days or a few weeks. The annual loss from unemployment in peace times has been estimated at \$2,000,000,000. There is no satisfactory evidence that in our effort to raise our production from the easy peace-time standard to the high requirement of war we have materially improved this situation.

Nobody knows how many men are out of a job in this country at the present moment. But we feel safe in saying that there are more than 1,000,000. The idle man is not one of our assets; he is one of our liabilities. We owe it to him, to ourselves, to civilization, to help him find a job. The idle machine is not one of our assets; it is one of our liabilities.

One of the most obvious needs of this situation is a national system of labor exchanges or employment bureaus. The first step, surely, in bringing the idle man and the idle machine together is to ascertain where the man is and where the machine is. Lacking the means for collecting and distributing this information, we are continually faced with the spectacle of an acute labor shortage in one community and an acute degree of unemployment in another. Such means have been devised in England. All we need to do is to borrow England's experience.

But our lack of any scheme for putting the man in touch with the job is only one aspect of our inefficiency. It is conservatively estimated that many of our new undertakings are not over 70 per cent efficient. The product of our machines is, say, three-quarters of what it ought to be. The labor turnover, always high in this country, is running beyond all bounds in the new war work. Factories in which the turnover is from 10 per cent to 15 per cent a month, or from 120 per cent to 180 per cent a year, are usual. We know of one factory which has hired in the last twelve months 22,000 men in order to keep an average of 1,700 men on the job, and we are reliably informed that, while this is exceptional, it is by no means unparalleled.

What does it mean when a large factory hires—and fires—a dozen men in order to secure one reasonably competent workman?

It means a heavy increase in the first cost of the product; it costs money to hire men; it costs money to fire men. It means a profound injustice to the men who are hired and fired. It costs the workman money to get a job; it costs him more money to lose a job. Often the cost is so terrific that it cannot be measured in money.

## Hiring and Firing

**W**HAT'S the secret of this high turnover—so expensive to employer and employee and consumer? Why are so many men hired only to be fired?

Employers say that there are just three types of labor now to be found in the open market. First, there is the high-grade man, the type of man who has worked many years for a single employer, but who now lays off in search of what he has heard is a similar job at a great increase in wages. This is the best type—and the scarcest. But it should be noted that such a man is necessarily less efficient in his new job, with a new machine to handle, than he was at his old. Second, there is the man whose trade has gone dull under war conditions and who seeks work at a munition factory—work for which he lacks training. Third, there is the poor workman—the floater—the man in the employer is willing to lose.

In a word, they say the quality of the labor in the market is poor, and they have evidence to support this view.

The New York State Employment Agent at Syracuse reports that of 2,500 reputed machinists who were laid off there by two factories temporarily, the majority were so lacking in adaptability that they could not be employed successfully in other near-by machine shops short of hands. The agent in another city says that

April 13, 1918

one in ten of reputed skilled machinists make good in the new job. The rest cannot. In one month 10,866 skilled union wage earners applied for work at the Massachusetts State Employment office. There were bartenders, boot and shoe workers, bottlers, locomotive engineers, stonecutters among this 10,866; but only 288—a little less than 3 per cent—were machinists. Probably one man in three of those out of a job applied to the State for work. Probably there were more than 32,000 skilled men out of a job in Massachusetts. (At \$4 a day average wage, these 32,000 men were lost \$128,000 a day.) Other States report a similar condition. Out of 7,510, mostly skilled, men who applied to the New York State Employment Bureau in November, only 172 were machinists.

The traditional American system for dealing with this kind of labor supply is to advertise for more men than are needed, the 10 or 20 per cent who look most capable, and send the rest away.

A well-meaning employment manager, new but more able than the average, recently boasted: "When I came here six weeks ago we had about fifty men at the gate each morning looking for work. Now we have 200 at the gate each morning."

This man needed thirty men. He ignored the effect of bringing 170 men to his gate only to turn them away. He ignored the fact that of the thirty he did hire, ten would be fired the next day and five more in the next week. He was dealing with the labor problem in the usual American way—according to the hire-and-fire system.

Our typical large employer of labor says to a new man: "There is your machine. Make good or quit."

Sometimes a man picks up enough from his neighbors in the machine room to make good; sometimes he doesn't. If he doesn't, out he goes.

## Training Machine Operatives

**E**XPERT opinion insists not only that this system is bad, but that there is a remedy for it. Mr. H. E. MILES, chairman of the section on industrial training of the Council of National Defense, has been traveling from one industrial center to another persuading factory managers that machine operatives can be trained. One factory which makes time fuses for shells is becoming famous as an example of what can be done with a training room. Mr. MILES reports:

Six thousand inexperienced operatives have recently been taught to run machines efficiently. The management estimates that after from three to eight days in the training room and three weeks in regular production these operatives are from 20 per cent to 50 per cent more efficient than the old-time self-taught operatives. The turnover in this factory is practically nil. On the completion of one order it was compelled to lay off 2,200 operatives for a few weeks. At the end of that period it secured the return of more than 2,100 means of a single advertisement in the daily papers. There is no hiring problem in this factory. There is no wage problem—the efficiency of the plant is so high that it can and does pay its operatives high wages.

The method used in this factory is of the simplest. Machines of the type used in the factory are set apart in a training room. Picked operators are instructed in the best methods of operating the machines and in the training of new workers. The machines were then used by the beginners in actual production, but under the superior direction of these specially trained and specially skilled operators. The training machines produced as much or more than the regular machines in the factory. The operatives so trained at trifling expense were better than the operatives formerly secured by the hire-and-fire, trial-and-error method.

That's the answer to the problem of unemployment, of labor shortage, of the expensive turnover in our industry. Train the men.

We are not so sure as Mr. MILES is that factory training of machine operatives is a panacea. But in the present emergency it offers vital relief.

## A Vest-Pocket Summary

**T**OWARD the end of the fourth year of Europe's war and at the beginning of the second year of our own war, the general reader has one great advantage over the general reader of the last three years and three-quarters. The war map—physical, economic, and moral—is much easier to follow. Through the joint efforts of LENINE and HINDENBURG the eastern front has been eliminated. Through the joint efforts of SCHEIDEMANN and HINDENBURG and CZERNIN, what may be called Germany's domestic front has been eliminated. We need no longer worry over interior lines versus encircling lines. We need no longer worry over wedge driving as between

# Editorials

Germany and Austria, or as between the German people and their rulers, or as between the German appetite and the German food supply. The situation has been enormously simplified.

Subject to immediate cancellation by events uncharted at the moment of writing, this is the strategic situation in a nutshell: Germany and the Allies are facing each other along a simple straight line from the North Sea to the Adriatic. Everything else—Saloniki, Palestine, Mesopotamia—no longer counts. There is no longer the slightest chance of the game being won by thrilling runs around the end or heart-compelling forward passes. There is no longer any chance of Germany's being driven to surrender by famine, or by a revolt of her socialists, or by the desertion of her allies. It is only a choice of a try for a break-through by either side now, or six months from now, or a year from now.

Two things Germany has won in Russia—men and food, of which the second for the moment is the more important. Two things America has brought to the Allies—men and food, of which for the moment the second is the more important.

It is Kansas wheat against Ukrainian wheat, with certain advantages for either side. The Ukraine is nearer to Berlin than Kansas is to Paris, and at first sight there are no Allied U-boats on the road from Odessa to the Spree. But conditions in Kansas are somewhat more stable than in the Ukraine, and we may take it that Germany will have to put in as much effort convoying her food through the newly conquered Slavland as the Allies across the Atlantic. When it comes to quantity, it is a fairly safe bet on the United States as against the Ukraine.

But that quantity will not come by merely taking thought. Germany's conquests in the Russian wheat fields must be met with a counterdrive from American farms and shipyards. That would seem to be the heart of the present strategic situation.

## Tarkington's New Stories

AFTER all, the lives of editors have compensations. We have just read in galley proof six new stories by BOOTH TARKINGTON. We read them all in a single evening, pausing only to chuckle. This was greedy. But most anybody who is human would do the same if he had the chance. Mr. TARKINGTON understands the American young person better, and presents him with more humor, than any other writer. Sometimes in reading these stories it seemed he was at his best with the belle of twenty and the enamored youth of about the same age. That was when we were reading about NOBLE DILL, who was in love with JULIA ATWATER. Again it appeared Mr. TARKINGTON was at his very best in telling about a boy and a girl of thirteen—the age of mischief. That was when we were reading about FLORENCE ATWATER and her cousin HERBERT. And then there came a passage in which one colored maid discoursed with another colored maid over the dinner dishes, and we thought Mr. TARKINGTON ought always to write about persons of color. The truth is, Mr. TARKINGTON was a natural-born storyteller who served a real apprenticeship. But where did Mr. TARKINGTON acquire his knowledge of thirteen, of seventeen, of twenty? Most of us can remember just enough of ourselves at these ages to recognize the truth of Mr. TARKINGTON's pictures. He stirs long-buried memories in the adult reader—compelling a happy reminiscent smile between chuckles. His stories ought to be read aloud—and, of course, one at a time. Nobody should be permitted to read six of these stories in one evening, gorging himself on their delights as the present writer did. Accordingly, COLLIER's will present these six stories one at a time. The first one will appear next week under the title of "Too Gentle Julia."

## Carleton Parker

IT is a truism, of course, that the death roll of this war is by no means confined to the fighting fronts. The men who die of disease in our training camps, the boys who went down on the *Tuscania*—men such as these are recognized as deserving, equally with those whose names appear on PERSHING's casualty lists, of the thanks of the nation. But there are victims of this war who have never worn a uniform. CARLETON PARKER, professor in the University of Washington, at Seattle, did not enlist. But from early last summer he flung himself into the task of keeping labor in the Northwest in line. He gave, as a Federal mediator, all his

unparalleled knowledge and understanding of labor and its point of view. That knowledge, that understanding, he gained, not by academic investigation, but by working in mines and woods, in shops and on farms. He had the trust and confidence of both sides in disputes between capital and labor; his services were called in whenever trouble was brewing. For months he worked almost literally night and day, traveling constantly, several times from coast to coast. Thanks to him, strikes were averted; war work of the most vital importance, threatened by misunderstandings and smoldering discontent, went on. In the middle of March, weakened, exhausted, he was attacked by pneumonia, and died without a chance to make a winning fight. We submit that CARLETON PARKER, fighting on the economic front, lies in a soldier's grave.

## Beating the Germans

THE family of a reserve officer in the American army who lived in France before the war occupies a flat in Paris. His wife recently gave birth to a son. The officer was anxious to inform his mother-in-law of this happy event by cable. He wrote as follows:

Robert M——, Jr., eight pounds, arrived safely.

The censor was adamant. "I cannot pass that," he said. "The rule is specific in forbidding mention of the names of Americans arriving in France." The officer rewrote the message as follows:

Robert M——, Jr., eight pounds, born safely.

Whereupon the censor beamingly wrote his "O. K." The German Intelligence Department was baffled.

## What They're Learning in Paris

PARIS may suffer, but we refuse to think that these food restrictions of which one hears have hit Paris very hard. We have various friends there, and some of them have written their gains in weight, and others have sent photographs. The purse of the diner in Paris suffers to-day much more than his stomach. If his purse holds nothing but police papers and postage stamps, then, of course, he may really suffer. There is undernourishment for many a poor citizen and for many a child; otherwise, we hardly fancy the American Red Cross would be establishing school luncheons in the poorer sections of the capital as an act of preventive medication. But as for the Parisian of circumstance, or the American of occasion, food restrictions in the Ville Lumière (but we forget: in the age of the Gotha it is the Ville Lumière no more!) are far less severe than in New York, in this the consulship of HOOVER. There is even something for a gourmet to be thankful for in such regulations as do rule the dinner card. True, one is denied the crème d'Isigny and the double-crème; the "little Swiss" of CHARLES GERVAIS is denied the epicure that there may be more milk for the children of France. On the other hand, the other restrictions should bring back table joys to their true French status as a fine art of fine arts. Gluttons had replaced by the abundance of plates the judicious choice, the wise eclecticism, which alone give a menu distinction. Two "plates" and two alone, says the Paris ordinance, may the diner enjoy. Does a hungry man suffer? Not if he can afford to begin with oysters or hors-d'œuvres (which don't count as a "plate") and can end with desert and coffee—which, again, don't count. And as one may have a vegetable with each of the two "plates" of fish or eggs or meat, one has really four courses, or six—counting the oysters and the dessert. Our officers on leave at Paris are not suffering—nor yet our boys of the Y. M. C. A., so heroically bent upon saving the morals and physique of our transplanted army. Indeed, food restriction in Paris will help to educate our sons and brothers and cousins, speaking gastronomically: they must now study the *carte du jour* with discretion and not leave those vital choices to a waiter—for who would use up his "two plates" without effectively balancing the ration and stretching it wisely and well to its fullest proportions? Knowing something of Paris, we would warn the wives, mothers, and sweethearts of the A. E. F. that when their husbands, sons, and lovers come marching home they will demand both more and better cooking than they used to put up with. No more will canned stuff serve our American youth! Get out your cookbooks, mothers and future mothers of America—get out your cookbooks and learn art from Paris, as well as economy from HERBERT HOOVER.

April 13, 1918

## WHAT "CONTROL OF THE AIR" MEANS

*A German railway supply station completely destroyed by French artillery after French observation airplanes, eluding the German air defenses, had flown over the lines and given the range to their guns. If this could be done along the whole front, the German armies would be blinded and at the mercy of Allied artillery*

FOR the reader's convenience the important details of this remarkable photograph have been numbered. First of all, it is well to point out that either during or following the shelling of the station the Germans built a new spur of track, shown in the foreground, and piled the supplies out in the open. Two loaded freight trains are shown at 1, running on the newly laid tracks, the smoke of a locomotive being plainly visible to the left of center. At 2 are

heaps of building material, chiefly cut and squared timbers for use in constructing dug-outs. Some rolls of barbed wire appear at 3, while at 4 is seen a pile of the iron stakes upon which the wire is to be strung. Curved steel roofing for underground shelters and machine-gun positions appears at 5. At 6 is the site where the railway station stood before the French shells destroyed it. There is nothing left except a series of huge shell craters, many of them overlapping. These

craters are from twenty to sixty feet across, and are probably the work of 320 mm. (13-inch) shells. This view illustrates strikingly the uncanny accuracy of modern artillery. The station was presumably six or eight miles back of the lines, so that the French guns must have been fired from a distance of at least ten miles. Yet so accurate was the range obtained by the airplane observers that of the twenty or thirty shells fired not one missed its mark. At 7, 8, and

9 may be seen the remains of the railway tracks that entered the station. A row of uprooted ties appears at 10. At 11 are more piles of supplies, the perishable goods being covered with tent cloth. No. 12 is a battery of four guns. Notice the emergency trench in front, and the "funk holes," or shelters for the artillerymen, at the right. A commander's headquarters dugout is seen at 13, its earth roof being plainly visible. No. 14 is of especial interest, as it shows a

common method of storing ammunition at the front. The boxes are stacked in square piles which are covered with tarpaulin and spaced about fifty feet apart. The spacing is done so that in case one pile is hit and exploded by a shell or bomb, the other piles remain comparatively safe. Notice the groups of German soldiers standing near by. One group is especially distinct to the left of the next to the last row. There are other soldiers in the road, to the right of 15,

watching the French airplane. The aviator who took this picture had about one chance in a thousand of getting back safely; for at the low altitude at which he was flying (not over 800 feet) he was a good mark even for a machine gun. The existence of the picture, however, is proof that he did get back. It is probable, also, that the French artillery, using this photograph as a guide, was not slow to make the destruction of the depot and supplies even more extensive.

# LIKE A SINGING BIRD

HER name was Melissa. She was fourteen, going on fifteen; and the world was a fascinating place. There were people who found Cherryvale a dull, poky little town to live in, but not Melissa. Not even in winter, when school and lessons took up so much time that it almost shut out reading and the wonderful dreams which reading is bound to bring you. Yet even school—especially high school the first year—was interesting. The more so when there was a teacher like Miss Smith, who looked too pretty to know so much about algebra and who was said to get a letter every day from a lieutenant—in the Philippines! Then there was ancient history, full of things fascinating enough to make up for algebra and physics. But even physics becomes suddenly thrilling at times. And always literature! Of course "grades" were bothersome, and sometimes you hated to show your monthly report to your parents, who seemed to set so much store by it; and sometimes you almost envied Beulah Crosswhite, who always got an A and who could ask questions which disconcerted even the teachers.

Yes, even school was interesting. However, summertime was best, although then you must practice your music lesson two hours instead of one a day, dust the sitting room, and mind the baby. But you could spend long, long hours in the summerhouse, reading poetry out of the big Anthology and—this a secret—writing poetry yourself! It was heavenly to write poetry. Something soft and warm seemed to ooze through your being as you sat out there and watched the sorrow of a drab, drab sky; or else, on a bright day, a big shining cloud aloft like some silver-gold fairy palace and, down below, the smell of warm, new-cut grass, and whispers of little live things everywhere! It was then that you felt you'd have died if you couldn't have written poetry!

It was on such a lifting day of June, and Melissa's whole being in tune with it, that she was called in to the midday dinner—and received the invitation.

Father had brought it from the post office and handed it to her with exaggerated solemnity.

"For Miss Melissa Merriam," he announced.

Yes! there was her name on the tiny envelope. And, on the tiny card within, written in a painstaking, cramped hand:

Mr. Raymond Bonner  
at home  
Wednesday June Tenth

R. R. V. P.

R. R. V. P.

With her whole soul in her mouth, which made it quite impossible to speak, she passed the card

BY DANA GATLIN

ILLUSTRATED BY CLARA ELSBIE PECK

to her mother and waited. "Oh," said mother, "an evening party."

Melissa's soul dropped a trifle: it still clogged her throat, but she was able to form words.

"Oh, mother!"

"You know you're not to ask to go to evening parties, Missy." Mother's tone was as firm as doom. Missy turned her eyes to father.

"Don't look at me with those big saucers!" he smiled. "Mother's the judge."

So Missy turned her eyes back again. "Mother, please—"

But mother shook her head. "You're too young to begin such things, Missy. I don't know what this town's coming to—mere babies running round at night, playing cards and dancing!"

"But, mother—"

"Don't start teasing, Missy. It won't do any good."

So Missy didn't start teasing, but her soul re-

mained choking in her throat. It made it difficult for her to swallow, and nothing tasted good, though they had lamb chops, which she adored.

"Eat your meat, Missy," adjured mother. Missy tried to obey and felt that she was swallowing lumps of lead.

But in the afternoon everything miraculously changed. Kitty Allen and her mother came to call. Kitty was her chum, and lived in the next block, up the hill. Kitty was beautiful, with long curls which showed golden glints in the sun. She had a whim that she and Missy, sometimes, should have dresses made exactly alike—for instance, this summer, their best dresses of pink dotted mull. Missy tried to enjoy the whim with Kitty, but she couldn't help feeling sad at seeing how much prettier Kitty could look in the same dress. If only she had gold-threaded curls!

During the call the party at the Bonners' was mentioned. Mrs. Allen was going to "assist" Mrs. Bonner. She suggested that Missy might accompany Kitty and herself.

"I hadn't thought of letting Missy go," said Mrs. Merriam. "She seems so young to start going out evenings that way."

"I know just how you feel," replied Mrs. Allen. "I feel just the same way. But as long as I've got to assist, I'm willing Kitty should go this time; and I thought you mightn't object to Missy's going along with us."

"Oh, mother!" Missy's tone was a prayer.

And her mother, smiling toward her a charming, tolerant smile as if to say: "Well, what can one do in the face of those eyes?" finally assented.

AFTER that the afternoon went rushing by on wings of joy. When the visitors departed Missy had many duties to perform, but they were not dull, ordinary duties; they were all tinted over with rainbow colors. She stemmed strawberries in the kitchen where Marguerite, the hired girl, was putting up fruit, and she loved the pinkish-red and gray-green of the berries against the deep yellow of the bowl. She loved, too, the color of the geraniums against the green-painted sill just beside her. And the sunlight making leafwork brocade on the grass out the window! There were times when combinations of color seemed the most beautiful thing in the world.

Then she had to mind the baby for a while, and she took him out on the side lawn and pretended to play croquet with him. The baby wasn't quite three, and it was delicious to see him, with mallet and ball before a wicket, trying to mimic the actions of his elders. Poppylinda, Missy's big black cat, wanted to play too, and succeeded in getting between the baby's legs and upsetting him. But the baby was under a charm; he only picked himself up and

No wonder the girls and boys gathered round her

tugged. And Missy was sure that Jack Poppy also laughed.

That night at supper she didn't have much chance to talk to father about the big event, for he had brought an old friend home to supper.

Missy was rather left out of the conversation. She felt glad for that; it is hard to talk to people; it is hard to express to them the thoughts and feelings that pass through you. Besides, to-night she didn't want to talk to anyone, or to listen. She only wanted to sit immersed in that soft, warm, flattering deliciousness.

Just as the meal was over the hall telephone rang and, at a sign from mother, she excused herself to answer it. From outside the door she heard father's friend say: "What beautiful eyes!" Could he be speaking of her?

THE evening, as the afternoon had been, was divine. When Missy was getting ready for bed she leaned out of the window to look at the night, and the fabric of her soul seemed to stretch out and mingle with all that dark, luminous loveliness. It seemed that she herself was a part of the silver moon high up there, a part of the white, shining radiance which spread down and over leaves and grass everywhere. The strong, damp scent of the ramblers on the porch seemed to be her own fragrant breath, and the black shadows pointing out from the pine trees were her own blots of sadness—sadness vague and mysterious, with more of pleasure in it than pain.

She could hardly bear to leave this mysterious, fascinating night; to leave off thinking the big, vague thoughts the night always called forth; but she had to light the gas and set about the business of undressing.

But, first, she paused to gaze at herself in the looking-glass. For the millionth time she wished she were pretty like Kitty Allen. And Kitty would wear her pink dotted mull to the party. Missy sighed.

Then meditatively she unbraided her long, mouse-colored braids; twisted them into tentative loops over her ears; earnestly studied the effect. No; her hair was too straight and heavy. She tried to imagine undulating waves across her forehead—if only mother would let her use crimpers! Perhaps she would! And then, perhaps, she wouldn't look so plain. She wished she were not so plain; the longing to be pretty made her fairly ache.

Then slowly the words of that man crept across her memory: "What beautiful eyes!" Could he have meant her? She stared at the eyes which stared back from the looking-glass till she had the odd sensation that they were something quite strange and alien to her: big, dark, deep, and grave eyes, peering out from some unknown consciousness. And they were beautiful eyes!

Suddenly she was awakened from her dreams by a voice at the door: "Missy, why in the world haven't you gone to bed?"

Missy started and blushed as though discovered in mischief.

"What have you been doing with your hair?"

"Oh, just experimenting. Mother, may I have it crimped for the party?"

"I don't know—we'll see. Now hurry and jump into bed."

After mother had kissed her good night and gone, and after the light had been turned out, Missy lay awake for a long time.

Through the lace window curtains shone the moonlight, a gleaming path along which Missy had often flown out to be a fairy. It is quite easy to be a fairy. You lie perfectly still, your arms stretched out like wings. Then you fix your eyes on the moonlight and imagine you feel your wings stir. And the first thing you know you feel yourself being wafted through the window, up through the silver-tinged air. You touch the clouds with your magic wand, and from them fall shimmering jewels.

Missy was fourteen, going on fifteen, but she could still play being a fairy.

But to-night, though the fairy path stretched invitingly to her very bed, she did not ride out upon it. She shut her eyes, though she felt wide-awake. She shut her eyes so as to see better the pictures that came before them.

With her eyes shut she could see herself quite plainly at the party. She looked like herself, only much prettier. Yes, and a little older, perhaps. Her

"I didn't want to leave them out there all night"

pink dotted mull was easily recognizable, though it had taken on a certain ethereally chic quality—as if a rosy cloud had been manipulated by French fingers. Her hair was a soft, bright, curling triumph. And when she moved she was graceful as a swaying flower stem.

As Missy watched this radiant being which was herself she could see that she was as gracious and sweet-mannered as she was beautiful; perhaps a bit dignified and reserved, but that is always fitting.

NO wonder the other girls and the boys gathered round her, captivated. All the boys were eager to dance with her, and when she danced she reminded you of a swaying lily. Most often her partner was Raymond himself. Raymond danced well too. And he was the handsomest boy at his party. He had blond hair and deep, soft black eyes like his father, who was the handsomest as well as the richest man in Cherryvale. And he liked her, for last year, their first year in high school, he used to study the Latin lesson with her and wait for her after school and carry her books home for her. He had done that although Kitty Allen was much prettier than she and though Beulah Crosswhite was much, much smarter. The other girls had teased her about him, and the boys must have teased Raymond, for after a while he had stopped walking home with her. She didn't know whether she was gladder or sorrier for that. But she knew that she was glad he did not ignore that radiant, pink-swathed guest who, in her beautiful vision, was having such a glorious time at his party.

Next morning she awoke to find a soft, misty rain graying the world outside her window. Missy did not mind that; she loved rainy days—they made you feel so pleasantly sad. For a time she lay quiet, watching the slant, silvery threads and feeling mysteriously, fascinatingly, at peace. Then Poppy, who always slept at the foot of her bed, awoke with a tremendous yawning and stretching—exactly the kind of "exercises"

that young Doc Allison prescribed for father, who hated to get up in the mornings!

Then Poppy, her exercises done, majestically trod the coverlet to salute her mistress with the accustomed maternal salutation which Missy called a kiss. Mother did not approve of Poppy's "kisses," but Missy argued to herself that the morning one, dependable as an alarm clock, kept her from oversleeping.

She hugged Poppy, jumped out of bed, and began dressing. When she got downstairs breakfast was ready and the house all sweetly diffused with the dreamy shadows that come with a rainy day.

Father had heard the great news and bantered her: "So we've got a society queen in our midst!"

"I think," put in Aunt Mattie, "that it's disgraceful the way they put children forward these days."

"I wouldn't let Missy go if Mrs. Allen wasn't going to be there to look after her," said mother.

"Mother, may I have the hem of my pink dress let down?" asked Missy.

At that father laughed, and Aunt Mattie might just as well have said: "I told you so!" as put on that expression.

"It's my first real party," Missy went on, "and I'd like to look as pretty as I can."

Something prompted father, as he rose from the table, to pause and lay his hand on Missy's shoulder.

"Can't you get her a new ribbon or something, mother?" he asked.

"Maybe a new sash," answered mother reflectively. "They've got some pretty brocaded pink ribbon at Bonner's."

After which Missy finished her breakfast in a rap-ture. It is queer how you can eat, and like what you eat very much, and yet scarcely taste it at all.

When the two hours of practicing were over, mother sent her downtown to buy the ribbon for the sash—a pleasant errand. She changed the black tie on her middie blouse to a scarlet one and let the ends fly out of her gray waterproof cape. Why is it that red is such a divine color on a rainy day?

Upon her return there was still an hour before dinner, and she sat by the dining-room window with Aunt Mattie, to darn stockings.

"Well, Missy," said Aunt Mattie presently, "a penny for your thoughts."

Missy looked up vaguely, at a loss. "I wasn't thinking of anything exactly," she said.

"What were you smiling about?"

"Was I smiling?"

Just then mother entered and Aunt Mattie said: "Missy smiles, and doesn't know it. Party!"

But Missy knew it wasn't the party entirely. Nor was it entirely the sound of the rain swishing, nor the look of the trees quietly weeping, nor of the vivid red patches of geranium beds. Everything could have been quite different, and still she'd have felt happy. Her feeling, mysteriously, was as much from things inside her as from things outside.

After dinner was over and the baby minded for an hour, mother made the pink-brocaded sash. It was very lovely. Then she had an hour to herself, and since the rain wouldn't permit her to spend it in the summerhouse, she took a book up to her own room. It was a book of poems from the Public Library.

The first poem she opened to was one of the most marvelous things she had ever read—almost as wonderful as "The Blessed Damsel." She was glad she had chanced upon it on a rainy day, and when she felt like this. It was called "A Birthday," and it went:

*My heart is like a singing bird  
Whose nest is in a watered shoot;  
My heart is like an apple tree  
Whose boughs are bent with thickset fruit;  
My heart is like a rainbow shell  
That paddles in a hulk of sea;  
My heart is gladder than mine,  
Because my love is com, to me.*

*Raise me a dais of silk and down;  
Hang it with vair and purple dyes;  
Carve it with doves and pomegranates,  
And peacocks with a hundred eyes;  
Work it in gold and silver grapes,  
In leaves and silver fleurs-de-lys,  
Because the birthday of my life  
Is come, my love is come to me.*

The poem expressed beautifully what she might have answered when Aunt Mattie asked why she smiled. Only, even though she herself could have expressed it so beautifully then, it was not the kind of answer you'd dream of making to Aunt Mattie.

THE next morning Missy awoke to find the rain gone and warm, golden sunshine filtering through the lace curtains. She dressed herself quickly, while the sunshine smiled and watched her toilet. After breakfast, at the piano, her fingers found the scales tiresome. Of themselves they wandered off into unexpected rhythms which seemed to sing aloud:

*Work it in gold and silver grapes,  
In leaves and silver fleurs-de-lys . . .  
Raise me a dais of silk and down;  
Hang it with vair and purple dyes . . .*

She was idly wondering what a "vair" might be when her dreams were crashed into by mother's reproving voice: "Missy, what are you doing? If you don't get right down to practicing, there'll be no more parties!"

Abashed, Missy made her fingers behave, but not her heart. It was singing a tune far out of harmony with chromatic exercises, and she was glad her mother could not hear.

The tune kept right on throughout dinner. During the meal she was called to the telephone, and at the other end was Raymond; he wanted her to save him the first dance that evening. What rapture this was what happened to the beautiful belles you read about!

After dinner mother and Aunt Mattie went to call upon some ladies they hoped (Continued on page 26)

She loved the pinkish-red and gray-green of the berries

# FROM BASEBALL TO BOCHES

BY H. C. WITWER—FIFTH INNING

ILLUSTRATED BY F. E. GRUGER AND ARTHUR WILLIAM BROWN

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I got them cigarettes and newspapers to-day, and I must say that you have made yourself solid with me for life. I split the pills fifty-fifty with my squad, and I'll betcha them guys would pay more attention to me right now than they would to Pershing. They is a waiting line from here to Milwaukee for a flash at the newspapers, which was close to a month old when they got here, and I am the envy of prob'ly half the American army.

You know, Joe, that my heart was always bigger than Boston, but them doughboys will have to gnash their teeth and wait till I get through readin'. Why, I have barely gone over them newspapers a dozen times, so far, givin' nothin' but a scant day to the baseball dope.

I see they was a case of intoxication come to light in New York. Is that on the level, Joe?

Well, I am out of the hospital now, with nothin' but a couple of scars on my back and a couple of stripes on my sleeve to show I was among them present when the Germans pulled off that raid on us. Joe, Rockefeller is just \$2.75 shy of havin' enough money to buy any part of 'em!

The French guys is tickled to death at the scrap we put up the first night the squareheads come over. Even the English officers which is here, and which wouldn't get excited if the Kaiser committed suicide, gives us credit for bein' able to take a punch without slowin' up. But, Joe, they is somethin' else us doughboys can do besides bein' able to take it, and that's bein' able to deliver a wallop, which same we will do the minute we go to bat against them birds. They grabbed a few hits off us in their half of the innin', but when we play a return date with 'em and pull off our raid, we'll make 'em holler for the cops, believe me!

Why, Joe, us doughboys which form'ly looked on this brawl over here as a kind of tick-tack-toe tourney is goin' around like lions at the zoo ten minutes before they bring the meat on. We ain't gonna be satisfied with just lickin' these tramps, we wanna tear 'em apart and throw 'em away! Alongside of us, a Belgian is madly in love with the Kaiser, and if we don't get a chance to use up this fightin' blood on them squareheads pretty soon, we'll be manglin' each other, and that ain't no lie!

Well, our captain presented me with ten days' leave on account of me gettin' beased in that raid and naturally enough, as newly married guys will, I beat it back to Jeanne, which same I wed in my last letter to you. As they ain't no way on earth of lettin' anybody know anything over here in advance, I was a complete surprise when I blowed into her home. She's sittin' in what passes for the parlor in France, talkin' to her brother which is an "ace" in the French Aviation Corps. An ace in the Aviation Corps means the same as it does in stud poker, and this guy has got more medals than Sousa ever seen. He's been poison to the German flyers, Joe, and any squarehead which will bring him down will be give a pocket full of iron crosses and allowed not to eat them German hot dogs for a week.

The two of them is sittin' there, and Jeanne is cryin'. My dare-devil brother-in-law is pattin' her on the shoulder.

"What's the idea of them weeps?" I says, comin' into the room. "Has Napoleon escaped from his tomb or is the butcher holdin' out for cash?"

Well, I found out what a sensation was anyways, Joe. I was it!

Jeanne takes one flash at me and give a yell that

must of woke up half Camden, N. J. Then she leaps from the chair and drapes herself around my neck like a collar. "Mon Dieu!" she says, huggin' me tight. "I thought the boche have kill you!"

"They ain't enough of them!" I says, liftin' her up and kissin' her. "Why, I had this Hindenburg guy

"You'd be a sucker if you tried it!" I says. "Love and let love, as whatsthis says."

Well, he blowed, Joe, and there was Jeanne and me all alone for the first time since I got wed and hadda dash right away to the front. The last scene in any of them ten-reel movies, Joe, will give you a line on what took place. Yours truly,

ED HARMON.

(Don't forget you gotta chance to enlist before they take you by hand in the draft!)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I am back at the ring-side again, my ten days' leave havin' come and gone like the Twentieth Century Limited. The worst part this time, of course, was leavin' Jeanne, and I must say I had a tough case of the blues for a while after I went away. But, Joe, this dame has got more stuff from the ears up than a foreman at Yale or one of them college joints, and she didn't make no wild scene or nothin' like that, which wouldn't of helped matters a bit. I fled outa here on one of them little trick trains, and she come down to the station with me as bright and full of pep as if she was in the front row of the Winter Garden, and a disinterested stranger would of thought I was on my way to get elected King of Arizona or somethin', instead of goin' to the

trenches. We tried to get done with all the good-byes at the house, but when the train come in it turned out they was a few we had overlooked, and all the French doughboys which was goin' back leaned out the windows and yelled encouragement to us like guys at a prize fight. Anything sentimental is a riot to the French, Joe, and we went big with this gang, believe me!

I am sendin' you a picture of Jeanne, and if she ain't the best-lookin' member of the fair sex you ever seen off a magazine cover, I'll devour your chapeau, as we say in France. Don't let none of them moving-picture guys see the photo, because I don't want her bothered with no cables whilst I'm away. I wished I knowed how Windy Haskins is makin' out since them guys took him prisoner in the raid. It certainly is lonesome without him, because me and him was pals, and now they ain't nobody to fight with but the Germans. All I know is that if them squareheads ever get mussy with Windy, they'll wish he had never enlisted, and that's a cinch!

I have got to cut this letter short, Joe, for reasons that is between me and the censor. But I have just heard we're gonna move to some new trenches, so I gotta tear myself away from the ink. The guy that said the pen was mightier than the sword never seen no battle field durin' the rush hour, and that's no camouflage; heh, Joe?

Yours truly,

ED HARMON. (The Avenger of Belgium.)

VIVELA, FRANCE.

DEAR JOE: Well, I guess you must be thinkin' by this time that the boches have fin'ly got me, it is so long since I have wrote you. But such is not the case, Joe, and anybody that claims I'm dead is a liar, and I can prove it!

Since last I took pen in hand and let it run wild over some clean white paper, I have had more adventures than the handsomest movie hero which ever bravely faced a battery of cameras, also I am now a sergeant and when you write to me you wanna say "Sir," and no familiarity goes! No doubt by the time you get this, if so, I will be a vice general, or somethin', and Pershing (Continued on page 24)

"What is the name of your regiment?" barks one of them in English

throwin' away his uneyform, and half the German army has threatened to resign unless the Alleys keep me outa the trenches!"

"Que je suis heureux de vous!" remarks Jeanne, splittin' the laughs, tears, and kisses three ways.

In butts friend brother-in-law. "Edouard!" he hollers. "It is then of the indeed you!" Before I can raise a hand, Joe, he has gone to work and kissed me his self!

"But they have wound you, mon chéri!" says Jeanne. "I hear you—"

"Sah!" I says. "Just a little blood poisonin'. I got it chokin' the Kaiser—my hand scraped against that trick whisker of his!"

"Ah! They have make you an officer!" chimes in the wife's relation, pointin' to the stripes on my sleeve. "You are then the capitaine?"

"Captain?" I says. "I got that beat eighty ways—I'm a corporal!"

"Ah!" they both says, rollin' their eyes and shakin' their heads like they'll tell the world I'm there!

"How many of the boche pig have you kill, then?" asks he.

"After the first few hundred I stopped countin'," I says. "They was a guy supposed to be with me with an addin' machine, but he overslept."

"Ah!" says Jeanne. "Sooch a brave homme!"

"Ain't I?" I admits. "Has anything happened here outside of the rain since I left?"

Her brother is still thinkin' about me. "By the George!" he says, "France will give you the Croix de Guerre, with that palm!"

"I couldn't eat a thing!" I says, "but—"

"Tell all to me of the fight!" he interrupts. "I die of the excitement!"

"Listen!" I says, drawin' Jeanne a little closer. "The wire's busy right now. If you wanna make yourself solid with me, you'll go out and take a nice, long walk, so's me and Jeanne can talk over the high cost of chocolate sundaes in Crimea, without bein' disturbed."

"Parbleu!" he remarks, givin' me a look at his gold tooth. "I well understand—I go!" He give a sigh that liked to blowed my hat off. "After all," he says, "who am I to stop the young from loving?"

## Stretch the Hours Between Whistle and Whistle!

**T**HESE are the days that must yield a bigger output than ever before. Increased production is demanded of you from all sides, in spite of man-shortage, despite scarcity of equipment, in the face of a coal shortage. How can it be done? By a bigger, better and easier day's work from everyone in your organization within the usual working hours. Overtime means increased cost without increased profit. It means a worn out staff—so time must be saved. The hours between whistle and whistle must be stretched. How?

By Lamsonizing your office and factory. A Lamson Pneumatic Tube System will keep your whole force at profitable work while it automatically does the fetching and carrying. It will put orders, messages and information in black and white into the hands of anyone you please at telephone speed. It will carry small materials, drawings, blueprints or tools from one department to another or underground to the shop or warehouse in a distant corner of the yard. A Lamson Pneumatic Tube System is the mechanical organizer. It saves time and foot-work. It doesn't drive help—but leads

them into orderly, standardized performance.

Lamson accomplishment isn't a theory. It's a hard, cold, practical fact. Lamson Pneumatic Tube Systems carry papers and cash in thousands of huge manufacturing plants and department stores, every day. They shoot letters, job cards, time tickets, orders and requisitions to just the place you want them to go. They are speeding up production in a thousand different firms. They carry incoming and outgoing mail for Montgomery, Ward & Co. and the Otis Elevator Co. They carry requisitions or orders for tools and supplies for Endicott, Johnson & Co.—and deliver them with telegram accuracy. They never hesitate nor stop on the way. They never lose their message or package. They are never tired and can't get overworked. If you think your plant can't go faster with the equipment and the force you now have, a look into the Lamson Idea will throw a new, strong light on the subject—to your advantage. A Lamson man is on call at your request. He won't try to tell you your business but he will intelligently explain a basic principle of organization.

# CONSCRIPTION IN CANADA

BY CHARLES HENRY MELTZER

AS I issued from the red brick Grand Trunk Terminal, Montreal looked strangely bright and gay. Men in khaki, new recruits, marched briskly by me, headed by regimental bands which drummed and blared. They had hardly the physique of the earlier volunteers whom I had seen. Among them there were many French Canadians, from the towns no doubt, whose pallid faces and lack-luster eyes told of long toiling in unwholesome stores and offices. They kept pace with the more robust Anglo-Saxons. But it was plain that they were neither pleased nor happy.

The streets were plastered here and there with war posters. On some a Canadian artisan clasped hands with a young soldier bound for France. "Bonne chance, mon garçon. Nous te soutenons!" helped to explain. And, on the posters, the young soldier beamed content.

But were those pictures true or false? Had conscription been forgiven in Quebec? We had read stories in New York of unrest caused by the Conscription Law; of resistance to that law by indignant habitants; of secession preached in Catholic homes and pulpits. It was to sift the facts and falsehoods in those tales I had come

to the ultra-Loyalists. But the bare hint of an approaching split with the Dominion had been interpreted by the Anglo-Saxon Canadians as evidence that a nasty streak of yellow soiled the blood of their French-speaking neighbors. Thanks largely to a timely speech of Sir Lomer Gouin, Prime Minister of Quebec, M. Francoeur with good grace withdrew his motion. But the ill feeling on both sides which led to it is not yet dead. Nor will it be for many a day to come, if the restless group or party known as Nationalist can keep it burning.

On the face of it, there was more pique, more petulance, than sedition in the motion. It was introduced less as a suggestion of secession than as a rebuke

to those themes in his own newspaper. And he has done more, much more, than anyone in Canada to annoy the Government. By his opponents he is set down as a demagogue. But there was little to suggest a would-be Cade in the man who welcomed me, one bitter afternoon, in his sanctum at the "Devoir" building. I had pictured him, in my mind's eye, as a truculent pacifist; loud-throated, blatant, of the soap-box school. I was greeted by a courteous, polished man, of seigneurial birth, speaking French with the ease of a Parisian. M. Bourassa is fifty years of age. He affects a Vandyke beard and various other attributes which, as a rule, we associate not with demagogues, but with artists. As I have said already, he is—er—discursive. He crowds more words into one minute than most talk in two. His brain works quickly, eagerly. Incessantly. His logic now and then goes all agley. But by his rushing speech, his earnestness, and his nervousness, he impresses till you analyze his phrases. Then, possibly, you will find—I thought I did—that he loves words at least as much as he does facts.

It would not be just to belittle M. Bourassa. He

SIR WILFRID LAURIER, who is to Canada what Gladstone was to England—a symbol of that temperate Liberal force which keeps the balance between the extremes in politics. Of all the public men of mark in Canada none is more honored

to Canada. In the morning I set out to look for uprisings. All I found was a procession of harmless citizens, clad in fur cloaks and queer pointed caps of beaver or astrakhan, who paced the sidewalks, halting at moments on their way to stare through shop-windows and weigh the advantages of the midwinter bargain sales. They scarcely glanced at the white headlines on the bulletin boards, announcing upheavals in Berlin, battles on the Piave, air raids over London. In Montreal it was still the fashion, then, to ignore the war; to pretend that, though it might concern Ontario, it was not Quebec's affair. And it was this attitude that the Western Provinces, largely Anglo-Saxon in sympathy, had resented savagely. The Westerners had cursed Quebec, the Province, as an abode of slackers. The old difference between West and East of which Kipling spoke, though without thought of Canada. And Quebec, the Province, had hit back at the elections by refusing to approve the Conscription Law. Of the sixty-five deputies it had returned to Parliament, sixty-two had been anti-conscriptionists. One other grievance, too, had rankled as much as the insults hurled at French-speaking Canada by a few foolish Anglo-Saxon preachers and writers—the earlier passage by the Ontario Legislature of the School Law, and especially of what was most detested in that measure, Regulation 17—devised, it was said, to restrict the use of the French language and to replace it soon or late by English.

Smarting under these wrongs, incensed by the taunts to which the French Canadians had been subjected, a week before I reached Montreal a promi-

SIR LOMER GOVIN, Prime Minister of Quebec. He has held the reins of power for twelve years and is a disciple, friend, and confidant of Sir Wilfrid Laurier. He has the tenacity of a bulldog and the tact of a diplomatist

to the ultra-Loyalists. But the bare hint of an approaching split with the Dominion had been interpreted by the Anglo-Saxon Canadians as evidence that a nasty streak of yellow soiled the blood of their French-speaking neighbors. Thanks largely to a timely speech of Sir Lomer Gouin, Prime Minister of Quebec, M. Francoeur with good grace withdrew his motion. But the ill feeling on both sides which led to it is not yet dead. Nor will it be for many a day to come, if the restless group or party known as Nationalist can keep it burning.

## Bourassa's Dream

THE Nationalists (French by origin and almost solidly Catholic) in theory want absolute independence. The most active and persistent of their leaders, M. Henri Bourassa, director and editor of "Le Devoir" of Montreal, is just at present not a member of either the Federal or the Provincial Parliament. But, thanks to his ownership of a newspaper, his admitted intelligence, and his rhetorical ability, he has much influence, not only over the masses of his own Province, but also over a large part of the French-speaking Catholic clergy. As a talker, M. Bourassa has few equals. He can talk one deaf and blind without an effort. If not convincing, he is certainly ingenious, in a Byzantine way, and he is often eloquent. He loves argument for the mere sake of argument. And next to that he loves to indulge in paradox. As to his courage, there can be no question. He is a D'Artagnan. Once at a public meeting in Quebec he roused his audience to such transports of hostility that he had stones and bricks and bottles hurled at him. The reporters, after getting a few knocks, ducked under tables. But, grabbing an overcoat from a bystander and wrapping it around one arm, as a kind of shield, M. Bourassa faced the storm and went on speaking till he had finished his address.

M. Bourassa was too clever not to make capital in turn out of the bilingual question and the Conscription Law. He has rung changes, many changes,

SIR ROBERT LAIRD BORDEN, Premier of Canada, who said that there has been general acceptance of compulsory service since the measure was enacted and an entire absence of any serious disturbance in connection with its enforcement

is quite sincere. He hates—and has a perfect right to hate—the doctrine of imperialism. To him England is a nightmare, a bête noire. In our interview he denounced the Conscription Law, first as unjust, next as uncalled for, and last as futile. What use was it, he asked, to tear a few thousand habitants from their native soil to swell the Allied armies? What service would they render if they reached the front? He professed no certainty as to the assertion of the Loyalists that they were fighting "against autocracy" and "to save democracy." He knew nothing, or cared nothing, as to the causes of the war—the immediate causes, or the older, deeper causes. Without casting doubt on the good faith of Sir Robert Borden, the Prime Minister, and his colleagues, he was of opinion that, by forcing the issue of conscription, they had widened the gulf between French-speaking and English-speaking residents in the Dominion. When I suggested that the voluntary system had added only 8,000 French-Canadian Quebec volunteers to the Canadian forces, he said that, proportionately, this was an honorable contribution. Much as he loathed the M. S. A. (Military Service Act), it was now law, and Quebec must obey the law. He indignantly denied the frequent charge that he and his followers had resisted the enforcement of conscription. As to the uprisings, or the insurrection, at which the "New Republic" lately hinted, he was entirely skeptical. Such things could never be, and never had been.

Nor did M. Bourassa feel the faintest, vaguest sympathy with the idea of the annexation of Canada to the United States. To him the U. S. A. was Anglo-Saxon. His dream, his ideal, was Canadian inde-

2000 pounds. without structural failure  
or loss of resistance.

# Pennsylvania TUBE

**T**HE "Ton Tested" Tube possesses definite properties that eliminate all general tube shortcomings.

The effects of long and continuous wear and friction in the casing are especially withstood.

The tough, yet highly resilient, stock is uniform, tear-resisting. It sets new individual standards of strength, elasticity, heat-resistance, durability.

It stands up against the usual destructive effects of extreme heating up and cooling down.

Carried indefinitely as a "spare," it will not check, crack, weaken at the folds or corners.

Light and air exposure do not harm it.

It will not tear beyond the immediate location of a cut.

It will eliminate a large percentage of blowouts which follow the laceration of a casing.

It bears the name Pennsylvania—a positive guarantee of remarkable service qualities.

Challenge the assertion of any dealer who offers you a so-called "special" brand tube as the equal of the "Ton Tested." Ask him for the name of the actual maker of the substitute offered.

The "Ton Tested" Tube comes in the orange and gray colored box. The name is on every box. The price is the same as that of ordinary tubes.

**MONSIGNOR BRUCHESE**, Archbishop of Montreal, a priest reputedly of the most subtle intellect, great resourcefulness, and far-reaching authority, who was ordained in Rome with the now reigning Pope, and whose influence seems to affect many people in the Province

pendence, though it might be a long time ere that could come true.

"But," I put in, "is it not possible to reconcile the idea of imperialism with the idea of autonomy?"

"Perhaps," said he. "As an alternative to full and unhampered freedom, my first choice, I should not object to self-government for this Dominion and other British overseas dominions, with federation—in short, full partnership."

To be honest, let me add that what M. Bourassa most dislikes in British imperialism is that, no matter how sincerely the Loyalists advocate federation and self-government, at heart they always think of the dominions as British—not as free African and Australian and Canadian commonwealths.

"Moreover," said M. Bourassa, "till the Boer War, Canada—every part of it—agreed regarding the right, if not the duty, of the Dominion to maintain a policy of neutrality in British foreign affairs. Macdonald had refused to allow Great Britain to recruit troops for one war. Sir Wilfrid Laurier, later on, renounced neutrality by assenting to the enlistment, the voluntary enlistment, of Canadians for South Africa."

Still later there had been the incident of the three warships which Sir Robert Borden had promised Great Britain. And the recent election had confirmed this "self-abandonment."

"The fact that, of her own will, Canada gave up the principle of neutrality," commented M. Bourassa, "made her decision doubly painful. Had she been forced into conscription, she might have respected herself. But it was shameful to consent to slavery."

He could never quite forgive the habitual tendency of Britishers—and more especially the English-speaking residents or citizens in Canada—to despise the descendants of the original French settlers in Quebec as crude and ignorant. One more point. Without being asked, he told me of his devotion to Catholicism and especially to the person of Pope Benedict. The emphatic way in which he said this set me thinking.

### The Church's Attitude

NOW all, or nearly all, the five million English-speaking inhabitants of Canada are non-Catholic, if not anti-Catholic. By most it is unreasonably thought that Rome—or the Catholic clergy—has urged resistance in Quebec to the Conscription Law.

I took considerable pains during my stay in Montreal and elsewhere to ascertain what might be true and what untrue in this assumption. It is certain that the Ontario Anglo-Saxons really credit what they have heard of this alleged disloyalty. Some go much farther; they talk of a wild hope of the Canadian priests that, some day, at a time perhaps not distant, a Catholic and detached French-speaking State, virtually a theocracy, may be substituted for the Quebec Province. If that were true, M. Bourassa might have dreamed with them.

One very distinguished prelate could have enlightened me on this and other subjects. But, as I knew, he was unapproachable. That prelate was the Archbishop of Montreal, Monsignor Bruchesi—a priest reputedly of the most subtle intellect, great resourcefulness, and far-reaching authority, who was ordained in Rome with the now-reigning Pope.

Many people in the Province seem obsessed by Monsignor Bruchesi's influence. All I could learn of the archbishop I learned at second-hand, partly from men who admire him unreservedly, partly from others who dislike and distrust him. But I was able to dig up his pastoral utterances. In one of these

Monsignor Bruchesi said, among other things: "We Canadians are not strangers to the struggle beyond the seas. . . . It is the duty of us all to give our loyal and our generous support to England. If they must fight beyond the seas, our brave young men will be ready, and we shall find in them the valor of their forefathers. . . . We will pray the 'God of Armies' to protect England and her ally, France. We cannot separate one of them from the other in our affection. Let us pray that they may win the victory, but a victory which will redound to the glory of God Himself and to the long hoped for triumph of the Church of Jesus Christ. And let us not forget courageous Belgium."

### Allegiance to the Allies

BEFORE this, on the outbreak of the war, Monsignor Bruchesi had subscribed to, and indeed headed, a pastoral letter of the Canadian hierarchy which all the curés were required to read to their congregations. In a guarded way it proclaimed allegiance to the Allies.

Officially, at all events, the pronouncements of the Catholic Church in Canada have been plain and loyal. In a measure, Cardinal Bégin, Archbishop of Quebec, had set the example of deference to the Canadian Government by commanding the curés to exhort their male parishioners to answer the questions which were sent out some months ago to all Canadians of military age, prior to the introduction of the Conscription Bill.

"The request," then wrote the venerable cardinal, "seems just and reasonable. It is due to motives of public interest and merely appeals to the good will of citizens."

None the less, it is no secret that the Conscription Law is unpopular with the clergy, as a needless evil, a demand for useless sacrifices, and as a menace to the faith, health, and morals of the young conscripts.

What the curés may have done privately and unofficially, in talking or writing to the members of their flocks, I do not know. I pushed my inquiries in the highest places, without learning anything to convict the priests of disloyalty. One curé, to be sure, in a small Eastern township, did urge the French Canadians to resist military service, even by force of arms, giving as his reason that war was a judgment of God on "infidel France," and declaring it the duty of French Canadians to stay peacefully at home, give birth to children, and bring them up to the glory of the Church. But if one swallow does not make a summer, neither does the incantation of one overzealous curé make a rebellion.

There is undoubtedly some smoldering discontent among the priests of the Eastern Province. And it has not been hushed by the supposed efforts of the Ottawa Government to discourage—or, rather limit—the teaching of French in the Ontario schools. For, as one very important personage pointed out to me, in other days all Canada spoke French, and at this hour the 1,600,000 French Canadians of Quebec are bound by tradition, love, and habit with their 200,000 or 250,000 French-speaking brethren of Ontario. Personally I should say it would be a mercy if the authorities at Ottawa insisted on the teaching of French—real French. For the queer patois now affected by the *habitués* is the reverse of beautiful.

The passages in Regulation 17 of the Ontario School Law most obnoxious to the Quebec people tend to restrict the teaching of French by declaring that:

"(1) Where necessary in the case of French-

**M. HENRI BOURASSA**, director and editor of "Le Devoir" of Montreal, leader of the Nationalists, in whose opinion the gulf between French- and English-speaking residents in the Dominion has been widened by forcing the issue of conscription

**CARDINAL BÉGIN**, Archbishop of Quebec, set the example of deference to the Canadian Government by commanding the curés to exhort their male parishioners to answer the questions sent to all Canadians of military age, prior to the introduction of the Conscription Bill

speaking pupils, French may be used as the language of instruction and communication; but such use of French shall not be continued beyond Form 1, excepting that, on the approval of the chief inspector, it may also be used as the language of instruction and communication in the case of pupils beyond Form 1 who are unable to speak and understand the English language.

"(2) In the case of French-speaking pupils who are unable to speak and understand the English language well enough for the purposes of instruction and communication, the following provision is hereby made:

"(a) As soon as the pupil enters the school he shall begin the study and the use of the English language."

All this might seem quite proper in the United States. But the United States has not, like the Dominion, one great cleavage between French and English. And, as things stand, Quebec is hardly Canada. The fury roused in the Eastern Province by the Ontario School Law has now been intensified by the introduction of another law, compelling all immigrants in Ontario for the future to subscribe not only to the M. S. A. (the Conscription Law), but to Regulation 17 also, if they wish to hold tracts of land allotted to or purchased by them.

In passing, I may mention that Pope Benedict is taking an acute interest in the affairs of Catholic Canada. This does not mean that he is stirring up more trouble for the Canadian Government. It may mean the contrary.

### Quebec Respects the Law

FROM Montreal I took an express one afternoon to the ancient city of Quebec. The train was filled with stolid *habitants*, all muffled to the ears in heavy furs. At last, thought I, the war will be discussed. But I was mistaken. Not once on the whole journey, in six hours, did I hear the remotest reference to the war. No one read newspapers. I had quite abandoned hope of spotting treason—on that train at least—and was pondering the vexed bilingual question, when I saw a poor, artless *habitant* trying to sell notebooks to the passengers. Each notebook was wrapped up in a neat envelope.

On one side was an affecting French inscription, entreating the merciful of heart to "buy the wares of an unhappy cripple. Price 10 cents." On the other the inscription read in English: "Being crippled, I am endeavoring to sell the included package. Price 25 cents." I bought a package just to encourage honesty.

Quebec was wrapped in snow and strangely silent. The corridors of the stately Château Frontenac were almost deserted. A few weary-looking officers, some in khaki, some in the pale blue of France, lounged in the writing rooms or sipped Scotch and soda in the canteen. A cheerless band played ragtime in the ballroom. Outside the hotel the lights shone clear and cold on the many statues which adorn the public squares, on the imposing residence of the archbishop, and the white surface of the broad St. Lawrence. Yet here, I had supposed, if I were to look for "uprisings," it was positively discouraging on the morning after my arrival to see that the only crowds were in the churches; at the "Basilique," listening with the enthroned cardinal to the admonition of a monsignor to save food and help the poor; or at Low Masses in the lesser Catholic fane. (Continued on page 30)

## HOW MANY CYLINDERS?

The Secretary of War has announced that all Liberty Motors now being built are the 12-cylinder type.

The basic principles of design from which these engines have been wrought are embodied in the Packard Twin Six.

The Packard Twin Six gives to its owner these marked advantages:

### SMOOTHNESS

¶ The impulses of its 12 small cylinders blend in a stream of power—the most agreeable action known to Motordom.

### SILENCE

¶ The Twin Six runs with the quiet rhythm of a perfected mechanism.

### RANGE

¶ It moves at a walking pace or, at the driver's will, speeds like an airplane in flight.

### ABILITY

¶ Plus-power for the hills and for hard going. The man who owns a Packard owns the road.

### ECONOMY

¶ Maximum results from low-gravity gasoline. Maximum tire mileage. Low cost of upkeep.

### UTILITY

¶ First-class travel over any road—a get-there-direct means of transportation.

## PACKARD TWIN SIX

*Ask the man who owns one*

PACKARD MOTOR CAR COMPANY, DETROIT

*Big minds responsible for mighty projects, like the Panama Canal, consider permanence of primary importance so that continuous earning power will be assured.*

## "Royal" Typewriters are a Productive and Enduring Investment

Like your business, they are built for the future as well as for the present. Improved design and inherent strength keep "Royal" Typewriters young. Long after they are old in years, as typewriter ages are reckoned, "Royal" Typewriters continue to turn out the same good work as they did when new.

The "Royal" is built to outlast and outlive the average typewriter; it is designed to produce a big volume of perfect work throughout its usefulness—to have that *continuous earning power* which makes it a productive, enduring investment.

Many large American manufacturers use "Royal" Typewriters exclusively because of their very apparent superiority. A mechanical engineer can foretell what the layman discovers after years of use—that the "Royal" Typewriter has super-durability and that a maximum volume of work is produced with the minimum effort.

Whether yours is a one stenographer office or a thousand typist force, "Royal" Typewriters will prove a profitable investment. We'll gladly demonstrate this fact if you'll telephone, write or visit our nearest branch.

## From Baseball to Boches

Continued from page 18

will be askin' me daily if I think everything is bein' run O. K. I will try and put him at ease if he does, Joe, and not be stuck up as many a guy would be with less brains.

I am sorry to say I have not been wounded no more, only gettin' mauled up a bit and layin' in a hospital for three weeks, havin' suffered a bad attack of shell shock. But I ain't been layin' down on the job, Joe, because I been in a real sure-enough battle, which made that first German raid look like a warm session of pinochle; also I been took prisoner by the boches and then stole home on them—just like I done on Alexander that time in Philly.

WELL, Joe, on a certain night we was ordered to relieve a battalion of French guys who'd been holdin' a line of trenches a little to the left and a whole lot further toward the Germans than we'd ever been yet. The officers seen that all the guys that come outa the first raid was among them present, because we was frothin' at the mouth to get back at them squareheads, and also we'd been under fire and was everything on earth but gun shy. The relief come off as nice and easy as the skin off of a banana, and they wasn't as much as an angry look throwed at us by the Germans all night long. As is usual when they is a relief comin' off, we picked the darkest night in captivity and, as is usual under any circumstances over here, it was rainin' like Niagara Falls, so I don't think the boches even knowed the change had been made.

The next mornin' I stuck my dome up over the edge of the trench for an eyeful. Joe, don't tell me that a guy can't live if his heart don't beat, because mine skipped between eight and forty taps and I'm still here, or was whilst writin' you this. There was them German trenches no more than prob'ly a hundred yards away, and you could see their barbed-wire entanglements, and the like, without no glass or nothin' at all. While I'm lookin' over the scenery, thinkin' about everything under the sun—or, in other words, Jeanne—they is a plop! beside me, and I got some dust in my eye. The next thing I knowed our top sergeant has grabbed me around the legs and throwed me.

"You big tinhead!" he hisses, when I get up. "Ain't you got no brains at all? I ought to of let them get you!"

"Was that a bullet?" I asks him.

"Oh, no!" he snarls. "That wasn't no bullet—them squareheads is prob'ly throwin' confetti at us!"

He chased me into a dugout, Joe. I ain't no more than got inside when the loudest crash the world has ever heard comes off right over my head! In another minute shells was goin' off fast enough to make an addin' machine lay down and quit like a dog. I didn't have to be no Sherlock Holmes to figure out that them squareheads knowed we was there and we was due for a warm and busy day. We all was wise by this time that whenever a sudden and heavy shell fire commences without no warnin', it's a sign that the Germans is comin' over in our midst as soon as they figure the guns has done enough damage to the dugouts. Well, Joe, we all get set for them, wishin' to Heaven they wouldn't be detained nowhere on the way. They kept bangin' away at us, Joe, for three or four hours, and you or nobody else ever heard such a terrible and continual roarin' and boomin' in all your life! I thought all the dynamite in the world had come over and gone nutty.

This time our artillery was ready for them babies, and pretty soon we cut loose with everything we had. Oh, boy! Joe, you had to scream to make yourself heard, and then you couldn't!

Well, me and about twenty other guys is down in a dugout with little or no air and nothin' but a piece of candle for light. We have been told to get set for an attack and, believe me, Joe, that waitin' stuff is the toughest part of the whole show! A guy's nerves becomes watch springs that keep windin' and unwindin' themselves, and you wanna yell your head off, just to get relief.

All of a sudden, Joe, we hear a gong bangin' somewhere, and they was a rush to get outa that dugout that would make a football game look like chess. We knowed what that gong meant, and we got our gas masks on in somethin' under half a second apiece. Then we pte out into what was form'ly our trench and bump into gangs of other doughboys doin' the same thing. If we

had stayed below, Joe, we would of died like rats in a hole because the squareheads was gassin' us, so's to make it as healthy as possible for them before they come over.

Well, Joe, as far as the trench was concerned, they wasn't none! The high-explosive shells had took care of that, and they was nothin' left but holes big enough to hide Paterson, N. J., in. We stumbled and milled around, cussin' or prayin' accordin' to our religion, and every now and then somebody would give a yell and fall down one of them shell craters. A coupla guys would drag 'em out, full of mud and fight. Joe, we was the awfulest mob you ever seen in your life! Between them gas masks, which makes a guy look like a bat from below, and the mud, we sure was a tough-lookin' bunch to go up against.

All at once the shellin' stops, and through the smoke that's driftin' away we can see the Germans pilin' outa their trenches and zigzaggin' this way and that toward us. We all give a yell of joy, and them officers of ours had their hands full keepin' us from goin' right out to meet them birds!

The first row of boches is carryin' little cans like fire extinguishers, and I'm wonderin' what they are for, when, Joe, streams of yellow flame comes bustin' outa them and shoots over to us. You never seen nothin' like this, I don't care if you go to the movies night and day! That burnin' stuff poured into us, Joe, and wherever it touched it cut to the bone. Well, it kinda surprised us for a minute, but we was there to show them German skunks that, no matter what they pulled on us, we'd raise 'em the limit, bein' Yanks, and, Joe, we went to it! A coupla machine guns opens up beside me, and the first line of squareheads just melted away like fried ice, with their cans of hell and all! These birds was what the Germans call the "shock" troops, which is the same as the Suicide Club, and the rest of them keeps comin' right on.

We got some kinda order in what's left of our trenches by this time, and we start lettin' 'em have it with hand grenades. We burnt them things over just as fast as we could throw 'em, and, Joe, they kept goin' down right and left like tenpins durin' a tourney. Then, without no warnin', our artillery opens up on 'em with a barrage fire, and we get the word to go over and get 'em, and to hell with their liquid fire and gas.

Oh, boy!!!

THIS is what we'd been waitin' for ever since we come to France, and, Joe, the yell we turned loose drowned out the artillery! We had made a bum outa their flame throwers with our machine guns, and before they could get set again we was on top of 'em and hittin' them boches with everything but Paris. I don't know what nobody else did, for I was the busiest guy in France for the next half hour. I can only tell you what I done, which was plenty!

The first atop I make is in front of a big squarehead which developed a case of stage fright and missed me with his gun. Then he come at me with a knife as big as Brooklyn, and I let him have the bayonet through the ribs, yellin' like a maniac whilst doin' so. I seen a doughboy go down near me, and two of them German tramps is so anxious to bayonet him that they collide with each other, head on. I got 'em both and I suppose that guy will never think of thankin' me for it! Joe, between the steady roar of our artillery, the crackle of the machine guns, and the yells of us doughboys—joy and pain mixed together—why, hell in full blast would be a whisper in a boiler factory alongside of it, that's all!

I fell down one of them shell holes, and a boche seen me go and jumps in after me, firin' an automatic as fast as he could pull the trigger. He turned out to be the rottenest shot in the world, but a darned good wrestler, and we rolled around and gouged each other all over the bottom of that hole. Fin'ly I got out my trench knife, and for all he knowed the war was over. I had some trouble climbin' out of this mud, and when I did I seen I was through for the day, anyways. Joe, they was three boches on top of me before I can lift a hand, but instead of hidin' a bayonet in me, one of them whangs me over the dome with the stock of his rifle, and I resigned!

When I come to life I'm layin' on the floor of a dugout that don't look like home to me. The biggest German

## This Non-Skid Heel prevents slipping

As important in walking as in motoring is the "non-skid" idea, which means safety from slipping. For pedestrians, the best example of this idea is the Foster Friction Plug—found in

Not only does this plug prevent slipping, but it also makes the heels wear longer. Other advantages of Cat's Paw Heels: They have no holes to track mud or dirt—and do not mar the floors.

Cat's Paw Heels will give you foot comfort and protection every day of the year. Your whole family should wear them. The name is easy to remember and they cost no more than ordinary kinds.

Black, white or tan. For men, women and children—all dealers

Originators and inventors of the Foster Friction Plug which prevents slipping

**Prevents Slipping**

in the world is standin' guard over me, and I ain't no more than opened an eye when he prods me with his baynet and motions for me to get up. I took his advice, and after feelin' myself over I find that outside of a lump on my head as big as a basketball, I am O. K. except a little stiff. "How many of your trenches did we take?" I says.

"Shut up!" he growls in plain English. "You will be shot to-morrow!"

What d'ye think of that bird, Joe, tryin' to gloom it all up for me! Well, he tells me to walk ahead of him, and I do the same, goin' all the way down the trench. The squareheads all look me over like I'm some new kind of fish, and quite a few yells stuff at me in German which was no doubt knocks, if I only knowed what they was sayin'. It was all I could do, Joe, to keep from bustin' the lot of them in the nose!

**W**E wind up before another dugout, and my charmin' guide turns me over to a squarehead at the door. This guy pushes me inside, and there I am up before the Night Court, or somethin', of the German army. They is three guys sittin' behind a table which from their unctions must of been at least the Kaiser and a couple of the crown princes. They are hard-lookin' babies, Joe, and they glare at me like they're tryin' to assassinate me with a glance. I come right back at 'em and tried it myself. Neither of us had no luck. The bird that brung me in does everything in the way of a salute but get down and kiss the dirt, and then he opens up with a string of boche lingo. At a given point he stops, pulls that trick salute again, beats it—and I'm alone with these three guys.

"What is the name of your regiment?" barks one of them in English.

Joe, I hadda laugh to myself. As if I'd tell them bums anything! "The Lenox Avenue Assassins!" I says.

One of 'em writes it down. "How long have you occupied your present salient?" is next.

"Sixty-four years," I says with a pleasant grin.

"Another incorrect answer and you die—pig!" bawls this guy, pullin' a gun. "Remember—I'll shoot!"

I figure he's four-flushin', Joe. If he was gonna shoot, he'd let the gun talk instead of warnin' me. I yanked a coin outa my pocket and throwed it on the table in front of him. "All right, stupid!" I says, "I'll shoot you a quarter! Who's got the dice?"

It goes over their heads like a airplane, Joe, and the third guy takes me in hand.

"How many of the American swine are there now in France?" he asks me.

"More than you Dutch rats can handle!" I says.

The guy with the gun shoots over my head. Can you imagine them guys tryin' to scare me, Joe!

"The next time you die!" he hollers, as red as catsup. "How many American troops are there now in France?"

"I'm the only one!" I says, grinnin' at him. "They sent me out here to look over the situation all by myself. I give you tramps a good fight, didn't I?"

Joe, they frothed at the mouth in German for a minute, and fin'ly I am led out, or rather shoved and mauled out, by the guy that brung me in.

"You die to-morrow, swine!" anarls one of the judges, shakin' his fist at me.

"Aw, go to blazes, you big stiff!" I bawls—louder than him!

The guard knocks me kickin' with the butt of the gun.

**W**ELL, I'm dragged to my feet again, Joe, and shoved back along the trench till we get to some steps, and up I go with the squarehead in back of me proddin' me along with the baynet. I am pretty well bunged up but, as usual, hopin' for the best. I see this guy is takin' me back of the lines, prob'ly to their guardhouse, and I got the old thinker workin' overtime tryin' to dope out a way to escape.

Heaven can't be so far away at that, Joe, because the Lord must of seen the jam I was in and decided to take a hand in the thing himself. From outa nowhere merry Hades busts loose again, and lookin' back I seen the boches millin' around in the trenches like a lot of scared sheep! Bang! goes a shell right in the middle of the place we had just left, and fare-thee-well, trench! Then our artillery opens up in earnest and, yellin' like hends from below, our doughboys and the French comes swarmin' over for the counterattack.

Joe, I felt so good I let out a yell, and the squarehead which had me in charge swings around. He'd been lookin' over and seen our gang comin' the

Brooklyn, New York

same as me, only his feelin's was a trifle different from mine! The minute he faced me, I put all I had left on a round-arm swing to the jaw, and he went down so hard he give one bounce. In a second I got his gun, knife, and automatic, and in another second he comes to. I yanked him to his feet, and that bird did everything but sob out loud for mercy, even goin' so far as to bring his wife and six children in Germany into it. Joe, I had no time to chat with this guy; I had just worked out a scheme in my head, and it hadda be done quick. I figured that if I could get this squarehead back to our lines, maybe he would cough up some information the same as his masters figured I would.

I told him where he was headed for, and he liked to kiss me! They ain't no doubt about it, Joe, from what he told me, them boches is fed up on the war! Not only he didn't try to get away, but he crawls along with me from hole to hole and hill to hill, even showin' me a short cut he'd been over before.

Joe, it was a tough job gettin' back, because shells was fallin' around us like hail, and at one place we hadda cut right around a German trench. But suddenly we come up out of a hole and run right into a squad of dough-boys. I never was so glad to see nobody in years! One of these babies all but run a bayonet through me before he seen who I was, but I worked my

way with the tame boche right into a communication trench, and kept on goin' till I had dragged him in before our captain.

"Here is a squarehead I have brought you, sir!" I says, salutin'. "Maybe he can be made to spill some dope about the rest of his gang."

I seen him jump to his feet, Joe, and that's all I know, except what was to me second-hand. They claim I failed dead away, but you know that's a lie, Joe. I never done nothin' like that in my life. Anyways, I come to on a stretcher, and what they done with my pet squarehead I don't know. I do know that the captain come to see me in the hospital and shook my hand like I was gettin' as much pleasure out of it as I was. Before he left he called me "Sergeant," and if I was gonna fail at all I would of done it then!

JOE, I am goin' back to the front. I trenches to-morrow and take on them guys again. I ain't got no more time to write now—I gotta fight! Anyways, I ain't gonna write to you no more, cause if you ain't on your way over here, you ain't worth writin' to!

Come on now, Joe—batter up!

Yours truly,

SERGEANT EDWARD HARMON

(I guess that's poor—that "Sergeant" thing, eh?)

To be continued in an early issue.

## Like a Singing Bird

Continued from page 15

wouldn't be at home—what funny things grown-ups do! The baby was taking his nap, and Missy had a delicious long time ahead in which to be utterly alone.

She took the library book of poems and a book of her father's out to the summerhouse. First she opened the book of her father's. It was a translation of a Russian book, very deep and moving and sad and incomprehensible. A perfectly fascinating book! It always filled her with vague, undefinable emotions. She read:

"O youth, youth! Thou carest for nothing; thou possessest, as it were, all the treasures of the universe; even sorrow comforts thee, even melancholy becomes thee; thou art self-confident and audacious; thou sayest: 'I alone live—behold!' But the days speed on and vanish without a trace and without reckoning, and everything vanishes in thee, like wax in the sun, like snow..."

MISSY felt sublime sadness resounding through her soul. It was intolerable that days should speed by irrevocably and vanish, like wax in the sun, like snow. She sighed. But even as she sighed the feeling of sadness began to slip away. So she turned to the poem discovered last night, and read it over happily.

The title, "A Birthday," made her feel that Raymond Bonner was somehow connected with it. This was his birthday—and that brought her thoughts back definitely to the party. Mother had said that presents were not expected, that they were getting too big to exchange little presents, yet she would have liked to carry him some little token. The rambler and honey-suckle above her head sniffed at her in fragrant suggestion—why couldn't she just take him some flowers?

Acting on the impulse, Missy jumped up and began breaking off the loveliest blooms. But after she had gathered a big bunch a swift wave of self-consciousness swept over her. What would they say at the house? Would they let her take them? Would they understand? And a strong distaste for their inevitable questions, for the explanations which she could not explain definitely even to herself, prompted her not to carry the bouquet to the house. Instead she ran, got a pitcher of water, carried it back to the summerhouse and left the flowers temporarily there, hoping to figure out ways and means later.

At the house she discovered that the baby was awake, so she had to hurry back to take care of him. She always loved to do that; she didn't mind that a desire to dress up in her party attire had just struck her, for the baby always entered into the spirit of her performances. While she was fastening up the pink dotted mull, Poppy walked inquisitively in and sat down to oversee this special important event. Missy succeeded with the greatest difficulty in adjusting the brocaded sash to her satisfaction. She regretted her unwaved hair, but mother was going to crimp it herself in the evening. The

straight, everyday coiffure marred the picture in the mirror, yet, aided by her imagination, it was pleasing. She stood with arms extended in a languid, graceful pose, her head thrown back, closing with half-closed eyes at something far, far beyond her own eyes in the glass.

Then suddenly she began to dance. She danced with her feet, her arms, her hands, her soul. She felt with her the grace of stately beauties, the heartbeat of dew-jeweled fairies, the longings of untrammelled butterflies—dancing, she could have flown up to heaven at that moment!

A gurgle of sound interrupted her. It was the baby.

"Do you like me, baby?" she cried. "Am I beautiful, baby?"

Baby, now, could talk quite presently in the language of grown-ups. But in addition he knew all kinds of wise, unintelligible words. Missy knew that they were wise, even though she could not understand their meaning, and she was glad the baby chose, the time, to answer in that secret jargon.

She kissed the baby and, in return, the baby smiled his secret smile. Missy was sure that Poppy then smiled to a secret smile; so she kissed Poppy also. How wonderful, how mysterious, were the smiles of baby and Poppy! What unknown thoughts produced them?

At this point her cogitations were interrupted and her playacting spoiled by the unexpected return of mother and Aunt Mattie. It seemed that certainly the ladies had obligingly been "out."

"What in the world are you doing, Missy?" asked mother.

Missy suddenly felt herself a very foolish-looking object in her party finery. She tried to make an answer, but the right words were difficult to find.

"Party!" said Aunt Mattie significantly.

Missy, still standing in mute embarrassment, couldn't have explained that it was not the party entirely.

Mother did not scold her for dressing up.

"Better get those things off, dear," she said kindly, "and come in and let me curl your hair. I'd better do it before supper, before the baby gets cross."

The crimped coiffure was an immense success; even in her middy blouse Missy felt transformed. She could have kissed herself in the glass!

"Do you think I look pretty, mother?" she asked.

"You mustn't think of such things, dear." But, as mother stooped to adjust a waving lock, her fingers fell marvelously tender to Missy's forehead.

EVENING arrived with a sunset of grandeur and glory. It made everything look as beautiful as it should look on the occasion of a festival. The beautiful and festive aspect of the world went out, and of her heart within, made it difficult to eat supper. And after supper it was hard to breathe naturally, to control her nervous fingers as she dressed.

At last, with the help of mother and

Aunt Mattie, her toilet was finished: the pink-silk stockings and slippers shimmering beneath the lengthened pink mull; the brocaded pink ribbon now become a huge, pink-winged butterfly; and, mother's last touch, a pink rosebud holding a tendril—a curling tendril—artfully above the left ear! Missy felt a stranger to herself as, like some gracious belle and fairy princess and airy butterfly all compounded into one, she walked—no, floated down the stairs.

"Well!" exclaimed father, "behold the Queen of the Ball!"

But Missy did not mind his bantering tone. The expression of his eyes told her that as thought she looked pretty.

Presently Mrs. Allen and Kitty, in the Allens' surrey, stopped by for her. With them was a boy she had never seen before, a tall, dark boy in a blue-gray braided coat and white duck trousers—a military cadet!

He was introduced as Kitty's cousin, Jim Henley. Missy had heard about this Cousin Jim who was going to visit Cherryvale some time during the summer; he had arrived rather unexpectedly that day.

Kitty herself—in pink dotted mull, of course—was looking rather wan. Mrs. Allen explained she had eaten too much of the candy Cousin Jim had brought her.

Cousin Jim, with creaking new shoes, leaped down to help Missy in. She had received her mother's last admonition, her father's last banter, Aunt Mattie's last anxious peck at her sash, and was just lifting her foot to the surrey step when suddenly she said: "Oh!"

"What is it?" asked mother. "Forgotten something?"

MISSY had forgotten something. But how, with mother's inquiring eyes upon her, and father's and Aunt Mattie's and Mrs. Allen's and Kitty's and Cousin Jim's inquiring eyes upon her, could she mention Raymond's bouquet in the summerhouse? How could she get them? What should she say? And what would they think?

"No," she answered hesitantly. "I guess not."

But the bright shining of her pleasure was a little dimmed. She could not forget those flowers waiting, waiting there in the summerhouse. She worried more about them, so pitifully abandoned, than she did about Raymond's having to go without a remembrance.

Missy sat in the back seat with Mrs. Allen, Kitty in front with her cousin. Now and then he threw a remark over his shoulder, and smiled. He had beautiful white teeth which gleamed out of his dark-skinned face, and he seemed very nice. But he wasn't as handsome as Raymond, nor as nice—even if he did wear a uniform.

When they reached the Bonners' they saw it all illumined for the party. The Bonners' house was big and square with a porch running round three sides, the most imposing house in Cherryvale. Already strings of lanterns were lighted on the lawn, blue and red and yellow orbs. The lights made the trees and shrubs seem shadowy and remote, mysterious creatures whisper over their own business.

Not yet had many guests arrived, but almost immediately they appeared in such droves that it seemed they must have come up miraculously through the floor. The folding camp chairs which lined the parlors and porches (the rented chairs always seen at Cherryvale parties and funerals) were one moment starkly exposed and the next moment hidden by light-hued skirts and by stiffly held, Sunday-trousered dark legs. For a while that stiffness which inevitably introduces a formal gathering of youngsters held them unnaturally bound. But just as inevitably it wore away, and by the time the folding chairs were drawn up round the little table where "hearts" were to be played, voices were hahbling, and laughter was to be heard everywhere for no reason at all.

At Missy's table sat Raymond Bonner, looking handsomer than ever with his golden hair and his eyes like black velvet pansies. There was another boy who didn't count; and then there was the most striking creature Missy had ever seen. She was a city girl visiting in town, an older, tall, red-haired girl, with languishing, long-lashed eyes. She wore a red chiffon dress, lower cut than was worn in Cherryvale, which looked like a picture in a fashion magazine. But it was not her chic alone that made her

so striking. It was her manner. Missy was not sure that she knew what "sophisticated" meant, but she decided that the visiting girl's air of self-possession, of calm, almost superior assurance, denoted sophistication. How eloquent was that languid way of using her fan!

In this languishing-eyed presence she herself did not feel at her best; nor was she made happier by the way Raymond couldn't keep his eyes off the visitor. She played her hand badly, so that Raymond and his alluring partner "progressed" to the higher table while she remained with the boy who didn't count. But, as luck would have it, to take the empty places, from the head table, vanquished, came Cousin Jim and his partner. Jim now played opposite her, and laughed over his "dumbness" at the game.

"I feel sorry for you," he told Missy. "I'm a regular dub at this game!"

"I guess I'm a 'dub' too." It was impossible not to smile back at that engaging flash of white teeth in the dark face.

This time, however, neither of them proved "dubs." Together they "progressed" to the next higher table. Cousin Jim assured her it was all due to her skill. She almost thought that, perhaps, she was skillful at "hearts," and for the first time she liked the silly game.

EVENTUALLY came time for the prizes—and then dancing. Dancing Missy liked tremendously. Raymond claimed her for the first waltz. Missy wondered, a little wistfully, whether now he mightn't be regretting that pre-engagement, whether he wouldn't rather dance it with the languishing-eyed girl he was following about.

But as soon as the violin and piano, back near the library window, began to play, Raymond came straight to Missy and made his charming bow. They danced through the two parlors and then out to the porch and round its full length; the music carried beautifully through the open windows; it was heavenly dancing outdoors like that. Too soon it was over.

"Will you excuse me?" Raymond asked in his polite way. "Mother wants to see me about something. I hate to run away, but—"

Scarcely had he gone when Mrs. Allen, with Jim in tow, came hurrying up.

"Oh, Missy! I've been looking for you everywhere. Kitty's awfully sick. She was helping with the refreshments and got hold of some pickles. And on top of all that candy—"

"Oh!" commiserated Missy.

"I've got to get her home at once," Mrs. Allen went on. "I hate to take you away just when your good time's beginning, but—"

"Why does she have to go?" Jim broke in. "I can take you and Kitty home, and then come back, and take her home after the party's over." He gave a little laugh. "You see that gives me an excuse to see the party through myself!"

Mrs. Allen eyed Missy a little dubiously.

"Oh, Mrs. Allen, couldn't I?"

"I don't know—I said I'd bring you home myself."

"Oh, Mrs. Allen! Please!" Missy's eyes pleaded even more than her voice.

"Well, I don't see why not," decided Kitty's mother, anxious to return to her own daughter. "Jim will take good care of you, and Mrs. Bonner will send you all home early."

WHEN Mrs. Allen, accompanied by her nephew, had hurried away, Missy had an impulse to wander alone, for a moment, out into the deliciously alluring night. She loved the night always, but just now it looked indescribably beautiful. The grounds were deserted, but the lanterns, quivering in the breeze, seemed to be huge live glow-worms suspended up there in the dark. It was enchantment. Stepping lightly, holding her breath, sniffing at unseen scents, hearing laughter and dance music from far away as if in another world, she penetrated farther and farther into the shadows. An orange-colored moon was pushing its way over the horizon, so close she could surely reach out her hands and touch it!

And then, too near to belong to any other world, and quite distinctly, she heard a voice beyond the rose arbor:

"Oh, yes! Words sound well! But the fact remains you didn't ask me for the first dance."

Missy knew that drawling yet strangely assured voice. Almost, with its tones, she could see the languorously uplifted eyes, the provoking little gesture of fan

### Enamolin Satisfies Even Boat Owners!

THIS is the strongest endorsement of Enamolin's wearing qualities and beauty. For there is no severer test to which an enamel can be put than use on the outside of boats.

An Enamolin-finished boat is always a gloriously white one, with a surface as hard and smooth as porcelain.

It may become dirty, oily or grimy, but a scrubbing with soap and water will instantly restore Enamolin's pure whiteness.

There is no "turning color"—no checking, cracking or peeling—no refinishing for at least two seasons, if Enamolin is used.

Because of this marvelous durability, this porcelain-like smoothness, this radiant whiteness and this economy in use, Enamolin has long been recognized as the leading enamel for use on the interior and exterior of homes.

Ask for "The White Spot Booklet." A sample can of either Enamolin or Namloc Floor Finish sent for 10 cents. Address: Domestic Dept.

## War on Spring Dust!

Arm the household brigade with home-made 3-in-One Dustless Dust Cloths and a 3-in-One Polish Mop. With these able aids go over your furniture and floors daily. The 3-in-One Oil in dust cloth and mop picks up and holds every speck of dust and soil—removes fingermarks and other surface disfigurements. Puts a beautiful, lasting polish on all veneered and varnished surfaces.

Thousands upon thousands of shrewd housewives now make their own sanitary dust cloths and real polish mops. The cost is trifling.

Nothing is needed but some cheese cloth, an ordinary twine mop and a bottle of

### 3-in-One Oil

To make polish mop, cut the strands short (as here pictured) before pouring on the oil.

3-in-One is sold at all stores in 1lb., 2lb. and 5lb. bottles, also in the Handy Oil Can, 25c.

FREE Literature sample of 3-in-One Oil and Dictionary of Uses sent free for the asking.

Three-in-One Oil Co.  
165 ANW. Broadway, New York

This spark plug has short-circuited its wasting power, depriving you of the use of one of your cylinders. And it's wasting fuel—unburned gas is being discharged through the exhaust. The solution of short circuit is a perfect insulator, perfect at all motor temperatures. Read the story which follows:

## —that "short" is holding your car back like a binding brake

**EVERY DAY** this little tragedy is enacted behind closed cylinder walls in thousands of motors. One little short-circuiting spark is holding your motor back; sapping its power and wasting fuel.

It happens when the motor heats up—when the porcelain, a perfect insulator perhaps at low motor temperatures, becomes porous in the intense heat of hard driving. Then the current becomes unruly. It looks for the nearest exit through the porcelain and the result is short-circuit.

No ordinary test will detect this weakness for when the porcelain has cooled its insulating properties are normal. To be a perfect insulator a porcelain must remain impervious at all motor temperatures.

Bethlehem Porcelains are temperature-tested. In comparative tests under government supervision, Bethlehem porcelain has exhibited three times the dielectric or insulating strength of other porcelains.

You can depend upon a spark plug only when you can depend upon its insulation. Insulation is ninety per cent important.

There is no reason why you cannot have Bethlehem Spark Plugs in your motor. Nearly all good garages, auto supply and hardware stores sell them.

RIGHT POINT

RIGHT POINT

at lips. Before she could move, whether to advance or to flee, Raymond replied:

"I wanted to ask you—you know I wanted to ask you!"

"Oh, yes, you did!" replied the visiting girl ironically.

"I did!" protested Raymond.

"Well, why didn't you then?"

"I'd already asked somebody else. I couldn't!"

And then the visiting girl laughed strangely. Missy knew she knew with whom Raymond had danced that first dance. Why did she laugh? And Raymond—oh, oh!

**SHE** had seemed to grow rooted to the ground, unable to get away; her heart, her breathing, seemed to petrify too; they hurt her. Why had Raymond danced with her if he didn't want to? And why, why did that girl laugh? She suddenly felt that she must let them know that she heard them, that she must ask why! And, in order not to exclaim the question against her will, she covered her mouth with both hands, and crept silently away from the rose arbor.

Without any definite purpose, borne along by an inner whirlwind of suppressed sobs and utter despair, Missy finally found herself near the entrance gate. Fortunately there was nobody to see her; everyone—except those two—was back up there in the glare and noise, laughing and dancing. Laughing and dancing—oh, oh! What ages ago it seemed when she too had laughed and danced!

Oh, why hadn't she gone home with Mrs. Allen and Kitty before her silly pleasure had turned to anguish? But, of course, that was what life was: pain crowding elbows with pleasure always—she had read that somewhere. She was just inevitably living life.

Consoled a trifle by this reflection and by a certain note of sublimity in her experience, Missy leaned against the gatepost upon which a lantern was blinking its last shred of life, and gazed at the slow-rising, splendid moon.

She was still there when Cousin Jim, walking quickly and his shoes creaking loudly, returned.

"Hello!" he said. "What're you doing out here?"

"Oh, just watching the moon."

"You're a funny girl," he laughed.

"Why am I funny?" Her tone was a little wistful.

"Why, moon-gazing instead of dancing, and everything."

"But I like to dance too," emphasized Missy, as if to defend herself against a charge.

"I'll take you up on that. Come straight in and dance the next dance with me!"

Missy obeyed. And then she knew that she had met the Dancer of the World. At first she was pleased that her steps fitted his so well, and then she forgot all about steps and just floated along, on invisible gauzy wings, unconscious of her will of direction, of his will of direction. There was nothing in the world but invisible gauzy wings, which were herself and Jim and the music. And they were a part of the music and the music was a part of them. It was divine.

"Say, you can dance!" said Jim admiringly when the music stopped.

"I love to dance."

"I should say you might! You dance better than any girl I ever danced with!"

This, from a military uniform, was praise indeed. Missy blushed and was moved to hide her exaltation under modesty.

"I guess the reason is because I love it so much. I feel as if it's the music dancing—not me. Do you feel it that way?"

"Never thought of it that way," answered Jim. "But I don't know but what you're right. Say, you are a funny girl, aren't you?"

But Missy knew that whatever he meant by her being a "funny girl" he didn't dislike her for it, because he rushed on: "You must let me have a lot of dances—every one you can spare."

**AFTER** that everything was rapture. All the boys liked to dance with Missy because she was such a good dancer, and Jim kept wanting to cut in to get an extra dance with her himself. Somehow even the sting of the visiting girl's laugh and of Raymond's defection seemed to have subsided into triviality. And when Raymond came up to ask for a dance she experienced a new and pleasurable thrill in telling him she was already engaged. That thrill disturbed her a little. Was it possible that she was vindictive, wicked?

But when she saw Jim approaching even while Raymond was receiving his *courtesy*, she thrilled again, simultaneously wondering, with a certain dramatic interest, whether she was, after all but a heartless coquette.

Jim had just been dancing with the visiting girl, so she asked: "Is Miss Slade a good dancer?"

"Oh, fair. Not in it with you, though."

Missy thrilled again, and felt wicked again—alas, how pleasant is wickedness! "She's awfully pretty," vouchsafed Missy.

"Oh, I guess so"—indifferently.

Yet another thrill.

They took refreshments together, Jim going to get her a second glass of lemonade and waiting upon her with devotion. Then came the time to go home. Missy could not hold back a certain sense of triumph as, after thanking Raymond for a glorious time, she started off, under his inquisitive eye, arm in arm with Jim.

That unwanted arm-in-arm business confused Missy a good deal. She had an idea it was the proper thing when one is being escorted home, and had put her arm in his as a matter of course, but before they had reached the gate she was acutely conscious of the touch of her arm on his. To make matters worse, a curious wave of embarrassment was creeping over her; she couldn't think of anything to say, and they had walked nearly a block down moon-flooded Silver Street, with no sound but Jim's creaking shoes, before she got out: "How do you like Cherryvale, Mr. Henley?"

"Looks good to me," he responded.

Then silence again, save for Jim's shoes. Missy racked her brains. What do you say to boys who don't know the same people and affairs you do? Back there at the party things had gone easily, but they were playing cards or dancing or eating; there had been no need for tête-à-tête conversation. How do you talk to people you don't know?

**SHE** liked Jim, but the need to make talk was spoiling everything. She moved along beside his creaking shoes as in a nightmare, and, as she felt every atom of her freezing to stupidity, she desperately forced her voice: "What a beautiful night it is!"

"Yes, it's great."

Missy sent him a sidelong glance. He didn't look exactly happy either. Did he feel awkward too?

Creak! creak! creak! said the shoes. "Listen to those shoes—never heard 'em squeak like that before," he muttered apologetically.

Missy, striving for a proper answer and finding none, kept on moving through that feeling of nightmare. What was the matter with her tongue, her brain? Was it because she didn't know Jim well enough to talk to him? Surely not, for she had met strange boys before and not felt like this. Was it because it was night? Did you always feel like this when you were all dressed up and going home from an evening party?

Creak! creak! said the shoes.

Another block lay behind them.

Missy, fighting that sensation of stupidity, in anguished resolution spoke again: "Just look at the moon—how big it is!"

Jim followed her upward glance.

"Yes, it's great," he agreed.

Creak! creak! said the shoes.

A heavy, regularly punctuated pause. "Don't you love moonlight nights?" persisted Missy.

"Yes—when my shoes don't squeak." He tried to laugh.

Missy tried to laugh too.

Creak! creak! said the shoes.

Another block lay behind them.

"Moonlight always makes me feel—"

She paused. What was it moonlight always made her feel? Hardly hearing what she was saying, she made herself reiterate banalities about the moon. Her mind flew upward to the moon—Jim's downward to his squeaking shoes. She lived at the other end of town from Raymond Bonner's house, and the long walk was made up of endless intermittent perorations on the moon, on squeaking shoes. But the song of the shoes never ceased. Louder and louder it waxed. It crashed into the innermost fibers of her frame, completely deafened her mental processes. Never would she forget it: creak-creak-creak-creak!

And the moon, usually so kind and gentle, grinned down derisively.

At last, after eons, they reached the corner of her own yard. How un-

# HOOD TIRES

ARE BETTER THAN GOOD TIRES

THIS IS THE SIGN OF A HOOD DEALER

## The "Why" of the Hood Extra "Ply"

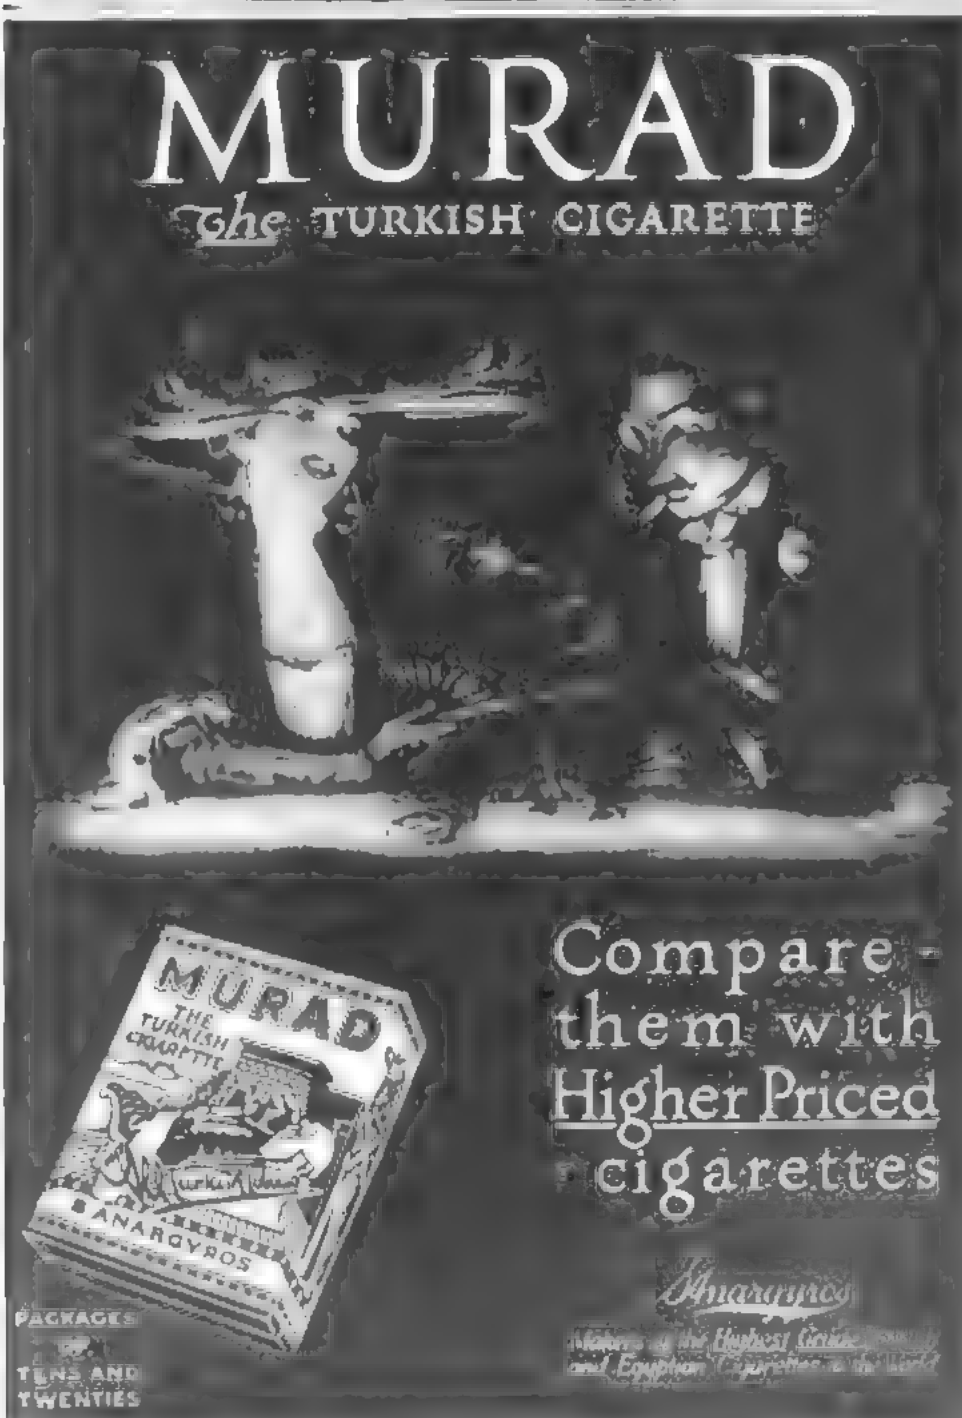

You remember that blow-out which caused you trouble, annoyance and expense? The disappointment in your tire mileage and wear?

The reason was a tire weak in fabric backbone where it should have been essentially strong. Take the time to go to a Hood Dealer. Count the plies of fabric in the Hood 4½" Arrow Tread and compare with any "standard" 5" tire. Then consider the price divided by miles guaranteed and delivered.

You will find an unanswerable reason for the Hood low comparative cost per mile—and for the growing Hood reputation.

The famous Hood outdoor signs protect you upon the highways of America and point the way to the sign of a Hood Dealer. Look up the address of our nearest dealer on the page opposite the contents page of the 1918 Blue Book. Ask him to show you the "why" of that Hood extra "ply." We leave the answer to you.

Hood Tire Co., Inc., Watertown, Mass.

PACKAGES OF TENS AND TWENTIES

changed, how natural everything looked here! Over there, across the stretch of white moonlight, sat the summer-house, symbol of peace and every day, cloaked in its fragrant ramblers.

Ramblers! A sudden remembrance darted through Missy's perturbed brain. Her poor flowers—were they still out there? She must carry them into the house with her! On the impulse, without pausing to reflect that her action might look queer, she exclaimed: "Wait a minute!" and ran fleetly across the moonlit yard. In a second she had the bouquet out of the pitcher and was back again beside him, breathless.

"I left them out there," she said. "I—I forgot them. And I didn't want to leave them out there all night."

JIM bent down and sniffed at the roses. "They smell awfully sweet, don't they?" he said.

Suddenly, without premeditation, Missy extended them to him. "You may have them," she offered.

"If?" He received them awkwardly. "That's awfully sweet of you. Say, you are sweet, aren't you?"

"You may have them if you want them," she repeated.

Jim, still holding the bunch awkwardly, had an inspiration.

"I do want them. And now, if they're really mine, I want to do with them what I'd like most to do with them. May I?"

"Why, of course."

"I'd like to give them to the girl who ought to have flowers more than any girl I know. I'd like to give them to you!"

He smiled at her daringly. "Oh!" breathed Missy. How poetical he was!

"But," he stipulated, "on one condition. I demand one rose for myself. And you must put it in my buttonhole for me."

With trembling fingers Missy fixed the rose in place.

They walked on up to the gate.

Jim said: "In our school town the girls are all crazy for brass buttons. They make hatpins and things. If you'd like a button, I'd like to give you one—off my sleeve."

"Wouldn't it spoil your sleeve?" she asked tremulously.

"Oh, I can get more"—somewhat airily. "Of course we have to do extra guard mount and things for punishment. But that's part of the game, and no fellow minds if he's giving buttons to somebody he likes."

Missy wasn't exactly sure she knew what "subtle" meant, but she felt that Jim was being subtle. Oh, the romance of it! To give her a brass button he was willing to suffer punishment. He was like a knight of old!

As Jim was severing the button with his penknife, Missy, chancing to glance upward, noted that the curtain of an upstairs window was being held back by an invisible hand. That was her mother's window.

"I must go in now," she said hurriedly. "Mother's waiting up for me."

"Well, I guess I'll see you soon. You're up at Kitty's a lot, aren't you?"

"Yes," she murmured, one eye on the upstairs window. So many things she had to say now. A little while ago she hadn't been able to talk. Now, for no apparent reason, there was much to say, yet no time to say it. How queer Life was!

"To-morrow, I expect," she hurried on. "Good night, Mr. Henley."

"Good night—Missy." With his dazzling, gleaming smile.

Inside the hall door, mother, wrapped, clad, met her disapprovingly. "Missy, where in the world did you get all those flowers?"

"Ji—Kitty's cousin gave them to me."

"For the land's sake!" It required a moment for mother to find further words. Then she continued accusingly. "I thought you were to come home with Mrs. Allen and Kitty."

"Kitty got sick, and her mother had to take her home."

"Why didn't you come with them?"

"Oh, mother! I was having such a good time!" For the minute Missy had forgotten there had been a shred of anything but "good time" in the whole glorious evening. "And Mrs. Allen said I might stay and come home with Jim and—"

"That will do," cut in mother severely. "You've taken advantage of me, Missy. And don't let me hear evening party from you again this summer!"

The import of the dreadful dictum did not penetrate fully to Missy's consciousness. She was too confused by her emotions, just then, to think clearly of anything.

"Go up to bed," said mother.

"May I put my flowers in water first?"

"Yes, but be quick about it."

Missy would have liked to carry the flowers up to her own room, to sleep there beside her while she slept, but mother wouldn't understand and there would be questions which she didn't know how to answer.

Mother was offended with her. Daily she felt unhappy about that, but she was too happy to be definitely unhappy. Anyway, mother followed to unfasten her dress, to help take down her hair, to plait the mouse-colored braids. She wanted to be alone, yet she liked the touch of mother's hands, unusually gentle and tender. Why was mother gentle and tender with her when she was offended?

AT last mother kissed her good night and she was alone in her little bed. It was hard to get to sleep. What an eventful party it had been! Since supper time she seemed to have lived years and years. She had been a success, even though Raymond Bonner had said—that. Anyway, Jim was a better dancer than Raymond, and handsomer and nicer—besides the uniform. He was more poetical too—much more. What was it he had said about liking her? . . . better dancer than any other . . . Funny she should feel so happy after Raymond . . . Maybe she was just a vain, inconstant, coquettish . . .

She strove to focus on the possibility of her frailty. She turned her face to the window. Through the lace curtains shone the moonlight, the gleaming path along which she had so often flown out to be a fairy. But to-night she didn't wish to be a fairy; just to be herself . . .

The moonlight flowed in and engulfed her, a great, eternal, golden-white mystery. And its mystery became her mystery. She was the mystery of the moon, of the universe, of Life. And the tune in her heart, which could take on so many bewildering variations, became the Chant of Mystery. How interesting, how tremendously, ineffably interesting was Life! She slept.

## Conscription in Canada

Continued from page 22

In Quebec I had the privilege of an audience with the venerable cardinal and enjoyed two meetings with Sir Lomer Gouin, the Prime Minister. Sir Lomer received me in his room in the vast Parliament House, and talked with frankness. He is one of the most important men in Canada. For twelve years he has now held the reins of power. He is a disciple, friend, and confidant of Sir Wilfrid Laurier. His face and figure bespeak force and character—the tenacity of a bulldog and the tact of a diplomatist. The tact shines out of his kind, gray-blue eyes, surmounted by thick eyebrows and a massive forehead. The tenacity is shown in his rugged profile, his firm jaw, overhung by a rough gray mustache, and his pugnacious though small nose. I am not at liberty to quote all that he told me. In a general way, however, he permitted me to say that, while regretting some mistakes of Ottawa policy, he foresaw no danger of resistance to the Conscription Law, so long as it was sen-

sibly enforced by the war authorities. "The Quebec folk," he explained, "are peaceable citizens who respect the law and are fully as intelligent as Canadians elsewhere, if not more so. As for my views on certain other matters, I refer you to my speech some days ago on the Francœur motion."

### Agricultural Conscription?

IN that speech (which, by the by, was a model of oratory) Sir Lomer poured much oil on troubled waters. He told his own people, in effect, that recriminations against Ontario and other Provinces could do no good, and that despite the insults which a few writers or preachers had hurled at the French Canadians in Quebec, the Canadian Confederation was the only system of government for Canada. His address was an appeal for peace and concord. It quoted the example of our own bloody Civil War, which had not prevented the reunion of North and South. It

## Concerning that Great Improvement in Shot Shell Manufacture— THE WETPROOF SHELLS

by REMINGTON UMC

Have you noticed that the Remington UMC Shells you buy nowadays are exceptionally firm in the crimp? These are the Wetproof Shells—Remington UMC—strong and dependable where the average shell is weakest.

As every hunter knows, a water-soaked crimp is apt to broom out in his repeater, and jam just when the birds are flying good.

Top wads hump up. The shot gets loose.

But not with a Wetproof Remington UMC! These are the first and only shells ever waterproofed in crimp and top wad—the raw edge of the paper filled with a tough, elastic, waterproof compound—sealed against wet.

WETPROOF does not signify a special brand of Remington UMC Shells, but a great forward step in shell manufacture applied to all smokeless powder shells of this celebrated

make. The Wetproof feature does not add to the price of the shells. To get it you need only ask your dealer for "Arrow" or "Nitro Club" Remington UMC.

"Wetproof" is exclusive with Remington UMC—protected by patents against imitation by any other manufacturer in the world. It is an example of the constant progress that is keeping the Company young and vigorous, its service to the public always growing—

Making the strongest sentiment of the shooting public for Remington UMC, and the Red Ball Mark of Remington UMC in the merchant's store the unfailing Sign of Sportsmen's Headquarters.

Wherever you find "Arrow" and "Nitro Club" Labels, you find the Wetproof Shells—Remington UMC. Look for them. It is worth while.

showed how impossible the Province of Quebec would find it to exist and thrive if it were cut off from the Dominion. And it reminded not alone the deputies, who hung breathless on his words, but also those outside the debating hall, that Confederation had been a thoroughly well-considered scheme, not a caprice, as some seemed to imagine it.

Whether Sir Lomer approves, besides merely submitting to, conscription, he best knows. But at least one member of his Cabinet, M. Caron, the Minister of Agriculture, whom I may quote, holds firmly that it would have been wiser on the part of Sir Robert Borden to propose a measure for agricultural rather than for military conscription.

There is something in that theory worth considering. All that conscription hoped to accomplish in Canada was the recruiting of 100,000 additional fighting men, drawn from a reluctant and already hard-pressed people. To raise even these, it may be necessary to drain the agricultural and industrial elements of the Dominion, which are badly needed for raising crops, building ships, and other purposes. At the end of January only 13,000 of the desired 100,000 had been enlisted. They will weigh little in the scale against the Huns. The new law is being administered very temperately by the authorities. Exemptions are numerous, and slackers are, of course, as common in the Dominion as in the United States.

**T**HE imperialistic view of the situation was summed up on my return to Montreal by Lord Atholstan, the Quebec Northcliffe, proprietor of the Montreal "Star," who so nearly fell a victim of a fanatic a few weeks ago:

"Whatever the motives of the politicians who worked up the stormy agitation of protest against compulsory military service," said Lord Atholstan, "Quebec opposed this policy ostensibly on constitutional grounds and mainly in a constitutional manner. Now that conscription has become law and is being enforced by Government with a direct mandate and a strong popular majority, Quebec will continue to act in accordance with constitutional precedent and will peacefully acquiesce."

"Quebec is naturally pacifist. By his language and his placid indifference to affairs outside his own immediate vision, the French Canadian is cut off from the great currents of the world. He has lost his filial love for France, which has departed far from the religious paths in which the *habitant* is trained, and he has not yet acquired any personal devotion to British ideals, though grateful and loyal in the main to the British flag for generous treatment. It is argued with plausibility that it is natural that this people should feel and display less interest in the present war than the English-speaking Canadians. It is also natural that by reason of their aloofness and naivete they should be easily misdirected by political agitators of their own race, of whom there are many. These have led them astray more than once. But Jean-Baptiste has a solid foundation of common sense in his make-up, and he will find his way back.

"The effect of the Military Service Act will hasten this rehabilitation by bringing a large number out of their isolation, placing them in direct touch with their English-speaking compatriots, and necessarily giving them a wider outlook. The ultimate effect will be to knit more closely the ties of the Canadian Federation and to strengthen Canada's loyal association with the British Empire. There is as little possibility of secession as there is of an uprising."

"It is a mistake to think of the French-Canadian problem as one pressing for 'settlement.' It cannot be settled, except by the gradual widening of educational currents which are steadily undermining the barriers between the two peoples and will, some day, in spite of foolish politicians of both sides, blend the two races together in a new nation which may be better than either alone could evolve."

Poor habitants! They are not eager for the melting pot. They wish to remain just what they are to-day, Canadian Catholics, speaking what they tell me is eighteenth-century French, but what I take to be a rude kind of Normandy dialect. As for the war, what do they know of the Bolsheviks, the Belgians, the Serbians, and the Rumanians? I even heard of one good habitant who, on dropping in at Montreal last year to sell furs or perchance to get a haircut, learned with

amazement for the first time of the war.  
Was he typical of thousands of excellent backwoodsmen? I wonder.

**THIS** much is plain: The Canadians have to their credit a tremendous effort. The 420,000 men who have come over from Canada are, proportionally, to the population of the Dominion (roughly 8,000,000), the equivalent of 5,000,000 who might be sent from the United States. That is their heroism and will never be forgotten. Of the 420,000 it will also be remembered that most—all, indeed, with the exception of some 10,000 or, at the utmost, 20,000—were of English, Scotch, Welsh and Irish blood. The Britisher loves fighting for its own sake. The French Canadian prefers peaceful sports. He is not a coward. He can on occasion be a brute. Or he may be a fairly agreeable if not brilliant citizen, ready to defend himself at a pinch, but very unwilling to take part in outside quarrels.

Besides, this conscription was sudden. For three years the Canadians—all Canadians—had been lulled by assurances that it was not even contemplated. On January 17, 1916, Wilfrid Laurier said explicitly: "There is to be no conscription in Canada. And on the same day Sir Robert Borden, the Conservative Premier, meaning all he said: "I made it clear to the people of Canada that we do not propose any conscription. I repeat that announcement to-day with emphasis." Then came the *volte-face*. So hurried was Sir Robert to push conscription through last fall that he omitted to confer with even Sir Wilfrid who was quite naturally huffed and hurt in consequence. The M. S. A. must indeed have seemed a necessity to the Canadian Government. The Duke of Devonshire, the Governor General, I know, thought so. But it was sprung on the Dominion rather brusquely. The recent elections roused Quebec in many ways. Some statesmen thought that in ways they were irregular. The jeremiads of hot-heads in Ontario deepened the objections of the Quebec folk to the new measure. Why should they be insulted for expressing their opinion constitutionally, as the Australians do? No one had insulted Australia for rejecting conscription.

**B**UT the keynote to the whole mission was in Ottawa, the seat of the Dominion Government. So to Ottawa I went, hoping for audiences of Sir Robert Borden and Sir Wilfrid Laurier. Both statesmen have an aversion to "being interviewed." Thanks to a letter from an acquaintance of the Premier, however, I succeeded in seeing him. Before that I was also fortunate enough to be received by Sir Robert's most formidable political rival.

Of all the public men of mark in Canada none is more honored or more widely known than Sir Wilfrid Laurier. For many years he has been a commanding figure, popular not only with his own followers, but even with his adversaries. He is to Canada what Gladstone was to England, a symbol of that temperate Liberal force which keeps the balance between the extremes in politics.

Sir Wilfrid has long passed the allotted span. He is anxious to return to private life. But, by his opponents quite as much as by his friends, the withdrawal from the leadership of the Canadian Liberals just now would be regarded as a calamity. It is he whom the Conservatives in power may thank for the checking of the Bourassa Nationalists, the moderation of the Catholic clergy, the submission of Quebec to the Conscription Law. But for his influence there might have been much disorder in Quebec. His very presence in the Dominion House of Commons lends dignity to that body. He is a survival of traditions which are dying; a gentleman, by instinct and by habit; a debater of authority; a true statesman. His experience in the conduct of affairs, both international and national, has won for him a quite unique position. His personal assets include tact and grace. A Canadian of Canadians, he has avoided offense to the Anglo-Saxon element without losing the affection of the French-speaking Catholics. Though, as his record proves, and as his intimates would confirm, exposed to all tightening of the links which bind the Dominion to the Empire, he has by his attitude during the war, and, indirectly, by his stand against conscription, done much to prevent those links from being loosened.

Digitized by Google

Sir Wilfrid did me the great favor of receiving me at his office, a large, plainly furnished room in the gray, castellated museum which, since the wrecking of the stately House of Parliament, has given shelter to the Senators and Commons. He talked with me for nearly half an hour, sometimes in French (which, oddly enough, he speaks with a slight English accent) and sometimes in English (which he pronounces like a Frenchman). He is tall and spare, and in appearance frail; smooth-shaven; with a fine and lofty forehead; fast-whitening hair, brushed back on either side; grave and observant eyes; a long and well-shaped nose; and a firm mouth. A man who knows his mind and yet can change it. There was something of the teacher in his bearing—a strong but not an overbearing teacher, willing to respect argument and to make concessions. Except at moments when his feelings moved him, his voice was low and very musical. He reminded me at times of Edwin Booth. The resemblance, which is real, lay in the set of his well-molded lips and chin and in a suggestion of romanticism.

#### The Premier Sums Up

SIR ROBERT BORDEN was up to his eyes in work in the east wing of the old Parliament Building, conferring with munition makers and dictating letters to his typewriter. He seemed unruffled by his heavy responsibilities. A man over sixty-four, though he looks ten years younger, built rather stockily—physically the antithesis of Sir Wilfrid. He has much in common with the late Lord Cromer, whom I met in Cairo. His grayish hair, tinged with what had once been red or reddish brown, was carefully parted in the middle. An ample brow, clear eyes, a generous nose, and a firm mouth, topped by a thick mustache, completed the portrait which I took away of him. He obliged me with ten minutes, all he could spare, talked with precision upon several points, and condensed his words for me in this dictated statement:

"Sir Robert Borden said that, while there had been strong opposition in some parts of the country to the principle of compulsory military service while the bill was under discussion, there had been general acceptance of

the measure since its enactment, and there had been an entire absence of any serious disturbance in connection with its enforcement."

Colonel Biggar of the Military Service Council, to whom I was commended by the Premier, threw more light upon the workings of the Conscription Law. "The results," he said, "have up to now been admirable. And nowhere more so than in the Province of Quebec, where the registration has been much larger than we had hoped. Roughly it was 115,000; of whom, of course, a proportion not yet known, but probably considerable, will be exempted. There has been no resistance, and, by all accounts, the quality of the drafted men is excellent."

#### Self-Government

AND now to sum up: There is assuredly some unrest among the French Canadians, due to the pin pricks of the School Law in Ontario and the much sharper stab implied in the Conscription Law. But it is still, and I believe it will remain, purely psychological.

The Conscription Law is regarded with disfavor and even with anger by the French-speaking Catholics of Canada. It has not stirred up any disorder in Quebec, nor will it provoke rebellion among either priests or laymen. While it is enforced with tact and care, it will be obeyed, though without enthusiasm.

No one, not even M. Bourassa, now wants Quebec to secede from Canada. No one, except the Nationalists (including a large number of town priests and country curés), wants Canada to cut loose from the British Empire. No one in Canada whom I met or heard of wants the Dominion, or Quebec, to join the United States. Everyone in Quebec does want either limited or unlimited self-government; to be let alone, wherever that is possible; and to be spared the sneers and insults of the westerners.

Should any for attempt to invade their country—and the fatherland to them means their own Province—the pacifist habitants will fight back tooth and nail. But they will fight, of their free will, for three things only—their sacred soil, their Church, their own French tongue.

## Wilson and the Enemy

Continued from page 3

agonies of life and death doubly and trebly in one year. It was not material want alone that pushed us toward the brothers of a silent beyond; to suffer want was bad, indeed, but it is still worse to see the hyenas of war at home sneak from one door to the other among the poorest, deprive them of their last, and fill therewith their own worthless carcasses. We are anxious for a final and lasting reconciliation. The sound of the moving wing of a new world history becomes audible for the first time since the break of day!"

Still another leaflet says:

"Renounce a policy which delays peace. Accept the idea of an agreement between nations which alone can bring us the peace which will preserve us from the danger that revenge wars will follow. What the Pan-Germans seek can never be gained. Nothing will come of it but the sacrifice of more human lives."

The realization on the part of the discontented civilians that the army must be converted to their view appears in another secretly circulated and recent flyer: "The force of a peace with Russia will awaken also the western front," says this cautious statement, and it is only by the spirit of the rest of the text that the interpretation intended appears plain. The hint is that the army on the western front must be converted—weaned from the leadership of the military herders.

That the censor of the press realizes that the German people are not in accord with measures which tend to increase international hate is brought out by the following order from the censor's office which has come into possession of the State Department:

"Concerning the most recent bomb attacks by German flying machines on London nothing may be published."

If, however, following an air raid an expression of anger against the German people is hastily uttered by some English, French, or American speaker this "hate speech" is given the widest circulation in Germany to convince the people that their enemies are inhuman.

Another censor's order to the German press discloses the fear that civilian dis-

content will spread into the army: "It is not permissible for third persons to appeal to members of the army in newspapers, brochures, or pamphlets in order to call upon them to take up positions toward political news."

The fear that the liberalism of Austria may spread to Germany is expressed in another confidential order of the German censor: "The discussions in the Austrian Chamber may for the present be published only as sent out by ——— [certain press bureaus]."

The sum total of this evidence, and a vast amount which policy prevents publishing for the present, is that there is political discontent in Germany; that it is growing and may reach the army; that it has been given expression in daring words which have escaped or defied the machinery of suppression. That there has appeared anything in the nature of a general revolt is a notion not to be entertained, but that the German military ring is in a panic for fear the people may break away is too patent in the evidence for any denial. No one knows better than the President that such breaks come suddenly and that, in a cause of conscience and democracy, once fairly started, they become an avalanche.

The fear of their own people by the German autocracy, of which our State Department has ample evidence, is considered a significant answer to this question: Has the President a fighting chance to win by a frank, insistent, and repeated appeal to the German people?

#### Our Danger?

THE second main question which perplexes the American people is this: What are the dangers of trying to win a victory over the military ring in Germany by enlisting the German people themselves?

Will the President's attempt weaken our national war spirit? The President thinks not. The evidence at hand will give us the answer to the collateral question: What is it that most provokes the war spirit?

Every time the President tries to give the German people a definition of our conditions so that they may take liberal-

## "Every inch of this kitchen is washable"

Here's a kitchen that is "bright and white" and washable throughout.

This means it is finished with Valspar and Val-Enamel.

Valspar is the famous water-proof varnish that isn't afraid of water—that never turns white—that is used for more household purposes than any other varnish.

Valspar is best for all woodwork indoors and out, as well as for all furniture, because it's durable, spot-proof and washable.

Val-Enamel is an American product that is far better than any imported enamel. It starts white and stays white. It has long life and is easily applied.

For very many rooms, especially if the popular colonial effect is desired, the best combination is water-proof, spot-proof and durable Valspar and Val-Enamel.

#### SPECIAL OFFER

If you wish to test Valspar send 20c. in stamps and we will send you enough Valspar to finish a small table or chair.

## The Spirit of War Service

Alone in the midst of war's desolation, the telephone line-man crawls to mend the broken wires.

On all sides the thunder of artillery; in the air bursting shrapnel.

He faces danger with that unconquerable spirit of war service which permits him to think only of maintaining the telephone connections.

The safety of the troops depends on these lines of communication, often used for the sentries' warnings, the carrying of

official commands and the summoning of reinforcements.

In a dark hole hidden among sparse brushwood are the telephone operators, some of whom have been for months in their damp cave ceaselessly swept by shells.

And they are admirable, all these heroes of the Signal Corps, whether serving in darkness or in the all too bright light of day.

The spirit of war service, over here as well as over there, furnishes the nerves, the endurance, the morale—the stuff that wins war.

ism into their hearts and turn out their military ring and float, or keep their military ring and go down, the military ring in Germany gathers up all our eastern-alive literature and reprints it in Germany to revive reactionary loyalty and arouse fear and bolster up the doctrine that the German Government is fighting a war of self-defense against a hyena world.

"There now! You see that all we have been saying is true," says the German autocracy to the people. "This is war on you to exterminate you. All the protests of President Wilson are hypocrisy. The American people are not back of their President. We must fight on!"

It is a fact reported from secret sources over and over again that the German officials watch the Allied newspapers and magazines day in and day out to find a "hate speech" to reprint and circulate in Germany.

Bolo, recently convicted in Paris of acting for Germany in spreading propaganda, corrupted certain newspapers. The State Department has analyzed the effect of this German money. Was it to spread pro-German propaganda? It was not. It hired these newspapers to emit a febrile eruption of hate, spite, threats, and hysterical abuse of all Germans. That was the commodity which the German Secret Service bought and paid for and, having obtained, took home and spread broadcast to rally the people around the military ring.

Says the German censor in confidential orders: "It is much desired that the press interpret in German interests events such as Ribot's speech" (a "bitter end" pronouncement).

The same kind of order went out so that the German people might all have the famous Lloyd George "knockout" speech of last year.

"The hate propaganda" within Germany—the "Gott Strafe England" propaganda which the German autocracy once fostered—was abandoned because it served more to unite the people of the Allies than to unite the people of Germany.

"We know many of the facts in regard to this," I was told by a State Department official who has been in Germany. "Certain liberal leaders in Germany went time after time to the German Foreign Office and presented elaborate documentary evidence that the German hate propaganda increased English recruiting, reawakened the spirit of British labor, stopped strikes, and in other ways aided the English. 'We challenge anyone to show that the hate doctrine has done as much good to our cause as good to the cause of the enemy,' they wrote. And at last the German Foreign Office began to see the truth of it."

But the most recent and important drama of the "bitter end" pronouncement was that which attended the Supreme War Council at Versailles. It is a fascinating bit of the inside story of the war.

The strikes were on in Germany, and

discontent was showing its head. The Allies, led by President Wilson, taken a stand on war aims which were firm and conscientious. At the same time it held out an assurance to the German people that their enemies did not intend to carry on a war of extermination against any nation—had no wish to war against a people which should throw off military domination. The German autocracy were at a loss to know what to do to change the tide.

### The Virtue of "Hate"

THERE is positive proof that determination was made to draw from the Versailles Council, if possible, a "bitter end" statement. In pursuance of this plan a vicious air raid was made on Paris. The news of it was spread within Germany.

A shrewd observer of the United States stationed in a European country cabled his belief that this air raid and certain other steps taken by the German Government were intended to bait the Versailles Council directly, and indirectly through the pressure of outraged public sentiment. He said in advance, for he feared the German plan would be successful.

It was, the "bitter end" resolution of the Versailles Council was used all over the German Empire to convince the German people that their hope was in rallying to the support of the military ring.

Now we are ready to answer the question: What is the virtue of the "hate doctrine" urged by the raw-meaters? On whichever side the game is played it does the enemy no end of good. Every "hate speech," every proposal to be merciless in a program of boycott, every plan for "war after the war" coming out of Allied countries or the United States, is pure gain for the German military ring.

The evidence of our State Department appears to be overwhelming that this is true and no small part of the evidence is that nation after nation has tried the hate doctrine and each, according to length of experience, has learned the immense value of it

to the enemy. There can be no complete evidence as to the effect of the President's action on our national war spirit, but his closest advisers believe that his appeal need not weaken our grim determination to see the job through with him.

### Men, Guns, Ships—and Truth

THERE can be only one tragic aspect of the President's attempt to defeat Germany with truth—even if he fails, and herein is the answer to the second main question:

It is the chance that, if the truth fails, too much attention will have been given to stating it and not enough attention to the trained men, the guns and the ships. Words are easily prepared, but not men and guns and ships.

Nevertheless, that is not a reason for throwing truth on the scrap heap. It has been suspected of being a great weapon

## How Does the Far West Stack Up?

Continued from page 7

Mafeking. You'll find him out in the forest teaching the men of the Far West all he knows of scouting and field skirmishing. These three are typical of the men the West attracts.

Clothes may not make the man, but a uniform often gives opportunity for the manifestation of manhood. There are many Asiatics in service at Camp Lewis. One, a Chinaman, was made sergeant because he deserved the place. Shortly after he got his stripes he was put in charge of a detail of recruits just up from California, with orders to have them dig trenches at a certain spot. He marched them to the spot where the trenches were to be dug; whereupon they sneered at him and lay down under the trees to smoke. They had no mind to work under the direction of a Chinaman. The sergeant stood very quiet for a little time; then he stepped over to the recalcitrant group and spoke in a voice that had an edge to it. "Nature made me a Chinaman," he said firmly, "but the captain made me a sergeant. You can dislike me because I am a Chinaman, but you'll obey me because I am a sergeant in the American army. Now you dig!"

It is a matter of record that they dug. In the early days of the camp they were in desperate need of blacksmiths to shoe mules. They searched the various units for men that could do the work. A company captain called in a man he thought might qualify, and asked him about it.

"You know something about mules, don't you?" the captain asked him.

"Plenty," the soldier assured him solemnly. "I know a guy that enlisted to shoe mules. He died 'fore ever he got to the front. He passed away in what you call—now—a rear-guard action."

As I said at the start, the camp offers a peculiarly fortunate variety for training grounds. It has rolling, open prairie; it has prairie dotted with evergreens; it has thick forest and steep hillside. It has hundreds of little parks absolutely walled in by fir and hemlock trees, where special details can be especially trained in private.

The instructors are taking full advantage of the natural resources offered. I was walking one afternoon through the fir and hemlock forest on the hill that flanks the camp on the south. It is a weird and mysterious wood. I could hear no sound except the demanding clamor of artillery on the far range and the syncopated squabbling of a machine gun not so far distant. I looked down a wooded hollow at my right and broke out into a rash of gooseflesh. There stood a bare-headed, blindfolded soldier—evidently awaiting execution!

"Teaching him to detect the direction from which sounds come," the officer with me explained. "Watch!"

I took a long breath of relief and watched. The blindfolded figure was surrounded by soldiers standing motionless at regular distances from him. At the sign of command from the directing officer, one of the soldiers would move toward the blindfolded man, stepping with infinite care in the attempt to creep up unheard. He would keep on going until the man he was approaching raised his arm and pointed in the direction from which he believed a sound could have come. There was no levity about that work. Those men were in grim and deadly earnest creeping over the moss and brush, in the weird light that leaks through the ragged roof of an evergreen forest.

### Scout Work

I PASSED on. The officer and myself were silent. There was an atmosphere in that deep forest that forbade speech. A scratching noise high in a near-by hemlock tree startled me. I looked up quickly and saw the olive drab of a soldier's uniform tucked in among the upper branches. Before I had time to ask an explanation of the officer with me, three soldiers burst out of the forest near by, crouched over with their guns held ready for business, hurrying, peering intently, through the wood. One of them looked aloft, spotted the man in the tree, and all three stopped.

"All right!" said one. "We got you."

The man up in the tree began to descend. An officer appeared and engaged the three soldiers in earnest conversation. "Scout work," the officer accompanying me explained. "Great opportunity for that stuff here."

**"No, you can't have that Job!"**

"That position demands a man who is alive—awake! You are not—Benson is. You are a time server, a clock watcher. He loves his work and puts his heart into it. For ten years you have been content to crawl along. To better himself for higher duties Benson used his brains, his energy, his vitality. He studied his weaknesses and his limitations and by taking the course of the American Institute of Business Psychology learned to build up where he was weak, to make better use of the strength which he had. Today he could find a hard to replace him, while we could get a thousand men tomorrow like you."

Have you ever been told something similar to the above? Have you seen the good position, the good things of life, go to others? And have you wondered why?

The American Institute of Business Psychology shows you how to build upon the talents you have—how to be better as Health, better as Energy and better as Business Power. It shows you the way to increased earnings, to a position of increased responsibility. By a course of study directed by experts, founded upon actual experience and based upon scientific knowledge and common sense, it throws open to you a new life of freedom from care, it shows that the

**Civil Service Examinations Open The Way To** good Government positions. I can teach you to pass at one trial. Full particulars free from American Bureau of eligibles up over. Write today for Booklet C P 100. East Highways, Washington, D. C.

A little farther along a large number of soldiers passed me in open formation. As far as we could see through the forest in each direction we could make out the forms of silent, hurrying men. An officer appeared. "What's the idea, Al?" my escort asked.

"We're the rear guard of a battalion in full retreat," the officer explained, "falling back from the Nesqually River. Some hike! I could eat raw crow right now, and swear it was quail. Boy! If Hoover knew what I'm going to do to food to-night, he'd have me shot for the good of the service."

We walked that dim wood throughout the entire afternoon, and on an average of every five minutes came upon an example of some new phase of training, and for every phase of training the reservation offered some peculiarly favorable physical advantage.

## The S. O. S.

ON a misty morning, squatted behind a front-line trench starting across No Man's Land, pitted with shell holes and strewn with all manner of equipment and refuse, we looked at the enemy trench and wire a hundred yards distant. The trenches and the intervening terrain built under the direction of British officers in a green, mossy glade, absolutely walled in by firs and hemlocks, presented a faithful reproduction of an active bit on the western front. There were perhaps thirty of us in the party. Soldiers, noncoms, privates, and two lieutenants were students in what is known as the S. O. S.—the scouting, observation, and sniping end of the army-intelligence game. A hundred yards away five men of a reconnoitering party were crowded in a shell hole. They had but just wormed their way under the protecting wire of their own—the enemy—trench, and slid rapidly to shelter in the first refuge that offered.

They were operating in almost impenetrable darkness, and yet we who watched stood in the full light of early morning. A trick of training is the explanation. Each man of each patrol wore goggles with a glass so darkened by a special treatment that they literally turned day into night for him. The student scout operates in almost total darkness; the instructor stands in the light of day, watching his every move to criticize him.

Four men and a lieutenant eased themselves gently over the top of the trench directly before us, squirmed under and through the seeming confusion of guarding wire, and went groping out into the billowy desolation of No Man's Land, inching along on their stomachs at the rate of less than a foot a minute, feeling carefully of every can and stick and stump, memorizing every little bump and hollow with their exploring fingers. They were out to

ak up any reconnoitering party that might be around, to see that no enemy force explored the secrets of their camp, and—if possible—bring in an enemy scout alive to be questioned.

### "I'm Tellin' You!"

NE of the enemy on the far side of No Man's Land lifted his head from the shell hole experimentally. From an advanced and wonderfully camouflaged listening post a sniper's rifle angled its announcement of discovery. The sergeant near me swore under his breath. "He poked his head up out of there too fast," he muttered. "I stalked a flock of mountain sheep all one day up Alaska, and then I lost a chance for shot at 'em by pokin' my head over the top of a rock real quick. If I'd eased up slow just a fraction of an inch at a time, they'd never have noticed me, I'm sure. It's always a mistake to move it until you know that you're seen."

"You're right," another sergeant whispered, "but when you know that you've been seen, do, don't let any tired winks of lingering lightning, or sound waves that scare wolves, or anything else that, get in your path. You want to be free to show speed."

"Ain't it the truth!" a private whispered fervently. "If I was out there I'd knowed I'd been seen, I bet I could get ten seconds behind a ninety-mile an hour wind and be in plumb calm rather in about fourteen steps."

"If we started together, I'd have to look around to see what was keepin' you," another declared. "With that reason for runnin' I could start at sundown, an' 'fore ever the folks that saw me leave could say 'There he goes!' I'd be more than dawn where I'd be, all 'fore daylight. I'm tellin' you!"

The group chuckled. "Shut up!" the sergeant growled. "Watch these guys learn something." The reconnoitering party from the enemy trench reached our wire and worked along it, examining it with their fingers, conversing with one another by means of pinches, looking, in their goggles and blackened faces, very much like terrible creatures common to the world's oozy youth suddenly become incarnate in the common-sense daylight of the workaday present.

There was a break in that wire, and a man of the reconnoitering party found it. He was a tall, lathy fellow with a tousled shock of yellow hair. I made a note of him.

The enemy party worked along our wire until they were almost on the edge of the shell hole which hid two of our patrol party. The lieutenant commanding our detail had inched himself out from behind a tree and with one of his men was worming himself along the ground to get into a position to cut off the enemy.

### Knowing More Than the Hun

THE leader of the enemy patrol poked his head over the edge of the shell hole that concealed two of our men, and could see his body stiffen. Very slowly he drew back, a fraction of an inch at a time. He reached out and pinched the man next to him. Our lieutenant rose, crouching like a football tackler, and whistled shrilly. Every man of both patrols rose abruptly. Two of our men jumped from the shell hole and bore down two of the enemy. Three of the enemy patrol were left. Two of them hesitated just for a second to get their bearings, and then ran for their trench. Both were tackled and thrown. One of the enemy patrol was gone. He was the lathy, light-haired fellow who found the break in the wire. Instantly on the sound of that alarm signal he had leaped to his feet, and the first leap had taken him toward home. When his comrades were being tackled, he was halfway across that No Man's Land, stepping it off like a ten-second man on a cinder track, and heading for the open lane in his own wire as straight as a well-aimed bullet for a bull's-eye! He couldn't see his way. I know. I put on his glasses later, and it was darkest night to me. He had come a circuitous route, this way and that, around shell holes and through them; but when it came time to go home he went without any fatal instant of hesitation. While his comrades were still struggling, he arrived at the break in his wire, ran through it, and rolled into his own trench. He had noted and memorized every twist and turn that he had made in that trip across, calculated the length of each movement, and constantly kept his bearings so that he could leap to his feet and run in exactly the right direction to reach home. He did reach home. Remember that.

The British instructor blew his whistle, and the show was over.

"It's all a matter of knowing more than the Hun knows," the British instructor said in explaining the work to me. "You see, if you know more than the Hun knows, you live; and if you don't, why, the Hun lives. It's our business to see that the Hun doesn't live, isn't it? Yes. So we must be very sure to learn more than he knows. And then we must be very, very careful. Yes."

"How do these fellows here pick it up?"

"Pick it up?" the British instructor exclaimed. "My dear fellow, they don't have to 'pick it up.' They carry it around with them. It isn't necessary to teach these fellows this work; you have only to tell them. Why, look at these chaps here. They've all had outdoor experience hunting, logging, something of the sort. Why, they're just made to order for this sort of thing, you know. You notice that chap who made straight for home when they tried to nab him? Most remarkable piece of work! Comes perfectly natural to him. He's been what you call a timber cruiser. He's trained to observe and remember what he sees. He's not alone. Plenty here like him."

He was silent for a moment, thoughtfully studying the soldiers at work about him. "Indeed yes," he went on. "All these fellows need is one little taste of actual warfare, and they'll be wonders. If they'd let me have my pick of 250 men from this division, and let me go on my own with them, just here and there along the western front, I promise you I'd have no cause to seek a separate peace."

### "We Can Lick 'Em"

CIVILIZATION has not yet disassociated the men of the West from experience with and knowledge of romantic action. This war has brought a romance of action back into the world—a greater romance than we have ever before known. Our grinning aviators contemptuously straddle the storm and tickle the tail of the angry blast with their whirling propellers. They sit the gale with insolent ease, ride it screaming past the startled upper clouds into the frontier of space, shatter the serenity of heaven with the crashing rattle of their fighting guns. Thousands upon thousands of men are nightly creeping Indianlike in the muddy mystery on No Man's Land. They play their wits and brawn individually against an individual foe, and, as the British instructor has it: "If they know more than the Hun knows, they live."

On my last day at Camp Lewis I stood watching the division pass in review. "Some bunch?" said a near-by civilian admiringly.

"Fine body of men," another civilian agreed sadly. "It's a shame to think they must go to their death, isn't it? Just to think that all those thousands of men out there are no more than a breakfast for the guns in a battle on the western front!"

A big soldier stepped up, voicing his protest in an inarticulate growl of anger: "If that bunch out there does any dyin', they'll take a plenty o' company along with 'em," he snarled. "You want to lay off o' that talk around here, you! We're gettin' plenty good an' sick o' you calamity howlers that seem to think that we're nothin' but a lot o' boobs being sent over for the Germans to play with. They ain't no Germans goin' to play with this outfit, an' go home to tell their grandchildren they enjoyed bein' with us. We don't thank you to figure that we're a set-up for the Germans to knock over. Get that idea out o' your head. We're goin' to do somethin' in France besides die."

That soldier was not boasting. He was stating what he knew to be a fact. We have had too much of the feeling that the American soldier is some kind of a helpless sacrifice to the mighty German.

As I write this, before me stands the meager report of the death of the first West Pointer in action on the western front. According to the account, his last words, uttered just before he was killed by a bursting shell, were: "Steady, boys! Though they outnumber us ten to one, we can lick 'em."

I have but just returned from a stay with the men of the Far West in training at Camp Lewis. And, in all honesty, after the exercise of whatever intelligence I may possess in arriving at a conclusion, I want to let that officer's reported statement stand as an echo of my idea.

This is the third of a series of articles on the National Army camps. The fourth will appear in an early issue.

## HOW TO END CORNS

SAFE CERTAIN

HARSH UNSAFE

DANGEROUS TEMPORARY

## Which Way for You?

Above are pictured three ways to treat corns.

Blue-jay is the most certain. It is safe and gentle.

Yet the unknowing ones experiment with harsh, mossy liquids or the dangerous razor.

These two ways are temporary.

But Blue-jay is scientific. The spot of medicated wax, discovered by a great chemist, soothes while it works.

Place a Blue-jay Plaster on your throbbing corn tonight.

Relief is instant. The soft felt pad stops the pain by relieving the pressure.

In 48 hours the medicated wax has saturated the corn—undermined it to its roots—and it comes off painlessly, completely. Nature responds quickly to such a gentle, corrective treatment.

## What Pershing's Biscuit Boxes Taught a Syracuse Packing Case

**C**ONSIDER, please, what changes have come to pass in the building of motor trucks during the two years since Gen. Pershing crossed into Mexico.

*Then*, Motor Truck design was thought to have approached practical perfection. Methods were thought standardized for years to come. Engineering practice was considered settled.

*Then*, certain truck troubles were thought inevitable—breakage, periods of idleness for replacements, rather rapid depreciation—all were thought quite natural,—or blamed on the driver, who would overload.

*Then*, people talked quite glibly of the limitations of motor hauling,—how they might or might not be suitable for local delivery purposes, but could never be a serious factor in the real transportation of the country. And even the builders believed them.

*And Then* came Pershing. Into the melting pot of military service were poured a half-hundred trains, 27 to 33 trucks each—a great symposium of America's best—and the supreme test of feeding a moving army hundreds of miles from its base.

Almost in a day old standards of truck building and truck service were swept away. Now, all truck designers know that the old trucks engi-

neered for carefully graded hauls over paved roads only, can not meet the needs of this day and generation. Now, all motor truck engineers know that the old truck troubles, the breakdowns, the endless repairs, the losses of time, the faults and weaknesses thought inevitable, are 95 per cent avoidable. They were not the faults of owners and drivers; but fundamental faults of engineering and design.

**NOW**, the whole world knows that there is no reasonable limit to the functions of the motor truck. The day of the long haul is here. Motor transport is the salvation of America's industry facing transportation chaos.

Pershing's Biscuit Boxes have taught a new lesson in economy of transportation to the packing case of Syracuse, New York, Chicago, and the rest of the world. Out of the Mexican military expedition came a new truck—the **WINTHER**.

Applying fully to commercial use, the lessons of that military expedition, these trucks are built in a new factory, by men rich in truck experience, backed with ample capital, with neither traditions nor policies to be protected, to meet the service all trucks now must yield.

Winther has established new standards of motor truck construction, new standards of economy and new life.

Winther Internal Gear Driven Trucks are not an experiment. They are used from Coast to Coast. The statement of their

service is based upon the experience of their users. They are not cheap trucks. A mere recital of the materials entering into their construction would serve to convince even the layman of their quality. No fundamental change has been found necessary in their building since the first Winther took the road. A complete engineering investigation of every Winther now in service in the United States, finished March 1st, failed to produce a single suggestion for their betterment.

There is a Winther Truck for every high-grade truck need. From one to seven tons, no matter what your requirements now or in the future, there is a Winther of the size and capacity you require.

The Winther distributor nearest to you will gladly place at your service, without obligation, the Winther traffic engineer, who will co-operate with you in a discussion and solution of your traffic needs.

Let us also send you "The Story of Winther," a booklet describing the features, specifications, etc., of the various models.

Model 28 Maximum capacity 1 ton  
Model 48 Maximum capacity 2 tons  
Model 68 Maximum capacity 3 tons  
Model 148 Maximum capacity 7 tons

Model 88 Maximum capacity 4 tons  
Model 108 Maximum capacity 5 tons  
Model 128 Maximum capacity 6 tons

# How quickly could you stop?

## *Don't wait for an emergency to test your brakes*

**W**HEN the unexpected happens can you count absolutely on your brakes? At the moment they are most needed will they act quickly, surely and safely?

They are out of sight and for that reason are frequently not given the attention which they demand. Yet on their efficiency depends your enjoyment and safety.

With so much depending on good brakes is it wise for you to neglect them?

A simple inspection by your garage man will tell you definitely if they are safe. Perhaps only a slight adjustment is necessary to make them dependable instead of doubtful.

If they do need relining you most certainly want to know it.

### *Endorsed by automobile manufacturers*

The engineers of fifty-one leading manufacturers, ten axle makers, and countless jobbers and dealers have selected Thermoid Brake Lining because they know its dependability.

**1. More material, greater service**—There is over 40% more material and 60% more labor used in the manufacture of Thermoid Brake Lining than in any woven brake lining. This abundance of material and labor must mean longer wear.

**2. Grapnalized**—an exclusive process which creates resistance to moisture, oil and gasoline. Under ordinary conditions of service, Thermoid is impervious to any kind of moisture.

**3. Hydraulic compressed, uniform throughout**—Every square inch of Thermoid is hydraulic compressed at a pressure of 2,000 pounds.

Because of this Thermoid is uniform all the way through. It cannot compress in service. There are no soft spots to wear out. It must give uniform service until worn cardboard-thin.

### *The measure of Thermoid value*

These three exclusive features form the measure of Thermoid value to the motorist—his assurance of longest, safest service at the lowest possible price.

Have your dealer inspect your brakes today. He will show you Thermoid Brake Lining that you may see why it is so different, so efficient and long wearing. If he hasn't Thermoid we will gladly send a sample.

Be sure to accept no substitute, our guarantee protects you. **Thermoid will make good—or WE WILL.** It is positively guaranteed to outwear and give more satisfactory service than any other brake lining.

### **Thermoid Rubber Company**

Factory and Main Offices: Trenton, N. J.

Branches: New York, Chicago, San Francisco, Indianapolis, Detroit, Los Angeles, Philadelphia, Pittsburgh, Boston, London, Turin, Paris.

Canadian Distributors: The Canadian Fairbanks-Morse Company, Limited, Montreal. Branches in all principal Canadian cities.

### **Brake Inspection Movement**

Prominent officials, leading clubs and organizations and motorists everywhere have endorsed this big national movement to reduce accidents, by having all brakes inspected before the touring season begins, and regularly thereafter. Give it your support.

**Will your car do this?**

Automobile engineers have proved that when brake mechanism is right and road conditions average, any car should stop at distances and speeds given by the chart.

V² means the square of the velocity or speed of your car. 10.8 is the proved factor of retardation under average road conditions. This factor decreases on smooth, slippery roads to 6.7 and increases as high as 17.4 on rough, worn roads. The chart represents the average condition and other conditions can readily be figured by changing the factor within the given limits. Remember that your brake mechanism is not "right" unless its brake lining has the ideal coefficient of friction. The better the brake lining the quicker your stop.

### **Thermoid Brake Inspection Chart**

Makers of "Thermoid Crolide Compound Casings" and "Thermoid Garden Hose"

# You're smoke-set for keeps when you pick P. A. for your pet pal!

You're going to blow off your smokeappetite to the realest bit of pipe or makin's cigarette satisfaction you ever stumbled against quick as you and Prince Albert hook up! Bet-your-bottom-dollar *on that!*

For, *quality* lets you in on the full joys of P. A. without putting your taste or tongue into training! P. A. *quality* gets the flavor, fragrance, coolness *right there instantly!* And, you catch it—and *hang on to it* because it heaves into the discard every kick you ever made against a jimmy pipe or a home-rolled cigarette.

P. A. *quality* is a smoking-smash-all-by-itself—but realize that behind it is Prince Albert's patented process *that cuts out bite and parch!* You can puff at a traffic-trot or speed-at-sixty—P. A. won't bite—*it can't bite!*

## PRINCE ALBERT

*the national joy smoke*

just makes pipe or makin's cigarette smoking what you always wished it might be—a *constant 24-hour delight!* Because, no matter how much of the gladgoods you get away with per day, you're keen for more! And, every time you fire-up you do some mental figuring that proves P. A. "tastes just a little better than that last whack"! *And, so on, right around the clock!*

You're in for a spell-of-sport that'll knock into a cocked hat the classiest smokesession you ever ordered through a smokeshop! For, Prince Albert's quality will show you some smokekinks via a jimmy pipe or cigarette that have made men everywhere, and in all walks of life, *talk Prince Albert and smoke Prince Albert!*

P. A. certainly will do a pretty clever job for you, all right! *Quit plaguing yourself!*

*Prince Albert awaits your call everywhere tobacco is sold. Toppo red bags, tidy red tins and handsome full pound and full half-pound tin humidors; and, that classy, full pound crystal glass humidor with orange moistener top that keeps the tobacco in such perfect condition.*

# United States Tires are Good Tires

## 41633 miles on the Redondo Stage

You can remember the day when 4000 miles on a tire was astounding mileage.

Today a good tire, properly handled, should go much farther.

We have an authentic record of one United States Royal Cord Tire that achieved the exceptional mileage of 41,633.

Not on a gingerly-driven private car but on the Redondo Stage, a sixteen passenger motor bus that plies between Redondo and San Pedro, California.

As a matter of business, the Stage Company keeps a record of tire mileage.

M. J. Kent, Manager of the Company, says that two other Royal Cords on the same stage have covered more than 22,000 miles each and are still in good condition.

No one can estimate accurately the mileage that any tire will give. Too many conditions influence service.

But it is a fact proved time and again that United States Tires will give the plus service that makes them a first-class investment.

It pays to buy *good* tires. It pays to take good care of them.

In equipping your car with United States Tires, you know that you are getting more miles for your money,

—utmost in service and satisfaction,

—demonstrated value that has sent the sales of United States Tires mounting to one new record after another.

Five treads give you a choice to fit every motoring need.

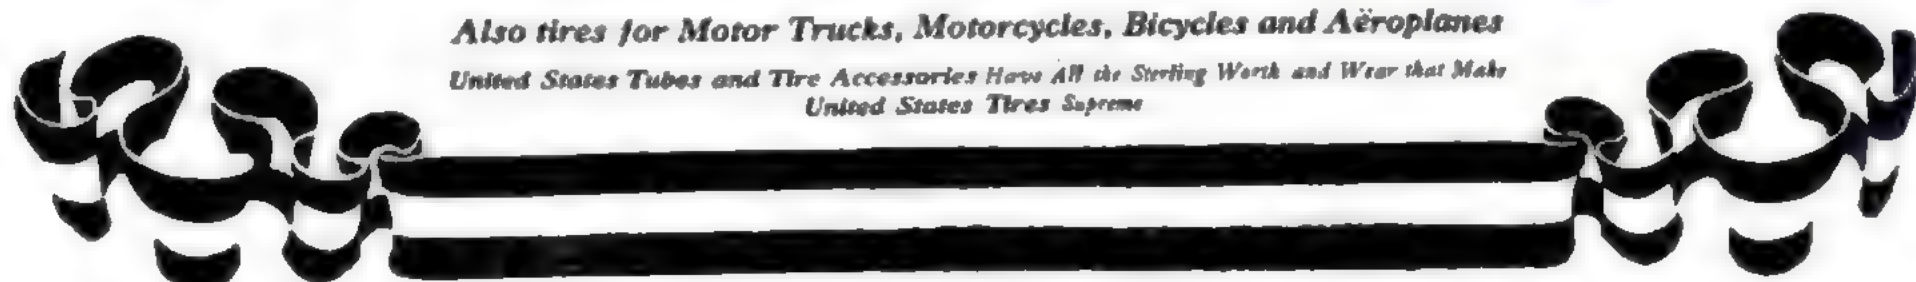

### Don't Waste Mileage

- Don't scrape your tires on the curb.
- Don't run in car tracks.
- Don't set brakes so quickly as to lock wheels.
- Slow up for bridge "edges" and crossovers.
- Don't let tires stand in oil.
- Don't neglect cuts in tread.
- DON'T RUN WITH TIRES UNDER-INFLATED.**

*Also tires for Motor Trucks, Motorcycles, Bicycles and Aeroplanes*

*United States Tubes and Tire Accessories Have All the Sterling Worth and Wear that Make United States Tires Supreme*

Quicker than bullets—and right in his own bailiwick, too. Besides saving shovelfuls of dollars, the Mimeograph is enabling him to get confidential information to his departments in a tenth of the time a many-manned printery could do it—and in absolute security. The work is done under the keen executive eye. And it's good work, too—*better than that*. Snappy! It matches the neatest typewriting. Five thousand real duplicates an hour—with easily drawn diagrams or illustrations on the same sheet, if wanted. Let us show you how the Mimeograph is solving many of the perplexing problems of these rocket days. Send for booklet "M." A. B. Dick Company, Chicago—and New York.

*Caution: The Mimeograph, and our supplies for it, are made to work together. Upset that relationship, the work suffers, valuable time and materials are lost, and our responsibility for quality and output ceases.*

## STAND BACK OF THEM

BY JULIAN STREET

THE line of division between genius and madness, alluded to in Dryden's familiar couplet, is no finer drawn than that separating comedy from tragedy. Some extraordinary geniuses, they say, have overreached and been actually a little mad, and certainly some jokes rise to awful magnitude only because their foundation stones are laid, in part, within the bounds of tragedy. Innumerable men and women, especially those through whose natures runs a strong strain of humor, know what it is to weep bitter tears over a joke too terrible for laughter.

A Frenchman, a great wit, was obliged by his business to go to South America for a year, leaving his pretty young wife at their home in Paris. In his absence she fell in love with another man, who besought her to divorce her husband and marry him. When the husband, who was very much in love with his wife, returned, she told him the truth and asked for a divorce. He was heartbroken. In an hour he seemed to have aged ten years. An intimate friend, coming into the house, remarked his appearance and asked if he was ill.

"Oh, no," he replied, with unconquerable wit. "I am not ill. But I am surprised. On returning from South America I find that my wife is engaged to be married."

Then, suddenly, he crumpled up, buried his face in his hands, and burst into a paroxysm of sobbing.

IN advertisements and speeches designed to persuade Americans to purchase Liberty Bonds or War Savings Stamps, or to perform other duties the nonperformance of which is a disgrace, I have more than once noticed a form of appeal which, whenever I encounter it, strikes me anew as constituting one of those great tragi-comic jokes of which I have been speaking.

It is the kind of appeal which says, in effect:

"Our boys in the trenches are doing their bit to make the world safe for democracy and home safe for you and yours. It is therefore up to you, who stay behind, to do your bit: namely, to purchase Liberty Bonds—or War Savings Stamps."

Their bit! What is this "bit" that our boys are doing over there?

They have given up everything—mothers, wives, children, sweethearts, homes, jobs—torn themselves up by the roots, braved the submarines, gone into trenches swimming in mud, alive with rats and lice, and subject to a ceaseless hell-fire—bullets, gas, flame, shells, shrapnel, air bombs, hand grenades, every devilish force with which the Prussian brute is attempting to coerce the world.

And for what have they done this?

For love of country—for their country's honor and the ideal of freedom.

The war, for them, is no investment, since "investment" implies security. They are gambling. They are playing the greatest game of chance a human being can play. Life is the stake.

If, as individuals, they lose in their gamble with the Hun, they pay the great price. If, as individuals, they win, they earn—what? The right to come back and begin life over again

in a land wherein your life and mine have gone on relatively without interruption; a land some of whose citizens have persistently voiced the noble cry: "Business as usual."

Heads we win, tails they lose. Theirs the losses, ours the gain. So much for their "bit."

And now for ours. What is our "bit"?

At present we are being asked as a nation to absorb three billion dollars' worth of Liberty Bonds, bearing interest at the rate of 4½ per cent. And, as I have said, there is in some of the appeals a sort of implication that, by so doing, we may render a service approximating that being rendered by our fighting men.

The great tragi-comic joke again!

While the man in the trenches stands ready to give his life, what are we asked to give? Nothing. While the man in the trenches gambles his life, what are we asked to gamble? Nothing—not even our sleek, comfortable dollars. We are not even asked to take such slight financial risks as are gladly taken by conservative investors who buy corporation stocks and bonds and lock them away in their strong boxes. We are asked to buy the best securities ever offered in this world, at a rate of interest abnormally high. We are asked, in short, to seize an unexampled opportunity for the exercise of intelligent self-interest.

Is that enough for us to do? By saving money, investing it in Government bonds, and making ourselves prosperous can we, at home, approximate the service rendered by the seaman and the soldier? And, if not, are there any means by which we may do so, in the interest of the democratic ideal of equal rights, equal duties, equal risks for all? No, there are none. Already we owe the fighting men a debt which never can be paid.

The fact that a debt cannot be paid does not, however, cause honest men to cease trying to pay. They will do their utmost to make payments on account, however small their utmost may be, if only for the sake of self-respect.

To be decent citizens each one of us must have a real share in this war. Nor does the fact that we have bought Liberty Bonds, or War Savings Stamps, or both, necessarily give us that real share. Those things, purchased in such amounts as we have found entirely convenient, represent a share in the profits of the war. And to be a profiteer is not enough. We are not participants until we share the sacrifice.

Turn back to the cover of this magazine. Look at the picture printed there. That is the "bit" that others are doing for you. What

are you doing? Have you bought your new Liberty Bonds? Have you bought only such Liberty Bonds (or War Savings Stamps) as it suited your immediate convenience to buy, or have you bought more than you can pay for without exercising self-denial? Have you made a sacrifice? Have you sacrificed enough? Have you gone over the financial top? Or are you that most contemptible of creatures, the slacker who lets the other fellow do it, not only in the trenches, but at home?

# TOO GENTLE JULIA

THE FIRST OF A NEW SERIES OF STORIES

BY BOOTH TARKINGTON

ILLUSTRATED BY LUCIUS WOLCOTT HITCHCOCK

**N**OBLE DILL, at twenty-two, had been seriously in love only twice before the collapse brought on by Julia Atwater, and though his mother talked of organizing a Young Men's Mothers' Club against Julia, nevertheless she acknowledged that in one solitary way Noble was being improved by the experience. His two previous attacks (one at twelve, the other at eighteen) had been incomparably lighter, and the changes in him, noted at home, merely a slight general irritability and a lack of domestic punctuality, due to too much punctuality elsewhere. But, when his Julia Atwater trouble came, the very first symptom he manifested was a strange new effort to become beautiful by means of bodily garnishment, and his mother even discovered that he worked with pumice stone upon the cigarette stains on his fingers. She was amazed, yet not overgrateful to the lovely Julia: what had been done to Noble in every other way was destructive, and the trial of living with him in his ruinous state was too great.

The most curious thing about his condition was that for a long time he took it for granted that his family did not know what was the matter with him; and this shows as nothing else could the meekness and tact of the Dills; for, excluding bad cooks and the dangerously insane, the persons most disturbing to the serenity of households are young lovers. But the world has had to accommodate itself to them because young lovers cannot possibly accommodate themselves to the world. For the young lover there is no general life of the species; for him there are no appalling spirals evolving in a trillion skies beyond our own; for him the universe is a delicate blush under a single little bonnet. He has no business except what deals with the business that goes on under this bonnet; he has but an irritated perception of every vital thing in nature except the vital thing under this bonnet—all else is trivial intrusion. But whatever does concern the centrifugal bonnet, whatever concerns it in the remotest, faintest, farthest—ah, then he springs to life! So Noble Dill sat through a Sunday dinner at home, seemingly drugged to a torpor, while the family talk went on about him; but when his father, in the course of some remarks upon politics, happened to mention the name of the county treasurer, Charles J. Patterson, Noble's startled attention to the conversation was so conspicuous as to be disconcerting. Mrs. Dill signaled with her head that comment should be omitted, and Mr. Dill became, for the moment, one factor in a fairly clear example of telepathic communication, for it is impossible to believe that his wife's almost imperceptible gesture was what caused him to recall that Charles J. Patterson was Julia Atwater's uncle.

That name, Charles J. Patterson, coming thus upon Noble's ears, was like an unexpected shrine on the wayside where plods the fanatic pilgrim; and yet Mr. Patterson was the most casual of Julia's uncles by marriage; he neither had nor desired any effect upon her destiny. To Noble he was ineffably privileged and fateful. Something of the same quality invested the wooden gateposts in front of the big honest brick house where Julia lived with that august old danger, her father. In general, Noble felt a warmer something for the gateposts, however, than he felt for Mr. Atwater. The latter inspired Noble with not only the uncalled-for affection and veneration inevitable toward Julia's next of kin, but also with a kind of horror due to the irresponsible and awful power possessed by a sacred girl's father.

In sum, Noble loved Mr. Atwater; but often, in his reveries, when he had rescued him from drowning or being burned to death, he preferred to picture the peculiar old man's injuries as ultimately fatal.

If Julia and all her relatives and Noble Dill and Noble's rivals had happened to live in Chicago or New York or Peking, much would have been different. In New York a person can be in love with any other person and walk the streets with some assurance, but in a town of sixty-five thousand inhabitants (so asserted but not officially proved) to be in love with a beautiful girl who belongs to a large "family connection" is like living under the surveillance of a dictograph. Everything will be known at headquarters.

There were two of Julia's relatives who would have been profoundly flattered and surprised had they realized how important they had become to Noble Dill. True, his only reason for attributing any importance whatever to them was their relationship to Julia, and lay in nothing intrinsic with

them. True, also, the only reason why they would have valued his esteem was that he had reached the age of twenty-two, while they had just attained that of thirteen and were under the constant necessity of combating the suppressions which older years wished to put upon them. These two were the cousins, Florence Atwater and Herbert Illingworth Atwater, Julia's niece and nephew. Noble discriminated between them. On account of her close consanguinity to Julia, he regarded Florence as a holy child, but her impulsiveness had invested her, in neighborhood opinion, with a terror as holy as her childhood, and Noble strongly preferred her cousin, young Herbert, a much milder and less imaginative character.

**T**HUS, on a sunny afternoon, having been home to lunch, after his morning labors, Noble paused in passing "the Henry Atwater house" (young Herbert's place of residence) and rather timidly began a conversation with this glamourized nephew. It happened that during the course of the morning Herbert had chosen a life career for himself; he had decided to become a scientific specialist, an entomologist, and he was now on his knees studying the manners and customs of the bug inhabitants of the lawn before the house, and employing for this purpose a large magnifying lens, or "reading glass," his discovery of which, in the attic, coincidentally with his reading a recent Sunday supplement article on bugs, had led to his sudden choice of a vocation.

"Did somebody—ah, have any of the family lost anything, Herbert?" Noble asked in a gentle voice, speaking across the fence.

Herbert did not look up, nor did he relax the scientific frown upon his brow. "No," he said. "They always are losin' things, espesh'ly Aunt Julia, when she comes over here, or

anywhere else, but I wouldn't waste my time lookin' for any old earrings or such. I've got more important things to do on my hands."

Unintentionally he spoke the high truth—after his digital researches in "ant holes," the most important thing that could have been done on his hands would have taken him to soap and running water. But Noble did not press this point, though it was indeed obvious. Instead, he said: "Has your aunt Julia lost an earring, Herbert?"

"Her? Well, she nearly always has lost some'n or other, but that isn't bother'n' me any. I got better things to do with my time." Herbert spoke without interrupting his preoccupations or relaxing his forehead. "Nacher'l history is a little more important to the inhabitants of our universe than a lot o' worthless jew'ry, I guess," he continued; and his pride in discovering that he could say things like this was so great that his frown gave way temporarily to a look of pleased surprise, then came back again to express an importance much increased. He rose, approached the fence, and condescended to lean upon it. "I don't guess there's one person in a thousand," he said, "that knows what they ought to know about our insecck friends."

"No," Mr. Dill agreed readily. "I guess that's so. I guess you're right about that, Herbert. When did your aunt Julia lose the earring, Herbert?"

"I d' know," said Herbert. "Now, you take my own father and mother: What do they know? Well, mighty little. They may have had to learn a little teeny bit about inseccks when they were in school, but, whatever it was, they went and forgot it probably long before they were married. Well, that's no way. F'r instance, you take a pinchin' bug: What you suppose my father and mother know about its position in the insecck world?"

"Well—" said Noble uneasily. "Well—" He coughed, and hastened to add: "But as I was saying, if she lost her earring somewhere in your yard, or—"

The scientific boy evidently did not follow this line of thought, for he interrupted: "Why, they wouldn't know a thing about it, and a pinchin' bug isn't one of the highest inseccks at all. Ants are way up compared to most pinchin' bugs. Ants are way up, anyway. Now, you take an ant—" He paused. "Well, everybody ought to know a lot more'n they do about ants. It takes time, and you got to study 'em the right way, and of course there's lots of people wouldn't know how to do it. I'm goin' to get a book I been readin' about. It's called 'The Ant.'"

For a moment Noble was confused; he followed his young friend's discourse but hazily, and Herbert pronounced the word "ant" precisely as he pronounced the word "aunt." The result was that Noble began to say something rather dreamy concerning the book just mentioned, but, realizing that his intended remark was malapropos, changed his murmur into a cough, and inquired:

"When was she over here, Herbert?"

"Who?"

"Your aunt Julia."

"Yesterday evening," said Herbert. "Now, f'r instance, you take a common lightning bug—"

"Did she lose it, then?"

"Lose what?"

"Her earring."

"I d' know," said Herbert. "You take the common lightning bug, or, as it's called in some countries, 'the firefly'—"

He continued, quoting and misquoting the entomological authority of the recent Sunday supplement; but his friend, on the other side of the fence, was inattentive to the lecture. Noble's mind was occupied with a wonder: he had realized, though dimly, that here was he, trying to make starry Julia the subject

of a conversation with a person who had the dear privilege of knowing her—even of being closely related to her—and yet preferred to talk about bugs. Noble began to feel that nephews were strange creatures, probably outside the pale of civilization.

Herbert talked at considerable length about lightning bugs, but as his voice happened rather precociously to be already in a state of adolescent change, the sound was not soothing; yet Noble lingered. Nephews were queer, but this one was Julia's—and finally mentioned her, as an incidental to lightning bugs; whereupon the mere hearer of sounds became instantly a listener to words.

"Well, and then I says," Herbert continued—"I says: 'It's phosphorus, Aunt Julia.' I guess there's hardly anybody in the world doesn't know more than Aunt Julia, except about dresses and parasols and piano playin' and every other useless thing under the sun. She says: 'My! I always thought it was sulphur!' Said nobody ever told her it wasn't sulphur. I asked her; I said: 'You mean to sit there and tell me you don't know the difference?' I said. And she says: 'I don't care one way or the other,' she says. She said she just as soon a lightning bug made his light with sulphur as with phosphorus; it didn't make any difference to her, she says, and they could go ahead and make their light any way they wanted; she wouldn't interfere! That shows what Aunt Julia knows, I guess! I had a whole hatful of 'em, and she told me not to take 'em into their house, because grandpa hates insects as much as he does animals and violets, and she said they never owned a microscope or a magnifying glass in their lives, and wouldn't let me hunt for one. All in the world she knows is how to sit around on the front porch and say: 'Oh, you don't mean that!' to somebody like George Plum or Newland Sanders or that ole widower Ridgely."

"When?" Noble asked impulsively. "When did she say that?"

"Oh, I d' know," said Herbert. "I expect she probab'ly says it to somebody or other about every evening there is."

"She does!"

"Florence says so," Herbert informed him carelessly. "Florence goes over to grandpa's after dark and sits on the ground up against the porch and listens."

Noble first looked startled, then uneasily reminiscent. "I don't believe Florence ought to do that," he said gravely.

"I wouldn't do it!" Herbert was emphatic.

"That's right, Herbert. I'm glad you wouldn't."

"No, sir," the manly boy declared. "You wouldn't never catch me takin' my death o' cold sittin' on the damp grass in the night air just to listen to a lot o' tooty-tooty about 'I've named a star for you,' and all such. You wouldn't see me—"

Noble partly concealed a sudden anguish. "Who?" he interrupted. "Who did she say that to?"

"She didn't. They say it to her, and she says: 'Oh, you don't mean that!' and of course then they go on and say some more. Florence says—" He checked himself. "Oh, I forgot! I promised Florence I wouldn't tell anything about all this."

"It's safe," Noble assured him quickly. "It's absolutely safe with me. I won't speak of it to anybody, Herbert. Who was it told he'd named a star for her?"

"It was the way some ole poem began. Newland Sanders wrote it. Florence found it under Aunt Julia's sofa cushions and read it all through, but I wouldn't wade through all that tooty-tooty for a million dollars, and I told her to put it back before Aunt Julia noticed. Well, about every day he writes her a fresh one, and then in the evening he stays later than the other callers, and reads 'em to her—and you ought to hear grandpa when he gets to talkin' about it!"

"He's perfectly right," said Noble. "Perfectly! What does he say when he talks about it, Herbert?"

"Oh, he says all this and that; and then he kind of mutters around, and you can't tell just what all the words are exactly, so't he can deny it if any o' the family accuses him of swearing or anything." And Herbert added casually: "He was kind of going on like that about you, night before last."

"About me? Why, what could he say about me?"

"Oh, all this and that."

"But what did he find to say?"

"Well, he heard her tellin' you how you oughtn't to smoke so many cigarettes and all about how it was killin' you, and you sayin' you guessed it wouldn't matter if you did die, and Aunt Julia sayin': 'Oh, you don't mean that,' and all this and such and so on, you know. He can hear anything on the porch pretty good from the library; and Florence told me about that, besides, because she was sittin' in the grass and all. She told Great-uncle Joe and Aunt Hattie about it too."

"My heavens!" Noble gasped, as for the first time he realized to what trumpeting publicity that seemingly hushed and moonlit bower, sacred to Julia, had been given over. He gulped, flushed, repeated "My heavens!" twice; and then was able to add, with a feeble imitation of lightness: "I suppose your grandfather understood it was just a sort of joke, didn't he?"

"No," said Herbert, and continued in a friendly way, for he was flattered by Noble's interest in his remarks, and began to feel a liking for him. "No. He said Aunt Julia only talked like that because she couldn't think of anything else to say, and it was wearin' him out. He said all the good it did was to make you smoke more to make her think how reckless you were; but the worst part of it was, he'd be the only one to suffer, because it blows all through

ing in a silent church. As he seethed adown the warm sidewalk the soles of his shoes smote the pavement, for mentally he was walking not upon cement but upon Mr. Atwater.

Unconsciously his pace presently became slower for a more concentrated brooding upon this slanderous old man who took advantage of his position to poison his daughter's mind against the only one of her suitors who cared in the noblest way. And upon this there came an infinitesimal consolation in the midst of anguish, for he thought of what Herbert had told him about Mr. Newland Sanders's poems to Julia—and he had a strong conviction that at one time or another Mr. Atwater must have spoken even more disparagingly of these poems and their author than he had of Orduma cigarettes and their smoker. Perhaps the old man was not all vile.

THIS charitable moment passed. He recalled the little moonlit drama on the embowered porch, when Julia, in her voice of plucked harp strings, told him that he smoked too much, and he had said it didn't matter; nobody would care much if he died—and Julia said gently that his mother would, and other people too; he mustn't talk so recklessly. Out of this the old eavesdropper had viciously represented him to be a poser, not really reckless at all, and had insulted his cigarettes and his salary. Well, Noble would show him! Noble had doubts about being able to show Mr. Atwater anything important connected with the cigarettes or the salary, but he

Looking at Mr. Atwater was at least the next thing to looking at Julia

the house and he's got to sit in it. He said he just could stand the smell of some kinds of cigarettes, but if you burned any more o' yours on his porch he was goin' to ask your father to raise your salary for collectin' real-estate rents, so't you'd feel able to buy some real tobacco, or corn silk anyway. He—"

But the flushed listener felt that he had heard as much as he was called upon to bear; and he interrupted, in a voice almost out of control, to say that he must be "getting on downtown." His young friend, diverted from bugs, showed the greatest willingness to continue the narrative indefinitely, evidently being in possession of copious material; but Noble, unostentatiously dropping a cigarette he had been preparing to light, and stepping on it, turned to depart. An afterthought detained him. "Where was it she lost her earring?"

"Who?"

"Your aunt Julia."

"Why, I didn't say she lost any earring," Herbert returned. "I said she always was losin' 'em; I didn't say she did."

"Then you didn't mean—"

"No," said Herbert. "I haven't heard of her losin' anything at all, lately." Here he added: "Well, grandpa kept goin' on about you; he told her— Well, so long!" And gazed after the departing Mr. Dill in some surprise at the abruptness of the latter's leave-taking. Then, wondering how the back of Noble's neck could have got itself so fiery sunburnt, Herbert returned to his researches in the grass.

THE peaceful street, shady and fragrant with summer, was so quiet that the footfalls of the striding Noble were like an interruption of cough-

could prove how reckless he was. With that, a vision formed before him: he saw Julia and her father standing spellbound at a crossing while a smiling youth stood directly between the rails in the middle of the street and let a charging trolley car destroy him—not instantly, for he would live long enough to whisper, as the stricken pair bent over him: "Now, Julia, which do you believe: your father or me?" And then with a slight, dying sneer: "Well, Mr. Atwater, is *this* reckless enough to suit you?"

TOWN squirrels flitted along their high paths in the shade-tree branches above the embittered young lover, and he noticed them not at all, which was but little less than he noticed the elderly human couple who observed him from a side yard as he passed by. Mr. and Mrs. Burgess had been happily married for fifty-three years and four months. Mr. Burgess lay in a hammock between two maple trees, and was soothingly swung by means of a string connecting the hammock and the rocking-chair in which sat Mrs. Burgess, acting as a mild motor for both the chair and the hammock—a device that had made many a winter tolerable for them through their anticipations of its happy employment when summer should come again. "That's Noble Dill walking along the sidewalk," Mrs. Burgess said, interpreting for her husband's failing eyes. "I bowed to him, but he hardly seemed to see us and just barely lifted his hat. He needn't be cross to us, just because some other young man's probably taking Julia Atwater out driving!"

"Yes, he need!" Mr. Burgess declared. "A boy in his condition needs to be cross with everything."

Sometimes they get so cross they go and drink liquor. Don't you remember?"

She laughed. "I remember once!" she assented, and laughed again.

"Why, it's a terrible time of life," her husband went on. "Poets and suchlike always take on about young love as if it were a charming and romantic experience, but really it's just a series of mortifications. Each party, in order to attract the other, assumes a supernatural perfection, and of course a thousand things constantly make plain how many bugs there are in the molasses. The young lover is always wanting to do something dashing and romantic and Sir Walter Raleighish, but in ordinary times about the wildest thing he can do, if he can afford it, is to learn to run a Ford. The young lover thinks he's absolutely got to seem not only superb but plumb incomparable; and of course he can't stand it to be found out for an instant. He can't stand it to find out that his lady is a human, either. He can't stand even a hint that he *might* find her out. He can't stand it to find himself out. He can't stand a word of criticism; he can't stand being made the least little bit of fun of—and yet all the while his state of mind lays him particularly open to all the things he can't stand. He can't stand anything, and he has to stand everything. Why, it's a horrible time of life, mamma!"

"Yes, it is," she assented placidly. "I'm glad we don't have to go through it again, Freddie; though you're only eighty-two, and with a girl like Julia Atwater around nobody ought to be sure."

ALTHOUGH Noble had saluted the old couple so crossly, thus unconsciously making them, as he made the sidewalk, proxy for Mr. Atwater, so to speak, yet the sight of them penetrated his outer layers of preoccupation and had an effect upon him. In the midst of his suffering his imagination paused for a shudder: What miserable old gray lives those two were! Thank Heaven, he and Julia could never be like that! And in the haze that rose before his mind's eye he saw himself leading Julia through years of adventure in far parts of the world: there were glimpses of himself fighting shadowy figures on the edge of Himalayan precipices at dawn, while Julia knelt by the tent on the glacier and prayed for him. He saw head waiters bowing him and Julia to tables in "strange, foreign cafés," and when they were seated, and he had ordered dishes that amazed her, he would say in a low voice: "Don't look now, but do you see that heavy-shouldered man with the insignia, sitting with that adventuress and those eight officers who are really his guards? Don't be alarmed, Julia, but I am here to get that man! Perhaps you remember what your father once said to me—and, when what I have to do here is done, perhaps you may wish to write home and mention a few things to that old man!" And then a boy's changing voice seemed to sound again close by: "He said he just could stand the smell of some kinds of cigarettes, but if you burnt any more o' yours on his porch—" And Noble came back miserably to town again.

FROM an upper window of the house next to Mr. and Mrs. Burgess's two maidens of nineteen peered at him. The shade of a striped awning protected the window from the strong sun and the maidens from the sight of man—the latter protection being especially fortunate, since they were preparing to take a conversational afternoon nap, were robbed with little substance, and their heads appeared to be antlered—they had caught sight of Noble just as they were preparing to put silk-and-lace things they called "caps" on their heads.

"Who's that?" the visiting one asked.

"It's Noble Dill; he's one of the crowd."

"Is he nice?"

"Oh, sort of. Kind of shambles around."

"Looks like last year's straw hat to me," the visiting one giggled.

"Oh, he tries to dress—lately, that is—but he never did know how."

"Looks mad about something."

"Yes. He's one of the ones in love with that Julia Atwater I told you about."

"Has he got any chance with her?"

"Noble Dill? Mercy!"

"Is he much in love with her?"

"Much? Murder!"

The visiting one turned from the window and yawned. "Come on; let's lie down and talk about some of the nice ones!"

The second house beyond this was—it was the house of Julia!

And what a glamour of summer light lay upon it because it was the house of Julia! The texture of the sunshine came under a spell here: glowing flakes of amber were afloat; fine dust of opals and rubies fell silently adrizzle through the trees. The very air changed, beating faintly with a fairy music, and breathing it was breathing sorcery—elfin symphonies went tinkling through it. The grass in the next yard to Julia's was just grass, but every blade of grass in her yard was a flower.

But Julia's house was also the house of that person who through some ungovernable horseplay of destiny happened to be her father; this made for

He leaned drooping upon the gatepost, seeming to yearn toward it

the enchanted spot a background of lurking cyclone—no one could tell at what moment there might rise above the roiling pleasure a funnel-shaped cloud. And with young Herbert's injurious narrative ever fresh in his burning heart, Noble shuddered and quickened his steps. As he reached the farther fence post, marking the southward limit of Mr. Atwater's property, he halted short, ineffably startled. Through the open front door, just passed, a voice had called his name—a voice of such strange and stabbing sweetness that his breath stopped, instantly paralyzed, like his feet. "Oh, Noble!" it called again.

He turned back, and anyone who might have seen his face then would have known what was the matter with him, and must have been only the more sure of it because his mouth was open. The next instant the adequate reason for his disorder came lightly through the open door and down to the gate.

If Julia, out of some love of justice, or in mere compassion, had accustomed herself to wear clothes made of coffee sacking, kept soot streaks on her nose, and let her hair go tousled, she still would have been so harmful that old gentlemen, seeing her, would have poked at their neckties and gone home peckish to grandma; but the insatiable girl, instead of slinging on any old thing, even went so far as to compose summer melodies in dress to run accompaniments for black-sapphire eyes. ("To Julia Girdled in Dark Blue," Not by Herrick but by Newland Sanders.)

Yet Julia, in her own way, was kind—much too kind! She had heard that her aunt Harriet and her uncle Joe were frequently describing Mr. Atwater's recent explosion to other members of the extensive Atwater family league; and though she had not discovered how Aunt Harriet and Uncle Joe had obtained their material, yet, in Julia's way of

wording her thoughts, an account of the episode was "all over town," and she was almost certain that by this time Noble Dill had heard it. And so, lest he should suffer, the too gentle creature seized the first opportunity to cheer him up. That was the most harmful thing about Julia: when anybody liked her—even Noble Dill—she couldn't bear to have him worried. She was the sympathetic little princess who wouldn't have the puppy's tail chopped off all at once, but only a little at a time.

"I just happened to see you going by," she said, and then with an astounding perfection of seriousness she added the question: "Did you mind my calling to you and stopping you, Noble?"

He leaned drooping upon the gatepost, seeming to yearn toward it; his expression was such that this gatepost need not have been surprised if Noble had kissed it. "Why, no," he said hoarsely. "No, I don't have to be back at the office any particular time. No."

"I just wanted to ask you—" She hesitated. "Well, it really doesn't amount to anything—it's nothing so important I couldn't have spoken to you about it some other time."

"Well—" said Noble, and then on the spur of the moment he continued, darkly: "There might not be any other time."

"How do you mean, Noble?"

He smiled faintly. "I'm thinking of going away." This was true; nevertheless it was the first time he had thought of it. "Going away," he repeated in a murmur. "From this old town."

A SHADOWY, sweet reproach came upon Julia's eyes. "You mean—for good, Noble?" she asked in a low voice, although no one knew better than she what trouble such performances got her into. "Noble, you don't mean—"

He made a vocal sound conveying recklessness, something resembling a reckless laugh. "I might go—any day! Just as it happens to strike me."

"But where to, Noble?"

"I don't— Well, maybe to China."

"China!" she cried in amazement. Why, Noble Dill!

"There's lots of openings in China," he said. "A white man can get a commission in the Chinese army any day."

"And so," she said, "you mean you'd rather be an officer in the Chinese army than stay—here?" With that she bit her lip and averted her face for an instant, then turned to him again, quite calm. Julia could not help doing these little things; she was born that way, and no lessons changed her.

"Julia—" the dazzled Noble began, but he stopped with this beginning, his voice seeming to have exhausted itself upon the name.

"When do you think you'll start?" she asked.

His voice returned. "I don't know just when," he said; and he began to feel a little too much committed to this sudden plan of departure, and to wonder how it had come about. "I—I haven't set any day—exactly."

"Have you talked it over with your mother yet, Noble?"

"Not yet—exactly." Forgetting that his means were totally insufficient for the trip, he was conscious of a hearty distaste for China as something unpleasant and imminent. "I thought I'd wait till—till it was certain I would go."

"When will that be, Noble?" And in spite of herself Julia spoke in the tone of one who controls herself to ask in calmness: "Is my name on the list for the guillotine?"

"Well—" he said. "It'll be as soon as I've made up my mind to go. I probably won't go before then; not till I've made up my mind to."

"But you might do that any day, mightn't you?"

NOBLE began to feel relieved; he seemed to have hit upon a way out. "Yes; and then I'd be gone," he said firmly. "But probably I wouldn't go at all unless I decided to." This seemed to save him from China, and he added recklessly: "I guess I wouldn't be missed much around this old town if I did go."

"Yes, you would," Julia said quickly. "Your family'd miss you—and so would everybody."

"Julia, you wouldn't—"

She laughed lightly. "Of course I would, and so would papa."

Noble released the gatepost and appeared to waver from the feet upward. "What?"

"Papa was talking about you this very morning at breakfast," she said, and she spoke the truth. "He said he dreamed about you last night."

"He did?"

# THE NORTHWESTERN FRONT

BY WILLIAM ALMON WOLFF

THE northwestern front isn't in France. It is in the States of Washington and Oregon, on the Pacific Coast of the United States. It is held by a division of troops that numbers, just now, a little more than 10,000 men. And the officer in command is Colonel Brice P. Disque. His command is known, officially, as the Spruce Production Division of the Aviation Section of the Signal Corps of the United States Army, which is so long a title that it isn't going to be repeated in this bit of war correspondence.

I have been in the front-line trenches of Disque's front. And, believe me, there is real work, and hot work, going on every day in the forests of Washington and Oregon. Reduced to its simplest terms, Disque's problem can be very briefly stated. The aircraft program calls for 10,000,000 feet of the supercarefully selected spruce that goes into airplane parts—every month. It is up to Disque to see that that much spruce goes east to the great airplane factories every month. In February, when he was just beginning to get things going, three times the quantity of spruce theretofore regarded as a normal cut was turned out. Hereafter the monthly requirement will be fully met or exceeded. The campaign along the northwestern front is going to be won. The battle there is not going to be drawn.

The Aircraft Production Board, as is fairly well known, worked all last summer, under the chairmanship of Howard E. Coffin. In cooperation with the Aviation Section of the Signal Corps, it turned out the Liberty motor. It standardized airplane construction; it settled upon specifications for every bit of material that goes into an airplane. You can't use shoddy material in building airplanes. If you do, you increase the hazards of the most extrahazardous service in modern war to an impossible degree.

Everything about an airplane has to be made of the very finest material there is. As speed is essential, lightness of all parts has to be considered. And so wing beams and struts, and practically everything except motor and wings, are made of spruce because spruce is the lightest wood that can stand the terrific strains of flying under modern war conditions. Experiments are being made constantly to discover a substitute for spruce. The Germans are using metal, but we have, as yet, no metal that is not so heavy as to reduce speed. Other woods can be used, but they too are heavy. So spruce was, and is, demanded.

Spruce grows slowly. And it doesn't grow in clumps and thickets. The spruce trees from which airplane stock comes vary in age from a hundred and fifty to five hundred years. If you are a timber cruiser, hunting for airplane spruce, you know that a tree with low branches won't do. Low branches mean whorls and broken grain. You know that any sort of parasitic growth damns a tree. So you mark only straight, tall trees, which shoot up sixty, eighty, a hundred feet from the ground before the first branch falls. And—you may find one such tree to an

acre, in a thousand-acre tract! That is, in fact, just about the average.

Spruce has always been turned out in the north woods, to a certain extent. In logging a tract a certain amount of spruce would be cut, together with fir and hemlock and all the other timber. Allowing for the fact that the I. W. W. were running a strike, spruce was being cut and sent to the mills at a normal rate last summer. Production was pretty well cut down by the strike, but it wasn't wholly checked. And it became obvious that not enough spruce could be obtained that way, even after the labor troubles were adjusted—which, incidentally, there was no particular reason, just then, to expect. The lumbermen were in a sullen, ugly mood, and determined to fight until they won; the I. W. W. were entirely ready to give them all the fight they wanted, and were already preparing to put into effect their new program of the "strike on the job," of "conscientious withdrawal of efficiency." Of which more, later.

## With Disque's Division

BRICE P. DISQUE enlisted in the old regular army in 1899, and was made a first sergeant at once. He was sent to the Philippines and got a commission as second lieutenant when he arrived. He made a corking record; there is a story of how, with forty men, he captured an insurgent chief that nearly matches the tale of Funston and Aguinaldo. He stuck to the army, and was a cavalry captain in Texas when, during the mobilization in 1913, he shattered all army records by laying out a divisional camp in exactly thirty hours. He wasn't written up in the newspapers, but, obviously, Washington put down his name for future reference. Disque went back to the Philippines after that and became a sort of manufacturer and business man in uniform. He was in charge of various big construction jobs, and grew rather tired of it. It wasn't soldiering. And so, when he got a cable offer to become warden of the Michigan State Penitentiary at Jackson, with a free hand, he accepted, and resigned his commission. He did big things at Jackson. He made that prison show a profit, and he made the men in it worship him by taking the ground that their job, and his, was primarily to see to it that they got out with a chance to stay out. Disque's administration of the Jackson prison is one of the brightest pages in the history of prison reform in America.

He was there when we went to war with Ger-

many, and he at once applied for his restoration to duty. He wanted his captain's commission in the cavalry again. He couldn't get it. Mr. Baker was opposed to letting men get commissions except through an officer's training camp—regular army commissions, that is. They fussed around a bit, and then they made him a lieutenant colonel in the Signal Corps, on general principles. But pretty soon he was sent to the Pacific Coast to look over spruce conditions.

Disque went out, in October, knowing absolutely nothing about spruce or lumber. He had never, so far as he knew, seen a spruce tree; if he had, he hadn't recognized it. I talked to him early in March, and what the man doesn't know about spruce is only what no one needs to know. The extent of his knowledge is dazzling and disconcerting. I'm not the only one who thinks so. A number of big lumbermen

in Washington and Oregon have learned many things from Disque about their own business.

Disque's report on what he saw led to the Spruce Production Division, and he was put in charge, naturally. He started with two rooms and four men in the Yeon Building, in Portland. He has a whole floor now, and it is overcrowded—and that is just his office.

Disque demanded selective logging—that is, he wanted the available spruce trees to be singled out in a tract, felled, and turned into aircraft stock—all without cutting the rest of the timber in the tract. The lumbermen protested; Disque quietly insisted. Selective logging is going on. Then he turned to the mills where the logs were sawed and reduced to planks. These mills turned out commercial stock in an efficient and economical way. But they ruined a lot of good aircraft stock. The grain must be absolutely straight in aircraft stock. There must be no knots and whorls. And the existing mills were not equipped to cut logs that way. Their machinery was not flexible enough.

There was no reason, as Disque saw it, why a mill shouldn't treat every log as an individual. Few logs are perfect. The commercial mills treat them all in the same way, and a slight imperfection, owing to the arrangement of their head saws, will run through every plane cut from a log. So Disque decided to build his own cut-up mill, which should be able to consider the personality of every log. Experienced constructors and lumbermen threw up their hands. They told him it would take him a year to build such a plant and that it probably wouldn't be practicable then.

Disque started work on that plant on December 15, 1917, and it began work on February 7, 1918. It went up in exactly forty-five working days; it is the biggest plant of its sort in the world, with twelve head saws—the average commercial mill has two or three—and it covers an area rather bigger than a city block. And—it is turning out perfect stock!

Work has probably been started, by now, on a drying kiln. When I was with Disque's division his interest in the spruce ended when it was put aboard freight cars for shipment to the East. But a great deal of good, sound stock has been ruined in the East by improper drying, and Disque wants to eliminate that. It is figured that the amount needed each month can be very greatly cut down if the drying is done at Vancouver, Wash., where the cut-up mill is. Moreover, the dried spruce will take up less room in freight cars.

## Slowing Up

MEANWHILE, Disque was chasing back and forth across the continent, hammering at Washington for the organization he had decided he must have. The labor problem was acute and menacing. There was, for various reasons, shortage of laborers. The men were going back to work in the mills and

Getting out the spruce for all our army airplanes is Colonel Disque's war job

Ready for rising, which preserves the grain of the wood, all-important in aircraft stock

the logging camps, but a lot of them had gone into the shipyards, drawn by the high pay and the better working conditions. The strike—the open strike—was about over, and the men hadn't won the eight-hour day that was the basis of their demands. The big lumbermen swore they never would.

So they were going in for the "strike on the job." They were practicing "conscientious withdrawal of efficiency." That meant that, though a man might, technically, work ten hours, he would slow up enough, and loaf enough, to bring the sum of his work down to what he could do in eight hours, or less. It meant sabotage, to a certain extent. It meant the frequent discovery of a spike in a log—the discovery being made when a head saw came into contact with the spike in the mill, to its sudden and complete ruination. It meant a sullen spirit that made for poor work, slack work—and a mightily reduced production of the spruce that was so vital to the aircraft production. There are wise men who believe that this war must and will be won in the air. Whether that is so or not, an army that hasn't enough airplanes might as well be in California as in France, for all the good it will be against the Germans.

### The Riving Camps

**D**ISQUE attacked the labor problem in two ways. First, he got soldiers who could be put to work. When I went West I traveled with a lot of lads, not even in uniform, who were going to Vancouver Barracks, and, ultimately, to cut spruce. I talked to them, and tried to find out just what it was they were going to do; it seemed rather odd, you know, to see recruits traveling away from the war instead of toward it. They didn't know what they were going to do; they had only a vague idea that they were going to cut spruce. Men were combed out from the National Army cantonments, strapping chaps who knew something about the woods or about saw-mills. Others got a chance to volunteer instead of waiting for the draft. That was how the 10,000 men who made up Disque's division were gathered, a squad at a time.

I reached Portland, on my way down the coast, just in time to be invited to motor over to Vancouver Barracks, across the Columbia River, with Colonel Disque, Major Stearns, his adjutant, and, so to speak, his chief of staff, and Captain Reuben Hitchcock. And when I got to Vancouver Barracks I saw 5,000 men pass in review before the colonel. It was a pretty impressive sight. The men I had seen on the train were in that lot. But they were in uniform by then, and, comparatively speaking, veterans. There were several hundred men who had no uniforms yet; some of them had dropped off the train the night before.

Vancouver Barracks is an old regular army post. Disque's division has built a cantonment south of the old post, with company streets, mess halls, and all the trimmings for twelve squadrons of the Signal Corps. Twelve squadrons are to be there all the time. Some of those men will be busy in the big cut-up mill, which was built on the parade ground. And the cantonment will serve as a depot for the men in the woods.

The bulk of Disque's men go into the woods just as soon as they have been licked into shape, and have learned some of the rudiments of drill, and, with them, the habit of discipline. That is what they are for. They have ended the labor shortage in the woods. Now, when a man who is cutting spruce under contract sends up a cry for labor, and proves he can't get it in the ordinary way, he gets soldiers. He pays them going wages, and, as those are more than the private's pay of \$30 a month, the men are happy. These men live in tents or huts in the woods, under army officers. Their working conditions are those that prevail in the woods. And they surely deliver the goods!

Most of the men in the woods, however, are in riving camps. Riving is the oldest way there is of preparing a log for the sawmill. Essentially it means splitting a log by driving wedges into it on the ground where it has been felled. That preserves the grain of the wood, which is the all-important thing in aircraft stock. The commercial method was to saw the trees—which destroyed the grain, as a rule. So riving was demanded.

The lumbermen swore it couldn't be done. They knew; they weren't guessing. Aside from the fact that it was a wasteful and extravagant way to go at the job, it was impossible, anyhow. So they said flatly. They didn't convince Disque. His point was that rived spruce was the kind that had to be produced, and, that being so, he was going to get rived spruce, whether it could be got or no. So—he is getting it. Captain Reuben Hitchcock sees to that. He is head of the rived-spruce division. And he showed me how it was done.

Hitchcock says that, in times of peace, he used to make folding machinery in Cleveland in the mornings and practice law in the afternoons. Also he used to be captain of the Black Horse Troop, Cleveland's crack military organization. He met Disque when Disque went to Cleveland as that troop's instructor, and when Disque realized the size of his

An airplane into which this tree's wood has gone may play a decisive part in winning the war

job he sent for Hitchcock, who dropped his business affairs and went West, at once. Hitchcock looks as if he were—and I know he is—an efficient business man of the sort which gets things done. I like him, and I don't want to cast reflections on him, but he doesn't look like a cavalry leader. I know any horse that saw him coming with intentions of mounting would agree with me too.

He said I couldn't understand the spruce problem unless I went out into the woods with him and saw the whole process. I tried to argue about that. I told him I could ask him questions. He said he wouldn't answer them. So we started from Portland one Sunday night, spent four hours traveling 100 miles to Astoria, and started thence early next morning, in a snowstorm and a Ford, with Colonel Disque's brother, Lieutenant Robert C. Disque, at the wheel.

Bob Disque feels that some one put up a game on him. He got his commission without letting his big brother know anything about it. And then, by some odd shuffling of the cards, he was sent out to Oregon to report to the colonel! It was a shock to both brothers. Bob was sent to the woods at once—and was the only married officer who was, in the whole division. The rest of the men with wives stayed in Portland or at Vancouver Barracks. But I think that was purely accidental, although it's a cinch that nepotism isn't going to prevail in the Disque family!

We headed for the woods along the Necanicum River. The going was fine at first; the snowstorm stopped, and it cleared up just in time to make my first glimpse of the Pacific Ocean a complete success. So far as I could judge, it is a large ocean, just about as wet as the Atlantic. But that is irrelevant and immaterial.

The road didn't stay good. It got so bad that Hitchcock began to worry as to how anyone was ever going to get spruce over it. As he will have to build a new road if his fears are justified, and

as he hates to spend Government money, he had reason for worrying. He hates to spend Government money—but he gets through a pile of it! He is building 100 miles of logging railway, for instance, to open up new spruce districts, and they will probably cost a million and a half dollars.

### Getting Out the Spruce

**S**OME miles back of Seaside, Ore., we stopped at Camp No. 1. Here there are about 200 soldiers, working for a contractor, who is getting out spruce for the Government. The men lived comfortably, in good tents, with big eating tents and a shack for shower baths. I don't know just what else the officers do, but when I was there the ones in that camp were slowly going mad over the official reports they had to fill out. I gathered that red tape had stretched some thousands of miles from Washington. But I suspect that it will be cut. . . .

Then we drove on, along a road that only a Ford could travel, and Hitchcock and Disque amused themselves by explaining just how rough the going would be after we left the car. We reached our destination just before lunch time. I was entirely willing to wait until after lunch, but Hitchcock said that if we hurried we could probably see some riving. So we walked along the road, looking for a path that led up the side of a mountain into the woods where a tree had been felled.

It didn't look like a path to me, when we found it. I don't know how the others knew it was a path. But they said it was, so we scrambled up. I went on all fours. I don't know what the others did; I was too busy to look. I could hear hammering, and, after a while, we came to where they were riving. A tree had been felled and sawed in two—across, but not lengthwise. It was being split, and that seemingly simple change in the way of reducing the big logs to manageable proportions is the kernel of the whole spruce nut.

## When Johnny Comes Marching Home

THE proposed program of the Labor party in Great Britain has aroused a great deal of interest in this country because of the effect it may have on the plans of our own leaders of union labor. It is not probable that a labor party will be started in the United States, but American labor leaders are apt to take their cue from the practiced politicians who control the Labor party of Great Britain. They will shape their demands for legislation on the lines laid down in this program, and they will act in concert as they never have acted before.

The committee of the British Labor party insists upon four cardinal points: The Universal Enforcement of the National Minimum, the Democratic Control of Industry, the Revolution in National Finance, the Surplus Wealth for the Public Good. Under these heads the program insists upon such details, for example, as Government insurance against unemployment, national control of railways, mines, the production of electrical power, and life insurance, rigid price fixing, and the "direct taxation of incomes above the necessary cost of family maintenance." It demands that the greatest incomes be taxed anywhere from 80 to 95 per cent, that the profits of city and mineral land—"the unearned increment"—be turned into the National treasury, and that the Government must be "the heir to all private riches in excess of a quite moderate amount by way of family provision."

It is a big program, expressed in the uncompromising tone of men who feel that they have the power in their hands and are determined to use it unsparingly. A discussion of its economic soundness would be of little value. The British labor leaders propose to make it a practical political measure, and as a practical political measure it must be considered. What chance is there that such a program can go through in Great Britain? What chance that an imitation of it will meet with approval in this country? These matters must be voted on by the people, and the question is: Where are the union labor leaders to get their votes? They intend to "reconstitute society" after the war according to their own theories of the proper constitution of society. But they cannot do it by themselves. The number of enrolled labor-union men in England or in this country is a small part of the entire voting population. They are organized, but, on the other hand, another body of political opinion and political action is organizing. If the war goes on for two or three years, as it may, the United States army probably will number four or five million men, ALL VOTERS. They will be accustomed to unity of action, to obedience, to discipline. Is it likely that they will take their political gospel from the lips of the leaders of organized labor?

At the present moment the feeling of the fighting men is hostile to the labor-union men at home. The clerks, shopkeepers, farmers who are at the front, exposing their lives to peril every minute of the day and night, have no kinder words for the union men than they have for the profiteering capitalists. The French farmer boys standing for twenty-four hours waist deep in the mud of shell holes or trenches class them all alike as "embusqués." They are "in hiding" in munition works or railways. They demand more and more money. If their demands are refused, they threaten to strike and so cut off the supplies of the men at the front. The feeling is apt to outlast the war and to determine the political action of the soldiers when they return.

American soldiers in France read of a riveter making thirty-six dollars on a Monday and then quitting work for the rest of the week. That news does not tend to make the fighting man a political ally of the mechanic who, he thinks, has betrayed him. It does not seem possible that such a labor leader as HUTCHESON, the head of the Carpenters' Union, will have much weight as counsel to returning soldiers who have suffered, or think they have suffered, from his activity as an organizer of strikes in shipyards.

The English Labor party proposes that the Government shall act as agent in enrolling returning soldiers in labor organizations. But it is probable that the soldiers will refuse to be enrolled or to follow a leadership that they have taught themselves to hate. They will have their own organization, hardened in the terrible furnace of war. They will have their own leaders whom they have followed against the shell fire and poisonous gas of the enemy. And they will constitute a body almost equal in numbers to either one of the principal political parties. They will not all think alike

or act alike politically. But they are apt to be in fairly close agreement in action. They are young and they will be politically energetic. The camp produces the keenest politicians. After our Civil War it was the "veterans" who controlled the politics and the political currents of this country. The Union veterans for many years "ran" the North, the Confederate veterans the South. Generally speaking, they grouped themselves around leaders who had gone into the army from civilian life. They were not very receptive to new political theories. In fact, they were absurdly conservative. But they managed the country. Of the eight presidents from 1868 to 1896, six were ex-officers.

As we have said before, the question is one of practical politics. If the war goes on for any great length of time, the probabilities are that the immediate political future of this country, and perhaps of England and France, will be determined, not by the writers of elaborate programs, but by the millions who have made actual sacrifices.

## Wanted—Destructive Criticism

EVEN with the total of his reinforcements from the Russian front, HINDENBURG could never have established a threatening numerical advantage if he had taken his eastern troops and dribbled them along the four hundred miles of western front. What he needed was not a 5 to 4 advantage but a 3 to 1 advantage. He got it by concentrating his new masses on the thirty-five miles between Cambrai and La Fère.

In the serious times which confront us we need more than ever an intelligent and efficient criticism of the men and the policies at Washington with whom rest the fortunes of this nation, of the Allied cause, and of a free world. But criticism is neither enlightened nor effective which exhausts itself in an angry spatter against the entire front, from CREEL to MCADOO, from shoes to ships and bureaucratic sealing wax. This sort of raid warfare is only the sign of deadlock. What we need is a destructive criticism that shall concentrate its just attack on the narrow, essential front, and *break through*: not criticism that punishes, but criticism that destroys. We want criticism that has discovered the vital fault in Administration policy and procedure, that has decided in advance and with all conscience what this country needs first and most to save the war and win the war, and that shall then fight it out in that narrow but decisive sector.

Consider, for instance, the effect, on the normal American citizen and reader of newspapers and magazines, of some such frontal attack as the following:

Shipbuilding has failed. Food conservation lags. The transport of men has broken down. Equipment is short. The airplane program has failed. Rifles and machine guns have failed. Railway management has broken down. The labor program has broken down.

Admit that in every case there is substantial basis for the charge. Yet the effect on the normal American will be one of two things. He will either say that such wholesale indictments are invariably untrue, and will put it all down to partisanship; or he will carry away, from the very impressiveness of the number of things the Administration has failed in, a sense of the enormous task that has fallen on the Administration; under which circumstances error is only human.

What Congress needs is a Board of Critical Strategy and Co-ordination. Such a board would select the weakest sector in the Administration front and concentrate there for a break-through against incompetence or ignorance or indifference. It would not complain about equipment deficiencies because these are not, for the moment, vital. It would not complain overmuch about airplane shortage, however excellent a talking point that offers, because the first week of the great battle in France showed that the Allies have airplanes enough. It would not spend too much time on field guns and machine guns, because they are not the immediately important thing.

But such a board of criticism would discover that the two pressing essentials are men for France and ships to get them over, and that the two things in turn resolve themselves into one—ships; for the men are in hand. Upon any weakness in the ship sector it would direct a fire destructive of all paper estimates, of all vague hopes, of all distant contingencies. It would compel the Government to think and build ships. Criticism would be doing only one thing at a time, but that one thing would be the vital task.

# Editorials

Behind a board of criticism thus deployed would stand the massed opinion of the nation, no longer dispersed—and bewildered—over a dozen needs and delinquencies.

## A Share in This War

MR. JULIAN STREET makes very clear in his article in this issue of *COLLIER'S* that we who stay over here cannot have a share in this war by investing our surplus income in Liberty Bonds or War Savings Stamps. Setting aside a convenient amount for the purchase of bonds is profiteering. It is only buying to the extent of real sacrifice that is sharing. There are still some of us who do not understand this. The variety of excuses offered the salesmen of the Third Liberty Loan is a tribute to the ingenuity of the minds which offered them. That the reasons given for not subscribing more money are, by and large, excuses and nothing else is proved by comparing our balance sheet with that of the other nations engaged. We are indebted for the figures to an article by Mr. THOMAS MORRISON in the current issue of the "Century Magazine":

### ESTIMATED INCOME

United States .....	\$40,000,000,000
France .....	6,000,000,000
Great Britain .....	12,500,000,000
Germany .....	11,000,000,000

In a word, the annual income of the United States is very much greater than the income of France, Great Britain, and Germany together. We are not only the richest nation in the world; we are richer than any other three nations together. Now, what is the relation of our national debt to our annual income? Mr. MORRISON says it is 17.50 per cent. The comparative figures are as follows:

### PERCENTAGE OF DEBT TO INCOME

United States .....	17.50%
France .....	333.34%
Great Britain .....	192.00%
Germany .....	236.27%

If France could devote every cent of income to the national debt, it would require three years and four months to pay it off; if Great Britain could devote every cent of income to her national debt, it would take nearly two years to pay it off; if Germany could devote every cent of income to the national debt, it would take considerably more than two years to pay it off. If the United States could devote every cent of income to the national debt, it would take a little more than two months to pay it off. Taking annual income as a basis of power to pay, France has gone in nearly twenty times as deep as we have. England has gone in more than ten times as deep as we have. Germany has gone in nearly twelve times as deep. We've got the money; we haven't begun to shell it out—no matter what we tell the Liberty Bond salesman.

## Home Fires

THE two bronze lions in front of Chicago's Art Institute are said to have the longest unsupported tails in the world. That is undoubtedly something, and the institute has even larger claims to distinction. It nourishes the original and no less Chicagoesque notion of using its resources to promote good citizenship, and instead of locking up its pictures like bonds in a safe-deposit vault, it sends some of them out every now and then on a tour of the smaller towns, where pictures are scarce, and an amiable crusader goes along with them to tell the dark people—as they say in Russia—the place of beauty in everyday life, and the very tangible relation between art and democracy. Mr. ROSS CRANE is their man for this—an odd genius, who can make good as an entertainer, in competition with the movies and the bill at the Orpheum, and give sound and constructive comment at the same time. One of his ways of doing this is to intersperse his picture talk with talks on house planning, the "city beautiful," planting shrubbery, and so on. Imagine him, for instance, in some high-school auditorium tackling the subject of interior decoration. With a mantel, a piano, a picture from the museum to start the color scheme, and a few other properties, he builds up a room before your eyes, and tells why the davenport goes here and not somewhere else. All complete but for a woman and music, he calls up from the audience a pleasing young lady who sits down at the piano and begins to sing "Love's Old Sweet Song" or "Genevieve." The lights are out by this time, except for the big shaded lamp in the imaginary room, the audience feel that it is *their* room, and they join in the chorus—a dramatization, you will observe—colonial mantels plus "The Man

from Home." Before an audience of Elks or Rotarians, Mr. CRANE will take another tack, and prove that by making itself less ugly, some other town has increased its real-estate values 200 per cent. He is always ready, and always contrives to hitch his special propaganda to everyday life. A lucky man, whose fight for civilization involves no destruction, and whose service is more useful, if anything, in war time than before it.

## That Missouri-Kansas Frame of Mind

WITH ten thousand big guns hammering out our world's future on the western front, the Kansas City "Star" yet found time and space to note that:

Men no longer scratch matches on their trousers, because it leaves a mark. It will occur to the men some day that matches do the same thing to a wall.

What a difference it would make if men everywhere would hold firmly to ascertained truth and apply the same to their major and minor daily acts! The human race, as now conducted, spends much of its time learning, relearning, and then disregarding what has been learned—a vicious circle which leads nowhere and that slowly. Of all our neglected resources none can compare in mass and in significance with the accumulation of unused knowledge that science and shrewdness have stacked up about us during the past hundred years. When once we have put it all to work, kaisers, politicians, and wars will vanish into nothingness like cockroaches before the spring house-cleaning. The hopeful faith that this is possible is the essence of the Middle-Western frame of mind. That is why Kansas, for example, turns out such energetic school-teachers. But it seems odd that they don't have safety matches.

## Full Moon in Paris

THE phases of the moon have long been held to exercise a serious influence upon earthly phenomena and human affairs. Old is the legend that children born under a new moon are sickly or weak-minded; old the superstition that a full moon favors the growth of cucumbers, potatoes, and turnips. But in the Paris of the late winter and early spring of 1918 a full moon had a quite other significance. It meant that, just before it reached its fullness, trains leaving the city were uncomfortably well filled with nervous gentlemen of middle age, or over, conducting their families to points south or west; it meant that when one asked the Parisian to dinner "next Monday" he was as likely as not to say: "Monday? But Monday the moon is full, and my wife is rather nervous about dining out when the moon is full. Make it two weeks from Monday, and I'm sure we'll be glad to accept!"

For to the Parisian of 1918 the full moon had signified, in anticipation at least, a return of the Gothas. Not in terror, for Paris is not easily terrified, but in mild, disillusioned humor, the wits of the City of Light (but nowadays not too much light!) rally one another upon their preference for dining at home on probable nights of a raid. Why die uselessly? is the excellent philosophy. It is only the American who has never yet seen a raid who ventures out needlessly; unless, indeed, he is a newspaper man, and newspaper men don't matter anyway. Yet it is in one of the most respectable of Paris newspapers that we find some excellent fun apropos of these same air raids. It is a writer in the "Journal des Débats" who recalls the place of the full moon in poetry—and MUSSET's rare "Ballade à la Lune," *du passant béni*.

The Japanese have loved the moon, in their brief snatches of lyric, their wonderful concentrations of a mood in a few syllables of phrasing. "Full moon," writes one of them:

Full moon,  
And all night I've walked me  
Round the lagoon.

Here is another specimen of Japanese moon verse:

To-night, that the moon is so fine,  
Is he in his hut,  
The hermit?

But here, according to the cynical Parisian, is the way the poet of Nippon would write his poem—if Yokohama were as near the German lines as Paris is:

Full moon,  
Some wise man tell me how to  
Douse that glim!

That perfect moon poem also measures twelve syllables!

## An Ocean

*Our first completely equipped hospital ship, the U.S.S. "Mercy," has just been placed in commission, under command of Dr. Norman D. Blackwood. Her sister ship, the "Comfort," will be in commission very shortly. Both will serve our navy, and are among the most perfectly equipped vessels of their kind in the world. More are under construction.*

## Hospital

*The operating room of the "Mercy," complete in every particular, was presented and equipped by the Colonial Dames. Although it presents facilities for performing any operation known to surgical science, it is used only for the most urgent cases. For the well-founded rule among navy surgeons is: "Get your man on land, if you can, before operating."*

*The surgical ward of the "Mercy." The cots, which are wider than the ordinary berths, swing out of the way when not in use.*

*There's a dentist with his armament on board too, a reminder to the jacks that there are worse things than being hit by a shell.*

*There is a spacious sun parlor where the convalescent patients can rest and entertain themselves with books, phonographs, and magazines*

*Badly wounded men are swung aboard in a Stokes stretcher. This modern device is made of steel netting and has special leg rests*

*On the left is the emulsifier, or mechanical cur, which, fed powdered milk, butter fat, and water, supplies a Grade A product. The X-ray machine, for studying fractures and wounds, is in center. At the right is a powerful electromagnet for extracting shell splinters*

# WHO WILL PLANT AND HARVEST THE 1918 CROPS?

BY EDWARD HUNGERFORD

**F**OOD is as essential as ships in the winning of the war. Food cannot be produced without labor. And we are short, alarmingly short, of labor for the farms.

For more than a decade we have been short—fully a million men in July, 1914, one authority puts it. If he is right, that means 10 per cent—even before the black days that marked the opening of the Great War. Since then the situation has steadily grown worse. And three years ago, when we first began to be the workshop of the world, multiplying many times over the size of our war-industry plants, it first became acute. New England felt the strain first, for it was New England that had the earliest of the large munition factories. The other States of the Northeast—particularly New York, New Jersey, Pennsylvania, Ohio, Delaware, and Maryland—felt it next. In New York thousands of acres of potatoes and beans went unharvested in 1917. The New York State Food Commission reports the loss of 35,000 full-time farm workers, 15,000 of whom have gone into military service. In Ohio official reports show farm labor to be over 10 per cent short now and the situation steadily growing worse. And the shortage is moving, slowly but surely, across Indiana, Michigan, and Illinois to the Mississippi.

Turn south. In Virginia out of a record crop of 70,000,000 bushels of corn last year, 30,000,000 bushels remained unharvested for lack of labor. The Old Dominion only a little time ago found herself, for the first time in her history, included in the industrial belt of the Northeast. Since the Huns began their first inroads upon Belgium, great powder mills, army cantonments, and shipyards have sprung up on her sandy acres. Those have made tremendous drains upon her none-too-generous labor reserve. And while her own industries were still short of men, she was still further drained by shipyards upon the Delaware, the "war brides" of eastern Pennsylvania and New Jersey, the great new rolling mills and factories in Maryland and West Virginia—all sending South for men.

Look to the West. Governor Capper of Kansas wires to the editor of *COLLIER'S*: "The acreage of crops planted in Kansas this spring will depend on the farmers' ability to secure labor. The shortage of farm labor is already serious." From Iowa the State Department of Agriculture at Des Moines makes the same comment, stating that probably 30,000 men in that commonwealth formerly available more or less of the time for farm labor have either joined the colors or taken up war work of some kind under the Government. North Dakota reports still more alarmingly that the shortage of farm help is menacing, that her farmers are discouraged, and that they are not preparing to plant a full crop. North Dakota conditions are more or less reflected in the adjoining wheat districts of Montana, South Dakota, Minnesota, Nebraska. In this last State the "Nebraska Farm Journal" reports that from February 1, 1917, to February 1, 1918, more than 10,000 young farmers went to the military camps alone; this loss will be felt keenly.

From the Far West come reports of the same tenor.

A few weeks ago, in the pages of *COLLIER'S*, I told of standing beside an expert shipbuilder at Newport News, Va., and of his gentle complaint against the inroads that the draft was making upon his none-too-large force of skilled shipbuilders. Last summer I found the same conditions and the same complaints in Aroostook County, Maine—the territory which last year produced 20,000,000 bushels of potatoes, or about 5 per cent of the national crop. A big potato grower at Caribou voiced his protest.

"They came to our village in May," said he, "with a life-and-drum corps and a half dozen mighty good speakers and recruiters, and they put it up pretty squarely to our boys. They asked them if just be-

cause they lived in the back country was a good reason for their shirking their military duty to their country. Our boys are good Americans. They resented that. A lot of them enlisted. And we've certainly been put to it to fill their places with the shipyards down at Bath and Rockland and Camden paying big money for workmen; and still bigger money to be had farther to the south."

There was no more bitterness in the Maine farmer than there was in the Virginia shipbuilder. Each recognized the overwhelming problem of the Secretary of War and his provost marshal general, and stood ready to cooperate in its solution.

## "The Boys"

**O**N the acres of the Maine potato grower I saw a little tent pitched at the edge of a tiny grove of fine high pines, which shadowed and protected the farmhouse. "What's that?" I inquired. Khaki-clothed figures were moving in front of the tent flaps. "Have you a military guard for your potatoes?"

"No, that's just the boys."

I had stumbled upon one of the most interesting human experiments toward solving the farm-harvest problem. "The boys"—there were six of them on this Maine farm—were a part of a whole regiment of 700 school lads that had been recruited from Maine cities and sent into the country for the summer. The scheme had been started in the late spring by Jefferson C. Smith of Waterville, State secretary of the Y. M. C. A. He had carried it to Governor

Milliken, who, being a practical farmer, had given enthusiastic indorsement. Others quickly followed. Percy R. Todd, president of the Bangor & Aroostook Railroad, offered to carry the youthful volunteers to all the farms upon his lines and back again without charge. The boys had a short training season in a big camp at Winthrop, then were sent out to the farms. The farmers furnished them their food-stuffs, they did their own cooking, and were paid for their services just like any other form of labor.

"How are they doing?" I asked the potato grower. "Oh, they're fine boys. I like 'em. Their only limitation is their size. They can't handle heavy weights. But there is no limit to their willingness."

Out of the 700 boys put upon the Maine farms last summer only four were returned for disciplinary reasons.

The work, which last year was desultory and scattered through a number of different States, has during the course of the winter been brought together by the Department of Labor at Washington, working in cooperation with the Department of Agriculture, under the official title of the United States Boys' Working Reserve. A national headquarters has been opened at Washington. Directors for the various States have been appointed. Census figures indicate a population of more than 2,000,000 boys in the country between sixteen and the draft age, twenty-one. From 250,000 to 300,000 of these boys will go out upon the farms this summer.

The county is the unit. Boys are now being enrolled by the State directors working through the county directors of the Council of National Defense. And the county director works in turn through the school authorities, placing his propaganda and gathering in his enrollments. While this is being done, Professor Spillman's division over at the Department of Agriculture is receiving the applications of the farmers of the various States—directly or through the agricultural departments—who want these boys on their fields in the harvest time of 1918. But the Government will not be content with merely receiving applications for the boys. It will demand that they be placed only on farms that can house them properly and surround them with proper influences. A good part of the farm-labor problem, like that of the shipyards and other industrial strongholds, is a housing problem which literally means a problem of decency and comfort for the resting hours of the tired worker.

## Preliminary Training

**T**HE Federal Government, in the person of Professor W. J. Spillman of the Division of Farm Management of the Department of Agriculture and his associates, is going to inspect each farm that makes application for boy labor before it grants that labor. And then the boy is to be paid the "going wage" for his labor. The Government will see to that also. And when he has worked six weeks—six days a week of eight hours each—he will receive the official commendation of his Government in the form of a bronze badge which will be well worth keeping.

These boys will not be sent to the farms from the cities absolutely without previous knowledge of the work awaiting them. The curriculums of many schools—particularly those of the Middle West—have been so readjusted during the past winter as to include lessons or lectures on the simple problems of agriculture. In Chicago the Lane Technical High School has arranged a course of this sort, and as a sort of final practical demonstration it sends its boys out into the streets round about the school where, on the wagons of the street-cleaning and the fire departments, they learn the actual handling of a team of horses.

## Who Discovered *RICORO*?

"Guess my top-sergeant discovered Ricoro," said Captain Adams of the U. S. Cavalry.

"Army pay is about half what I was used to. A man's got to smoke. So I asked Sergeant Gregg how he managed to keep supplied.

"I smoke Ricoro," he said.

"What's that?" I asked.

"It's this!" said Gregg and he handed me a regular Kipling beauty of a Panetela.

"How can you afford to smoke such an expensive cigar on your pay?" said I.

Gregg laughed in my face as no non-com should.

"W,-w,-why sir," he said, "that's a Ricoro—only seven cents, on sale at all United Cigar Stores."

"Say, man, you ought to be helping Goethals with his war-buying—you're a *real* purchasing agent."

*Sooner or later you'll discover—*

***Ricoro***  
*the "Self-Made" Cigar*

Don't make the mistake of thinking a cigar can't be good unless it's expensive. Ricoro is *imported* from Porto Rico *duty free*.

Ricoro is perfectly made and combines a rich tropic fragrance with pleasant aromatic *mildness*. To discover Ricoro is to halve your cigar expense and double your smoking enjoyment.

Ricoro is made in a dozen sizes and shapes, from 6c to 2-for-25 cents—simply the question of size. The quality is the same in all.

Sold only in United Cigar Stores.—"Thank You."

in 25 makes  
good in the  
Miller Plant"*

## By Creating Uniform Builders We Created Uniform Tires

### Each Man a Master—Each Tire a Masterpiece

**M**ILLER TIRES are known far and wide today as the Uniform Mileage Tires. That means wherever Millers are run under like conditions, they wear the same. That 99 Millers in 100 outrun standard guarantees.

Of all the some 429 brands on the market, there is no other we know to equal this.

#### How Miller Succeeded

Such uniformity has been the aim of tire makers for years. For who could tell, when he bought a tire, whether it would run 5000 miles or fail at a thousand?

Miller found the solution—not in machines or methods—but in men.

We discovered that workmen must be uniform or their tires (mostly handwork) can never be.

By training crack squads—a regiment of champions—we reduced the variables in tires to the smallest fraction.

#### Each Man Rated

When tire builders come here, each one must take our training and then pass our tests.

Then our efficiency experts keep a record of that man and his work.

To pass our inspectors, the tires he builds must reach our 99 per cent grade. If ever a Miller comes back, the builder's score is penalized. Under this rigid system, only one man in 25 makes good.

But those who do are masters. Their average efficiency is 96 per cent.

#### Geared-to-the-Road

There is no excuse longer for buying tires on luck. Miller means certainty.

And safety, too, due to the tread that is *geared-to-the-road*.

Mark how the sharp rubber cogs engage the ground.

#### A Limited Number

Only about one motorist in fifty will be able to get the Miller Uniform Tires this year. It takes time to train men to Miller perfection. And even so, but few can ever become masters.

To make sure of securing your season's supply of Millers, you must speak at once.

Only good dealers are authorized to sell them. Find the one in your neighborhood without delay.

**Miller**  **Tires**  
GEARED-TO-THE-ROAD

*If you want the utmost air capacity—size for size—ask for Miller Cord Tires. They are truly luxurious—yet not a luxury, because they cost less per mile than any other type.*

**THE MILLER RUBBER COMPANY, Akron, Ohio**  
*Makers of Miller Red and Gray Inner Tubes—The Team-Mates of Uniform Tires*

# THE MERCHANT MARINE AND THE WAR BY NELSON COLLINS

AN honest-to-goodness sailor is expected always to have a grouch over one thing or another, and he is supposed to take seriously everything he sees in print. He is naive as well, and so if he sees odds and ends of a certain kind of comment in the newspapers during the few days he is in port he naturally assumes that the same kind of comment runs current all the time he is away. Also, the winter at sea was unusually fine this year—it is a pity to admit it when we want so much to appear to be hearing hardships, but it is the unheroic fact—so that he has been able to nurse his grouch from one making of port to another without being distracted from it by more immediate and actual cares.

## Cargo-Carrying—the War's Pivot

THIS whole war is touch and go on the question of merchant ships. There is, for instance, plenty of sugar in the world and plenty of wheat. If the navies could fully perform their old function of protecting merchant vessels, there would be ample tonnage for bringing sugar from Java and wheat from Australia and, with naval luck, from Russia. As it is, the American Sugar Refining Company has to advertise: "At the same time, an abundance of sugar was and still is locked up in far-away Java, as unavailable as unmined gold—because ships cannot be spared to transport it. . . . If we can save the Allies from taking any Java sugar in 1918, we shall release for transport purposes enough ships to carry over to the western front and supply about 150,000 to 200,000 soldiers." The navies have done magnificently, but they have not been able to rise fully to the emergency, so that merchant ships of countries in full surface control of the wide seas might sail freely on their carrying errands. There are not destroyers enough to do the naval job. The convoy system wastes endless days of ships' time. The merchant marine has to do its work under a handicap for which the navies, nobly as they have worked, not the merchant services, are responsible. No other war came to the point where its vital issues hung, absolutely, on merchant ships. They have a new dignity and a new danger in this war. They are indispensable and self-reliant as they have never had chance or need to be before. This has produced a sensitiveness with regard to the management of them unique in wars and unique in the history of the merchant marine—the play back and forth of human motives, of all kinds of human sufficiencies and deficiencies and partialities, ought not to be omitted from the current chronicle of the war. When army, navy, and merchant service are all involved in consideration of the same ships, sometimes of the same single ship, with shipping boards and naval intelligence boards added, the facets of policy and of human nature exhibited from time to time are numerous. The marvel is that all the men concerned and all the groups concerned are so candid and open to revision of their ideas, and that has been true in Great Britain as well as in the United States.

The merchant-service men believe the war can be won through them, and they know the war would

Not often does an editor have a chance to print an article with so real a tang of its own as this. The author is not a special writer sent out by the office to "cover" the merchant marine. He is a sailor who speaks of the sea as one who knows it and loves it, and, incidentally, can write. Mr. Collins is at present an officer in the American merchant marine. — EDITOR'S NOTE

be lost without them and their ships—would have already been lost long ago—though in the same moment they pay the high tribute devoted service deserves to the navy and to the army, branches of service in which they take a kindred pride. But their own pride is in their capabilities as merchant-service men, and it is these capabilities that are of supreme value in the war. The idea of naval-reserve rating for merchant-service men, an old and honored idea in many countries, had as its originating inspiration the acceptance into the navy in time of the navy's need of men whose equipment made them readily adaptable to naval service as distinguished from merchant service. But it is to the ship as a cargo-carrying vehicle, it is to the merchant-service man as a cargo-carrying and cargo-managing sailor, that the call is imperative. The sailor in his civilian duties, not in his potential fighting qualities, is the sailor upon whom this war pivots. The ship as a carrier, not as a scout or supply boat to a fleet, is the ship's value.

## "Manned by Civilians"

ACCORDINGLY as such a person the merchant sailor comes blowing into port. Well, then, his experience the last four or five months of things heard and read in the port of New York tends to rile him. New York is the greatest port in the United States, and he thinks naturally that he ought to be able to feel sure that its newspapers are competently informed on marine matters and sharers of his pride in the American merchant marine, ships and men. He knows there is more or less agitation about ships. He has heard that the old question of whether army transports shall be under army or navy direction has been raised. He learns along in October that the navy has carried its point of many decades, and that, for the rest of the war, at least, transports' officers and crews shall be from the navy or the Naval Reserve, instead of civilian officers and crews under army orders. He has never given the matter any particular thought, has half inclined to the navy point of view, perhaps. He is proud that the officers and men of the merchant service and the ships of the merchant service took over the first troops to France, and he lets it go at that. He hears that the matter of the navy also taking over all cargo boats requisitioned for army supplies is under discussion, and that the army Quartermaster's Department is inclined to hang on to them. That doesn't strike him as particularly his business either. Then he buys the papers and grows angry. This is his actual experience. All the papers one day in October print the announcement of the navy's taking over the army transports, with a similarity of phras-

ing which indicates that they are following some single statement sent out from some headquarters somewhere. The reasons given for the change leave out discussion of army and navy diverging views and attack the merchant marine. The announcements state that the shift is made because naval forces are "far more effective" for this purpose than a merchant-service personnel. The transport *Antilles* has just been sunk, and reference is made to this disaster, with the phrase "manned by civilians" carefully or carelessly inserted. A particular ring is taken at the firemen, men who risk more than anybody else in present-day navigation. Ordinarily the merchantman has shrugged his shoulders at active injustice or passive neglect. This time, however, his war pride is added to his pride of the service, and he actually bestirs himself to get off a letter to the papers with some statements of fact regarding the *Antilles* and merchant-service work on the transports. The papers print it, and he heads off to sea feeling satisfied that for once he has taken the trouble to stand up for himself and for something greater than himself with which he is bound up. He comes back a couple of months later, and here again was his actual experience. The first paper he bought was still discussing further transfers to naval management and stated that the change was sought because it was understood sailors of some merchant ships were allowed to come aboard drunk in foreign ports. The naiveté of this statement, for a metropolitan newspaper, makes it hard to believe. But it was in a noon or near-noon edition of the New York "World" for Thursday, December 20. Similarly the "Sun" printed a statement that same day with regard to some wild submarine stories and said an officer of either the army or the navy had declared that the tale must have come from some "civilian member of the crew." He swallowed that (although wondering from his experience of weird rumors on shipboard why such an inference was inevitable) in time to read in the "Globe" that "merchant-service captains" were causing a good deal of trouble by not following convoy directions closely enough.

## Public Information!

IN the same week the "Evening Post" came out with a claim that Naval Reserve men "should have precedence above any or all persons who have not enlisted, but have remained ashore, possibly with the idea of high wages on board merchant-marine vessels." About this time he heard there was a plan on foot for the navy to take over all vessels, army transports, army cargo carriers, merchant vessels of whatever description, and put them under Naval Reserve regimen. The Government had already taken charge of the routing of all vessels, and they were under the direction of the civilian Shipping Board. He did not pretend to follow the arguments on policy that he understood were developing between the Shipping Board and the naval authorities, and he hustled off to sea again, anticipating the relative peace of the war zone. While he was in a foreign

port mail from the States came in, and somebody had followed him up with a clipping. This was the gem of the collection, both in its matter and in the sources from which it was published. The refrain is in its second paragraph, "... reports of petty officers in more than one instance show that ... the firemen and other members of the merchant crews were ready to quit their posts and desert the ship at the first sign of a submarine." A column of such stuff was printed in the New York "Times" of December 9, claiming to be from an article by Ralph D. Paine, compiled from the records of the Navy Department and sent out by the Committee on Public Information.

### "Oh, What's the Use!"

FOR what happens? Suppose it were all true, what is the point to be made, the purpose to be served, in printing it? Is there professional cooperation in such a course? Are the ethics and amenities of the related and associated services maintained by it? Since when were petty officers of the navy held competent to pass judgment on masters and officers of ships? They are excellent fellows, known for their handiness and not used to thinking outside the range of the "Bluejacket's Manual." Their value is in their limitation. Would a merchant vessel's boatswain or chief quartermaster have his report on the discretions exercised or indiscretions committed by a naval ensign or lieutenant entertained, let alone published, by his line officials?

I am not a great believer in tu quoque arguments myself. But out of curiosity at least the merchant sailor is apt to set forth a few to himself. To the original faux pas attributing the loss of the transport *Antilles* to her "civilian crew" comes as offset the recall of a rear admiral and talk of inadequacy of convoy in the connection. Offsetting the charge that naval convoys sometimes have trouble in getting their orders exactly executed by civilian captains under their escort are the readily confirmed incidents where ships, reputations, and even lives have occasionally been risked trying to carry out convoy instructions. These lead to the sympathetic reading by American merchant officers of such questions as this one, asked of the Secretary to the Admiralty in the House of Commons on the night of January 16, 1918: "Is the right honorable gentleman aware that many experienced British shipmasters would very much prefer to be without the [convoy] protection afforded by the Admiralty?" The charge printed in Mr. Paine's article that gun crews have difficulty with merchant crews in submarine encounters is offset by the whole glorious record of the merchant marine throughout this war, by plenty of citations of "nerves" and perilous excitements among the relatively inexperienced naval gun crews and the repetition of what the New York "Times" printed October 25 last—and should have remembered: "The officers, petty officers, and most of the men in the merchant service have had three years' experience carrying American ships through the war zone. Naval officers and gun crews who have been aboard with them since our entrance into the war have conspicuously profited by the practical tutelage and initiated discipline they needed and received from the men of the merchant service." The New York "Telegram's" reference to "conditions which not only have retarded the operation of vessels and delayed them in transit, but conduct which has seriously jeopardized the property of the United States and the lives of all on board" has been charitably construed as at least ambiguous. To the claim of the writer in the "Evening Post" that Naval Reserve men "undoubtedly should have precedence above any or all persons who have not enlisted," the reply is obvious that the men already in the merchant service have lived through all the perils that might attend enlisted service long before it occurred to many of the men in the Naval Reserve that there was such a thing as the sea and have served an apprenticeship in discomfort at miserable wage while these newer applicants for sea service were happy and prosperous ashore. To the comment in the same newspaper, "Both the Shipping Board and the department controlling the army transports are gradually seeing the light," comes the

offset of the whole experience of Great Britain as summarized in the "Nautical Magazine" (Liverpool) for January, 1918: "From the American 'Nautical Gazette' we learn that American transports are to be manned hereafter by none but naval ratings, the inference being that officers and men of the merchant service have been found wanting in some measure. The United States naval authorities are seemingly of the opinion that the operation of a vessel is less efficient when she is manned by a crew which changes each voyage and that a naval personnel for each transport is preferable. . . . Proportionately, the number of casualties entered to vessels under the control of naval officers is immensely greater than is the case with vessels under the command of merchantmen. If the American naval authorities give effect to their proposals, they will become sadder and wiser men ere many moons wax and wane. We were under the impression that America had learned much from Britain's failures in naval matters as in military, but it would appear that there are points on which she still requires enlightenment, and the manning of her transports is evidently one of them."

A new book by Charles Clifford Gill, lieutenant commander United States navy, "Naval Power in the War," originally "contributed to The New York Times Current History Magazine" and now "adopted by the Academic Board of the United States Naval Academy for use in the history courses for midshipmen" and labeled "Publication Authorized by the Navy Department," has nowhere in it any word of appreciation for the merchantmen, and prints statements like these:

"It is difficult for seamen who for years have navigated the usual lanes to understand and carry out instructions intended to safeguard them from a foe they cannot see. . . . Utmost vigilance is necessary at all times, and to get this requires a strict discipline which does not exist on board the majority of trading ships. . . . There is plenty of evidence that many a ship has played into the hands of the U-boat either by failure to carry out instructions or by a poor lookout system, or by neglect to steer zigzag courses before sighting the submarine, or by stupid seamanship after sighting it. This is unfortunate,

the case. It isn't the depreciatory intention, but the smugness, the carelessness, and the ignorance, the inability to see anything but one's own ship on the whole sweep of sea, that bore a man even more than they exasperate. There is no record anywhere in the merchant service, so far as I can ascertain, of bringing ships that are halfway across the ocean to a full stop at dawn to arrange formation for the day, nor has any merchant captain in a convoy laid out a course for himself that would compel him to cut out a chunk of island as an incident of the day's run, nor has he, upon discovering something unseaworthy in his vessel when *halfway across*, put about and returned to his port of departure. Does the writer of such a careless book know that the greatest British army transport, which has successfully carried over 100,000 men, is commanded by her old civilian captain and manned by her old crew? Does he know that the voyage of the *Deutschland* was accomplished by a captain of the North German Lloyd Line? Does he understand that the British blockade of German ports is run by merchant-service officers and men, along with all the work of the mine sweepers and the trawler patrols? Does he wish to argue that the mystic R. N. R. changed their natures and their capacities in the moment of going into active service, or is it his argument that American merchant-service men are poorer stuff than the British and German?

### At Least, Justice

WHY not have been at least just, or conceivably as generous in his presentment of the merchant marine for the education of impressionable midshipmen, who may yet have to cooperate with them in this war, as in his estimate of the navy: "Again it is the ability of the naval power of the United States to check the submarine menace in the Atlantic which has made the money, food, and man power of America transported overseas to the support of hard-pressed England, France, and Italy a decisive factor in the war?"

If merchant officers and men had been careless about professional cooperation, if the same lack of professional reserve and unselfish patriotic pride that has originated some of these reports from individuals—not from the naval service as a whole—had incited our merchantmen, they could often enough have created laughter and dubiety by recitals of some experiences in this mixed association by playing up exceptional cases as typical. They could have been Gilbertian in comment. Censorship, however, whether compulsory or voluntary, involves two motives, one rather more legitimate than the other when selfishly applied—to keep information from the enemy for defense from attack and to keep information from the home public for defense from criticism. The men of the merchant service have kept both of these consistently in mind in their silences. They have leaned over backward for others where they were indifferent about themselves. They have had a seamanly understanding of difficulties, born of their own long experience with an enemy that was inimical long before we ceased being neutrals, and an admiring recognition of zeals and intentions. Most naval men at sea are keen for the merchantmen because of that, just as merchantmen are keen for them for the real protection they afford.

### What Does He Mean?

ONLY naval men ashore and long ashore could sponsor or enjoy the glaring misstatements and downright falsehoods that from some source or other have been supplied the newspapers. The "United States Naval Institute Proceedings" reprinted in its issue of January, 1918, from the Washington "Post" of November 25, 1917, an article by Mr. George Rothwell Brown, entitled "Naval Control of Merchant Transports Urged," that simply could not have been written or printed or reprinted in a country where the merchant-marine service was adequately developed, so that people knew anything about it or were in the least degree sensitive for its

repute, and that never would have come from anyone actually in active service on the high seas. Nowhere in the article is there any recognition of the merchant marine either by way of a thing directly said or by way of unfortunate phrasing withheld. "On most of the ships com-

(Continued on page 41)

SEEING IT THROUGH

but not surprising. The nature of the submarine enemy is such that to combat it successfully requires a personnel of a high order of intelligence, well trained and well disciplined."

"Oh, what's the use!" in schoolboy parlance, for schoolboy parlance is the only language that can fit

## Why 50,000 Motorists Have Accepted The Hudson Super-Six As Is

*Performance Is What They Bought,  
And That Is What They Got*

*The new Hudson Super-Six Phaeton. It is a 7-passenger car, a de luxe development of the earlier Super-Six models, of which there are more in service than any other fine car of its type.*

**T**HEY looked for no special detail. No special device or equipment influenced their choice. What they bought was what they knew the Super-Six has done for men they knew. There was plenty of proof that the Super-Six is not merely a good-looking, easy-riding car. The convincing thing is the way in which it meets every service punishment without faltering.

Before many Super-Sixes had been delivered, stock cars were matched against the most difficult tests known to motordom. There was the one hour run, the twenty-four hour test, the climb up Pike's Peak, and the double transcontinental run. In each the Super-Six showed better performance than any other car of its class had ever shown, regardless of cost. Some of these records were better than any car, regardless of class, had ever made. Some still stand, although attempts have been made to defeat them.

Hudson engineers wanted to learn how to make later models better than the earlier ones in endurance and reliability.

### Now A Finer Super-Six

The first Super-Six possessed all that Hudson engineers knew at that time.

No experience with cars known then could have helped to make it better than it proved to be.

But now 50,000 cars are in service. Much was learned from the experience owners had with them.

The special tests also showed ways in which endurance could be extended. Hudson engineers learned ways to improve their earlier standards.

That, you who know the Super-Six will appreciate if you will merely ride in and drive this new Hudson. And if you do not know the Super-Six, then you

will more than ever understand its qualities, for your knowledge of motor car performance will be founded upon the standards which you know.

From the very first the policy has been to make the Super-Six the perfected ideal car. That called for many refinements, for the finest materials, the finest workmanship. You will realize that influence by merely examining the car. But its deeper meaning can come only from the day-to-day, month-to-month service it gives.

In every detail of the ten different body styles the same ideal of matchless design and workmanship has been preserved.

Hudson Motor Car Company, Detroit, Mich.

# Printing Papers

**WE** print our trade-mark big because it plays such a big part in a big cause—Better Printing for America.

Before printing became standardized, the finished booklet, folder, or catalog that was delivered often bore no more resemblance than that of a weak sister or sick cousin to the pasted-up "dummy" that you so proudly O. K'd.

With no fixed standards of book-printing papers to guide paper-maker, artist, engraver, and printer, the wonder is that the art of printing of ten years ago reached as high a level as it did.

Standardization of paper ushered in the era of Better Printing—Warren saw the need of definite standards to guide the way to better printing. A Warren Standard was made to fill every established need for book-paper printing. Just calling these papers "Standard" didn't make them real standards. Only one thing under the sun could justify the use of this word—Warren Standards *are* standards because they answer an

authoritative "YES," to the big question in the print shop, "Will it print?"

Creating paper standards is one Warren contribution to better printing. Bringing these standards home to every printer and every buyer of printing is another Warren contribution.

The 1918 Warren Suggestion Book is made up of specimen leaves of Warren's Standard Printing Papers in various weights and tints. Engravings of different character and different screen are shown. You can see how printing looks on the dull-surfaced Warren's Cameo, on the glossy Lustro, on Cumberland Coated, on Warren's Super, Warren's Cumberland Machine Book and on the other Warren Standard Papers.

Each page is a guide-post that points the way to greater security in planning better printing; less labor and less expense in executing it. It is one of those golden books that you will value highly and use often. Sent on request to buyers of printing, to printers, engravers, and their salesmen.

**S. D. Warren & Company, 49 Federal Street, Boston, Mass.**

# THE YELLOW-FOOTED BIRD

BY JOHN BRECK

ILLUSTRATED BY HERBERT PAUS

I EXPECT my nerves were rather overstrained. Some of the chaps from the neighboring unit of the British R. F. C. gave a little dinner to us Sammies who were already backing our country's declaration of war by getting into their game. Chisholm, confound his colloquial tongue, gave a corking toast—he ended up by quoting from Montgomery's verse:

*Some bird, that boy,  
Duckin' clouds and flyin' is joy to 'im,  
And so we're gettin' sorter fond of 'im—  
The yellow-footed beggar with the blinkin' eye.  
Some bird, old ally of the sky—  
Some bird!*

And it was up to me to answer him.

They were making a special set at me for a Hun I strafed in the morning when he was pressing one of their machines which was almost out of control—my second triumph as a "pilote d'avion de chasse." I answered that it took a bird to fight a bird. The black eagle had been crowing long enough—now we were ready to show him we were no barnyard rooster even if we did have yellow legs. By the way they howled I knew more than a few of them knew how to set a gaff.

Chisholm shouted: "I'll give ten to one on Baldy!" I faded then and let him have the floor. It's too much to expect a fellow to bandy words with a clever Irishman when he has to "do his work on water." Oh, there are drawbacks to the flying game—the higher up you get the less you seem to belong to yourself, and the more you get to feel like some tool, to be kept in perfect order for delicate uses. When you come to compute the cost of manufacture, though, it seems fair enough. I figured that nearly five thousand dollars had gone into whatever my raw material was worth at the start. But whatever is the use of a commission, I'd like to ask, if your chief mechanic can chaperon you home from a party at ten o'clock, sober as Balaam's ass? For that's what Tommy did.

Not that there was anything unusual about having Tommy look after me—he assumed me as a fore-ordained responsibility on my very first day in school and has stuck to his job ever since. I thought for sure I'd lost him when they passed me and then turned him down on account of his eyes, but I forgot that Thomas Gordon McLeod was a man who could make himself indispensable anywhere. By the time I had become a finished pilot, wearing my sergeant's chevrons, he had won a name for himself around the hangars as a genius with machines—that is, if you accept the definition of genius as the capacity for taking infinite pains. Anyway, he could infuse that Scotch conscience of his into the most casual of apprentices, and his flyers always gained an extra sense of security from the knowledge that their machine had passed one of his rigid inspections before it left the ground.

Nevertheless it was Tommy's presence that started me thinking. It did seem unfair for me to be getting a second forty-eight hours' leave that week, just through a lucky shot, when old Tommy really needed the change. I didn't want to go without him. To tell the truth, Paris was beginning to pall on me—even Paris could not keep my mind aped up fast enough to make me forget—and if Tommy quickened my memory with that look of regret which was forever haunting me from his eyes, I knew he honestly loved me. The others might all find me good sport to play around with, for they don't put brakes on flyers—the machines or the men, either one—and I'm geared high, but only Tommy really cared.

FORGET what? Well, most of all, that night at the Country Club back home in Kenilworth when I lost my head. That was honestly what brought me here. Corinna Gaylord had just finished that Porto Rican dance of hers, and it put the finishing touch to the flirtation we'd been carrying on all week. She's the sort that gets into your blood; she keeps you all stirred up until smashing conventions seems as legitimate sport as breaking speed laws, and she manages to invest every word and glance with some illicit spice of suggestion that seems to set you two apart from the rest of the world. And the sensuous thrill of her keeps your nerves too tense to give your brain a chance to gauge her. Her very curtsy, though her

smile seemed for her audience, was a subtle beckoning to me, standing back in the shadow of the west veranda where the lights were still turned off.

Without thinking I turned to Tommy, who stood beside me. "Tell Corinna I'll meet her at the steps. I'm going for the car," I said.

"I'll do no such thing," he answered indignantly. "You're forgetting yourself, Bob. Worse than that, you're forgetting Harriet."

He was perfectly right. I had completely forgotten my wife. It was easy to forget her; she had always been one of us. In all the shifting loves of my school and college days she had been my confidante, my buffer between me and the disapproval of Tom, but I had never dreamed of marrying her until I realized that he stood fair to win her right from under my nose. Then it seemed to me I could not let her go; I suddenly realized my need for her, and in that realization forgot that it was need and

not love. Not love, at least, as I loved Corinna. "That's no fault of mine," I snapped. "Why did you let me marry when you knew I wasn't ready to settle down? Do you think that changes a man's whole being? Do you think it keeps him from seeing and feeling? I can't be old and staid just because you think I ought to be. Confound it, I wish you'd married her yourself instead of meddling in my affairs." For the time I forgot that was just what he had wanted to do. I only knew that I wouldn't have done it excepting for him.

Then I caught the little sound of a breath sharp-taken behind him, and I knew Harriet was there, in the deep shadow of the door. I could think of nothing more I might say. I was sorry—but she might as well know first as last; the dutiful husband was not in my line and I was tired of playing the part. Anyway, my one idea was to get clear of them both, to where I could follow my impulses, breathe a freer air. So I started across the room. But before I could locate Corinna, in a group of admirers, Tommy strode past me, bristling with disapproval, yet obedient to a command more pulsant than my own. And there flashed before my memory the vision of Harriet serving me on the same sort of an errand, with an earlier Corinna of dancing-school days. She never seemed to care for herself so long as I had what I wanted—I half wondered if she really cared now.

Corinna met me. But the essence was fading from her allure.

No longer was it just she and I; those two we left behind seemed haunting me. Their gaze noted every move we made, their intuition sensed every caress, their knowledge curbed the candor of our intimacy. I could not tell Corinna—neither could I endure her blandishments. I drove like mad. It seemed the only way to keep her hands off me. She grew afraid, both of the speed and of the change she felt in me. I think we were both glad when that ride came to an end.

I never went near Corinna again. Nor did either Tommy or Harriet refer to that unlucky outburst. Nevertheless it lay between us, smothering the frank good-fellowship which had always been our common ground. They might be tactful and magnanimous, they might even hide their virtuous complacency—I could not forgive their being so utterly impeccable. It was that same sense which alienates the evildoer from the most sympathetic reformer and throws him back on his own kind for true camaraderie. . . .

THIS was what lay back of my own enlistment, though I had never realized it until that moment. Nothing is so myopic as habit, or so dazzling as the speed at which one lives in these high-pressure times. But that night as I tossed on my cot my vision cleared and I attained, for the first time, a glimpse of that perspective which the routine of daily existence usually keeps blurred.

I began to guess at the reasons which brought the others there. Patriotism might do for a man like Tommy, to whom principles were the most vital thing in the world, or to an emotional sentimentalist like Ormsby Cole, perhaps, but the rest of us—Allen, and Throgmorton, and Gracie, and Flynn, and the others—I'd wager anything every man jack had something on his soul. Not serious evil, perhaps, but a thing which would not let him be at peace.

The events of the past six months, so full of vital impressions, kept wheeling and shifting, like the concentric circles of a fever dream, in my brain. The day I made my first flight with MacIlvaney in the double control; the sudden paralysis which seemed to catch me as I felt the earth dropping away from us; then, as my nerves grew more accustomed, the dawning exhilaration, the triumph as I began to sense the machine's response to its controls, the keen enjoyment of its flexibility—I lived it all over in that half doze when your memory is the more acute because your other perceptions are stilled. I smiled as I remembered Mac's enthusiasm at reporting me in as material of the right timber. Then the ocean trip! An awful torment of inactivity when you wonder what it is you have undertaken! And France, where you have no time to think, where your every fiber is strung to the task of working yourself into this new element until you

I knew one other chance—the dreaded "tail spin"

## Thrift Car

### The Size of A Dollar Is How Much It Buys

Mints make dollars for the thrifty men and spendthrifts identical in size.

The reason one dollar buys more is the reasoning of the man who spends it. Sane reasoning points unerringly to this Model 90 as bigger value per dollar.

And here is why it does—

Full value, or complete satisfaction, is possible only through complete satisfaction in all of these five points—Appearance, Performance, Comfort, Service and Price.

See how this Model 90 meets each and all of these requirements in the most satisfactory manner and you understand with 80,000 owners why the sum total of its value makes its price extremely small in proportion.

In *appearance* Model 90 is unusually attractive with this big-car stylish design, correct color scheme, quality finish and appointments.

It is not only what it does but *how* it *performs* that makes Model 90 of greater value. You enjoy this car while you *employ* it.

Its sweet-running powerful motor is exceptionally economical with fuel and the strong, light chassis, perfectly balanced, minimizes tire wear.

This car does not look cramped and it is not.

It looks decidedly *comfortable* and it is, decidedly!

With wide seats, deep upholstery, spacious interior, rear cantilever springs, and scientific distribution of weight, it glides buoyantly over the roads, relieving passengers from fatigue.

No matter where you drive there is always accessible expert Overland *service*.

The nation-wide Overland service facilities protect your investment in a Model 90 and guarantee continued satisfaction in your car.

The *price* of the Model 90 is one of the most potent factors in its favor.

It represents the high mark for quality, competence and pleasing accommodations at the lowest possible cost.

Make your dollar larger by investing it in this Model 90 thrift car.

You will be richer in time saved and opportunities improved and happier and healthier.

In emergencies such as catching a train, a physician's race with death, or innumerable cases where time is *more* precious than money, Model 90 is invaluable.

Every day and night it multiplies the man-power of business and professional men.

It is as indispensable for the *home* as it is for the office.

What else *works* all day for business and then is equally valuable for the family?

What else has such endless work uses and at the same time affords *recreation*?

Order your Model 90 now. Let the Willys-Overland dealer save you money.

*Appearance, Performance,  
Comfort, Service and Price*

become as much at home in it as a small boy in the old swimming hole.

I remembered when I lost my last vestige of unconfidence—curiously enough, it came after I saw my first man killed, when Hardman took too sharp a dive for his landing and failed to flatten out in time. That was sheer lack of skill, skill which I felt I had. This one realization atoned for all the nerve-racking hours in the tricky penguin whose one big secret is the management of your tailplane—I knew that whatever faults I might develop in the air I could rise and redress as instinctively as the birds themselves; I felt that, even with the loss of distance values which the altitude work entails, my sensitiveness would stand me in good stead. And it was not long before I had my chance of making good my belief, in the ninety-mile-an-hour landing of the Spad whose lack of sustaining power calls for as fast an alighting as the most capacious Frenchman could require.

That accident, nevertheless, gave me a strange uneasiness. I helped carry Hardman in, with his breath coming shorter and weaker, like an engine running out of petrol, until it ceased. What, then, was life—merely the power in the machine? Something within me cried out against this thought; and yet might not my own be seeping away at the bullet hole of the next boche flyer I rose to meet? It was not a physical fear; it was rather a strange loneliness of the soul, that might drift out into the unknown, hungering for the warmth of its earthly ties, regretting that while the engine raced it had dreamed so little of this future awaiting us all. Was Hardman absolutely blotted from the earth, no trace of his being to remain save in the memory of his comrades who risked the same fate? Why, then, was life with all its poignant experiences which write so legibly upon our characters, making each one of us different from all the rest of mankind? Such thoughts returned to haunt me now.

IN vain I tried to drown these speculations with details from my work, such as deciding on my report as to the little triplane we were testing out, or wondering what changes we would find in our old sector to which we were summoned in the morning. It was the first time I remembered seeking out work as a comfort, a stability-control. I wondered how long I had lain awake. My own watch being stopped again, I tumbled out to rummage Tommy's clothes—I might have known it would not be in them; when I did come to enough to remember I tried his wrist; finally, under his pillow, I found it—and with it was a letter in Harriet's hand. My eyes burned on the familiar script beneath my flashlight. I had never seen a letter from her that I wanted so much to read. Suddenly I knew I was just hungry for word from her—my world simply wasn't complete without her. That set me wondering about Corinna—if I still could feel the same about her too. And I found she was no longer real to me; I couldn't materialize her. She was like some one I'd read of in a book, long, long ago.

Then the vibrant circles of my imagination focused with insupportable concentration upon one tiny point—myself. Beneath my awakened consciousness, as beneath some powerful psychic lens, I saw myself as I really was, a sort of ghoulish who devoured the very ones who loved him. The life I had not cared for—home, children perhaps—I had denied them. What right had Tommy to go gyping through the world at my feckless heels? What right had Harriet to live alone, eating out her heart for the homeliest, simplest realities which even the poor may have? Those things belonged to them. And there I stood between them. If I were gone, they would find their happiness.

Inexorably the last question completed the inquisition of this strange detached self which had arisen in me. What value had it in return for all it had taken to itself?

And I found I could not answer. I saw how I had perverted my normal appetites in the one gnawing hunger for excitement which I had permitted to ob-

sess me, and how I had let my powers be wasted until my very mind no longer kept on watch, but let me betray myself on the sheerest impulse. For, back of that one unforgivable act, I could remember so many, so very many things I would never have done had I used my intelligence to foresee the end—until at last I knew myself for something life had spoiled in the making, something worthless, to be thrown away. God, how I hated myself!

And I saw how even the service had been merely a means of escape with my head up from a situation which should have been honestly met and atoned. But here I had one chance: I might be honest to it, give myself without reservation, live for my work

*He dropped his nose in the effort to pick up speed as I pounced on him*

alone until the end came of itself—grant it might not be too long. For to live with what I knew myself to be—cowardly, selfish, unscrupulous—was penance unbearable when better men than I were being sacrificed. So, there in the night, I dedicated myself anew to atone, in the only way left, for my wastrel debts toward life.

Then I shoved Tommy over and crept in beside him, where I could feel him, warm and steady; and he put out his arm for me as he always has since we were youngsters. The thought stilled me that it might be Harriet he dreamed of holding there; but now I knew that would come, all in good time, I felt more at peace, so that sleep came at last.

IT was broad daylight when I awoke, and Tommy had long since slipped away to commence his daily grind. I trotted out to the hangars to find a lot of the machines ready for the move. He was going over our new twin-motor tractor with her pilot, hair by hair, so to speak. She's a fine machine—they say she handles wonderfully fast for a battleplane—but not entirely broken in. As I listened to his questions it came over me afresh that no one but Tommy could be so careful, so accurate, so intuitive, so alert for every slightest nuance of a weakness—Tommy with his grinding hours of study and his inordinate sense of responsibility toward the flyers who manned the machines under his care. He was the big man, the one who deserved all the things which had fallen to my share. I was glad I could foresee his due reward in the end. "Why didn't you wake me?" I demanded.

"I thought you had leave—I left word you were to be called in time for town," he defended.

"Don't need it," I told him. "What have you for me to do? I wasn't up an hour yesterday all told."

"Well, Captain Fould was asking for one more trip with a camera man before we leave. I can't very well take chances with the regulars—it looks as though we'd find ourselves short-handed as it is—we had terrible luck last week and no new machines are in this week so far. What about using the triplane?" he turned a questioning gaze. "Will you chance it?"

I nodded. "Is it as serious as all that?"

"Well, the boches seem to be concentrating a lot of the Albatros type behind their line. They say they seem to be swarming about like bees, getting used to the place. Even Duval is worried, and he's pretty sane. I'd trust his judgment."

"I suppose it's those batteries over in the cut they're after," I ventured. "We didn't permit any reconnaissance work to speak of while we had that ground, and I guess the other escadrille has done the same. They've got to feeling that they simply must have a look around."

"Yes. But the worst of it is they're mostly painted in this new system of broken color—it isn't so much the effectiveness of the camouflage that's alarming as it is the inference that they are maneuvering as a fleet."

"I should say it would be well for us to move along."

"Oh, the air's too spotty for anything like formation in the middle of the day. I look for them toward the end of the afternoon. Then, if they come in along that turn in their line to the north, they can try to get the advantage of the sun. They say new Archies are going in on that side too." If Tommy could fly, what a flight commander he would make!

"Run out the experiment. I'll make her do. You want all the old reliables on call." I made my voice as hearty as I could, seeing he was really worried. "Bar that spark plug—I think it's cracked, probably—and cleaning up the rest of her points I was using entirely too much oil. My Spad's fit. What was it about Coffey's Nieuport? Do you want me to take her up and see how she handles?"

TOMMY smiled gratefully. For some reason he seemed to feel that having me try a machine out for him was the next thing to doing it himself. He's so nearsighted that if he ever did get up he'd never see where he could get down again. He'll take his airings in a penguin for choice.

"Don't bother, thank you, Bob. It was mostly nerves; he got jarred up a bit in a rough landing. A wire did need tightening, but I got it." Then he added: "Run along and report to Fould. I'll leave an automobile to run you over if we get started without you. Leave the triplane here—we'll be back in a couple of days, as soon as they build up the other escadrille to normal again." I knew he was pleased with me. He liked us to be keen on our work.

I found our flight commander with his nose buried in a mess of maps and photographs, and got my orders. Although I had never felt comfortable in the little triplane, I was perfectly confident of her this time, a little contemptuous of the disappointment of Hoskins, my photographer, when he saw to what he had been detailed. We sailed out above a fairly light drift of clouds, keeping hidden until I figured by my compass; and, allowing for a brisk breeze, it was high time to drop down for more accurate bearings. We found ourselves right on the spot, made our dash, and got a lot of good plates before the fire from below got hot enough to bother us. Unfortunately we were so occupied with what lay beneath the clouds that we forgot to keep in mind the specks which had been sailing to the northeast of us, patrolling the higher levels for just such game as ourselves. A spatter of bullets woke us to our error; the German must have been a new man at the game to open fire at such long range, for he could have crept right on our unsuspecting tail. I nearly went off on the wing trying to make a quick turn on that imbecile Dep control—it's the thing for the heavy, stable battleplanes, but not nearly flexible enough for combat machines. There being no room

# Hot, plunging strokes per minute!

**T**HAT'S what takes place in each cylinder in your motor—every time you drive. If your motor has six cylinders there are 13,200 piston strokes every minute—792,000 complete piston strokes every hour you drive.

That's what happens under the hood.

Is it any wonder that the heat climbs to 3,000 degrees at the piston head? Think what this heat would do unless these terrifically-heated pistons and cylinder-walls were protected.

That's where *Havoline Oil* comes

in. *It protects* the rubbing surfaces. Heat and wear and tear do not break down the protecting film of *Havoline Oil*. It saves lost power from gas escaping from the combustion chambers. It keeps your motor running sweetly. Your motor responds instantly to the extraordinary quality of *Havoline*.

If you do not feed your motor the best oil you can find, you do not give it a fair show. The owner of a thoroughbred horse would not feed him inferior oats or bed him in poor straw and expect him to win his races. Treat your motor as you would a blue-blooded race-horse.

Give it the best care and the best lubricants you can. It will pay you back with interest in cheerful, unflinching service.

*Havoline Oil* is scientifically graded into *Light*, *Medium*, and *Heavy*.

Keep your motor sweet-tempered by feeding it *Havoline*. You may find it necessary to drive your present car next year, and the year after that. The oil you use is important to the life of your car, whether you continue to drive it yourself or want a good price for it when you sell it or trade it in.

*Havoline greases are compounded of Havoline Oil and pure, sweet tallow. Clean to handle and correct in body.*

"It makes a difference"

## Smooth in Action, But a Brute for Work

That just about sums up the impression made by the BUDA ENGINE on one as familiar with it as its driver, whether in truck or farm tractor.

Except for its sturdy appearance, it would seem impossible that a machine which runs so smoothly could be so powerful or so enduring in severest use as the BUDA ENGINE.

The secret is in the careful BUDA manufacturing process, always putting "Performance before Price."

Made by THE BUDA COMPANY, Harvey (Chicago Suburb), Ill.

# THE BUDA ENGINE "HIGH CLASS"

**Crisp!**

OUR ENGLISH FOLK have adapted their cravats because washing is so hard. They have to go to the laundry and get them back so stiff and dry. Freshness.

Let's Cherry Silks and Cottons make the wash so easy that they can be washed at home. They are so soft and comfortable that they are perfect for the most delicate of skins. They are so light and airy that they are perfect for the most delicate of skins.

CHENEY BROTHERS

## Cheney Cravats

to go lower without interrupting the course of some very busy traffic on the part of those seventy lives, I zoomed sharply into the nearest cloud bank, and lost him.

Right there I nearly lost ourselves as well, for you can miss your bearings completely if the trip lasts long enough, with your compass spinning and your inclinometer trying in vain to keep up with your activities—with only your air speed indicator trustworthy, and that's not much comfort when you may be going the wrong way. But I burst through to a wind-swept level above the fluff and got my direction again without more interference. Our pursuer was not so green that he cared to risk poking his nose through on our trail when I might be better placed to give him a proper reception, so I had nothing on the home trip to interrupt venting my feelings on the machine.

She was a puzzle to me. Stable in many ways, she still made curious disconcerting motions in the air, like an automobile with a crimp in her steering rod—I could never make out whether that was an intrinsic fault in the design or merely some idiosyncrasy on the part of the individual. Now she seemed to have developed a decided weather helm. I made up my mind to recommend her as an addition to the scrap heap.

As I circled into the wind for a landing I could see our fleet winging their way across the autumn landscape and the string of camions and automobiles creeping caterpillarwise along their wake. Tommy was waiting for me. The triplane landed beautifully—so well I was afraid he would scarcely credit my evil reports of her behavior until his anxious face showed me that something was obviously wrong. I climbed out to find our boche had made a pattern on the lower plane in his one successful raffle that would have gone hard with us in any other make of machine. Tommy stood there poking his screw driver through a hole in the strut and biting the edge of his mustache, refusing to be cheered by the score it made for his pet theory, though I assured him I was born to be hanged, the one death an aviator needs fear the least. I fairly believed it too. However it may look to the man on the ground, every narrow escape seems to give you a stronger faith in your chances when the next pinch comes.

Just the same I felt the strain of it. By the time we were settled down in our old quarters my nerves were raw. The deadly wait in a growing tension as the time slipped by irked me unbearably. The incessant bursts of firing from one battery or another were like listening to some everlasting argument by disputants of stubborn mind and irascible temper; I longed for the silence of my whirring motor, far above the din. Relaxation was impossible; the only occupation I could stomach lay in watching the sheet signals, on a distant hillside, where a telephone squad was transmitting to some battery the directions of one of the Caudrons, which floated like some huge vulture, awaiting, with abominable patience, its ever-increasing meal.

Suddenly the recall signals were displayed, the Caudrons left their posts, and almost as they turned we got our order to go up. Flynn, who had been on "outpost duty" in the higher levels, came diving through the cloud floor before half of us were in the air. This brought another delay. I eased myself by bending the Spad, like a polo pony, getting back the feel of my joy stick, enjoying the exhilaration of her speed.

Now Fould was out ahead, and the whole fourteen of us spread along behind him, following his ascent. The clouds were lighter than in the morning—broken, too, by a rising wind. By the time we were up about 12,000 feet there was quite a gale blowing and we quartered across it like a corps of crabs, keeping safe distance for fear of a possible crash. It was less troublesome than it might have been, however, for the air seemed blown fairly clear of "remous."

FROM here we could catch glimpses of the enemy fleet, advancing in two formations, one straight to the westward, and the other rather more toward the south. On account of the camouflage their numbers were indistinguishable at that distance, but I judged from the way they covered there must be five or six in each, although, coming straighter into the wind, they might be flying in closer order than we. Their position seemed a trifle more than considerate, from our point of view, in recognition of the fact that we knew their headquar-

ters lay to the north of their present line, and that the resulting encounter seemed about to take place unnecessarily near the protection of our own guns. Besides, the wily Hun does not sacrifice the advantage of the sun.

I WAS just beginning to worry over these observations when Fould pulled off one of those maneuvers which seemed to be based on nothing less than second-sight. He took a swooping spiral of four thousand feet, then headed north along the enemy lines to where eight more combat machines were coming up with the intent to close in on our rear. We never gave them a chance to rise. Full strength we poured in upon them, cutting them off from their retreat and forcing them beyond the support of their own anti-aircraft guns.

They hadn't a chance of recovery. I had stopped back of the rush with Throgmorton, whose engine was giving trouble; now we took a climbing turn to the east and came into the melee from the flank with our Vickerses pouring into the nearest two. His victim went down in flames—we were too close to miss—but mine, although it swerved and began dropping, looked doubtful. I followed down until it began turning over and over, past all manner of doubt. An enemy who had disengaged from the flight above by spinning suddenly flattened behind me. How I blessed the Spad! She answered like a part of my own body, and he flashed past without touching me. Before I could maneuver for a return one of our men opened on him from a longer range, and he went on down, still in control but evidently through. We were too close to the Archies by then to make following look profitable, so I circled back to the scrimmage that was working back up toward the higher levels again.

This gave me a chance to breathe—my first since the struggle commenced. Everything seemed to be happening with inconceivable rapidity, speeded to the tune of our racing hearts. Even then we had no time to spare, for their reinforcements were only a matter of moments distant. I saw Fould disengage and rise to reconnoiter as an Albatross engaged me. We were a pretty even match, getting in inefficient raffles which did no real damage, neither of us able to get the other at a serious disadvantage, though we kept drawing away farther than I liked from our own fleet. An unexpected twist, and I had him at last, full broadside; a second more and he would have been done for—and my gun belt jammed. How I cursed that vile cotton tape, such a weak spot in material as has so often set ability at naught and sent many a good man to his death!

I HAD no chance to make any move toward freeing it. He sensed the trouble immediately and closed in. My Lewis was empty and I had no chance to change its drum. Now my escape became a sheer duel of speed and skill. Whirl and dodge as I might, he followed like a hound on the trail. Twice I heard his bullets spatter, and twice, by a desperate twist, evaded the deadly stream. The speed of that machine! That was where he had me; it overcame the disadvantage of his slightly slower coordination. The end was inevitable.

Presently I found myself awaiting it—almost impatiently! Yes, you do after a little of such a strain as that; your head tightens, your breath comes hard, you can scarcely distract your attention from that terrible pounding in your ears; it presses so hard you cannot swallow, no matter how your dry throat aches. And your hands—your hands which hold your fate, cling clammily to your joy stick as though paralyzed to that grip, while your feet, following some early habit pattern of their own, go on turning and twisting you as your body sways, though your brain has long ago forgotten them. Such torture makes the thought of death endurable.

Speed, speed was all I could think during those first hot moments; then I knew one other chance—the wretched, dreaded "tail spin" which follows when the beginner makes his fatal slip, the destruction that has been salvation to many a fighter in such case as this. I checked my engine and threw my Spad into her turn; she caught. I felt her follow along the curve; no nose dive can come down as fast as this. If he could catch me now? At last it came—a burning flash which seared my side, and the warm rush of blood.

How I righted I never knew; habit again, perhaps, for the Spad has too little equilibrium to be trusted to right herself as many machines will do, even

# YALE

## Yale—**YALE** Made to serve Built to endure

And as our guarantee that every Yale product will serve you best and endure under all conditions of use—it has the trade-mark "Yale" on it.

Today you need the protection and security of the Yale trade-mark more than ever. You must be sure that your locks and hardware will fulfill their purpose. You must make certain that the lives and property in your keeping are safe-guarded.

You need the dependable, un-pickable Yale Night Latch; the tenacious, staunch Yale Padlock; you need the protection of decorative Yale Builders' Hardware; the security of Yale Cabinet Locks; the comfort of the Yale Door Closer.

And when you go to buy the Yale product you need remember this: see the trade-mark "Yale" on it. That makes your buying easy; it makes your satisfaction sure. The trade-mark "Yale" is never left off any Yale product.

in such a case, if you leave them free; perhaps it was only some happy twist of the wind. I was not thinking of such things now. Nor was I thinking of my past. I was living too intensely in the present. One thing only I knew. He had me; I was done! And should he then escape? Rage swept my head clear, spurred my lagging strength anew. I charged directly at him.

THAT his game should turn on him—it took an instant for him to grasp the thought. That instant was his doom. I meant to crash head on, the suction of our propellers holding us to certain annihilation. He guessed it while he still had time to turn. But not to clear himself—the wind was at my back, my engine racing full; he dropped his nose in the effort to pick up speed as I pounced on him.

There came a wrench; it sent me spinning and diving. I guessed I must have fouled him with my alighting gear. Then I glimpsed him falling, his upper wing crumpled as though snatched by some giant hand, his tail swung awry. This main had been fought as eagles ought to fight—the black one, too, had his mortal wound.

I turned my Spad for home. How hard, how desperate hard it was to drive! I ached with weariness, my body seemed continually falling forward on the stick, my feet could scarcely endure the pressure of my weight, heavy, heavy from my ebbing strength. The rudder bar seemed fairly to cut into them. And yet my belt was holding too: it crushed my wounded side until my fumbling fingers cast it free. My eyes filmed. Some other sense than sight drew me earthward, warned me when it grew near.

The earth! The warm, brown, steady earth. I had never dreamed what it might mean to me. My clothes, my shoes, were soaked with blood; I was far beyond the lines, with no help near—why should I want to reach the ground alive? Only to feel the touch of earth again, beneath my weary head, as I waited for my life to ebb away.

I pulled myself together despairingly. How I wished for the triplane now, not the undersupported racer I must bring to that earth at ninety miles an hour. I loved my Spad, but her tantrums frightened me; she seemed so headstrong. I could not make up my mind to act, but away inside my head a little voice was giving sharp commands. "That field! No, circle. The wind's the other way—see the smoke from that chimney! That's right; now shut the motor off. Redress, redress!" It gave me courage. One moment and I should have what I wanted—the feeling of the earth once more.

I MISSED it. I felt the stick twitch from my slipping grasp; something tossed me—and the next thing I knew was the hospital smell, the narrow bed, the dull throb of nerves just awakening from a shock. People were there—they meant nothing to me—just figures in a dream. Time passed. I seemed no part of the life which went on around me—I who was done with living, waiting release from my ruined flesh. The care they gave me seemed a waste of time. All that was left me was a vast patience to endure until the end. Why must it be so long?

Then Tommy came, just as I knew he would. His long, dark face was lined with the marks of the life one lives by hours instead of normal years, aged since I saw him last, even—when had that been? For in this backwater there was no time! The war swept by us undisturbed. We paid no more attention to its distant sounds than to the sicker of the autumn rains on our windowpanes. I wanted him. And I wanted that letter still. I had to have it. And I had to tell him how I had come to know all Harriet might mean to a man—all I had cheated him of, as I saw it now. And I must be sure that things would come right now—that would bring the absolution I needed to die content.

He forced a smile. "I've had the devil of a hunt, Bob. Don't you know your way home yet? What do you call that style of fighting? 'Rough and tumble'?"

"Giving the gaff," I answered grimly. "When the eagles mix it's some main, isn't it? What happened after I left?"

"Oh, there were only two that managed to flap home by the time reinforcements arrived, and it sort of disarranged their plans, apparently. They didn't linger long."

"Any more of us winged?"  
"Gracie. They splintered his blade."  
"Did you find the Spad?"

He assumed a judicious air. "I be-

## You're at Attention—Men!

"Right dress!—Count—off!—Squads right!—Left turn!" The military manuals become our year's best sellers.

What's this? Democracy a-spreading o'er the earth! Your Uncle Sam a-summoning his young men to the front!

How can we help?—we who are left behind?

No end of ways! Here's one I think of quick—like *that*!

Stop puffing *over-strong* cigars that dull efficiency and weaken your physique.

No—not "swear off"!—but smoke a milder brand—a "meet-you-half-way" smoke—like Robert Burns!

How is this efficient mildness brought about in Robert Burns?

By *blending* and *curing*.

His Havana filler gives him fine flavor. Our own special curing gives that Havana rare mildness. The neutral Sumatra wrapper *helps* that mildness.

Thus Robert Burns keeps mild for efficient men who fight—and efficient men who do their bit at home!

*Have you tried one lately?*

Remember that Little Bobbie is a small edition of Robert Burns ten cent cigar.

(Exact Size)

Here both of those last spark plugs can be used again—possibly that gasket we just put in! You must have crumpled your landing gear. You only ran a little way."

I nodded, remembering. "Tommy—get a paper," I demanded. "I want to draw up a—well, a sort of a will."

"What's the matter with the one you drew up before you came away?"

"That's only my worldly possessions. I want to will something this time that I can't give just that title to. The same legal procedure won't quite cover the point. I want to will you and Harriet to each other. You've always been her right hand—I know how dependable I've been; she'll need you more than ever now."

"You might leave that to her. You know I'll do anything in the world she wants to ask."

"This is the thing she never would let you know. Perhaps that's why I was put here—to bring you two together. You self-sacrificing folks have to be coerced into your rights. You feel happiness is almost immoral, I believe." It would be worth while having lived, I thought, if I could only be sure of this ending. "I want you to marry her."

Tommy put his hand on mine. "But, Bob, where do you come in?"

"Count me out. I'm done for. But I want my satisfaction in seeing you two content. You can give her everything I failed her of." I wondered why they hadn't already told him.

"Good nerve!" he answered, his grasp strangely tender. "Only she won't, you know. She's never thought of anyone but you that way. She couldn't now."

"She must!" I cried irritably. What was the use of dying if the wrong would not right itself—if it was too late to mend my mistakes? "I'll make her understand. Have you your pen?"

HE hadn't, but a youngster a couple of beds away offered his, and a pad with it. I noticed how glad he seemed at having anything to offer. How little it was beside what I had to give! "I, Robert Deming, of sound mind, do bequeath my wife—write it, Tommy. She'll understand me, even if you don't."

"Bob," Tommy's voice was very, very gentle. "You aren't dying. You're out of danger."

"I am," I insisted. "I'm dead already below my waist. My feet—"

He groaned. "Oh, I hoped you knew. That's what's the hardest for you to bear: they're numb. It was the fall. Your wound is healing well."

"I got it. You mean I'm crippled?"

"Yes, old boy."

"For life?" It was my disembodied self asking how long it must be quartered in that ruined hermitage lying on the cot.

"We hope not. They do marvelous things these days." There was no real assurance in his tone. "But you have so much left—so much to live for. Listen; I can read that letter to you now, and then you'll know how little this counts. There's so much beside that hope for you."

I didn't hear. His pistol, at his hip, filled my eyes. It was all I could think of now. Right there, almost within reach, that held my problem solved. If I could hold my hand from shaking—if I were ever so gentle! He moved to get the light on the sleazy sheets and I touched the holster catch. It slipped—tensely I drew the old "Cat" out. He was reading in a low voice. I could sense the feeling of it, but the words were not reaching me. At last I was done with everything. I dragged the Colt across my pillow—I had forgotten how heavy these guns were—and leaned my head to meet the cold muzzle. My fingers sought the safety catch—

Then Tommy's hand swept back, before he even turned his eyes. I had forgotten the youngster; he told.

"Not this time!" he exclaimed. "How could you? How could you?"

"It's the thing to do," I insisted. "I have the right."

"Bobby, Bobby, you haven't learned a thing. Your right is still to you the thing you want, regardless of anyone else."

"You damned sentimentalist!" I snarled. "Would you want to exist, just a worthless cumberer of the earth?"

"Well," he asked with an obvious struggle after patience with my infirmities, "why need you be? Your mind's all right, though you don't act like it just now. Why not try living in that for a while? You simply enjoyed living in your body so completely you wouldn't think—that's what's been the matter with you."

"Just a wreck—a miserable, useless bulk, a millstone for you two. You may

enjoy martyring yourselves—think what my side of it would be!" I ground my teeth, wrung as I never had been by bodily suffering.

"Useless? And you with a tongue that would wile a bird off a bush, and us with all sorts of needs coming up that we have to beg for! And Washington just going at loose ends for want of men with exactly your experience to keep them straight, and all those experiments I want worked out over there."

Tommy got fairly carried away with his own eloquence. But he couldn't hypnotize me. The bit that the most willing man can do is very, very small.

"Don't pull any of that hero stuff on me," I ordered. "You know I can't go back. I couldn't even if I were able to offer something—I forfeited whatever rights I had there. I'm no duty of Harriet's now, and, by Heaven, no one's going to impose me on her again—not even you!"

"Impose!" he shouted. "Did you hear one word I read you?"

I shook my head. His gesture of despair made the man on the next cot laugh. He ruffled the paper in his anxiety to reach the exact sentence which would refute me. "What's the use of waiting—you know his silly pride. The more wrong he feels the stubbornner he gets. I wasn't the right one for him—but, oh, Tommy, I never saw any other woman who would have understood him the same way—nor anyone who really loved him so. His very faults and weaknesses—dear human, natural sins, so much easier to bear with than the complacency of conscious virtue, for he always awakes to them at last—are just a part of what I love in him. Do make him write me. I don't care what he says. My Bobby defiantly conscience-smitten, or Bobby contritely affectionate, or even just whimsically oblivious to the past—he's always the same to me."

I put up my free arm to hide my face. It shamed me to think how often I had played those parts; but before I had time to plunge into the depths of remorse which awaited me, I heard Tommy's low voice reading on. "Don't tell him about me until he really must know. It's much better to let him make good since he has his heart and soul in his work—better for him, I mean, though sometimes it seems as if I could not go on facing it out alone. I do want him so." Tommy folded the page. "That's all which concerns you," he said in his natural tone.

"Facing what out? Tell me what?" I demanded. "I don't understand. What must I know?"

"That you have a baby coming in November." I could feel his eyes searching me, imploring me not to disappoint his faith in me. I was stunned. I could think of this for others, but never before in connection with myself. I had never believed I wanted children—they tied one down so! Now that I was inextricably bound, this opened up whole new vistas for living. This would make the future endurable. This little new life, with so many of my possibilities for good or ill, mine to live vicariously! It startled me to think how little I had learned, how ill equipped I felt to help it find those truths I had missed till now. I wanted to think, to understand the reasons for my mistakes so I might be on guard in its behalf. And Harriet—with this new gratitude I longed unbearably to be there, atoning to her in every deed and thought. No longer was it her tenderness I sought—I wanted to give, give, give. And with that longing came a sort of happiness that I was free to go—even at this cost.

WORK, work of which I knew the burning need, love, and that wonderful link with the ages yet to come—these things I had—what was my body now? The stone to whet my spirit on, keeping it edged for worthier use; the adversary who would make me fit for honest struggles.

"Did you cable?" I demanded.

"Only that you were hurt."

"But you didn't write her details?"

"I wasn't sure of them until now."

"Then don't. I want to go home right away. I want to break this news to her myself. I don't want her to hear until I can be sure of making her understand that some way I'm almost glad it's turned out so. I want to have her know the finer things we've gained, make her see how differently life looks once one is out of it."

"Above it, Old Eagle," Tommy choked, squeezing my hands. "Above it."

And I saw I had a struggle ahead if I would keep above it; but my mind had shed its burdens; it felt fit to soar.

## The Northwestern Front

Continued from page 11

"Well, there's that," I said. "But you could certainly have described that to me without making me climb up here."  
"Oh, yes," said Hitchcock. "But I wanted you to see it. Look around. And remember how you got here."

I began to see the point.  
"How do you get those logs to the road?" I asked.

"That's just it," said Hitchcock. "Here it's easy. We'll cut a real path through the woods and drag them down with a team. But it's no trick at all here. I might have taken you to a place where you'd have had to travel three miles through much worse going than we had to find the tree nearest to the road. And there is spruce we have to have that is a lot more inaccessible than that. We'll get it out in various ways. In some places we'll use donkey engines to drag it along by a cable. And we're building a lot of railway, as I told you."

### Through a Virgin Forest

IT is the selective logging, the picking out of one tree, on an average, to the acre, that complicates the problem so much. In commercial logging, you see, the timber is cut and the ground cleared, inward and upward, from the road, or from water, or the railroad, or whatever the means of transportation may be. Getting the logs out over the cleared ground is easy enough. The spruce Hitchcock is riving has to go out through a virgin forest. And even after the trunk of a tree from six to twelve feet in diameter has been rived into two or three logs you still have a considerable problem to solve!

We slid back through the woods down to the road, and went back to the contractor's mess house for lunch. There is discipline in the woods, but it isn't the conventional army discipline, and I suspect that it would make a West Pointer weep. There isn't any saluting, except between officers; and the only part of their uniforms the men wear—and so the only thing that distinguishes them from the regular employees of the contractors—is a campaign hat with the orange-and-white hat cord of the Signal Corps. And—officers and men, at the camp where I ate lunch, sat down together with a wholly engaging informality. In some of the larger camps the officers mess together, when there are several of them, but where there is only one, as was the case at that camp, with twenty-five soldiers under him, he eats with the men.

A lot of people have talked to me about how that sort of thing has pleased and surprised them in the French army. Disque's division is proving that it will work in the American army too, without subverting discipline in the least. Incidentally, it was an extremely good lunch that we ate—and a Hooverized one. Colonel Disque had just issued an order establishing all the Hoover conservation rules for the division.

After lunch they dragged me up another "path" to see a spruce tree felled. I wanted to see that, and was a willing victim. Lieutenant Meyer, in command, who confessed that it was all nearly as new to him as it was to me, went along, and we climbed and slithered our way up a hill as steep as the side of a house to where a tree was awaying, having been nearly cut through.

### Crashing and Smashing

IN a way, you know, I believed that these people knew just how that tree was going to fall. That is, my reason convinced me that they knew. But the way you feel when two gentlemen are sawing through the last inch of a tree 120 feet high, and you are watching them from a distance of 20 feet, has nothing to do with pure reason. However, they were right. The tree fell away from us, just as they said it would. And what a row it made, to be sure! It went crashing and smashing its way down, through lesser trees and all sorts of junglelike obstructions. I suppose a sight like that can grow commonplace, but it is mighty impressive the first time you see it. And I thought of how that tree had chanced to begin growing in that spot, two hundred and fifty years ago, to live and flourish until that moment. By the time you read this, wood from that tree will probably be nearer the sky than even its topmost branch ever was before! And it may be, you know, that a bomb dropped from an airplane into which that tree's wood has gone will play a decisive part in winning this war. . . .

The tree fell right along the alleged

Food will win the war—Don't waste it  
UNITED STATES FOOD ADMINISTRATION

# HEINZ Vinegars

Every worker in a fresh uniform every day is an index of the spotless cleanliness that prevails everywhere in the Heinz establishment

57

In bottles filled and sealed in the HEINZ establishment

Malt, Cider and White, in pints, quarts and half-gallons

EVERY drop of Heinz Pure Vinegars has been aged one year or more. Aging is as necessary for developing the flavor and aroma of good vinegar as it is for many vintages.

Heinz Vinegars are made from the purest and choicest materials. They are mellowed in wood until they become appetizing and delicious condiments. They make good foods better, and make palatable many foods otherwise flat and tasteless.

## As a Food For Children

Grape-Nuts has long enjoyed popularity.

Its sweet, nut-like flavor appeals to the growing child's appetite, and its wholesome composition of wheat and malted barley make it a "builder" of highest grade.

## Grape-Nuts

is so processed that it provides the greatest nourishment in the most compact form.

It is easily digested, and furnishes those wonderful phosphates of iron, phosphorus, calcium, etc., so essential for health, steady nerves and keen brains.

Grape-Nuts is attracting special attention these days, for it is considered by many as the ideal blend of wheat and other grains and is thus in tune with the times as a wheat-saver, while its self-developed sugar, from the grains, makes it of added value as an economizer.

"There's a Reason" for Grape-Nuts

# AJAX SHOULDERS of STRENGTH

More Rubber  
Where It  
Should Be

**SEE** the supporting shoulders that uphold the tread—brace it against attack, insure elasticity, enduring strength. These Patented Ajax Shoulders of Strength are your car's real shock absorbers. They carpet the road. They are mile-makers.

**Ajax Road King**, in thousands of miles of severest tests, has proved its marvelous stamina. Its triangle barbs have unusual "holding" quality. Its Shoulders of Strength mean more tread on the road—longer wear because road friction is distributed, and does not come in one spot to wear through to the fabric.

**97% Owners' Choice.** That is why motorists by the thousands select Ajax Tires to take the place of other makes that came with their cars. Of Ajax output 97% is singled out by car owners to replace tires first on their cars. Ajax Tires are Guaranteed in Writing, 5000 Miles.

Get in touch with the Ajax Tire Supply Depot in your town—headquarters for Ajax Tires and Tubes and real service. Write for our booklet on Ajax Shoulders of Strength.

1796 Broadway

NEW YORK

path we were supposed to slide down to reach the wood. So we walked along its trunk, and Disque took a picture of Hitchcock and Meyer and myself, balancing ourselves upon it. And when we got to the top branches we only had to drop about a dozen feet to the ground, and then slide about fifty yards more to reach the road. Very easy; child's play, in fact. Hitchcock said so.

When we got back to the road and the Ford Hitchcock insisted upon driving. He said Disque didn't understand the finer feelings of a Ford. The difference between them as drivers was that Disque sometimes remembered that people have been known to be hurt when an automobile is upset as the result of reckless driving. . . . But we got back to Seaside, somehow, and Mrs. Disque gave us tea, and we took the train back to Portland, and, on the way, Hitchcock told me about the Royal Legion of Loggers and Lumbermen.

## The Loyal Legion

I SAID before that Colonel Disque attacked the labor problem in two ways. In fact, he delivered three parallel attacks. One consisted in sending soldiers into the woods to supply actual deficiencies of men. Another was the organization of the Loyal Legion. And the third attack was upon bad working conditions—which involved argument, to put it mildly, with the big employers, the lumbermen.

I hope, in another article, to go pretty fully into conditions in the woods of Washington and Oregon, and to write a good deal about the I. W. W. Here let it suffice to say that, when Colonel Disque went West to solve the problem of spruce production, he found practically open warfare between employers and men. There was a dying strike; it was being succeeded by "conscientious withdrawal of efficiency" and the "strike on the job." The I. W. W.

and mills. And every man who joined signed this pledge:

"I, the undersigned, in consideration of my being made a member of the Loyal Legion of Loggers and Lumbermen, do hereby solemnly pledge my efforts during this war to the United States of America, and will support and defend this country against enemies, both foreign and domestic.

"I further agree, by these presents, to faithfully perform my duty toward this country by directing my best efforts, in every way possible, to the production of logs or lumber for the construction of army airplanes and ships to be used against our common enemies. That I will stamp out any sedition or acts of hostility against the United States Government which may come within my knowledge and I will do every act and thing which will in general aid in carrying this war to a successful conclusion."

Up to March 1, 62,000 men had signed that pledge. They are living up to it; they met in Portland on March 4, and pledged themselves anew, through their elected delegates—with a whoop and a cheer for Colonel Disque. I. W. W. men haven't been barred; Colonel Disque wants them in. His theory is that the way to pull the teeth of the I. W. W. is to remove their just grounds of complaint. In some cases overzealous subordinates have failed to understand Disque's idea, and I. W. W. men have been ordered from the camps. But he does not want that, and stops it when he hears of such activity.

Lieutenant Crumpacker, through sanitary officers who are constantly making rounds of inspection, watches the health and living conditions in the camps. In every local there is a suggestion box, into which any man who wants to make a complaint may drop it, with the knowledge that it will go straight to Crumpacker in Portland and be answered by him in person. At first Crumpacker

## LOYAL LEGION OF LOGGERS AND LUMBERMEN MEMBERSHIP CARD

Signature to Certify, That

has become a Member of the Loyal Legion of Loggers and Lumbermen for the duration of the war by taking oath to devote his efforts to the production of Logs and Lumber for Army Airplanes and Ships, to be used against our common enemy, and to do every act and thing within his power to further the cause of the United States of America in the present conflict.

By authority of the Secretary of War.

No. 52460

*M. E. Crumpacker*

Lt. Col. Signal Corps, U. S. Army, Officer in Charge

Dated this

day of

Not a labor union but an organization of laboring men

theory is that long strikes don't pay. If the employers don't give in in the first sharp struggle, let the men go back to work. It's poor business to lose wages for a long time. It's better—argue the I. W. W. leaders—to slow up work, to do no more than eight hours' work in ten on the job, to practice certain minor forms of sabotage, and, generally, so to harass the employer that he will be forced to give in.

As a result Disque found that there was mighty little efficiency in the work of the men in the woods and the saw-mills. With the spirit that existed good work couldn't be done—wouldn't be done, at least, which came to the same thing. Seditious talk was rife. The argument that it made no difference whether German or American capitalists came out on top was used. Profiteering and exploitation of labor were charged against the employers.

Now, working conditions, in many parts of the woods, were just as bad as the I. W. W. said they were. Men slept in bad bunkhouses. They had to supply their own bedding, and, when they had to carry blankets around with them, from camp to camp, without proper cleaning facilities, these became infested with vermin. Wages were rising, but they had been low for a long time. Disque found that there was ground for many of the complaints.

He talked to the employers, and began, with certain reservations of his own opinion, to sound them on the question of granting the eight-hour day. And he organized the Loyal Legion of Loggers and Lumbermen, putting Lieutenant M. E. Crumpacker in charge of its organization. An appeal was made to the men in the woods and the mills to join, on the score of patriotism. Locals were organized, in logging camps

appointed the secretaries of the locals. There was some complaint about that, and now those secretaries are elected.

The Loyal Legion isn't a labor union, but it is an organization of laboring men, and it fulfills a good many of the useful functions of a labor union. It is a splendid patriotic force. It provides recreation—there are traveling moving-picture outfits that are taken from camp to camp, for example. And it has cleaned up a lot of the worst things about the camps.

But Disque went further. He kept hammering at the employers. He showed what decent treatment had begun to accomplish in the way of more efficient production. And finally, at the end of February, he won his big point. He induced the employers to grant the eight-hour day—a thing most of them had sworn the most solemn of oaths never to do! On March 1 the eight-hour day became universal in the woods of Oregon and Washington.

## Killing the I. W. W.

THE President's Mediation Commission reported, after its trip to the coast, that a condition of seething unrest still existed among labor in the lumber industries of the Northwest. That was true when that report was made. It is far less true now. There is still some unrest. The I. W. W. are still at work. But a lot of ground has been cut away from under their feet.

An I. W. W. said to me in Portland: "Remove the conditions that our agitator leaders denounce and you will kill the I. W. W. leader than a doornail."

That industrial worker and Colonel Brice P. Disque, U. S. A., are in complete and cordial accord. And Colonel Disque is a very practical man!

# Mitchell

Sixes

## This \$1250 Wonder-Car Proves the Mitchell Efficiency

**H**ERE is a high-grade Six—a leader among fine cars. It has oversize parts, big margins of safety, a wealth of costly steels. The wheel-base of 120 inches makes a uniquely roomy car. The engine is 40 horsepower, with cylinders  $3\frac{1}{4} \times 5$ .

It is a Six of the highest development. It has the Six smoothness, its versatility, its tire economy. Yet it sells at \$1250, which is much below other cars of like size, power and class. For superlative value it stands unique in the fine-car field this year.

### Meets Today's Conditions

We started this car a year ago to meet today's conditions, and thousands are now running.

We have aimed here to offset the rising cost of materials through wonderful factory efficiency.

We have aimed at a car to be proud of—big, sturdy, impressive, handsome and powerful. Yet a car which will meet today's ideas of economy. We have aimed to restore the class and prestige of the \$1250 Six.

### No Standard Sacrificed

This car has the Mitchell endurance, proved again and again by rendering over 200,000 miles of service.

It has the Mitchell over-strength, proved part by part in our rigorous factory tests.

It has our wealth of Chrome-Vanadium steel.

It has the Mitchell shock-absorbing rear springs

which never yet have broken. Its comfort will amaze you.

It has the Mitchell extra features. It has our new type steering gear which never tires the driver.

It has the Mitchell beauty and luxury, created in our own body plant. The finish coats are fixed by heat, so the luster is enduring. There are scores of dainty touches. It comes in five new-style bodies.

### Just by Saving Waste

You will ask how one car can so far excel in all that owners value, and yet sell at \$1250. It is due to saving waste. This car is our supreme example of scientific factory management.

We build the complete car—chassis and body in this model efficiency plant. This mammoth plant was built and equipped by experts to produce the Mitchell type economically.

They have worked for years here to minimize factory cost, to eliminate waste and to speed production.

The enormous savings show in this matchless value. Our profit has also been pared to the limit.

See this new car. You will find nothing comparable around this price in the fine-car field today.

The Mitchell line includes two sizes of Sixes, at two basic prices—\$1250 and \$1525 at factory.

### The Star Design in Club Roadsters

The new Mitchell line includes the most attractive Club Roadster yet designed. It is low, compact and racy and seats five. It will delight the man who seeks a striking type of roadster.

Built in two sizes at two prices—with 120-inch wheelbase and 127-inch wheelbase.

Mitchell D-40			
120-inch Wheelbase, 40-Horsepower Motor			
Touring Car	\$1250	Touring Sedan	\$1350
Roadster	\$1250	Club Roadster	\$1350
Coupe			

Mitchell C-42			
127-inch Wheelbase, 48-Horsepower Motor			
Touring Car	\$1525	Touring Sedan	\$1625
Club Roadster	\$1560	Club Sedan	\$1685
4 Pass Surrey	\$1625	Coupe	\$1725

Also Cabriolet, De Luxe Sedan, Town Car and Limousine, from \$1900 to \$2850

All prices f. o. b. Racine. Subject to change without notice.

Write for our catalog. Also for name of local dealer if you do not know him.

**MITCHELL MOTORS COMPANY, Inc., Racine, Wisconsin**

Ham	28c
White Fish	62c

## What You Buy

### When You Buy Food

#### First, you buy calories—the unit of nutrition.

In Quaker Oats you get 1810 calories per pound. In meats, eggs, fish and chicken—averaged—you get 750 calories per pound. So Quaker Oats excels there by 141 per cent.

#### You buy body-building elements and minerals.

As a flesh builder Quaker Oats is almost the same as lean beef. In lime, phosphorus and iron it is vastly superior to beef.

#### You buy palate-pleasing qualities.

No other grain food which Nature gives us can match Quaker Oats in flavor.

#### And you consider—or should—the cost.

In Quaker Oats you get 1000 calories for five cents. In meats, eggs, fish and chicken—averaged—those 1000 calories cost 48 cents. That is almost ten times as much.

Those are the overwhelming reasons for using more Quaker Oats. Make it your basic food. Make it the entire breakfast. Mix it with your flour foods to add flavor and save wheat.

# Quaker Oats

### The Doubly-Delicious Flakes

Quaker Oats won its world-wide supremacy by its exquisite flavor. It is flaked from queen grains only—just the big, rich, luscious oats.

We get but ten pounds from a bushel. That flavor makes oat foods doubly delightful. And it costs you no extra price. Get it.

Cost comparisons based on prices current at time of writing  
**13c and 32c Per Package**  
 Except in Far West and South

#### Quaker Oats Bread

1½ cups Quaker Oats (uncooked)  
 2 teaspoons salt  
 2 cups boiling water  
 ½ cup lukewarm water

1 cup sugar  
 1 cake yeast  
 5 cups flour

Mix together Quaker Oats, salt and sugar. Pour over two cups of boiling water, let stand until lukewarm. Then add yeast which has been dissolved in ½ cup lukewarm water, then add 5 cups of flour.

Knead slightly, set in a warm place, let rise until light (about 2 hours). Knead thoroughly, form into two loaves and put in pans. Let rise again and bake about 40 minutes. If dry yeast is used, sponge should be made at night with the liquid, the yeast, and a part of the white flour. This recipe makes two loaves.

#### Quaker Oats Sweetbits

1 cup sugar, 2 eggs, 2 teaspoons baking powder, 1 tablespoon butter, 1 teaspoon vanilla, ½ cup uncooked Quaker Oats.  
 Cream butter and sugar. Add yolks of eggs. Add Quaker Oats to which baking powder has been added, and add vanilla.  
 Beat whites of eggs stiff and add last. Drop on buttered tin with a teaspoon, but very few on each tin, so they spread. Bake in slow oven. Makes about 20 cookies.

#### Quaker Oats Muffins

½ cup Quaker Oats, ½ cup sugar, 1 cup scalded milk, 1 egg, 1 level teaspoon baking powder, 2 tablespoons melted butter, ½ teaspoon salt, 3 tablespoons sugar.  
 Cream scalded milk on Quaker Oats, let stand five minutes, add sugar, salt and melted butter. Sift in flour and baking powder, mix thoroughly and add egg well beaten. Bake in buttered greased pans.

## FIGHTING SNOW ON THE LINCOLN HIGHWAY

BY EDWARD MOTT WOOLLEY

NOW that winter is over, the snow fight on the Lincoln Highway stands out as an epic of our war preparations here at home. Only through heroic work has this slender but vital thread of traffic been kept open for the endless flow of army trucks and for the transportation of large quantities of munitions. Military emergencies early in the winter decreed that the impossible be attempted. Not only has it been accomplished, but it seems to mark the beginning of a new epoch of road utilization throughout the country.

In all this great Eastern country there was no other highway capable of heavy military traffic. Even the roads between Buffalo and Albany were unavailable because some of the bridges were not strong enough. On the Lincoln Highway alone was concentrated an amazing flow of motor vehicles, the great bulk of them moving eastward and never stopping day or night.

Some time, when the history of the war is written, the full story of this mighty procession may be told—the story of the call of the Government for the "rush" transportation, for example, of gas masks for our boys "over there." It was a long distance from the factories in Detroit, Cleveland, and Akron to the ships in Atlantic ports, and the railroads were in a tangle. Then our troops in France were desperately in need of the motor trucks themselves, and to get them to the waiting vessels by railroad would involve serious delays.

Thus the Government spotlight fell on the highways—closed by mighty snowdrifts and swept by blizzards unparalleled in weather records. There was only one thing to do—dig through those drifts, attack them with man power, horsepower, motor power! Open the Lincoln Highway and keep it open!

#### Day and Night Shifts

THE biggest part of the fight was in Pennsylvania, and there the Pennsylvania Highway Department handled the job for the Government. For 225 miles from Ohio to the Maryland State line, and also up to Philadelphia, its battle with snow was spectacular and unrelenting.

The Pennsylvania State Highway Department had told the Federal Government that it would go the limit, and when the winter came with a swoop, on December 7, it was ready. The story is unique in highway history.

One of the biggest problems was to get the men, and in Somerset County, for instance, it was often necessary to send sleighs twelve, fifteen, even thirty miles into the adjoining mountains, where men were recruited from the perpendicular farms of that wild region and brought to Stoyestown.

Despite the terrible cold—often as low as twenty-five degrees below zero—these hardy Pennsylvania mountaineers worked in shifts of ten hours without complaint. Day and night huge bonfires blazed along the road, where groups of men warmed themselves at intervals. Nevertheless there were many cases of frozen faces, hands, and feet. Men often worked for an hour or two without realizing that they were freezing, and heroic measures had to be taken to rush them in the automobiles of the engineers to local doctors. For a period of six weeks an almost perpetual blizzard raged; often it was impossible for the men even to see one another at close range. At night the work was done under the powerful searchlights of the department's trucks.

Along the whole course of the Lincoln Highway between Ohio and Philadelphia, and on the cut-off to Maryland, the average number of snow workers employed from December 15 to February 15 was between 1,200 and 1,500. On various occasions the high school at Chambersburg and Beaver Falls was closed and the boys employed. At the present writing, late in March, about 600 men are at work, cutting drainage courses and widening roadways through the lingering snow.

#### Two Days, the Longest Delay

WHEN the snow wasn't too deep the first operation was done by the tractors, using a road drag usually hauled by six horses. Following came road graders and scrapers, ordinarily drawn by horses but sometimes by tractors. Then came motor-trail snowplows, capable of handling snow to a depth of forty inches. These first operations contemplated removing the snow down to three inches of the road surface, and what didn't melt was afterward removed entirely.

First, a track was cut just wide enough for motor vehicles, with turnouts every 500 or 1,000 feet when possible. Afterward, if a fresh storm did not set in, the track was widened to sixteen feet, and the drainage taken care of. In places where the road ran along the verge of dangerous cliffs, broad protecting walls of snow were built.

In spite of the succession of storms the longest delay was less than two days, though some of the army troops were held in Pittsburgh several days because they lacked authority to use detours laid out by the Highway people.

Detours, sometimes involving engineering difficulties, were used in many emergencies. In the station beginning fifty odd miles east of Pittsburgh was a section more than twenty miles long that had to be hand-shoveled, and so fast did the snow drift that day and night shifts were unable to keep it off. Drifts of sixteen feet were not uncommon.

In another station a gale lasted several days, and although the snow on the mountains was heavily crusted, it blew away in fragments and piled into the cuts in vast heaps of pulverized ice so heavy that machine work was impossible. Then came a thaw and a freeze, and picks and crowbars had to be used. The workers in this gale suffered intensely from the blinding and cutting particles of ice.

#### Over Ligonier Mountain

ON one occasion a private truck in Government service, heavily loaded with gas masks, made a journey from Akron over Ligonier Mountain in the midst of the most terrific storm of the winter. Fifty miles east of Pittsburgh, in the night, it ran into drifts that hadn't been reached by the snow gangs. Backing and bucking, it forced its way up the long grade, followed by two other trucks also heavily laden. The first truck had to borrow gasoline from the other two, and soon after the three of them reached the top the gas was exhausted. The temperature was fifteen below zero and the radiators had to be drained. A big touring car was up there too, stuck in the snow.

Finally seven snowbound and nearly frozen men made their way a mile through drifts that were over their heads and broke into a schoolhouse where they built a fire and spent the night, supperless. These men were thirty hours without food.

BOSTON  
NEW YORK DETROIT CHICAGO  
SAN FRANCISCO

On another occasion an army truck went partly over an embankment and was slowly sliding toward the ravine when a Boston freighter hove in sight, coming up the hill with a noise like a railroad train. Some rapid work with sand, winch, and ropes saved the other from a tumble of hundreds of feet.

A driver of one of the individual trucks says he hauled a whole train of army transports, one at a time, up a snowdrifted mountain.

One line of private trucks ran all winter between Akron and Boston, equipped with monstrous pneumatic tires, winches, and sleeping berths. Each truck carried a double crew and ran day and night, the round-trip schedule, 1,540 miles, being eight days in normal weather. From Pittsburgh and other points trucks were constantly running to Philadelphia, New York, and New England.

It is impossible to estimate the tonnage of freight, Government and private, that went over the Highway through the extraordinary work of the snow gangs. In numerous sections of Pennsylvania and adjacent States coal famines and the shutting down of large industries were averted. Thousands of new automobiles designed for points north and south of the Lincoln Highway were able to get through, though delivery by railroad was impossible. Some of these cars, including trucks, made rather hazardous journeys on Lincoln Highway feeders to points far distant.

The Highway was used also by dozens of cars belonging to "dollar-a-year" men and others whose business called them to Washington and New York for prolonged stays. Usually these cars were sent in charge of chauffeurs, but now and then the owners and their parties were aboard.

#### **Training Motor-Truck Companies**

THE system for conducting the work was established by the Maintenance Division of the Pennsylvania State Highway Department, under State Highway Commissioner J. Denny O'Neill. In direct charge of the work was George H. Biles, second deputy commissioner, and the field organization comprised the engineers, the superintendent of highways of each county, gang foremen, patrolmen, and laborers.

Sentinel or patrol duty was performed by the thirty-four caretakers who live along the Lincoln Highway in Pennsylvania. The Highway Department in Harrisburg received reports from them constantly by telegraph or telephone, and any unusual condition anywhere along the route was known at headquarters within an hour. The department was in constant touch by wire with the Weather Bureau at Pittsburgh, and the moment a warning was received squads were dispatched to the danger stations.

Daily reports of road conditions at important points were published in the newspapers along the way.

If reports showed that conditions remained bad for twenty-four hours in

**What every soldier needs.**

## **The AutoStrop Razor**

THE right razor is as much a part of a soldier's necessary equipment as the right rifle. Any razor won't serve under the conditions he will meet over there. He must have a self-contained, self-maintaining outfit that will be always ready, always dependable, no matter how far he may be from his base, no matter how long he may be away.

The AutoStrop Razor is its own base of supplies. It does not depend on the camp stores for a fresh supply of blades every few weeks. It is

**the only razor  
that sharpens its own blades**

You don't have to take it apart to clean it or to strop it. It keeps free from rust and in perfect condition. And the twelve blades in the set will give at least 500 clean shaves.

## "I resolved not to die without a fight."

On my desk the other day came a letter. A man had given up. He had crawled into bed to die. By mere accident some literature came to his hands—what he read should have given him hope but he was faithless. The writer was Ned Fay, of Seattle, Washington. Let me tell you what he wrote:

"I had been a total physical wreck for over 10 years, suffering from rheumatism which resulted in arthritis deformans. Four years ago I was lying in bed in the county hospital in Seattle. I had given up all hope.

"As the merest accident I was given some Physical Culture magazines to read. I became interested in Senator Ben Tillman's article, and continued to read everything in all the Physical Culture magazines I could find. This gave me hope and I resolved not to die without a fight."

Then he tells how "in the face of ridicule" he began to build up his body, and in one year left the institution and went to work.

He ends his letter:

"I am in better physical, mental, and moral condition than I was 20 years ago."

This letter is typical of hundreds of others that have come my way. They come from men and women who finally discover Physical Culture, who follow for a time Physical Culture's methods of body building, and who lift themselves out of the ranks of the weak and unfit.

They come from men and women driven by pride and patriotism to help their country and thus to help themselves.

The science of physical culture is the science of the ages. It is the same theory that gave the North American Indians their energy, strength, and driving power. It is the idea upon which the armies of the Allies are being modeled. Applied to you it will make you among the fittest. It will increase your physical power and your thinking power.

Each issue of Physical Culture will stimulate, inspire, will make you want to do bigger things. Each issue is a feature issue. February contained a health sermon from Theodore Roosevelt, which gave some heretofore unknown facts about America's most interesting personality. March told how Woodrow Wilson, by Physical Culture methods, worked himself into a 100% physical state of health. This in spite of the fact that Mr. Wilson went into the White House in the most unhealthy physical condition of any man ever called by this country to assume the duties of Chief Executive.

Each month there are absorbing articles by such masters of their subjects as: Dr. Frank Crane, Alfred W. McCann, Mrs. Woodruff Chapman, Thomas L. Mayson, Bernard Macfadden, Upton Sinclair, Horace Fletcher, and a host of others, all able, all skilled, writers. Matters of ethics, diet, of outdoor, of sex instruction, venereal diseases, and other intimate and pulsative problems of life are discussed in such a way as to make Physical Culture the most necessary magazine in America.

The nation cries out for men and women—strong, enduring, resourceful. Decide now that you will be ready to take your place among the "live," active workers at home or in the trenches.

Here is an opportunity to prove to yourself that you can possess that magic touchstone—health.

Bernard Macfadden, the founder of Physical Culture, one of the leading authorities of the country, has written a book crammed full of helpful suggestions for every man and woman who would be energetic, enthusiastic, capable. He calls it "Vitality Supreme."

If you send in your subscription now, a copy of this book containing two hundred and sixty pages and fifty-eight photographic illustrations will be sent you without charge.

You don't have to write a letter. You don't have to send the \$2 now. Simply sign the coupon below so that the current issue of Physical Culture and "Vitality Supreme" can be sent at once. Then when you get the opportunity send \$2 in one, two, or three months. Earn the right to be happy! Solve with one stroke of your pen life's biggest problem. Don't let success get away from you this time. Act!

—COUPON—

PHYSICAL CULTURE PUBLISHING CO.

At your own risk you may enter my subscription for one year to Physical Culture, starting with the current issue, and send me Bernard Macfadden's "Vitality Supreme." I agree to remit for it in full within three months if fully satisfied.

Name

Address

Send me length your subscription with the issue containing articles on Colonel Roosevelt and President Wilson.

When you can remit \$2.00 and the amount will be refunded if not received you have received ten times the value of your money.

\*This special offer is strictly limited. \$2.00 bills only being on the top of this stack is 10.

any station, the department hurried one of its engineers there, and if necessary reinforcements were rushed. The reports showed in detail what trains of army trucks had gone through the various sections, and what difficulties they had.

Reports by wire were confirmed by mail, and at intervals a man from the Harrisburg office was sent clear across the State by automobile to check up. One result of this system of reports has been valuable information concerning the extent, location, and depth of the drifts and in the Harrisburg office all this has been tabulated and charted, and will be used this summer in constructing snow fences.

Aside from transportation, the open Highway has given the War Department opportunity to train motor-truck companies. The Government had been drilling officers and men in almost all the arts of war except handling motor-truck trains, and the War Department needed the Lincoln Highway for this purpose. In operating trucks close to the lines in France, and utilizing the roads up to a hundred times their normal capacity, the greatest coordination and sympathetic relations have been necessary.

The strenuous work this winter over the Pennsylvania mountains has given our American truck companies the very

training they needed. This summer it is probable that cross-country army trucking will be done mostly at night, under conditions as similar as possible to those encountered abroad.

### Open Roads All the Year

WAS this a costly job—keeping the Lincoln Highway open last winter? Not excessively so—the aggregate figures between \$100,000 and \$200,000. Automobile license money paid the bill. This license money was spent under the authority possessed by the commissioner to use it for emergency purposes, and the military necessities alone amply justified such use.

The Highways Transport Committee of the Council of National Defense, of which R. D. Chapin is chairman, hopes that before another winter the country will be thoroughly awake to the necessity of military roads. With the results on the Lincoln Highway as an example, it is believed that road officials, wherever it may be necessary, will have their plans laid to keep highways open. But aside from this, the old order is passing when the farmer was content to be snowbound from November to March. The war has done more than anything else to arouse men to the value of time. People all over the country are going to demand open roads, so far as possible, all the year.

## TARKINGTON

A YOUNG American who drove an ambulance in the Verdun sector during a week when ambulance drivers either died a sudden and violent death or got the war cross lay in a Paris hospital with a smashed shoulder. He was still very weak, but he was able to be amused. The American girl who had been nursing him paused at his bedside, noted his improvement, and smiled:

"What could I do for you?" she asked. "I have an hour."

"Would—would you read aloud to me?" "Of course," she said heartily. "What would you like—what would you like most?"

He smiled. "If," he said—"if you only had a short story by Booth Tarkington."

In a small suburb of Chicago there lives the proud and anxious mother of twin boys. They are now thirteen. During the past year the opinion has steadily grown that they are the worst boys in that town. Their mother has only a vague notion of how bad the neighbors think they are. But she has a vivid notion that twin boys are capable of more mischief than two boys; and until recently she often broke into an anxious discussion with the boys' father with the remark:

"Do you suppose there is anything in their inheritance that explains it?"

For to her the practical difficulties of managing the outrageous twins were as nothing to the spiritual difficulty of understanding how they could do the things they indubitably did.

Then one night her husband appeared with a volume of Booth Tarkington's short stories. He had read one on the train and he could hardly wait until the boys had gone to bed to read it aloud to his wife.

Before he had finished, they were both laughing with the delighted laughter of those who have discovered that boys are funny as well as bad.

"Oh," she said as she wiped the tears from her eyes, "they aren't degenerate, are they?"—she meant the twins—"they're just—just—"

"Just boys," he said.

A FRENCHMAN of distinction who was making his first visit to this country was put up at one of those very quiet clubs just off Fifth Avenue—one of those clubs where, at four in the afternoon, gentlemen whose hair has turned white, or disappeared altogether, gather to await the appearance of the

New York "Evening Post." Our Frenchman inquired of one of these gentlemen which American writer he had best read in order to get the true flavor of American life—the essence, he called it, of the American gesture. One gentleman after another laid his "Evening Post" on his knee to join the ensuing discussion. One suggestion after another was made until all but one of the men in the room had expressed an opinion. Finally the silent one, apparently immersed in the market reports, could stand it no longer. He lowered his "Evening Post" and peered belligerently over the top.

"Read Tarkington," he said in the voice of one who knows.

"Of course," said the others. "Of course—read Tarkington."

NOW, when the lonely young American lying wounded in France, and the struggling parents of twins, and the irascible old gentlemen in an exclusive club—to say nothing of tired business men, and literary critics, and bright stenographers, and women who have nothing to do, and people who go down to the city in subways, and high-school boys and girls—are all united in admiration of a writer, something has happened.

As a matter of fact, it has been happening for a number of years. Mr. Tarkington's first story was a charming historical skit—delicate, humorous, charming—"Monsieur Beaucaire." And ever since his skill as an artist has been conquering new fields, and his charm as a writer has been conquering new readers. To-day there is no man living who writes about boys, or dogs, or darkies, or young people in love with Mr. Tarkington's understanding and enthusiasm and humor. We are quite sure that no more delicious stories have ever been written than the series of six which Mr. Tarkington has just finished for COLLIER'S—not even by Booth Tarkington.

## Poker and Pipe-Smokers

Five men playing poker—hammer and tongs. Take away two. This incident concerns only the remaining three.

Smith loses a big pot. His laugh is nervous and he knocks over his pile of chips. Smith is smoking a long black powerful cigar.

Jones loses a big pot. He throws his "hand" across the room and calls for a new deck. Jones doesn't smoke at all.

Robinson loses a big pot. He tucks his "hand" quietly into the discard and never makes a yip. Robinson is smoking a pipe.

Why is it that pipe-smokers are almost always so self-possessed?

Because their nerves are in better trim.

That man's nerves are in the best trim who has finally found the particular brand of tobacco suited to his particular taste.

It is frequently a long quest—a quest in course of which a man makes many compromises. He smokes many brands of tobacco before he comes at last upon the brand yielding him complete satisfaction.

Then a burning face and a huge content. Life taken on an entirely new aspect. He enjoys his smoke. When things go wrong he has something to make them seem better.

When things break right, well—he enjoys his smoke. What more can be said?

Edgeworth Tobacco has proved itself to be the brand full many a smoker has long sought.

It may not be the tobacco especially suited to your individual taste. You may be more particular than they are.

Nevertheless it has delighted so many that its manufacturers feel no hesitation in submitting it to your judgment.

They intend to make it very easy for you to put Edgeworth to the test and learn if it is not the tobacco you like best.

Merely send them on a postcard your name and address, also that of the retailer usually supplying your smoking needs. Upon receipt of this card they will take pleasure in sending you generous samples of Edgeworth in both forms—Plug Slice and Ready-Rubbed.

Edgeworth Plug Slice is compressed to the consistency of a plug, then sliced by the sharpest blades into wafers, thin and moist when peeled away. One of these thin slices, rubbed between the hands, will load the bowl of the average pipe.

Edgeworth Ready-Rubbed, as is clear from its name, comes already prepared for your pipe. Tilt up the little tin canister and pour the tobacco straight into your pipe. Incidentally, it can be rolled into a most satisfactory cigarette.

Edgeworth is sold in convenient sizes to suit all purchasers. Edgeworth Ready-Rubbed in pocket-size package is 15c or two for 25c. Other sizes, 30c and 60c. The 16-oz. tin humidifier is \$1.15; 16-oz. glass jar \$1.25. Edgeworth Plug Slice is 15c, 30c, 60c and \$1.15.

When the samples arrive, pack the bowl of your favorite pipe to the brim, light up, and relax for a few minutes of complete enjoyment.

There is nothing on earth so good as at last chancing upon the tobacco that just suits you.

If Edgeworth proves to be your tobacco—well, the boys in the ramps and "over there" like nothing better than good tobacco. They know Edgeworth, but never have too much of it.

Matches and tobacco are valued even more highly than money in the front-line trenches and even in our camps on this side the man who has a little tobacco to spare makes the most friends. A tin-jar of Edgeworth makes a boy feel rich—and grateful.

For the samples, address Larus & Brother Company, 3 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants—If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-deck carton of any size of the Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

Edgeworth is sold in convenient sizes to suit all purchasers. Edgeworth Ready-Rubbed in pocket-size package is 15c or two for 25c. Other sizes, 30c and 60c. The 16-oz. tin humidifier is \$1.15; 16-oz. glass jar \$1.25. Edgeworth Plug Slice is 15c, 30c, 60c and \$1.15.

EXTRA HIGH GRADE  
SMOKING TOBACCO

## Too Gentle Julia

Continued from page 8

Julia nodded sunnily. "He dreamed that you and he were the very greatest friends!" This also was true so far as it went, but she omitted to state that Mr. Atwater had gone on to classify his dream as a sample of nightmare. "There!" she cried. "Why, of course he'd miss you—he'd miss you as much as he'd miss any friend of mine that comes here."

Noble felt a sudden rush of tenderness toward Mr. Atwater; it is always possible to misjudge a man for a few hasty words. But Julia went on quickly: "I never saw anybody like you, Noble Dill!" she exclaimed. "I don't suppose there's anybody in the United States except you that would be capable of doing things like going off to be an officer in the Chinese army—all just any minute like this. I've always declared you were just positively the most reckless man I ever knew!"

Noble shook his head. "No," he said judicially. "I'm not reckless; it's just that I don't care what happens."

Julia became grave. "Don't you?" "To me," he said hurriedly. "I mean I don't care what happens to myself. I mean that's more the way I am than just reckless. Of course, in one way, I suppose that is recklessness, and a good many people would say I was reckless; but that's the way it looks to me."

SHE was content to let this analysis stand, though she shook her head, as if knowing herself to be wiser than he about his unadulterated recklessness. A cheerfulness came upon them; the Chinese question seemed to have been settled by these indirect processes—in fact, neither of them ever mentioned it again. "I mustn't keep you," she said, "especially when you ought to be getting on downtown to business, but—oh!" (She gave the little cry of a forgetful person reminded.) "I almost forgot what I ran out to ask you!"

"What was it, Julia?" Noble spoke huskily, in a low voice as people speak sometimes in the hushed crises of life. "What is it you want me to do, Julia?"

She gave a little fluttering laugh, half timid, half confiding. "You know how funny papa is about tobacco smoke?" (But she hurried on without waiting for an answer.) "Well, he is. He's the funniest old thing; he doesn't like any kind very much except his own special cheroot things. He growls about every other kind, but the cigars that Mr. Ridgely smokes when he comes here papa really does make a fuss over! And, you see, I don't like to say no when Mr. Ridgely asks if he can smoke, because it always makes men so uncomfortable when they're sitting on a veranda, but I thought if I could just tactfully get him to buy something different from his cigars, and I thought the best thing would be to suggest those cigarettes you always have, Noble: they're the ones papa makes the least fuss about and seems to stand the best—next to his own, he seems to like them the most, I mean—but I'd forgotten the name of them. That's what I ran out to ask you."

"Orduma," said Noble. "Orduma Egyptian cigarettes."

"Would you mind giving me one—just to show Mr. Ridgely?"

Noble gave her an Orduma cigarette. "Thanks!" she said cooly. "I mustn't keep you another minute, because I know your father wouldn't know what to do at the office without you. Thank you so much for this!" She turned and walked quickly halfway up the path, then paused, looking back over her shoulder. "I'll only show it to him, Noble," she said. "I won't give it to him!"

SHE bit her lip as if she had said more than she should have said; shook her head as in self-chiding; then laughed, and in a flash touched the tiny white wand to her lips, waved it to him, and ran to the porch and up the steps and into the house. She felt satisfied that she had set matters right, this wild Julia!

The facts, however, were contradictory. Before she set matters right with Noble he had been unhappy and his condition had been bad; now he was happy, but his condition was worse. In truth, he was much, much too happy; nothing rational remained in his mind. No elfin orchestra seemed to buzz in his ears as he went down the street, but a loud, beautiful brass band. His unathletic chest was perilously inflated; he heaved up with strange joys; and a little child, playing on the next cor-

ner, turned and followed him for some distance, trying to imitate his proud, singular walk. Restored to too much pride, Noble became also much too humane; he thought as constantly of Mr. Atwater as he did of Julia, and felt almost a motherly need to cherish and protect him. There was a warm spot in Noble's chest, produced by a gush of exalted love and humble yearning toward that splendid old man. Noble had a good home, sixty-six dollars in the bank, and a dollar and forty cents in his pockets; he would have given all for a chance to show Mr. Atwater how well he understood him now at last and how deeply he appreciated his favor.

**STUDENTS** of alcoholic intoxication have observed that in their cups commonplace people, and not geniuses, do the most unusual things. So with all other intoxications—and Noble Dill was indeed no genius: his only distinction of any kind whatever, present or potential, was that among all of Julia Atwater's followers, he was (as people said, meaning his mental and not his moral state) "the worst"; and he scored probably the highest pitch of all his worstness to-day. Some friend should have kept an eye upon him; he was not himself. All afternoon in a mood of tropic sunrise he collected rents—or with glad vagueness consented instantly to their postponement. "I've come about the rent or something," he said to one delinquent tenant of his father's best client; and turned and walked away, humming a bright waltz-time, while the man was still coughing as a preliminary to his monthly explanation. The tenant was as pleased as surprised.

The entranced collector was preoccupied with sketches of wonderful, flashing D'Artagnan things to do—things that Julia (and, of course, Mr. Atwater too) might see with their own eyes, or at least hear described by an enthusiast. The ideal action would be one performed for their sakes, to "save" them—and he would dash away, not waiting for one word of thanks, but letting them come and find him, to pour out their gratitude and other feelings while he said: "No, no! It was nothing—less than nothing. It is I who should be grateful, not you, Julia; not you, Mr. Atwater!"

And as he sat musing alone, near a window in his father's office, late in the afternoon, his exalted mood was not affected by the falling of a preternatural darkness over the town, nor was he roused to action by any perception of the plain facts that the other clerks and the members of the firm had gone home an hour ago; that the clock showed him his own duty to lock up the office and not keep his mother waiting dinner, and that he would be caught in a most outrageous thunder-storm if he didn't hurry. No; he sat smiling fondly by the open window and at times made a fragmentary gesture as of some heroic or benevolent impulse in rehearsal. Meanwhile, paunchy with great portents of wind and wetness, outlandish clouds came smoking out of the blackened west. Rumbling, then roaring, they drew on. From cloud to cloud dizzying amusements of white fire crackled, staggered, and boomed the wireless signals for assault; then the vats of the winds were opened, the tanks of deluges unbottomed—and the storm took the town. So, presently, Noble noticed that it was raining and decided to go home.

With an idea that he was fulfilling his customary evening duties, he locked the doors of the two inner rooms, dropped the keys gently into a wastebasket, and, dreamily passing by an umbrella which hung upon the wall, went out to the corridor, leaving the door of the suite open behind him; and thence stepped into the street of whirling rain.

Here he became so practical as to turn up his collar; and, substantially aided by the wind, which was at his back, he was not long in leaving the purlieus of commerce behind him for Julia's street. Other people lived on this street—he did, himself, for that matter; in fact, it was the longest street in the town, and it had an official name with which the word "Julia" was entirely unconnected, but for Noble Dill (and probably for Newland Sanders and for some others in age from nineteen to sixty-odd) it was "Julia's Street" and nothing else.

It was a tumultuous street as Noble splashed along the sidewalk. Incredibly limber, the shade trees were practicing calisthenics, though now and then one outdid itself and lost a branch; thunder and lightning romped like loosed scandal; rain hissed upon the

pavement and capered ankle-high. It was a storm that asked to be left to itself for a while, after giving fair warning that the request would be made; and Noble and the only other pedestrian in sight had themselves to blame for getting caught.

This other pedestrian was some forty or fifty yards in advance of Noble and walking in the same direction at about the same gait. He wore an old overcoat of some flimsy material, running with water; the brim of his once rigid straw hat had begun to sag about his head, so that he appeared to be wearing a bucket; all in all, he was a sodden and pathetic figure. Noble himself was as sodden; his hands were wet in his very pockets; his elbows akin to spouts; he, too, was bucketed rather than hatted atop—yet he spared a generous pity for the desolate figure struggling on before him.

All at once Noble's heart did something queer within his wet bosom. He recognized that figure, and he was not mistaken. Next to the One figure, and those of his own father and mother and three sisters, this storm-tossed shape was that which Noble would most infallibly recognize anywhere in the world and under any conditions. In spite of the dusk and the riot of the storm, Noble knew that none other than Mr. Atwater splashed before him.

Excitement took quick possession of him. He hastily reviewed possibilities, and dismissed a project for seizing upon a fallen branch and running forward to walk beside Mr. Atwater and hold the branch over his venerated head. All the branches were too wet; and on second thought Noble feared that Mr. Atwater might think the tableau odd and decline to be thus sheltered. And yet something had to be done to save Julia's father from pneumonia; surely there was some simple, practical, dashy thing that ordinary people couldn't think of, but that Noble could. He would do it and not stay to be thanked. Better, he would not even stay to be recognized! And then, to-morrow evening—not sooner—he would go to Julia and smile and say: "Your father didn't get too wet, I hope, after all." And Julia: "Oh, Noble, was it you that speaks of all day long as his 'unknown new Sir Walter Raleigh'?"

Suddenly he saw will-o'-the-wisp opportunity dancing before him, and he paused not one instant to consider, but acted. He had just reached a crossing, and down the cross street, walking away from Noble, was the dim figure of a man carrying an umbrella. It was just perceptible that he was a fat man, struggling with seeming feebleness in the wind and making poor progress. Mr. Atwater, moving up Julia's street, was out of sight from the cross street where struggled the fat man.

Noble ran swiftly down the cross street, jerked the umbrella from the fat man's grasp; ran back, with heart-sounds dying out behind him in the storm and dark; turned the corner; sped after Mr. Atwater; overtook him and thrust the umbrella upon him; and then, not pausing the shortest instant for thanks or even recognition, sped onward, proud and joyous, into the stormy dusk, leaving his beneficiary far behind him.

**IN** his young enthusiasm he had indeed done something for Mr. Atwater. In fact, Noble's kindness had done as much for Mr. Atwater as Julia's gentleness had done for Noble, but how much both Julia and Noble had done was not revealed in full until the next evening.

It was a warm and moonshiny night of air unusually dry, and yet Miss Florence Atwater sneezed frequently as she sat upon the side porch at the house of her great-aunt Harriet and her great-uncle Joseph. Florence had a cold in the head, though how it got to her head was a process involved in the mysterious ways of colds, since Florence's was easily to be connected with her cousin Herbert's remark that he wouldn't never be caught takin' his death o' cold sittin' on the damp grass in the night air just to listen to a lot o' tooty-tooty. It appeared from Florence's narrative to those interested listeners, Aunt Harriet and Uncle Joseph, that she had been sitting on the grass in the night air when both air and grass were extraordinarily damp. In brief, she had been at her post soon after the storm cleared on the preceding evening, but she had heard no tooty-tooty; her overhearings were of sterner stuff.

"Well, what did Julia say then?" Aunt Harriet asked eagerly.

## Billings and Spencer Drop Forgings Have Played A Conspicuous Part in the Growth of Great Names of Industry

Each era of invention, of specialized machinery, of industrial magnitude, has developed its own peculiar demand for Drop Forgings.

Each industry inevitably developed its leaders—its great names. The perpetuation of those names, the expansion of those industries, depended to a very great degree upon the *quality* of the Drop Forgings they started with.

It is significant that Billings & Spencer products were selected by the pioneers in such stalwart industries as the Firearms, the Sewing Machine, the Textile, the Machine Tool, the Bicycle, the Electrical, the Automobile, the

Motor Truck, the Aeroplane, the Tractor, and others.

Founded on *quality*, names in these industries have become great and flourished and prospered. And in the very heart of these reputations lies the worth of Billings & Spencer Drop Forgings, whose accuracy, uniformity, and soundness have become essential to carrying these concerns to their predominant positions in the industrial world.

All Billings & Spencer Drop Hammers, Drop Forgings, and Drop Forged Tools bear the symbol of quality—the Billings & Spencer Triangle B Trademark.

## Cutting Maintenance Expense

When returns are all in and department costs figured to a hair, then do the efficiency figures of equipment operated by Robbins & Myers Motors speak for themselves.

For here figures become eloquent with a directness that is unmistakable. Here the tangible and intangible elements of production stand illumined in the balance sheet.

Representative concerns who have well learned their lesson know that maintained production and reduction of maintenance cost are largely matters of right operating equipment.

To them, Robbins & Myers Motors are veritable guarantees of production and low maintenance expense. A motor that keeps wheels turning without gaps of idleness is a good investment.

Back of every R & M Motor is

an experience of 21 years in the building of motors from 1-40 to 30 horsepower — motors for the factory, store, office and home.

These include motors for general power services and motors of special design as a built-in part of the better vacuum cleaners, washing machines, addressing and mailing machines, coffee grinders, meat choppers and other electrically-driven labor saving devices.

A Robbins & Myers Motor on any of these devices is a sure sign of super-quality throughout.

Power users, electrical equipment manufacturers and dealers find a marked value, performance and prestige in Robbins & Myers Motors. Detailed information upon request.

"She said she'd put herself in her room and her ears if grandpa such a fuss."

"And what did he say?"

"He made more noise," said Florence. "He and told the whole again; he seemed it enough, and ever his voice got higher was all kind of noise. He had his raincoat or an umbrella anywhere carried one a single years! And he said Dill and all this. You bet he knew he'd know Noble Dill his terrible cigarette, else, and, anyway, so's he couldn't see shoulders, and anyway. And he said Noble Dill umbrella; he stuck it like he was some to put out, or some could get out of it and this ole fat man that and was chasin' Noble from behind, or some fell down and just lay in' against each other a while they got to it was somebody for Heaven's sake with his ole umbrella and so he did, because awful, and I guess he give up; he couldn't."

"No," said Uncle Joe, "whoever he was. But about Noble Dill?"

FLORENCE passed and conclude a responded pleasantly. "I goin' to kill him. He and often wanted to. That's the reason I wrote that note to."

Inside the house, in the library, sat Mr. Atwater, trying to read a work by one Thomas Carlyle, while a rhythmic murmur came interferingly from the front porch. The invisible young man, watching him attentively, saw him lift his head and sniff the air suspiciously, but the watcher took this pantomime to be an expression of distaste for certain poetry, and, sharing that distaste, approved. Mr. Atwater sniffed again, threw down his book and strode fiercely out to the porch. There sat dark-haired Julia in a silver dress, and, nearby, young Newland Sanders read a long young poem in manuscript.

"Who is smoking out here?" Mr. Atwater inquired, not mildly.

"Nobody, sir," said young Newland with eagerness. "I do not smoke. I have never touched tobacco in any form in my life. I loathe it!"

Mr. Atwater sniffed once more, found purity, and returned to the library. He frowned uneasily: the air seemed faintly yet unmistakably impregnated with Orduma cigarettes. "Curious!" he said as he composed himself once more to read—and presently the odor seemed to wear away and vanish. Mr. Atwater was relieved: the last thing he could have wished was to be haunted by Noble Dill.

Yet for that while he was. Too honorable to follow such an example as Florence's, Noble, of course, would not spy or eavesdrop near the front porch where Julia sat, but he thought there could be no harm in watching Mr. Atwater read. Looking at Mr. Atwater was at least the next thing to looking at Julia. And so, out in the night, Noble was seated upon the top of the side fence, looking through the library window at Mr. Atwater.

AFTER a while Noble lit another Orduma cigarette and puffed strongly to start it. The smoke was almost invisible in the moonlight, but the faint night breeze, stirring gently, wafted it toward the house, where the open window made an inward draft and carried it heartily about the library.

Noble was surprised to see Mr. Atwater rise suddenly to his feet. "Damn!" he said distinctly. He smote his brow, put out the light, and stamped upstairs to his own room.

His purpose to retire was understood when the watcher saw a light in the bedroom window overhead. Noble watched that window as he had watched the lower one. He thought of the good, peculiar old man now disrobing there, sheltered by the chastely lowered shade, and he smiled to himself at a whimsical thought: What form would Mr. Atwater's embarrassment take, what would be his feelings, and what would he do, if he knew that Noble was there now, beneath his window and thinking of him?

In the moonlight Noble sat upon the fence, and smoked Orduma cigarettes, and looked with inexpressible fondness at the bright window of Mr. Atwater's bedchamber. Suddenly the light in that window went out.

"Saying his prayers now," said Noble. "I wonder if—"

But, not to be vain, he left the thought unfinished.

Mr. Tarkington's next story in the series, entitled "Feef and Meemuh," will appear in an early issue.

## The Merchant Marine and the War

Continued from page 36

commanded by civilian skippers, therefore, there is always poor discipline," is one of the slapdash comments. Another quotation is: "Great Britain long since placed her fleets, naval and commercial, under the navy, but before she did so she made costly errors." The exact opposite is, of course, the case. Sixpence paid for a copy of Great Britain's "Defense of the Realm Regulations" would have informed Mr. Brown and the Washington "Post" and the "United States Naval Institute Proceedings" regarding the civilian shipping controller in Great Britain and his steadily expanding powers, following upon less excellent administration secured with the Admiralty in full control. Just what do the three publicity agencies involved suppose are the functions of Sir Joseph Maclay, a civilian, Controller of Shipping—a ministerial rank since late in 1916, when the office was established to correct the preceding muddle? Another quotation runs this-a-way, as our Italian citizens might say: "No ship commanded by a naval officer would

# Acquire A Better Memory Quickly

**Because You Get the Secret Right Away**

David M. Roth, whose reputation as a Memory Expert extends all the way from Seattle to New York, not only because of his remarkable feats of memory, but because of his success in teaching others how to remember, has prepared his complete Memory Method in a home study Course of Seven Fascinating Lessons.

## SEATTLE POST INTELLIGENCER

"Of the 150 members of the Seattle Rotary Club at a luncheon yesterday not one left with the slightest doubt that Mr. Roth could do all claimed for him. Rotarians at the meeting had to pinch themselves to see whether they were awake or not."

"Mr. Roth started his exhibition by asking sixty of those present to introduce themselves by name to him. Then he waved them aside and requested a member at a blackboard to write down names of firms, sentences and notions on numbered squares, meanwhile sitting with his back to the writer and only learning the positions by oral report. After this he was asked by different Rotarians to tell what was written down in various specific squares and gave the entire list without a mistake."

"After finishing with this Mr. Roth singled out and called by name the sixty men to whom he had been introduced earlier, who in the meantime had changed seats and had mixed with others present."

## NEW YORK TRIBUNE

"David M. Roth gave a practical demonstration of memory at the lunch meeting of the Rotary Club at the Hotel McAlpin."

"Mr. Roth asked the men at any four tables to call out their names. This they did—32 of them. Then the speaker turned his back and they changed chairs. Mr. Roth then proceeded to call each one by name and went through them without error. The blackboard was used and a number of other astonishing illustrations were given."

## You Too Can Do This

"There is not a thing that I do with my memory that any other person of average intelligence cannot learn to do—probably more easily and quickly than I do," says Mr. Roth.

"By applying my Memory Method you will be able to do wonderful things with your own memory in the course of a few weeks."

"In the first evening you spend on my first lesson you will discover a mental power that you never dreamed you possessed. I know this is true because my pupils—thousands of them—have so testified."

"Your memory is the most wonderful instrument in the world. You need only to know how to use it (and I will tell you how) to do things that look marvelous but are really only your natural mental faculty properly controlled and applied."

## C. LOUIS ALLEN, President of the Tyrene Manufacturing Company, says of Mr. Roth's Course:

"Now that the Roth Memory Course is finished, I want to tell you how much I have enjoyed the study of this most fascinating subject. Usually these courses involve a great deal of drudgery, but this has been nothing but pure pleasure all the way through. I have derived much benefit from taking the course of instruction and feel that I shall continue to strengthen my memory. That is the best part of it. I shall be glad of an opportunity to recommend your work to my friends."

Fifty Other Letters Like This Are in Our Booklet, "How to Improve the Memory." Sent Free With the Course.

## The Seven Lessons are:

1. The Basic Secret
2. The Mental File
3. Names and Faces
4. Reading and Public Speaking
5. How to Remember Numbers
6. Studies and Spelling
7. Practical and Entertaining Applications

## Spend One Evening

with Mr. Roth. Study the first lesson of his Memory Course. And you will see how a new world of magic, facts, figures and mental picture-records opens up to you the next day.

You will see how much more smoothly and efficiently the day's work goes forward.

You will see how many minutes and hours you have for other things, because you have learned how to cut out the time and effort you used to waste in trying to remember and memorize.

You will see what a vast amount of energy you save because your facts and figures come swiftly to mind—just when you need them most.

You will see how your ability to talk convincingly increases because you are sure of your facts and recall them clearly.

You will see how readily you lead the conversation wherever you gather socially or in business conference.

## The Fear of Forgetting

will vanish the minute you learn Mr. Roth's easy method of remembering.

Then you will be delighted at the new sense of confidence and power that has come to you, when speaking on your feet, or in business discussion, or in making a selling talk, or in holding up your end of a conversation.

## How Simple It Is

Mr. Roth's Method makes the act of remembering, not a matter of hard work and training, but an easy, natural and automatic process of the mind summoning, with a minimum of mental effort, just the right fact, name or number for instant use when you need it most.

Mr. Roth's Method will be a delightful revelation to you. Studying it will be like a fascinating game. You will see your own mind as you never saw it before. You will discover mental faculties—in good working order—that you never dreamed you possessed.

You will be amazed to see what a short stroke lesson will do for your wife and children, and the whole family, the first evening you share your lesson with them.

Mr. Roth shows in his first lesson the underlying scientific principle of his method—by which the average mind can be made to remember—like a flash—anything that the occasion demands.

The other six lessons teach the practical application of this principle to the various daily requirements of the human mind and memory.

## To Help You Succeed

No matter what your work in life we believe you will find Mr. Roth's Memory Method a priceless aid to achievement and a money-making instrument of efficiency.

**YOU NEED THIS COURSE** It will teach you to remember—quickly and easily—

ever run away in the submarine zone. It would fight off the submarine and materially increase the U-boat destruction. Action by the Government giving to the navy the job for which it is fitted would have the immediate effect of increasing the active offensive units of the surface patrol in the submarine zone." Let the implied fling at the merchant-service commander, which had been made explicit in the context, be passed over, and the query raised: "What does the man mean?" Do Mr. Brown and the journals which have published his article mean that transports, loaded with soldiers or with cargoes indispensable in France, with their great bulk and only average speed, would not try by every means possible to avoid and evade submarines? Does he mean that under naval commanders they would deliberately divert their ships from a defensive to an offensive attitude? Would they envisage their work as the speediest and safest transfer of troops and cargo from United States ports to French ports, or would they depart from the task set them in order to become "active offensive units of the surface patrol in the submarine zone?" The article persists in its attack on "civilian skipper": "They continue to show their red and green port and starboard lights, which make them easy targets for the undersea boats, because they are operating under navigation laws which they refuse to violate for fear of losing their licenses. They would rather endanger their ships." Now, really, I can't imagine anybody saying that in the actual bodily, two-flated presence of any "civilian skipper" or other ship's officer. Lights are not shown by merchant ships excepting in moments when the loss of ship and lives by collision is much more imminent than any loss through exposure to a submarine. Do the agencies that have put forth this statement happen to know of a great American ship that threatened to leave a convoy unless the escorting cruiser ceased flashing signals in the night concerning a formation to be accomplished at ten o'clock in the morning? As to the fear of merchant-service officers losing licenses, the statement could not be made by any man who knows the specific release from normal obligations as regards their licenses under which officers of merchant ships are operating now and steadily operated for a considerable time while the United States was still neutral and before the navy had any chance to be in the war. There is necessary point in the statement: "One way to help build a merchant marine for the United States is for related services to show a proper pride in it."

## Leave the Merchant Service Alone

IN early February Congressman Miller, back from a trip abroad, rose in the House of Representatives, and the New York newspapers of February 6 printed this item about him: "He said American shipping should be handled by naval officers, and not by the Shipping Board. There were no Americans in the crews of the two transports on which he crossed the Atlantic, he said." It would be exceedingly interesting to know all the persons with whom Congressman Miller had talked about the manning of ships, what independent investigation he made of this complex question, and what reasons he has to offer for his flat pronouncement against the effectiveness of the mercantile marine as at present constituted; and it would be exceedingly astonishing—and contrary not only to all experience with transports but with all merchant ships as well—to find that his statement that there were no Americans in the crews of the two transports on which he crossed the Atlantic is correct, or even half correct, as the Commissioner of Navigation's figures might hint to him.

All this has been necessary to say without regard to whether or not the plan to make every American Atlantic-crossing ship of the merchant marine into a naval ship be a good plan or a bad one. The reasons for it based upon depreciation of the merchant marine are all of them bad. If the idea itself might be good, it is not the first good cause that has been discredited by some of its most active advocates. In favor of the idea it has been urged that it gives permanent crews instead of crews signing on from voyage to voyage; that it makes the crews all-American, since only American citizens are admitted into the Naval Reserve; that they will be better than the present crews; that it puts a lot of young Americans at sea who may choose to remain there after the war is over and

so build up the personnel for a real merchant marine; that it takes care of an oversupply of men now in the training stations; and—only occasionally is this argument offered—that men, being enlisted, will have to work for less than the going rate of wages at sea in the merchant service. The negative considerations connected with these points of argument are that necessity has been shown for taking away the autonomy of merchant-marine crews after years of service in the navy; that it is not proved the Naval Reserve crews will be better crews; that if the navy has more men under training than it can use for naval purposes they will be released under the condition that they go to sea in the merchant service; that a permanent personnel for a merchant marine can be built up only by right treatment under peace conditions; and that it is a mean policy to take from men long underpaid, poorly housed and fed the \$60 a month and war bonus of 50 per cent that they are now being paid in the merchant service. In all the discussions of the matter I have heard from naval officers I have not heard any of them claim that the reserve men would do as much work or accept as poor quarters, food and treatment as the merchant service men. It is always assumed that there will be more of them to the star in both the forecabin and the fireman. The Seamen's Union has been attacked in these same newspaper paragraphs for some of its demands, but the fact remains that the Naval Reserve takes as a matter of course improvement for the half of which the merchant service men have had to negotiate, strike and bide years out in struggle and waiting. The United States merchant ship that had trouble with the crew of eighty-one over matters of food and quarters, and had her difficulty solved by throwing her into the Naval Reserve with a crew of 306 and more up to navy standard, is a case in point. As to caliber, there is nothing miraculous about six weeks or six months in a naval training station, and observation of the naval reserves has not justified any hope that they excel men who happen only to be rougher in appearance than they and to bear more signs of the pains of the sea. The regular merchant-service men may prefer work ashore, now plentiful and patriotic, to the loss of their autonomy and the reduction of their wage. As to their Americanism, Americans are a mixed company anyway. It's no grousing too much over mixed nationalities in crews. Simon-pure citizenship of a ship's registry would be ideal, but it never has been the condition. There have been mixed crews from the beginning of time. Very few men are going to try to throw a ship to the enemy, and they may be looked for in a naval reserve, with only slightly less chance of finding them, as well as in a picked up ship's company. People don't realize the cold hate seamen have for shelling of lifeboats, the international mood at sea toward such devils incarnate. The situation with American ships isn't as bad as in many British ships manned by lascars and coolies. It really isn't worth while depreciating the seamen we have. Get more as good before you try chasing the others out. Aside from enemy aliens, who aren't allowed in any case, what danger is there from them? None at all. Anyway, though few people even at sea realize it, 43 per cent of the officers and crews are American. A third of all our seamen are American-born. A ninth are naturalized. A ninth are British. Those are the figures of the Commissioner of Navigation for 1917, and the ratio has been practically the same—more American, if anything—for the past ten years. A seventh are Spaniards, mostly employed in the fire holds. Release any surplus Naval Reserve man who will undertake to go to sea in merchant ships at going wages for the period of the war. Leave the merchant service alone, except by aiding it where you can, as a merchant service. Give merchant service officers any additional disciplinary powers it may be thought they need for the period of the war. Give all men who sign for a year in the most perilous of all the sea services, on a merchant ship, the same right to cheap insurance up to \$10,000 that the Government gives to the soldiers and sailors they carry across.

## England's Experience

AFTER "the wholesale muddle brought about by Admiralty control of the merchant service," in the words of the "Nautical Magazine" for January, 1918,

COLLIER'S

# W.L. DOUGLAS

"THE SHOE THAT HOLDS ITS SHAPE"

\$3 \$3.50 \$4 \$4.50 \$5 \$6 \$7 & \$8

W. L. Douglas name and the retail price is stamped on the bottom of every pair of shoes before they leave the factory. The value is guaranteed and the wearer protected against high prices for inferior shoes. You can save money by wearing W. L. Douglas shoes. The best known shoes in the world

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York. They are always worth the price paid for them.

**CAUTION**—Before you buy be sure W. L. Douglas name and the retail price is stamped on the bottom and the inside top facing. This is your only protection against high prices for inferior shoes. **Beware of Imitation.**

Sold by over 3000 shoe dealers and 106 W. L. Douglas stores. If not convenient to call at W. L. Douglas store, ask your local dealer for them. Take no other make. Write for booklet, showing how to order shoes by mail, postage free.

**W. L. Douglas** W. L. DOUGLAS SHOE CO. 183 Spark St., Brockton, Mass.

Getting up early in the morning, milking the cows and driving them to pasture were tasks which W. L. Douglas was called upon to perform while "bound out," learning the trade of shoemaking.

pay a fair going wage for his labor. We are not doing that to-day. And our cities are beginning to grow hungry while our acres stand idle."

Dillon has little use for dreamers. Neither has Arthur Capper, who, as his real job, prints several agricultural papers out in the Middle West and as a sort of incidental avocation is governor of Kansas. Part of his message has been quoted. He says further:

"Kansas in normal years imports 40,000 hands for the wheat harvest. If our entire 9,480,000 acres is harvested, nearer 50,000 imported men will be needed. Everything, however, indicates an abnormally light crop, and several million acres promising to yield from three to five bushels per acre will be plowed up or allowed to go unharvested unless the price of wheat is made higher than that now proposed. The farmer must have more money or he cannot compete with other bidders in the labor market."

### Cease Temporalizing

I SHALL not at this time enter upon any discussion of the problem of price fixing. But Capper's statement as to the price needs of the farmer is as significant as Dillon's. These men know the pulse of rural America. They know that the farmer is paying much more to-day than ever before for the "raw materials" that go into his production—seed, implements, feed, labor. They know that the Government has asked the farmer of the United States this year to increase his wheat production alone some 300,000,000 bushels over last year's crop of 653,000,000 bushels—an increase, figured upon present-day averages, of some 22,000,000 acres. And they know that this master problem of increased production, under conditions of decreased labor, cannot be solved permanently, even by the use of the tractor—tremendous factor though it is—or by the labor drafted from schools, stores, or offices. The Chamberlain measure would be a big relief, although it is a measure that would undoubtedly be accomplished at the expense of our military preparation.

Another suggestion is the drafting of men outside the military age, or for some other reason unfit for military service, but valuable on the farm. Objections to this are many and serious. The New York State Prison Commission advocates the use of prison labor for the farms and urges boards of supervisors to appropriate money for lease or purchase of farms where prison labor may be employed. This was done in some cases in New York State last summer.

There is, however, a factor which

looms large already and may loom much larger before the summer well advanced. We are to-day producing munitions for overseas more rapidly than the shipping facilities for transporting them. There is glut to-day at our embarkation ports. In a short time this congestion may reach an embarrassing size, and then we shall have to halt production of our munitions for the war until our production of ships shall have caught up. The figures of the Federal Department of Labor agencies at some of the typical "war-bridge" towns—Bridgeport, Conn. for instance—show that to-day men are applying for work than can be given jobs. The ship congestion will easily slow down others. And for a time in midsummer, while our transportation situation is adjusting itself to production, there may be many men of work—and they will be full-grown men, accustomed to work and not afraid of it. That will be the farmer's opportunity. If he is wise, he will clinch it by good housing and living conditions for his men. There is a definite reaction to the farm and farm life in these days of better highways, cheap automobiles, the rural parcel post and the telephone.

When the farmer gets a city man—worn out of the monotony of his life and the close air of the machine store and rejoicing in the openness of God's country—he had better fill him full of the real benefits of farm life.

Tell him about Kansas: How figures show that the average Kansas farmer goes to work as a hired man in his eighteenth or nineteenth year, works out for a little over seven and a half years and then becomes a tenant farmer in that second interval he generally marries; at the average age of thirty-four he owns his farm and is his own boss. How many mechanics at thirty-four own their own shop or even a decent interest in it? Are the joys of having Mary Pickford or Charlie Chaplin around the corner to be compared with those of having a land deed in your strong box? And, just in order to show that I am not prejudiced against either Charles or Mary, permit me to say that the man who has his Kansas farm generally has his car and gets his fill of the movies too.

When are we going to cease temporalizing with this all-important question of farm production in America and come to a definite policy in regard to it—a definite policy as we reached a conscription, for instance? We have wasted reams of paper and endless authority—everyone seemingly has taken a whack at the problem. And we have arrived nowhere—not even made satisfactory progress.

### STATEMENT OF THE OWNERSHIP, MANAGEMENT, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912

Of Collier's, The National Weekly, published weekly at New York, N. Y., for April 1, 1913

State of New York: County of New York: ss: I, A. C. U. Hammerstahl, who, having been duly sworn according to law, depose and say that he is the General Manager of Collier's, The National Weekly, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the above-named publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:
 

Name of	Post-office address
PUBLISHER—P. F. Collier & Son, Incorporated	116 West 13th St., New York
EDITOR—F. P. Dunn	418 West 13th St., New York
MANAGING EDITOR—William Le Baron	316 West 13th St., New York
BUSINESS MANAGER—A. C. U. Hammerstahl	416 West 13th St., New York
2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)
 

P. F. Collier & Son, Incorporated	116 West 13th St., New York
STOCKHOLDERS—Robert J. Collier	418 West 13th St., New York
Arthur Steward Collier	418 West 13th St., New York
3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are:
 

Robert J. Collier	416 West 13th St., New York
-------------------	-----------------------------
4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting is given; also that the said two paragraphs contain statements embracing affirmations of knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, bond stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

(Signed) A. C. U. Hammerstahl, GENERAL MANAGER

Sworn to and subscribed before me this Twentieth day of March, 1913.

All prices f.o.b. factory. We furnish every type of body, including hoist, gravity and elevating dump. Write for book on any model in which you are interested. Address Department B.

**Republic Motor Truck Company, Inc.**  
Alma, Michigan

See Your Nearest Republic Dealer  
Dealers and Service Stations in  
Over 1300 Distributing Centers

Big modern hydraulic turbines, operating gigantic plants, receive their power impulse at a point farthest from the center of the axle. The greatest leverage is thus realized.

The Republic-Torbensen Internal Gear Drive transmits the power in the manner of the circumferential force of the gear—not at the center of the wheel.

This cut illustrates the Internal Gear Drive of Republic Trucks. A massive 14-inch carrier is the extra load. The drive axle is separate, and its sole work is to drive the truck in reverse the load. Cut shows how power is needed in internal gear on road wheels—insuring the greatest leverage.

# SERVICE

*An officer of the Mechanical Transport division British W. D., telling of his experiences with tractors in France, said:*

**“YOU** know we use a lot of Holt ‘seventy-fives’ for snaking up the ‘nine point twos’ and ammunition wagons. You cannot imagine worse operating conditions for a tractor—everything from bumpy going over broken stones to soft clay slush well mixed with sand. The dust and slush are the worst because it gets into the bearings. Occasionally an upper track carrier wheel would drop off—shaft cut clean through by the grit which gets into the plain bearings if they are not constantly oiled. It’s marvelous how those Hyatt bearings stand up in the lower wheels. They are right down in the worst of the dust and muck and carry the entire weight of the tractor. They are always running and get precious little attention in the field.

“There is an old man at the Base Repair Shop who takes care of all the Hyatt bearings in all the tractors in service. They bring each tractor in about once in six months or so for a general going over. The track wheels are given to this old man who removes the bearings, carefully scraping and brushing out every particle of grit. Sometimes he has to take the cage apart to get at the dirt in the hole through the rollers. After he gets the bearing clean and cage reassembled

he swills them about in a pail of paraffin, dips them in heavy oil and reassembles them in the wheels. They’re just as good as new. I don’t suppose he has thrown away a pail full of broken bearing parts since the war started and very few, if any, new bearings have been needed for repairs.”

□ □ □ □

Every Holt tractor, models 75 and 120 built at Peoria, has 24 Hyatt Roller Bearings in the “CATERPILLAR” track rollers. These models have been Hyatt equipped for the past eight years and today there are over one hundred thousand Hyatt bearings in every day use in Holt tractors alone in service in all parts of the world. Repairs or replacements of Hyatt Bearings have been less than one-fourth of one per cent in all this time.

Because of this remarkable record of service the Holt Manufacturing Company have specified Hyatt Roller Bearings throughout on all of their recently developed tractors, most of which are designed for military purposes.

# The Waltham Chronometer

Times the War Ships of Uncle Sam and Britain

Dreadnoughts of war guarding the gateways of nations; destroyers vigilantly roaming the seas in quest of their hidden prey; ocean leviathans that carry their passengers safely from shore to shore when peace reigns—these are guided in their activities by Waltham Chronometers.

No greater faith was ever shown in the precision of a timepiece than when the war governments of the United States, England and Canada placed their orders at Waltham. Faith based on tests which proved the reliability and precision of the Waltham Chronometer.

Visit the jeweler whose reputation stands highest for quality. Ask him to show you some of the Waltham models—particularly the Colonial A. The extreme thinness of this beautiful masterpiece is one of the crowning achievements of more than a half-century of watchmaking experience.

Waltham, the only watch factory in the world that is equipped to make Chronometers, is also supplying other timepieces for war work. Deck clocks, comparing watches, airplane clocks, wrist watches—all made at Waltham—are doing their bit in helping the Allies go "over the top" to victory.

The Colonial A is an ensemble of all those superiorities which have led the horological experts of the greatest nations to choose Waltham in preference to any other watch made in America—in preference also to the finest timepieces of Switzerland, England or France.

# MAKING SOLDIERS IN DIXIE

BY WILLIAM SLAVENS MCNUTT

A French officer instructed them in the art of grenade throwing

AN ugly splattering of sound from a snarling machine gun woke the valley with menacing echoes. A Virginia descendant of a Confederate soldier lay on the ground with his finger on the trigger. Near by stood a Pennsylvania descendant of a Union soldier watching the action admiringly. The earth under them had given final asylum to the soldier ancestor of each. The Virginian eased the pressure of his finger. A British officer stepped forward and spoke sharply in instruction. The Virginian and the Pennsylvanian—both of whose remote ancestors had, so to speak, collaborated on the job of seeing that the Englishman's ancestors didn't hang around to wear out their welcome—listened intently. Behind them, ringed about in formation, scores more of Northerners and Southerners bent their heads forward to catch the Englishman's words. The officer's speech was interrupted by a savage smash of noise from a hill in the near distance. I saw, outlined clearly against the sky line, a French officer instructing men of the North and South in the art of grenade throwing: a French officer whose ancestors may well have aided the men of the Revolution—North and South—in their battle against the English on that very ground. The sound of the bombing ceased, and the English officer went on with his talk. Men of the North and sons of the South, under the instruction of a British officer aided by a Frenchman, and rehearsing their warfare on the ground that saw the final resistance of Lee against Grant; on ground in seeing distance of the Appomattox Courthouse!

It was Camp Lee, the National Army cantonment just outside of Petersburg. Camp Lee is not altogether typical of the South, but it is typical of America.

## Inside of the Horseshoe

CAMP LEE is the second largest cantonment. Most of its personnel is from western Pennsylvania, although it houses the selected men from West Virginia and Virginia. The camp is built in the shape of a horseshoe, with the drill grounds, bayonet courses, gas schools, and bombing grounds on ground inclosed by the barracks. One may stand near Division Headquarters at Camp Lee and see more men doing more different things than at any other camp. From one point of vantage I was able to watch several infantry battalions drilling, details at bayonet practice, machine-gun crews under instructions, bombing squads at work, men around the gas house learning to don masks properly, and others working at trench construction.

On a windy hill near the gas house I met a captain whose business it is to teach noncommissioned officers all the methods of defense against gas. All about us were details of men practicing the adjustment of masks. A number of men were just coming out of the gas house near by, laughing and joking at their first experience with the noxious, inviolable enemy. "How was it, Joe?" asked a sergeant.

"Like Limburger cheese, only not so thick," the soldier replied.

"Wait till you get a whiff of it! A Bermuda

onion will smell like a rose to you for a week afterward."

The captain laughed. "The Heinies will have to dig up something more schrecklich than gas if they want to scare this outfit," he said. "Men aren't afraid of a thing they make jokes about. They say the noncoms are the backbone of an army. If that's true, we've got some vertebrae. I was lecturing to a class of fifty noncoms, and I found out later that thirty-three of them had had more chemistry than I'd had. After I had finished my talk I invited them to ask me questions, and they put me in a hole. I'd have been in an awful fix if it hadn't been for the fact that the fellow who was my orderly then was a former professor of chemistry at Yale. Between us we got by."

The 159th Brigade at Camp Lee has in its enlisted personnel probably the purest American blood of any camp in the country. Most of the men in the brigade are Virginians who trace their lineage back to colonial days. Major Granville Fortescue was telling me of the men of this brigade. "You know if an Englishman were to read over the localization order for this brigade, he'd think it a call to his home soldiers," he said. "We've men from Middlesex, Surry, and Kent here in one company; in another Westmoreland, Northumberland, and Northampton, and in other battalions are soldiers from the counties of Lancaster, York, Warwick, Bedford, Richmond, Sussex, Southampton, and Isle of Wight. Company roll calls down here sound like a lesson in English history—

Buckingham, Brunswick, Cumberland, Bath, Halifax. Literature is well represented too. One company has a squad composed of Addison, Arnold, Johnson, and Merideth."

The Division Headquarters at Camp Lee is within a stone's throw of the spot where the house stood that housed Grant and his staff during the siege of Petersburg. Last fall there was a Confederate reunion at Petersburg, and the old soldiers visited the cantonment. The man who had served as General Lee's cook during the siege was there; and in that camp, so appropriately named for the great military leader of the South, he met the grandson of the famous general, an officer in the American army, training Americans to fight for America.

## Southern Spirit

AT Camp Jackson, South Carolina, we find the unalloyed South in training. The men at Camp Jackson are drawn from North and South Carolina, Tennessee, Florida, Georgia, Arkansas, and Alabama. This camp is located near Columbia, the State capital, in the pine woods on the highest bit of ground between the coast and the mountains. The soil is sandy, and because the water drains from it so quickly, it offers splendid opportunity for drilling.

The men of the South are excellent physical material. They are, on the whole, strong men; but they need athletic work to loosen and speed them up. Camp Jackson is fortunate in having Frank M. Dobson, former Princeton athlete and National League ball player, as a camp physical director, working in conjunction with the divisional athletic director, James Driver. Dobson is the best known college athletic coach in the South; over three hundred of the officers at Camp Jackson have played on college teams either under or against him. With Driver he has planned and carried out an athletic program of track and field events that has embraced all the men in the camp. It has long been his theory that athletics should be run to benefit the men of a college rather than merely to insure victory for a college team; now his theories are peculiarly applicable.

I wish there were some way in which I might do full justice to the reserve officers of the National Army in the South. I can't. History will. Practically all of them are from the training camp at Fort Oglethorpe. Most of them are Southern college men, and they are a snappy, peppery lot. They believe in themselves, they believe in the National

Army, and above all they believe in their men. There is a phrase which always made me smile: "the flower of the South." I heard it used in reference to the reserve officers of the South, and I didn't smile. It's not trite nor funny to me now. Those reserve officers have a hard job. They are doing it well and cheerfully, and finding the patience to be courteous not only to superiors and visitors, but to their men as well.

"I put in a good deal of time explaining to my men the principles for which we are fighting," a reserve captain of infantry—a college man—told me. "I get excellent results. I believe that the Southerner is peculiarly susceptible to the appeal of principle. My men don't understand all the forces that operated to bring about this war. That knowledge is not necessary. They are coming to understand that the United States is absolutely right in its position, and, believe me, Mr. McNutt, these men of mine will fight like madmen for anything that they believe to be right."

Most of the selected men in camp at Jackson are from remote farms and small towns. Those who took newspapers were interested in local news. They are, for the most part, men who have been accustomed to glance briefly at the headlines announcing the death of thousands in some great battle on the western front, and for their reading turn to the story about how Jim Hawkins fell from a scaffolding while painting his house and broke his arm. They know Jim; they did not know Europe. They knew that there was a war going on in Europe, but it was as remote from their minds as a native squabble in India or a fracas between black tribes in darkest Africa. There was much less argument about the Great War in idle moments than over the question as to whether Ty Cobb would outbat Speaker.

Many of them went to the cantonment unwillingly; but paste this where you can see it: The selected man of the South would go to France to-morrow if given his free choice between crossing the sea to fight and going home before the fight is finished.

"There's a wonderful spirit in this army, sir," a typical selected man at Camp Jackson told me earnestly. "I'm mighty proud to be in along with men like I know in this army. I reckon they all feel most the same as I do: This job's got to be 'tended to, an' we are the people who've got to do it! 'Tain't a nice job, but it's our job, an' we're goin' to see to it."

"You're not sorry, then, that you're here in the army?"

"Turn me loose an' I'd enlist to-morrow," he said.

"Then why didn't you volunteer in the first place?"

"'Cause I didn't think we had any business in the war, an' I didn't think the army needed me, whether we were right or not. I had me a little store, sir, down in —, Tennessee. I'm just married an' my business just beginnin' to get goin' good. I got me a little home, sir, an' what time I ain't downtown 'tendin' to my business, I'm home doin' some chore round the yard or putterin' round the house someway, fixin' up some shelf or 'nother for the missus. We're right happy, sir, me an' the missus. We're just happy with each other an' gettin' on about our business. I ain't got much time for readin' in the newspapers. I read a little 'bout the war, but I don't give a damn. Then, sir, all of a sudden, we're into it. I been goin' on 'bout my business like I said, an' it seems to me like we're awful foolish to go an' get mixed up. But I didn't pay no 'tention even then, till 'long come Mr. Draft an' grab me. Well, sir, I reckon I just most went crazy! I think they ain't got no right to bust up my business an' take me 'way from my home an' all. No, sir! I try to get exemption an' everything, but 'tain't no mite o' good; an' down here I come! I was right mad about it for a spell, an' then I begun thinkin' about it, an' hearin' my captain an' lieutenants talk about what we had to do an' why we had to do it. Then there's some men in the barracks that had more time for readin' an' studyin' 'bout the war than me, an' they're tellin' me 'bout it, an' how we come to get in on it. I think we got a job

"Like Limburger cheese, only not so thick," the soldier replied

to do that's got to be done. I ain't no slacker, sir. No, sir! My daddy, he fought along with the Confederate army, an' you bet if he were livin' to-day an' young enough he'd be fightin' in this army; an' you bet I'm glad I'm fightin' in this army. I'm where I belong, an' I'm glad of it. Mister, I don't even want to go home till we get this job finished an' done with; an' after I wrote the missus, an' told her how 'bout it, she don't want me to come back till I git through with what's to do neither."

### "I'm Done Talking Against Niggers"

IN writing of the National Army of the South, I must not omit the negro soldiers.

There was one unit at Camp Lee composed of 1,600 colored soldiers, selected from West Virginia. Ten days after they arrived in camp with the first quota last fall, the call came for them to go immediately to France for special service. The call was sudden and unexpected. General Cronkhite knew that the men had not expected to leave this country for several months. He thought that perhaps some of the 1,600 might have good reasons for not wanting to leave at once, so he called for volunteers from the 5,000 other colored troops who were in camp to fill up whatever vacancies there might be in the overseas unit. Every one of the 5,000 volunteered for immediate overseas service. Then the unit was marched to a hall. The general said that there were volunteers to take the place of any who wished to remain behind. Only 20 per cent of the 1,600 availed themselves of the opportunity to stay at home. When the general came from the stage on his way out those newly drafted colored men, facing active service in the war zone within less than two weeks after having broken their civilian ties, started to sing "America." As the general went down the aisle the singing grew to a harmonious roar of affirmation. The thing was absolutely spontaneous. They had not been coached. It was a spontaneous expression of sentiment in the face of danger.

Will you say that they had no full realization of the danger to be faced? Then come with me to Camp Jackson. I heard there a battalion of negro soldiers singing under the leadership of David Griffin, the division singing instructor. They were drawn up in formation before a barrack, singing with that abandon and joy that only the negro can attain. It seemed indeed that the thought of the war must be very light on their minds.

Come with me to an officers' mess hall the next day. There is a shout outside: "Hey! Look what's coming!" We step outside. Down the road, thump-thump, thump-thump, comes that same battalion of negro soldiers in full marching order. These soldiers from the mills and cotton fields are on their way to France. The whole camp knows it; the whole camp is grave, quiet. Thump-thump, thump-thump! There is no sound in all that great cantonment save the beat of marching feet and the creaking of packs. The black men know they are on their way abroad. They are a solemn-looking lot. A minister steps out to the edge of the embankment overlooking the road down which the troops are marching, and calls out shakily: "Good-by, boys. God bless you! God take care of you, boys!"

There is an uprolling of eyes and a shaky chorus of voices in answer: "Thanky, suh. Thanky kindly. Thanky, parson. Thanky, suh!"

A big Mississippian, standing near, swore growlingly under his breath, gulped, and cried.

"I'm done talking against niggers," he declared huskily. "Those boys have been damn fine soldiers here, an' if they ever get back from France, I'm big enough to lick any man who don't give 'em a square deal."

"They've certainly been good soldiers," a South Carolinian standing by agreed. "I never thought to salute a nigger, but I've been glad to return salutes to those boys. If they die in France, they're going to be just as dead as any of the rest of us. I been changing my mind awful fast in the last two months."

Silence but for the shuffle and thump of booted feet on the roadway. The rollicking, syncopated songs of yesterday were forgotten. A soft, drawling, quavery voice from somewhere in the marching ranks began the hymn: "Will There Be Any Stars in My Crown?" Others took it up, and to the words and music of the old church song those black boys tramped their solemn way out of camp to put their bodies to the chance of war on a foreign soil.

They may not have known much about the history of the German nation. Czars and kaisers may not have been any more real to their minds than ghosts and goblins. It is probable that the majority of them knew very little of the intricacies of Balkan politics. But, believe me, they knew that they were going to a dangerous place. They were not leaving with any idea of enjoying a pleasure picnic. They knew! I know very little of the rights and wrongs of what is spoken of as the Negro Problem of the South; I believe that, whatever the rights and wrongs of it may be, it will prove much easier of adjustment after this war is over.

On a nipping clear evening, in company with a Southern friend, I was loafing through the camp in a car. The blare of a band—a harsh rider on the back of that soft southern wind—started us. We stopped. On an open plain near by a battalion was going through the ceremony of retreat. We watched the companies and the band go through the evolutions. At last one company advanced bearing aloft the colors.

The flag was a brilliant patch of color against the dark of the pine-woods background. My Southern friend swore a little prayer.

"Say! A live American he-man who couldn't get in under that flag and go some place that ought to be gone to, he ain't alive in the first place, he ain't a 'he' in the second place, he ain't an American in the third place, and in the fourth place he just naturally ain't!"

The soldiers came to attention in battalion front, and the martial notes of the national air rode proudly abroad on the rising night wind. My friend and I uncovered and sat in silence until the echo of the last note had died away. My friend blew his nose hard and winked his eyes clear of a mist that had gathered in them.

"Now, I reckon some folks, they'd go an' call this just plain emotionalism," he said as he started the car. "But it ain't. No, sir! It's just realization

The flag was a brilliant patch of color against the dark background

Man, I'm making a bet an' a prayer that when these Southern fellows get over there, they're going to act up in such a way that their country'll have a chance to be proud of them."

I can echo my friend's prayer and congratulate him on his bet. The knowledge that the Southern soldier must acquire is a knowledge of technique. The South needs no training in courage. The South needs no bolstering of the will to conquer and endure. The South has traveled a hard road without fainting, and endured without complaint. The grandsons of the gallant men who fought under the Stars and Bars are standing retreat under the Stars and Stripes; the will of the men of yesterday, who backed a lost cause to the ultimate of human endurance, steels the man of to-day for the coming combat; the spirit of the men who fought with Lee is alive in the breasts of the men who will fight with Pershing.

This is the fourth article on the National Army camps. In the fifth, to be published in an early issue, Mr. Mr. Nutt will sum up his impressions of America at war.

The Virginian eased the pressure of his anger. A British officer stepped forward and spoke sharply in instruction

# WHERE ARE YOU GOING, CONGRESS?

BY RICHARD WASHBURN CHILD

THE two active branches of our democratic government—legislative and executive—have suffered a considerable disturbance of balance in a quarter of a century. If an American will go and sit to-day in the galleries of Congress, and imagine the ghosts of Webster, Clay, and Calhoun, or even of Cullom, Hoar, and Dolliver, witnessing the performance, there may steal over him the suspicion that the intellectual sea of legislative statesmanship is not at flood tide.

At the end of a period when, for good or ill, the real government of the United States, from the days of Cleveland, and later, after the death of McKinley, had been slipping away through the relaxing fingers of Congress and running in dribbling streams down Pennsylvania Avenue toward that home of the Tightening Grip, the White House—Bang! the war came. It jumped at Congress so hard that it startled Congress out of its spare wits.

Coincident with this the President, acting with some shrewdness and wisdom, began to play the Executive hose into the Legislative face.

"Congress?" said a member of the Lower House to me in a style of English diction not out of vogue. "Well, sir, Congress don't know where it's going. But that's not all. Congress don't even know where it's at."

Congress admits with a gasp that it is voting appropriations in a year equal to the appropriations for expense voted in all the years of our history; it knows vaguely that it is passing measure after measure asked for by the Executive which have far-reaching significance for good or evil in the social and economic future of the country; it hopes that all results will be good and suspects that not quite all will be. It looks back upon its hatch with that same suspicion with which a hen would regard a brood consisting of ducks, birds of paradise, auks, eagles, and ostriches, hoping for its young, fearing for them, and not quite sure of their origin.

Congress has no time to pause. It is on the run. It is going somewhere. It must scatter largess. This is War. It does not stop to weigh the packages of foreign policy or military policy or domestic policy which the President wraps in such attractive inclosures.

Perhaps it would be unwise to stop. The intellectual tide is so low just now that, even if the gallop were halted, where would Congress find among its members the statesmanship to set up an independent legislative mentality again? Name the men if you can. Name a half dozen men in Congress who by comparison with the President do not look impotent and puny.

"And, furthermore, the people are not watching us as in the old days," say the honorable legislators, with some measure of truth. "The public mind has been diverted. To reach the public ear now, we only have a whisper; the President, through the infinite multiplication of executive and departmental publicity bureaus, has got the biggest megaphone ever built."

Congress has become a good deal like the board of directors of a corporation who look wise and vote

with the general manager when he talks beyond their depth. Perhaps this is a good thing; a democracy is putting on trial a centralization of power in the Executive which now has reached a degree of practical concentration unequalled in autocracies.

Watching Congress for many weeks, however, the question arises in the mind of the observer whether the disturbance of balance is located completely in the yielding of power by Congress to the President. Is not the change in balance somewhat explained by conditions which have made our Congress what it is?

No careful observer of our political life has seen all there is to see of Congress until he has been on hand when the President, planning to read a message on foreign affairs, makes one of his sudden descents upon the Capitol.

Buzz of talk in the marble corridors. The President has arrived! He is to speak! He has a message for Congress. Of course the final destination of this message is not Congress. Addressed to Von Hertling, addressed to the Bolsheviks, addressed to Lloyd George (London papers please copy)—all of whom will understand. Congress is to hear the message. Congress is a lay figure, and the President is about to drape a manuscript.

A sense of importance surcharges the air. History is in the making. No joke about that. Pages look grave. Ancient doormen exchange glances and nod their heads wisely. Those democratic "leaders" who feel themselves a part of this history making which is more or less Greek to them swell up a little as they "come off the floor" and peer around the reception rooms as if about to say: "Where's Destiny? Where is that constituent of mine? She just sent in her card."

## Calling the Roll

THERE'S Kitchen of Scotland Neck, N. C., who is chairman of the House Ways and Means Committee by the operation of the seniority rule—the designer of the eleventh-hour 8 per cent tax on the little incomes—those earned by personal effort. And there's Senator Kirby of Arkansas, who the other day was telling us from the floor that Surgeon General Gorgas, even after months of study, must be all wrong about our soldier boys having been overcrowded in the cantonments because he, Kirby, was a hunter and had been hunting with the fellers back in the Ozarks and slept in a tent four feet by eight or thereabouts, along of eight or ten others!

And there's Ollie James of Kentucky, the big, booming, thunderous personality of the Senate, who adores the Administration and would not readily change anything in it. And there's "Uncle Joe" Cannon, who has seen twenty-one terms of Congress, and Senator Stone of Missouri, chairman of the Committee on Foreign Relations, who was against the war but now clamors that Roosevelt is the kind of man who gives (as the administrative opinion machine says of criticism) "aid and comfort to the enemy." There is Jeannette Rankin, Representative from Montana, harbinger of suffrage, and Congress

man Baer, a cartoonist and a kind of advance agent for the Non-Partisan League.

And there's the representative from New England who the other day made a philippic against the mud he found in a cantonment at Charlotte and distinguished his flourish by this closing sentence:

"Better treatment, I say, is deserved by these boys who will carry the flag—over the top to victory—FOR YOU AND I!"

## "They Are Trying to Understand"

THE President is coming! Knots of congressmen, informed by Washington society ladies who have arrived in their limousines, protest in whispers as they will afterward protest on the floor, that the secrecy about the President's coming is not proper "because Rumor knows more than we do."

Here, where so many interesting figures are pointed out, not as advocates, analysts, or men of outstanding ability, not as formulators of policies, not as students of great questions, but rather as men distinguished by the way of wearing their hair, or the length of their service, or their relationship to some one, or their participation in some funny story, or their hopes for promotion to higher office or the presidency (either growing, nipped, or dead), an astonished American wonders that no one is pointed out as a statesman. Or even as a man who brings preparedness, depth of study, and breadth of education for true legislative service.

"Of course, there goes Lodge," says one of his fellow senators.

"Who else?"

"Well, er—"

But the President has come! The bells are buzzing. Congressmen and senators in black streams flow into the chamber. A hush.

This is the President! A man who appears taller than he is—a severe man, a man of poise, of calm manner, a little ministerial, proud and majestic in mien, a man whose expressions come and go in marked measure. One person will notice that this is a noble figure, a figure apart from the men around him; another will remark that he is not a man of spontaneous smiles, not a man whose breadth of understanding and sympathy includes laughter—as Lincoln's did—not a man unconscious of himself, as Lincoln was unconscious.

The message! Measured, weighed, shaded, chosen, sculptured, arranged—the architecture of rhetorical excellence! Adapted, fitted, symphonic, striking chords of human sensitiveness, classic music of words which have been popularized without unbending from the manners of stately dignity—the minuet of state papers! And always touching the destiny of the world.

And this pond of expectant legislative faces—not weak faces, but rather faces strong in the lines of homely struggles and compositely virtuous and conglomerately ambitious and businesslike and stable, looking anything but suggestive of the old year suspicion of "influence" and "alliance with the

interests" and "manipulating" and "fine Italian hand"—what is the mood and susceptibility of this pond as the President delivers his complex treatment of world politics?

The pond just looks back at the President blankly! One man in it starts to applaud at the wrong time and then thrusts his hands into his pockets. There is almost no spontaneous demonstration. Furtive glances are cast at neighbors to catch a clue to the proprieties of response. Gravely, solemnly, and a little pale, assured of the importance of the occasion and equally unmoved by it, Congress looks at the President with a combined pond expression of respect—and dismay.

The American onlooker is perplexed. He leans toward a Washington correspondent and says: "What's the matter?" and the answer comes in a hoarse whisper: "They are trying to understand."

That phrase represents, as one finds it, the whole undercurrent of Congress to-day. With the gigantic task of the war, and on top of that an Executive hose of ideas played into the Legislative countenance, and on top of that tremendous social upheavals ready to shake the world, with no average intelligence knowing what to do or expect, Congress finds itself a plaything of necessities. What it must do it cannot weigh; the impulses from without are those it cannot estimate. No strong men are standing forth individually; collectively there is no force of independent action or initiative.

Some one has told the story of a Frenchman of prominence who was seen chasing after a mob in Paris during the Commune. "Stop! Stop!" cried an old friend. "Why run after this wild rush?" The Frenchman looked back pathetically. "I have to do it," he shouted. "I am its leader." And Congress is like that.

Make no mistake, however, about the virtues of this Congress. It has them. It is not a "special privilege" Congress, not a "pusyfoot" Congress. There is nothing Machiavellian about it. This Congress is in the category of "honest" Congresses.

Furthermore, it has worked hard enough! In the promptness of its service it has been praiseworthy. If an order comes down for legislation, Congress says: "Yes, sir. On the fire, sir. Will be right up, sir. Will you have mushrooms again to-day, sir?"

Suffrage and prohibition, once camels, are only gnats to this Congress. Not even a drink of water is needed afterward. Tell Congress what is needed in war enactments and, in the main, one may be fairly sure that, first of all, Congress will be very grateful to learn what is needed, since this fills a yearning desire to be useful while lost in the woods of dazed speculation, and secondly, with good faith, with dispatch, and without much of loose debate, tail-feather spreading, logrolling, or trades and whispered conferences, Congress will enact the law.

"We are much too busy to make many trades," a senator told me. "Occasionally the Democrats make a bid for the votes of the handful of hybrids—Progressives or the men who wear hyphenated party names—and, of course, if I am to be asking something of one of them, sooner or later he will be asking something of me. But there is less of that now than these halls can remember. The film moves so fast that there is no chance for posing, either."

#### An "Honest" Congress

IT is said that in the turmoil some ridiculous examples of the results of a democracy's haste have come up. One of them nearly resulted in an appropriation to buy a number of mounts and draft animals, horses, and mules for the use of cavalry which would have been enough if sent to the other side to eat France into starvation. And this proposal came in spite of the fact that cavalry is a branch of mili-

tary service nearly eliminated from warfare. The recommendation, which probably slipped off the pen of a callow subordinate officer in a hurry to "do things in a big way," is like hundreds of other instances, such as the ordering of 21,000,000 pairs of shoes, the specifications for many of which were based on the sizes of soldiers' feet in the latter part of the Civil War when Americans' bodies and feet were smaller and the army was a "boy army"; or the duplication of an order for gas-mask bags which would have provided more gas-mask bags than our army now in France could have used in ten years.

In Washington there are spasmodic attempts on the part of executive departments to pin upon the back of the galloping Congress the charge that Congress has been responsible for delays. No doubt in some rare instances the accusation will stick. But, as compared to executive speed, Congress is an air-plane preceding the advance of an apple cart over rough ground.

"I am amused when our friends of the Shipping Board complain that Congress has been slow," said a contractor to me. "As you know, we have just finished a shipbuilding yard for the Government. Now, here is the literal truth—it took longer for the executives to read and sign our contract, even after the terms were all settled, than it took us to build the yard."

The amount of legislation passed by this Congress, considered by its weight of importance, has been great; it has been an "honest" Congress, a "people's" Congress, as Congresses go; it has done a large amount of business in a fairly businesslike manner. The whispering type of legislator is out of fashion. Congress in the main is earnest and patriotic. Partisanship has been restrained. All this, in fairness to Congress, ought to be made plain.

Unfortunately this is not all. If the legislative branch of government in our democracy is not to become a mere adjunct of executive power by the common consent of the governed, then it is time that Americans took a close look at Congress and planned for its restoration. For even if one believes in centralization of power in war time, it is better that such centralization take place by deliberate policy and the creation of the proper machinery than by a possible deterioration of fitness in Congress to function according to the plans of the founders.

"My stars!" said one frank senator to whom I suggested this. "You ask that Congress express the will of the people. Bless me, in these days it does not know how to express itself."

To begin with, the chamber which is supposed to be closer to the people and more expressive is the Lower House. A few years ago, and by fits more recently, a large group of Americans were urging us to put the Senate out of its misery. "It is the stronghold of special privilege," they said. "It should be put on the list of extinct species. The direct primary may help to improve its independence, but, after all, only a rich man or a very noisy one can weather a State-wide senatorial campaign. Furthermore, what purpose does the Senate serve?"

Whatever the answers to the first suggestions, the answer made by our War Congress to the last question is quite clear. The Senate serves as a ground of debate and discussion, even if not of initiative and statesmanship, which at its best is at least worthy of more public attention than is given.

"Nothing ever comes out of this chamber now," said one of the ablest of the newspaper correspondents, with a yawn. "The Senate is the place where

one may at least hope for intelligence on the big challenge of this war."

We were sitting in the gallery of the House. Banks of brown chairs crowd the yellow and brown and gloomy and badly ventilated hall. Four hundred and thirty-five members! More than a hundred added to the number of Cleveland's day. And each one now represents nearly a quarter of a million people! Half a century ago each one represented less than half that number!

#### Blond or Brunette?

IT was a day when a discussion of the famous Garfield fuel order, affecting a whole nation's economic equilibrium, had been forced off the floor. The Speaker, Champ Clark, with a grave expression on his strong face, is listening to parts of the following:

CAMPBELL of Kansas—The gentleman from Mississippi has intimated that somebody is talking politics. Sisson—I did not intimate it; I stated it.

CAMPBELL—I do not know to whom he refers.

Sisson—The gentleman ought to be able to recognize his own photograph.

CAMPBELL—That is what I wanted the gentleman to say.

Sisson—That is all. I have said it.

And then again:

CAMPBELL—I have gone through the War Department and found four or five clerks visiting, hovering over the same typewriter's desk. You will find in every hall in the War Department clerks so thick that they are in each other's way, reading newspapers, gossiping, manicuring their nails. . . .

RUCKER—Mr. Campbell speaks knowingly, because he speaks from personal observation of conditions in the War Department, and he tells us that he frequently goes there and finds five or six clerks hovering over the desk of a stenographer or a typewriter—presumably of the female persuasion—and the gentleman from Kansas, it seems, places himself around that same typewriter when he goes to the department. If the gentleman is appealing in behalf of that typewriter, who perhaps puts in several hours of the time daily in entertaining members of the House, then, so far as that one is concerned—

CAMPBELL—It is not one, but the desks clutter the hallways of the entire department.

RUCKER—Well, the gentleman ought to confine himself to one—if she is good-looking, at least.

CAMPBELL—Oh, I have long ceased to be interested in any typewriter, be she blond or brunette.

#### New Wits

I THOUGHT of the plight of nations and the vast upheaval of the world; I thought of the coming new day, or night, of the world which will change even our vocabulary by making obsolete the words for old ideas and bringing in words for institutions and conceptions not yet in being, and then I thought of all the mouthing on the floor among those who speak for "that fair and beautiful State of Tennessee" or "the great and prosperous State of Iowa" or "the honored and glorious State of Texas" or "the unparalleled and ever-bright State of Ohio." I thought of this passage of the other day:

CANNON—Why, I may be foolish in my old age, but I have no doubt that this amendment—

SNOOK of Ohio (rising)—Oh, vote it down!

CANNON—My friend says: "Vote it down!"

SNOOK—Oh, well, I say vote it up or down.

There is innocent fun for you to relieve the stress of grim duty! It is carrying the flavor of the House to that same plane reached the other day when a great Government contract was under discussion:

A MEMBER (rises)—What does the gentleman mean by referring to a "wooden" contract? Does he mean a contract with a man who is wooden from the neck up?

And on the same plane was the eagerness with which a "cultured" body seized upon the name of Hog Island when an investigation of the shipyard contract was going on. The word "hog" played upon ad nauseam, even up in the Senate by men like Vardaman and Knute Nelson, made the reputations of new wits and convulsed members, while even the galleries groaned. (Continued on page 35)

# Collier's

## The Battle

AS this issue of COLLIER'S goes to press, the great battle in France—perhaps the greatest in recorded history—is still raging with undiminished fury. Of the outcome it would be absurd to venture an opinion. The Allies are fighting with the tenacity and courage to be expected of them, and although the advantage is still with the enemy, a day might turn the tide the other way. The Germans have suffered terribly. No such shedding of human blood as took place in the waves of men who were hurled against the machine-gun and artillery fire of the Allies has ever been known. But their gains have been great in territory, prisoners, and guns. It is good to be able to write at last that American troops are now in this battle and that more are hurrying over from the training camps, the flower of the youth of this country. Their numbers may be small, but their courage is high, and without boasting we may expect that they will take at least their share of the work from the French and British veterans with whom they are brigaded.

The reason for the German success remains a military mystery. We cannot understand the preponderance of German man power or the effectiveness of the surprise. For months it had been known that the German General Staff was planning a great drive. In fact, the movement was advertised in advance in order to quell political discontent at home. Yet when the blow was struck it came with all the force of "the bolt from the blue." "Surprise," says a great military writer, "was the foundation of almost all the grand strategical combinations of the past, as it will be of those to come. The first thought and the last of the great general is to outwit his adversary and to strike where he is least expected. . . . There is nothing to be more dreaded in war than the intellect and audacity of the strategist. . . . The great strategist, surprise being still the most deadly of all weapons, will devote the whole force of his intellect to bringing it about."

These are all truisms of warfare. They are printed, in one form or another, in all the great military books. Yet here we find armies surprised after having been notified that they were to be surprised! Probably the reason for the failure better to withstand the German onrush is to be found in the other strategical necessity of discovering the weak point of your adversary's line and striking at that. Undoubtedly it was the British Fifth Army which first gave way and disordered the entire plan of defense. It may be that the German General Staff trusted to the unstable character of the general commanding this army or had actual knowledge of his failure to provide sufficient defenses. At any rate, they struck with unexampled ferocity at the Fifth Army, and the Fifth Army gave way. The commanding general, Sir HUBERT GOUGH, has since been removed from this command.

The purpose of the Germans is generally believed to be to divide the British and French armies, driving one of them back on the Channel ports, which the needs of national safety will compel them to defend to the death, and forcing the others to retreat on Paris or even beyond. But the Germans are not the only strategists. We have unbounded confidence in that compound of cunning and audacity, highly imaginative but intensely practical, which distinguishes French strategy. It was seen at its best at Verdun, when the enemy were continually drawn in and drawn in with great loss until the hour came to give them the hammer strokes that sent them reeling back.

What would happen if the Germans should finally take Amiens? Suppose that the worst should occur and Paris be occupied, the French and British armies separated. Would the war end there? We believe not. The people of France and Great Britain are tired, but their hopes are high, their spirit is unbroken, their courage undaunted. We will continually refresh their jaded forces with new drafts of young and vigorous men. Even if the worst should happen, the Allies will go on with this war. The ring around Germany will not part even if she adds many more hundreds of miles to the territory in France which she occupies and desecrates. The answer to all the downhearted here and abroad is the ringing utterance of President WILSON at Baltimore: "There is but one response possible from us: Force, force to the utmost, force without stint or limit, the righteous and triumphant force which shall make right the law of the world and cast every selfish dominion down in the dust."

April 27, 1918

## Planning for Liberty Loans

THAT third Liberty Loan of \$3,000,000,000 is not large for our country nowadays, and we ought to take it rather easily in our economic stride. An American who doesn't know what a Liberty Bond is by now is either an idiot or a freak, and all sections of the United States ought to come forward for their full share. The great farming regions of the Middle West surely will if the Government can do something real for them in solving their knotty problem of costlier fertilizer, scarcer labor, and more expensive tools as contrasted with fixed prices for what they raise. If this is not done, the proportionate bulk of the third loan must be taken by the industrial communities as heretofore. This bond issue is quite small compared with the vague forecasts of it which had been coming from Washington, and it would be a very great economic advantage if our Government could get more order and system into these things.

If we need to have two bond drives per year of, for example, five thousand million dollars each, we ought to know it so everybody can settle down to pulling his part of the load. The chances are that most of the loose capital available for the purpose has already been put into these loans, so that it is now a matter of how much can be set aside for war purposes during a given period. It is important not to have these periods overlap. Those who subscribe for bonds out of their pay ought to finish up within the time in which the Government spends the money so raised and, preferably, before the next issue is out. There's little sense in putting two saddles on one horse. One excuse is, of course, the complicated and unpredictable tax laws which Congress has imposed in the last year or two. When those mysteries have been cleared up and their actual yield in money ascertained, the Administration ought to settle down to a solid budgetary policy under which each of us can see his duty and plan accordingly. Meanwhile we'll put this loan over with a rush. Three times is out for the Kaiser!

## Why Buy Bonds?

WHO needs to have that explained while the great battle is on along the western front? We are buying safety for everything we hold dear. How is there anything of sacrifice about getting security? In this world of peril and change the Liberty Loan gives you a chance to quit wasting and get your property into something solid. If the promise of the United States to pay principal and interest is not sure, then there is no such thing as wealth or certainty. The power of our country which guarantees these bonds is able, by taxation, to take the same wealth without giving you any bonds at all.

These Liberty Loans really force economic advantage upon those who subscribe to them. Suppose you don't care a copper about our soldiers or sailors, suppose you reject all thought of freedom, patriotism, justice, or peace for the suffering nations, then (if you are not detained in a lunatic asylum) buy Liberty Bonds because you seek your own selfish advantage as measured by the acid (and asinine) test of dollars and cents. To keep our Government possessed of all needed purchasing power at this time is not only the highest duty of citizenship, but also the lowest and most obvious common sense. In a cause so great there is room for all. Come on in!

## A Hint on Hero Worship

TO worshipers of the political individual we commend the following saying of the great Dr. JOHNSON:

If nothing but the bright side of characters should be shown, we should sit down in despondency and think it utterly impossible to imitate them in anything. The sacred writers related the vicious as well as the virtuous actions of men; which had this moral effect, that it kept mankind from despair, into which otherwise they would naturally fall were they not supported by the recollection that others had offended like themselves, and by penitence and amendment of life had been restored to the favor of Heaven.

It seems to us that the attempt to create out of a highly cultivated, extremely able, and patriotic man a figure of imperturbable serenity, of angelic innocence, and of an omniscience which it is treason to dispute must fail when the American Sense of Humor comes to the rescue of American Common Sense.

## *The Right to Make Faces*

ON the morrow of the Wisconsin election in which Antiwar BERGER polled about 100,000 votes and carried the city of Milwaukee, there came from that puzzling sector a vindication of Milwaukee's loyalty. Some one in the town now famous in more ways than one rose to point out that Milwaukee had oversubscribed its Liberty Loan allotments, that one out of every fifteen of our soldiers in France was a Wisconsin boy, and that the State had been free from strikes, riots, and other disturbances militating against the efficient conduct of the war. The argument has force. If there is such a thing as constructive disloyalty, shown in acts and not words, there is apparently, too, a constructive loyalty as shown, not in words, but in acts. Wisconsin would therefore be claiming the privilege of the small boy under parental duress. He will knock off marbles and go on errands to the grocery store, but he reserves the right to make faces.

Disconcerting though it may be to find Americans here and there carrying on with a frown instead of a smile, let us set it down to the imperfections of human nature—and politics—and be content, for the time being, with the loyalty of the overt act. We had the same state of mind in New York City after the election of HYLAN. The forces of outspoken disloyalty of the Hillquit type and of the reticent loyalty of many of the Hyman supporters had won an overwhelming victory. What would happen to the war in New York City? Nervous editorial writers went so far as to call for the assumption of police authority by the Federal Government in our principal port. There rose a vision of draft riots, munition-factory explosions, and scuttled transports in the harbor.

What happened we all know. The drafts have gone forth cheerfully from New York to Upton and have come back to parade through shouting crowds. The Liberty Loans have been over-and-over-subscribed. There have been no ominous fires on the water front and no mysterious scuttlings in the harbor. From New York, under the eyes of millions, the transports and the food ships and the munition ships have been pouring out for the ultimate victory of America and her allies. New York, having made a face last November, is going efficiently about her errands.

And in the long run this useful and loyal activity is bound to wipe the frown from the face and the heart of the small boy.

## *Getting Around It*

IF a fellow wants to look a little bit like a soldier without the trouble of actually being one, he can have a belt sewed on his overcoat at an average cost per snappy garment of about one War Savings Certificate. The leaders of this mode camouflage wear belts about their coats, and we saw one sartorial Ulysses who had his waistcoat thus encircled; but anyone who puts a belt around his shirt (they'll come in summertime!) ought to have another behind the ear. A society dame from West Pumpkin, N. J., got her picture in the admiring New York papers by having her Palm Beach riding suit cut on the lines of the Royal Flying Corps uniform. Our allies have no remedy in the matter, and anybody who cares to do so can rig up a bow-legged baby in the dress of the Bersaglieri or the chasseurs alpins. All it takes is a little cheap nerve. After all, it does not matter much. Those who are helping win the war will keep right on doing so, and those who show their zeal by flourishing bits of cloth will keep on doing that. It's the eternal difference between real and sham, and even this war does not rouse some of us to see it.

## *A Law of Mystery*

ONE specially queer thing about that postal-zoning law which goes into effect in July is that the argument is so invariably against it. Everyone who considers that fantastic statute for cutting our country up into sections, and for making the circulation of periodicals across those absurd boundaries more expensive, is dead set against the whole business. The March Hare might have devised the scheme in some idle moment, and it needs a Mad Hatter to speak for it. The matter has been warmly and extensively discussed for some three or four months now, and, as far as we know, not one real argument in its favor has turned up. If Postmaster General BURLESON and his comrades care anything at all for the "opinion of mankind," "the general reason of humanity," "the voice of the people," or any other of those oracles of democ-

racy to which JEFFERSON and JACKSON used to appeal, it is high time that they cocked an attentive ear in the direction of this chorus of condemnation and made some slight attempt to answer. It is no disgrace to make a mistake, for that can happen to anyone, but it is disgraceful to refuse flatly to consider whether or not a mistake has been made. For public officials that course is usually fatal—or should be. Why cannot Burleson and Company drop their pose of Bourbon dignity, step down off the pedestal, and tell straight out what that postal-zoning law is for? All of us who like to read would appreciate it. Our own notion is that this queer statute was passed in darkness and will fade away when exposed to the light. Turn it on!

## *Vain Wishes*

WE are as patient as most folks, but when we see that same blond beauty on the same magazine covers gazing at a fractured Hun helmet with the same silly, empty, simpering gloat that she used to bestow on bunches of spring violets and boxes of Whuyler's sweets, we could wish that some of the lower levels of American art were—but, oh, what's the use?

## *Raise Some Yourself*

IF these soft days make you feel lazy about starting that garden work, just reflect that it will be mighty handy to have some few things to eat stored in your pantry and cellar along about next February. You will need that food and might better raise all you can yourself so as to be sure of it. With a complacency peculiar to itself, our Government reports that not less than 600,000 workers have been taken from the farms of America since we got into the war. Every city has unemployed in large numbers and still larger numbers doing work that has little or no relation to the war. The farms have not enough people to run them. The Government is pouring capital into war industry, but dribbling it into the ration-raising business. Washington is straining everything to feed the factories with coal and iron, but fertilizers and farm tools are scarcer than ever. The Administration is promising gigantic exports of foodstuffs to our allies, and seems to have no program in particular for getting the stuff raised. The prices the farmer gets are nailed down while the prices he pays are going steadily up. Do you need any diagram of what your favorite corner grocery store will be telling you next winter? Don't try to hoard food; that sort of robbery and selfishness will only make trouble—preferably for the hoarder. Add to the supply, raise some yourself.

## *New England at the Front*

THOSE who recall Civil War days when the Sixth Massachusetts Regiment fought its way through Baltimore must have been thrilled when the news came that a New England division had taken our flag into the great Battle of Picardy. Separated by nearly sixty years of time and three thousand miles of sea, distinct in practically all these details of scene and action, it is still the same crusade for freedom as that to which the men of the Sixth gave their best. It certainly is a different sort of New Englander. COTTON MATHER would shudder to see these polyglot inheritors of the spiritual commonwealth he sought to found: Portuguese fishermen from down on the Cape, Slovak garment workers from South Boston, Swedish farmers from Connecticut tobacco fields, Finnish chair makers from Gardner, French-Canadian loggers from the heart of the Maine woods, and Italian artisans from the hat mills of Danbury, all lined up with old-time Yankee boys from the Vermont sugar bush and the lobster pots of Nantucket. They are fighting for the brick-lined factory streets of Fall River and Manchester as well as for the little white villages that nestle among New Hampshire's elms and the great Statehouse that holds its sway on Beacon Hill. But behind them all are three hundred years of history, whether they know it or not; and in them all is the courage that flamed up after the Deerfield massacre and avenged the horrors of King Philip's War. They will hold their lines as the farmers did on Bunker Hill or go forward under orders with the same bravery and steadfastness as inspired those historic charges at Fredericksburg and Cold Harbor. Men change, but their land remains and molds their souls in its own image. Generations may come and go, and the races of the world may mingle there, but New England is New England, as of old.

April 27, 1918

# Germany's War Pictures — Made in America

Here is a photograph supposed to show a German plane downing a Russian machine. It appeared in a recent issue of "Der Welt," a magazine published in Berlin. The inscription underneath reads: "Russian airplane falling in flames after its gasoline tank was exploded by a well-aimed shot from a German biplane"

HERE is the original of that picture, taken in California in 1915! The New York "Sun" of March 23, 1915, said about it: "This remarkable picture . . . was taken at Universal City, Cal., on March 16, when Frank Stiles, an aviator employed by the Universal Film Company, lost control of his biplane and

plunged 150 feet to his death. The accident occurred during the making of a motion picture. . . . A premature explosion in an un-anchored airplane just as Stiles flew over it caused his machine to somersault earthward." As long as we're at war with Germany, she might at least furnish her own war photographs!

# THE THOUGHTS OF HINDENBURG

BY LEAVITT ASHLEY KNIGHT

WAR prophesying is an indoor sport on a level with that of popping at the moon with a bean shooter. Everybody knows that nobody knows all the vital facts about the western front, the eastern front, and the great German Insides. I am not going to indulge in war predictions here—or anywhere else. But I do know something about the German mind, for I lived with it four years, sometimes in officers' quarters and sometimes with *Unteroffiziers* and sometimes with the common folk. And I think it is much more important for the American people to know how the German military mind works in a situation like the present crisis than it is for them to know exactly when and where the German infantry will strike in the west. For, after all, this war is not so much a battle of charging masses as it is a conflict of types of mind. The successes of the Germans have been due almost entirely to the fact that none of the Allies' great leaders have really grasped the German mind. And the menace ahead of us is just this same menace of misunderstanding.

The Prussian will surprise us, not because he is cleverer—for he is not—but merely because he is mentally different from us. His mind differs from our mind as profoundly as an ape's differs from Henry Ford's. And therein lies peril for us. To win the war we need fewer alleged statesmen and more psychologists.

Here is the situation to-day as the German military mind sees it:

## Loquiter HINDENBURG:

A little patience, and we shall win the war in the west as we have won in the east. My formula is the oldest and best tested rule in the world. The Caesars used it, and on it built the Roman Empire. We are using it, and are erecting a greater Rome.

Divide and conquer! That is the formula in a word.

We must divide men in their interests first of all. After that it is child's play to divide their territories and possessions.

At first our Foreign Office blundered. It thought there was a deep division of interests within the British Empire and another in the United States. These turned out to be trivial. We wasted time over them, precious time! But finally we came upon the great division. It is the division of interests between the eastern and the western Allies.

*Erselens.* The dear Russians are simple peasants. All they want is a little land for each one, a few cows, a wooden church, and much peace. But the western folk are world builders, inventors of mighty engines and cunning devices, schemers, capitalists. They want world trade, wealth, new comforts and luxuries; power.

Now we Germans shall win if we cater to the interests of each individual Russian and each individual westerner. How shall we do this? It is simple.

*Zweitem.* The poor Russians need shoes and clothing and hardware and farm implements desperately. Let us give them freely, as soon as our own more pressing needs shall have been satisfied. Let us

send into the Russian cities skilled organizers, shrewd salesmen, machinists, railway experts. . . . Let us put the House of the Slav in order. Let us make each muzhik comfortable in his own nir, and all Russia will rise up and bless us. Naturally, we cannot do this unless we first reestablish order in the land; so we must send a few infantry divisions to police the towns and railways.

*Drittens.* Once we get half a million skilled Germans at work producing metal, oil, lumber, and wheat for us and for the dear Russians, we shall be able to repair our own railways, provision our own towns, and run our oil engines day and night. The labor of millions of muzhiks under the lead of our half million experts will put our own house in order quickly—let us say *within two years*. We shall then be much better off than we were when we started in 1914.

*Viertens.* There will be considerable grumbling among certain of the Russians, I know. They will say we have taken their liberty from them. Now, those who are leaders in this seditious agitation we shall hang; and, as for the rest, we shall fill their bellies and give them minor Government jobs and pretty uniforms. That will settle them nicely.

*Fünftens.* Now for the western Allies! We need not fear any offensive from them until the summer of 1919. We have hammered them back over the ground we made them a present of last year. Their counterattack may, of course, turn into a tremendous offensive; but we need not fear it in the larger sense. We have intrenchments all the way to the Rhine. They may drive through for five, ten, twenty miles here and there. They may force us back along the entire front, though this is not likely, in view of our heavy reinforcements drawn from the east. But grant the worst; we shall find ourselves as strong as ever when the rains of autumn begin. Suppose we lose half a million? Our line will be shortened again, so that we shall not need as many to hold it, and we shall be nearer our bases.

The Allies cannot materially increase their forces this summer as we have increased ours in the west. For our submarines are still sinking boats faster than the Allies produce new ones. As for the Yankees—God curse them!—they are very much in earnest, but as yet they have only half organized their army and—what is more to the point—they do not yet grasp what they are up against. They gloat over their paper organizations, and they fill their newspapers with stories about ten Yankee soldiers attacking fifteen Germans and killing five of them. They still think of the war as glorified baseball. That is well for us. No! We need have no fear of the Yankees until the summer of 1919. That is clear.

But by that time they will be so strong, so horribly strong, that they will easily fly over our front in vast flocks and wreck our factory towns. It is imperative that we bend every effort to cease hostilities on the western front just before the Yankees are ready to strike in full force. How shall we do this? Very simple! Divide and conquer! As soon

as our spies report that the Yankees are arriving in force at French ports; as soon as they tell us that they have battle planes by the thousands ready to loose against us, we must launch a peace drive so cunningly suited to the divided interests of the western Allies that they cannot reject our terms flatly without causing such grave dissensions among their own people that their morale will be dangerously undermined.

Early next winter or in the spring of 1919, perhaps—well after we shall have gained full control of the farms and factories and merchandising of all Russia—we shall send ambassadors to France, to Italy, to Belgium, and to England *individually*, and they shall say: "We regret to admit that this war is a deadlock. It will run on for a hundred years if we persist in it. Now, this is to no man's interest. So we make you this offer. Name whatever territories you think you are entitled to for your efforts, and we shall consider them seriously."

Suppose they rebuff us. Suppose they say: "We have bound ourselves to sign no separate peace." Then we reply: "Excellent! Those of you who have signed such an agreement may well observe it. We make our offers to you jointly if you prefer. But not to the United States, for that country has not signed any such agreement; and, even if it does so belatedly, it will not matter, for the United States has said explicitly that it seeks nothing in the way of territories or indemnity out of the war. It is moved only by ideals. But you and we are practical men. Now, here is what we will do: To Belgium we pay in full for all damages done, and we restore her boundaries, and humbly apologize for our rudeness. To Italy we cede the Trentino, for we heartily approve of the rights of nationality. To France we give Alsace-Lorraine and damages in full, fairly computed. To Serbia we give damages and political autonomy. To England we leave our African colonies, and we agree to stay out of Africa forever.

"This, gentlemen, will satisfy to the full all your several interests. Consider for a moment what it means! The honor of France is completely vindicated, and she is made joint mistress of all Africa with England. A British-French alliance, on this basis, will be overwhelmingly the largest and mightiest power in the whole world. It will control the seven seas, the second largest continent, half of North America, all Australia, and the richest of Asia—namely, India. The British-French navy will outmatch all other navies combined. Out of that colossal empire you can pay off all your war debts in a few years."

Italy, seeing us in a liberal mood, may demand even more than the Trentino. She may clamor for Dalmatia. And, if she becomes too noisy, we shall gladly concede it.

Of course somebody—probably the accursed Yankees—will howl: "How about Russia? How about making the world free for democracy?"

To this we must have ready one and only one answer. We must say: "Oh, yes, (Continued on page 38)

## MORE HORRORS OF WAR

IF you want to realize fully the awful things this war has done to masculine beauty, compare the picture of a Seventh Regiment private, on the left, taken about 1906, with that of a British officer, on the right, taken in Mesopotamia in 1918. Imagine being told that the latter was your favorite child! And look at those gas-masked French soldiers at the top of the page. They look like something out of "Alice in Wonderland." The gargoyle in the center is supposed to be a Canadian, but it also gives a good idea of how our own boys at the front look by now—worse luck! The gentleman below is a British Tommy wearing the favorite pair of Mesopotamian sand shoes. No wonder he's lying down!

# SAILORMAN BORN

BY JOHN FLEMING WILSON

ILLUSTRATED BY F. C. YOHN

CAPTAIN JOHN MASON put down his paper, took off his spectacles, and filled his pipe out of a polished coco-wood bowl. When it was drawing well he stamped across the little room, opened the door to the porch, and stepped out into the air. It was a fine October day. The great estuary which forms the mouth of the Columbia River glistened and sparkled under a pellucid sky swept clear of clouds by a belated spell of the northwest wind. Around him and below him the town of Astoria sprawled over its hills, sunning itself against the long gloom of approaching winter. Seaport towns have a trick of taking on the color of the day's weather, and one who knows them well will understand that their citizens are as responsive as the barometer to every change and flaw. So it was really extraordinary that Captain Mason's brow was stormy, his heavily tanned face a complete scowl, and his sturdy figure a protest against unseasonable fair weather, a smooth bar, and a serving tide. A couple of passers-by, on the very edge of hailing him jovially, perceived his threatening mood, muffled their husky tones, and merely called up curt greeting. As they went on down the hill, clumping their heels on the steep descent, the captain growled in his beard: "Every man-jack gone or going but mine!"

He glared out on the bay, where a dozen vessels lay at anchor in various stages of undress. For an instant his professional eye was caught and his attention held by the untidy look of a big bark just in from sea. Automatically his mind pieced together the dozen little details no landlubber would have observed and plumped out the conclusion that her mate had quit the ship with the tug's hawser.

"A job for a real sailorman!" he muttered to himself. "Right at the door! And my own son isn't up to it!"

He allowed himself a brief moment's consideration of the men eligible to take the departed officer's berth, found the list incredibly short, and fairly flamed with indignation at his son's delinquency.

"Ships waiting for officers, war declared next week, probably, and no Mason ready to take the deck," he went on to himself. "And I gave him every chance in the world! D——" Here Captain Mason indulged in a profane monologue indelicate to repeat. When he had concluded it he felt his inadequacy and gave an unsolicited encore even more lurid, bitter, and scandalous. Warmed up to his subject by this, he instantly started off at score and gave the whole matter a fresh cursing of such fluency, vehemence, and expert completeness that a young woman who had just come around the corner seemed caught spellbound, unable to move out of the narrowing circle of the old man's invective. When

he had finished with a single comprehensive oath of such magnitude that it left him breathless, this newcomer started, stopped, and then demurely walked past without a glance upward. Captain Mason's inflamed glance fell on her as she continued on her way, and he was horror-stricken.

"Mary!" he called after her. "Mary Chase!"

Miss Chase turned slowly, as if she hardly thought she had been mistaken in thinking she had been addressed, looked everywhere but in the right direction, seemed puzzled, and was walking on when once more the captain's voice, this time almost a roar, called her to a stop. She looked around, finally saw the captain, and expressed astonishment.

"I didn't suppose you were at home," she said.

"Did you just come down the hill?" asked the old man severely.

"Yes," she replied. "I thought of stopping. But I saw nobody at the window and——"

"I was at the window," Captain Mason said firmly. "Just now. I saw you passing and ran out and called to you."

Miss Chase looked up gravely, her youthful face unblest by so much as a dimple. Involuntarily the captain smiled.

"What did you wish to say to me?" demanded that young lady, permitting a twinkle to glimmer in her gray eyes. "Or did you say it?"

"I wanted to talk to you about Jack," he returned, and frowned again.

"Dear me!" she answered. "I suppose he told you I refused again last evening to marry him? I really can't, you know! Now please don't urge me, captain."

"None of your larks, young woman!" said the captain with a still blacker frown which only made his voice the tenderer. "It's you I want to see, and about that very matter. I've changed my mind. I don't want you to marry him."

MISS CHASE sauntered up the steps slowly, holding her smart, trim skirt modestly high above exceedingly slim ankles.

"I really oughtn't to stop," she remarked. "We're both agreed. I mustn't be daughter-in-law, and it's awfully impudent of me to even look up, much less call."

Captain Mason gave her a wooden chair, scowled at the bark again in a peculiarly truculent fashion, and then turned to his visitor.

"You know I've always wanted you to marry Jack," he said. "I've argued to persuade you to. You're the one girl I'd like for a daughter. But I've decided you can't marry him."

"He's so eligible!" Miss Chase murmured softly.

"A fine old father who simply adores me, a good position in the cannery, and—and so good-looking!"

"Mary!" croaked the old man, choked, and stopped. The girl's clear eyes shot one quick glance at his twisted face and all the girlish laughter fled. She rose. There was a new tone in her voice, the tone of a woman threatened with loss of what she holds dearest.

"Where is Jack?" she demanded.

Captain Mason shook one fist at the bay, swallowed an imprecation, and then shook his other fist at the sky.

"He's holding down that good job at the cannery!" he almost sobbed. "Working a d——d wooden stick with a pen in the end of it! Adding up figures in a thrice-cursed book made of old rags gathered by a miserable junkman out of back yards, sold to a mill run by a set of silk-pocketed millionaires who made it into a ledger and sold it to these fish-eating swabs who stick poor salmon into tin cans and call it business. He's keeping books for Mr. Lillyfingers and Mr. Silksock. He's drawing down a hundred a month for using drops of ink. He's getting ready to be married on the strength of a little bank book, a dresser full of neat shirts, and a wedding present from the general manager! My son!" The captain drew a long, painful breath, exhaled it noisily and miserably.

Miss Chase dropped back into her chair. But the former girlish attitude had vanished. She spoke competently and to the point.

"Jack said something to me about your bringing up the old question," she said. "It is an old question, captain. Jack decided it for himself long ago. He has his own life to live. You may laugh and scorn his new ways, but the people here appreciate him. Really, even if you don't think so, it is something to be proud of, to have a son who everybody says will make his mark. Astoria has plenty of the other kind—sailors without any sense of their responsibilities."

Captain Mason snorted, laughed with embarrassment, and seated himself on the porch rail with a movement at once youthful and muscular.

"You're the only excuse Jack's got for not doing a man's work," he asserted. "Time and again I've thought the whole thing out and made up my mind. Then when I looked at you I've almost forgiven the lad for choosing to stop ashore. But I'm determined now. I'm not going to take Jack's excuses any longer for being a miserable pen pusher, an ink dabbler, a leaf turner in ledgers, a fellow who uses his ears for a penholder, a d——d penurious, I'll see-at-the-end-of-the-month financier, and a shame and a disgrace——"

"Hush-sh!" said Miss Chase gently. "So you blame him for doing this for my sake? You don't

know Jack. He may seem a mollycoddle to a rough-and-tumble old pirate like his father. But times have changed. He's settled down. He's doing the best thing any young man can do: winning the good opinions of men who count—

"Pennies."

"In real life," Miss Chase went on undisturbed. "He will make a place for himself—"

"On a sofa!"

"In Astoria," she said firmly. "He'll build him a home and live like a well-bred man. He'll be a citizen in a community, not a vagabond. And he's doing it in spite of a natural spirit of adventure. You don't know your own son, captain!" The girl's eyes sparkled with anger. "He's subduing his inherited liking for—for piracy—that's what you followed, by your own account—and trying to be a decent man."

CAPTAIN MASON rapidly recalled a long series of lurid tales of his own experiences, related by himself in an effort to stir the feeble spark of his son's spirit into action, regretted their unvarying bloodthirstiness, and took another tack.

"Spirit of adventure!" he remarked scornfully. "You mean to tell me the boy ever had a thought beyond sticking in an office and having the cashier of the bank refer to him as a rising young fellow? He don't even know what it is to have a man's job—after all the pains I took to teach him the finest profession in the world!" He swallowed. "All he seems to think of these days, when there's war and ships are idle for lack of men to man 'em and whole nations of our own blood are dying, is a nice, easy job, evenings at home and—how many cats will you keep, you two?"

Mary Chase stooped, possibly to hide a blush, ostensibly to pick off an invisible raveling from her skirt. "You blame me?" she whispered gently.

"Look here!" Captain Mason said boldly. "A fair and square answer, Mary, my girl. Are you sure you'd prefer to marry a chap with a salary which he gets at the say-so of another, or marry a real man with two fists, a record on two coasts, and the respect of men he never heard the names of? I raised Jack to be a proper sailorman. He's turned sissy."

Womanlike, she paused on the brink of the abyss to try pleasantry.

"I told him I couldn't marry him!"

The captain groaned, turned savage. "I know! You stirred his ambition, eh? Spurred his haughty spirit on to bold adventure for his ladylove, eh? Gave him your mitten as a knightly favor and told him never to look on your fair face again till he'd get a raise to one hundred and twenty-five dollars a month!"

Mary Chase was withdrawing herself silently, without words, into herself.

"That's the modern way of doing it," Mason went on. "When I asked his mother to marry me—I was mate of the *Black Hawk* then—she looked out over the bay and said she'd wait till I brought my own ship to the bar and signaled for a tug. And I went out again and in sixteen months less eight days the sun rose and showed my topsails above the lift of the sea. That night we were married. I had made the trip from Hongkong in a hundred and nine days flat and landed a cargo worth two hundred and six-

teen thousand dollars without a single note of protest against the underwriters. And our son is told to go home early like a nice lad and work nine hours to-morrow and catch the boss's eye and get the promise of a raise next January first. Women have changed," he concluded bitterly.

Miss Chase studied her fingers thoughtfully. Contrary to the expressed opinion of Captain Mason, women do not change. Consequently the girl's face gave no sign of the sacrifice of dreams she was making. Her voice when she looked up to speak was lazy, seductive, and sweet.

"You really think Jack ought to go back to sea?"

"I trained him for it as far as I could," the captain answered tartly. "You can put a fish in water, but you can't make him swim. Up to ten years ago if a man saw a ship with the American flag flying and it was a big, handy, well-kept craft, ten to one he'd ask which one of the *Mason* commands her? Now there isn't a *Mason* afloat. Not one."

Mary Chase rose. She had never looked more lovely or more placid.

"I see," she said; "it's my fault. You blame me for keeping your son home earning an honest, quiet living, in hopes of an honest home. I admit I prefer the clerk to the pirate. I shall probably continue to prefer a respectable citizen to a man who is always a stranger in any community. But a father has his rights. You've left it to me. You shall have yours, captain, and your sailor-man son."

The old man's voice was heavy with sarcasm. "Now, whatever you do, my dear, don't interrupt the boy at his work. He might make a blot on the ledger if you went down and told him you really wouldn't marry him. You'd never forgive yourself. A matter like getting married or handling back a ring can wait till after office hours."

She lifted her cool eyes to his fiery ones. "I said you should have your rights," she answered. "You say his stopping home is all my doing. I'll undo what I've done. It's a promise."

Captain Mason caught the note in her young voice, a glimmer of the spirit blazing behind her veiled eyes, and stumbled up in a panic.

"Mary! Look here! What are you—"

Miss Chase had departed, stepping down the street with a lithe, easy grace, a figure bewitching and beautiful. The fiery eyes dimmed. The savage old seafarer saw her in a golden mist, remote, mysterious.

"My God!" he muttered, not profanely. "My son is waiting till he gets a raise before he marries her! And if he had the spunk of a house, he'd steal a ship and fetch her with him to-night by main force and defy heaven to take her from him."

While the sky reddened in the evening glow Captain Mason pondered. After all it was worth while to be lifelong a poorly paid bookkeeper and have Mary Chase to wife—no adventure could be more splendid.

IT was dusk when he put his newspaper down and went in to start the fire for the evening meal. But there was a light in his eyes and a tenseness in his

"All right. Stick to your books and your pen"

movements that showed his thoughts were not with his domestic chores. When the front door opened at last and let in the only other member of the little household Captain Mason nodded absently and went on with his biscuit making. But his son's start tones recalled him.

"All women are alike!" remarked the slender, well-set-up and well-dressed youth stormily. "You were your head off to please them and then they see somebody they like better."

His father lifted his head abruptly and stared. A guilty flush spread over his dark cheeks.

"Speaking of Mary?" he stammered.

The young man scowled fiercely and rasped: "Yes. Here I've been slaving for a year for old Petterson trying to live up to her requirements, and this afternoon she comes right into the office at ten minutes past three—"

"At—at ten minutes past three!" repeated the captain with every appearance of being profoundly shocked. "Right in office hours!"

"Yes," continued his son bitterly. "Couldn't wait, of course, to tell me we—to say she—"

Recollection of what Mary Chase had said in that office at that hour sacred to business seemed to choke him. He stared at his father in mingled wrath, outraged dignity, and agony. The captain devoted himself to the biscuit, merely muttering: "You say she said something?"

"She said something," repeated the young man stonily. "Just came in and never gave me a chance. Stood there by the desk with old Petterson peeking around the partition and told me she had thought it all over and she couldn't marry a man who didn't go out and fight for his country."

"Yes?"

"And when I asked her what country I'd fight for, seeing we were at peace with the world, she merely laughed and spoke of playing a man's part and not sitting around like a stick when there was a man's work to be done."

Captain Mason essayed an explanation so feeble that it elicited only inarticulate snorts from his son.

"Mary was joking, Jack."

IN the silence the two men seated themselves before the stove to wait for the cooking of supper. Usually this period had been utilized by the elder to relate the incidents of the day in his world, the world of shipping, in which Jack professed to have no interest whatever. It had been part of the captain's stout program for keeping his son in mind of what he should have been doing. But to-night tragedy sat with them. The old man, out of an experience which he steadily tried to ignore in his dealings with the younger generation, knew that Mary Chase had taken matters into her own hands with a vengeance. And Jack Mason dully knew that something in the relations between himself and the girl he worshiped had forever altered. She had positively defied the traditions of offices, the customs he had so strongly approved of—she who had never even called him up on the telephone before—and allowed her voice to be cruel, harsh, and scornful! Why?

The biscuits announced. (Continued on page

The girl looked at the new pole of her frozen world

A glance at the above photograph gives you some conception of what the Apperson Brothers have accomplished. These 80 parts formerly considered necessities on the 8 cylinder motor have been eliminated. The result is that Apperson 8 simplicity approaches that of the 4 cylinder motor. And all the 8 cylinder advantages are made more valuable than ever before.

## The New Compact Simplified APPERSON 8

**T**HE new Apperson 8 deserves your careful attention. It is the only eight with this extreme simplicity.

The complications have been removed. With all the power, acceleration, speed and economy of 8 cylinder construction, the Apperson 8 has scarcely more parts than the old-fashioned 4.

A camshaft, a gear, and the entire trigger board have been omitted.

The result is more steadiness at high speeds and vibration banished. You don't have to worry about adjustments of delicate mechanisms when those mechanisms have been abolished.

This new 8 is the fruit of Apperson Brothers' twenty-five years' experience.

The same inherent mechanical genius that produced America's first practical gasoline car has made this final, conclusive 8.

Great as it is, the Apperson 8 motor must not be allowed to overshadow other worth-while Apperson qualities.

Owing to the long wheelbase coupled with extremely light weight, you enjoy in the Apperson:

**Comfort**—easy riding and ample seating capacity.

**Tire Economy**—owing to excellent balance and minimum weight.

**Gasoline Saving**—due to motor efficiency.

**Good Appearance**—always an Apperson characteristic.

Let your Apperson dealer prove these things by demonstration.

APPERSON BROTHERS AUTOMOBILE CO., KOKOMO, INDIANA  
*Manufacturers of Eights and Sixes*

SHIPS, a hundred thousand ships, should enter and leave our ports this year, to carry men, food and munitions to our Allies.

*"There is now a Fisk Tire for every motor vehicle that rolls."*

FROM the manufacturer to the trenches the motor truck is constantly playing its part in speeding overseas transportation.

SHIPS depend on Trucks—Trucks depend on Tires. Never has quality meant so much!

BRUTALLY strong—built to withstand the greatest demands made upon them—FISK SOLID TIRES faithfully meet every possible requirement of truck service.

WHEN you need Solid Tires—buy Fisk.

# FISK SOLID TIRES

# THE NEW LEADER

## A LETTER FROM T. P. O'CONNOR TO THE EDITOR

**L**E roi est mort! Vive le roi! The great leader has been laid in his grave, but the Irish cause must go on; and the Irish party, with commendable promptitude, have proclaimed to the world that they are ready to take the flag from the hands of the dead chieftain, and to carry it on till they realize their purpose. Mr. Dillon was pointed to as the inevitable man, by reason of his long services, by his spotless integrity, by his extraordinary realization of Irish opinion, and by his inflexible and even relentless spirit in fighting for his principles. In some respects his leadership will follow the same lines as that of Mr. Redmond; in others there will be some difference, as there was some difference in spite of the most loyal and hearty friendship and the most cordial cooperation during Mr. Redmond's lifetime. The difference between the two men was not, however, on the issues of the war. Mr. Dillon, though he never altered his opinion that the war was brought on by inept diplomacy, and though he would have been ready to fight, if that were possible, the outbreak of the war, never wavered in the conviction that, when Germany finally provoked the war, her triumph would bring the end, for this generation, of all his ideals. A strong democrat, a strong opponent of militarism, the foe of autocracy and of the oppression of small nations, the champion of the principle of nationality for which he had been fighting all his life, he could take no other view. But he did not think that holding this view with regard to the war implied that the British Ministry of to-day need not be watched vigilantly, criticized frankly and freely, and that the cause of Ireland and the follies and crimes which produced the present Irish situation should not be mercilessly exposed. His memorable speech on the rebellion was the first attempt to place before the world the Irish side of the story; in that speech, while agreeing with the condemnation of the rebellion, as everybody outside a very few did, and which was universal with the overwhelming majority of the Irish people, he assailed in language of burning denunciation the crimes, such as the executions and the murders of Sheehy, Skeffington, and others, which had been perpetrated by Sir John Maxwell; and drew a picture, then thought to have been overcharged, now known to have been below the reality, of the disastrous effect on Irish opinion, both in Ireland and throughout the world, which these executions would produce. Mr. Dillon has done many courageous things in his strenuous life of everlasting conflict; but never did he show such courage as when, to a House exasperated and almost frenzied by the rebellion, he thus boldly stated the Irish case and voiced Irish exasperation and Irish defiance.

Though that speech did not gain him the ear of the Sinn Féiners, they seem to have heard it, and it did gain the affection and respect of the great majority in Ireland and confirmed the impression that no man of his time could so instinctively embody the innermost sentiments of the Irish heart. It is to be inferred from this incident, as well as from his whole career and temperament, that the policy of Mr. Dillon will emphatically be a fighting policy if fighting is called for.

Will a fighting policy be called for? That question is really up to Mr. Lloyd George. From such information as I have up to this hour, I am inclined to expect that it will. Though I do not conceal my opinion that this will be a grave prospect for Ireland, for England, and for all the Allies, we ought now to know the realities of the situation. From all the information at my disposal, I expect that the Ulster Orange section are determined to persevere in their attitude. They will still insist that they cannot entertain home rule and will have no part in a Dublin Parliament. My information also leads me to believe that in taking up this attitude they are finding themselves in opposition not merely to all the Nationalists, but

also to all the Unionists and Protestants from the south of Ireland. It is impossible any longer to make the claim that a small minority of the Irish people have a right to hold up the overwhelming majority of the rest of the nation—especially a majority made up of such former conflicting elements as the Southern Catholic Unionists and the Southern Protestant Unionists. If this doctrine of the supreme rights of the minority over the majority in a nation were admitted, it would not and could not stop there, for there is a minority, in some sections of forty to fifty-

*E. W. Weston, Newspaper Union*

*By reason of his long services, by his spotless integrity, by his extraordinary realization of Irish opinion, Dillon was pointed to as Redmond's inevitable successor*

four, in all the counties claimed by the Orangemen except two; in two of them there is actually a majority of Nationalists. The minority have a right to claim that they should be excluded from the rule of the Orange majority; and their claim is based, not on the imagined and impossible perils of religious ascendancy in the distant future, but in the living present; for in all the places where the Orangemen hold the majority the Catholic minority are subjected to persecution almost incredible in a modern world.

No, this claim of a minority is inadmissible to the mind of anyone believing in representative government and in the rights of national self-determination. It would prevent the liberation of Alsace-Lorraine, because there is a German minority there who wish to remain German; or of Poland, because its population is not homogeneous; or of Italia Irredenta, because there is a German minority there. It reduces self-determination by nations to a nullity; it would mean that self-determination was the omnipotence of a minority.

But what makes a much stronger case against the Orange claim is the higher claim of the necessities of the war. I say emphatically that the claim of the Orange minority is against the sentiment of not merely the majority of the Irish but also the majority of the English people. The Orange minority have steadily lost respect and support among all British parties since the war began. It was easily possible to an English political party before the war, affrighted by the prospect of the omnipotence of so deadly an enemy to their privileges as Mr. Lloyd George, to adopt the Orange threat of rebellion as a last desperate reason. But war has come; and the

Orange element now stand up against the safety and even the existence of the empire. The saner of all Liberals and all Labor men are convinced of this fact; all the sane and intelligent British Tories are equally aware of it and have had the courage to declare that opinion. The Orangemen profess to believe that their property would be confiscated, their churches closed, their Bibles burned by an Irish Parliament; there isn't an Englishman who does not regard these fears as groundless, and if a guaranty of protection were necessary against the impossible,

there is no Irish Nationalist who would object to this being embodied in the settlement. Such childish fear of the phantoms of medieval bigotry cannot be allowed by sane English minds to stand between them and doing a long-delayed act of justice, and, what is more important, averting an addition to their already long list of perils.

But the Orange claim confronts even bigger things than these, and these are the opinion and interests of the whole world, the opinion and interests of all the nations that are fighting by the side of England for the defense of English interests as well as of their own, for the defense of English ideals as well as their own in the future government of the world. I have been up and down America for nearly forty years; I do not remember a single American of proved intelligence who does not believe that Ireland ought to get, and get at once, her liberty. I have not met one who has any patience with the demand of the Orangemen who stand in the way of the liberty of the majority. If the Orange demand were listened to, it would affront the opinion of every ally of England.

Of the Allies which submission to the Orange demand would affect most, America stands first. First she is England's greatest ally; and second she must have a special interest in the Irish question because of the large number of the Irish race within her borders and the important part which they play in her life. The importance of that part was never demonstrated so clearly as in the present war, when men of Irish blood have, in accordance with all their traditions, rushed so enthusiastically, so numerously to the defense of her flag. Is it just to America to compel

her to tell these soldiers of Irish blood, while they are passing over Europe in their hundreds of thousands now (later on in their millions) to fight the battles of liberty, including English liberty, that the motherland of their race should still be denied liberty? I do not exaggerate, I think, in saying that such an addition to the task of America—such a return for her supreme and vital help to England—would be an act of cruel injustice.

I cannot help believing that in friendly and private suggestions the statesmen of America have tried to bring home this fact to the minds of British statesmen. I will not believe, till I see it, that British statesmanship should be so bankrupt or lacking in any reasonable sense of England's own interests as to neglect advice from so powerful a friend.

But poor John Redmond fought in vain against the unwisdom of the British and the vacillations of British rulers; and it may be that even the same bankruptcy of intelligence may be deaf to the voice of America. If that incredible and criminal blunder should be added to the long list of blunders, it will remain for those who really know the realities of this war to adopt every just and wise means to bring home to the British authorities and statesmen that they must adopt a different attitude in the interest of their allies and of the war; and at home, John Dillon—standing, I hope, at the head of a reunited nation and reunited race—may be trusted to adopt such a policy of vigilance as will induce the House of Commons and the Ministry to do the courageous thing, the right thing, the wise thing; and the only courageous, right, wise thing is to ignore any revolt of any minority and to give liberty to Ireland at once.

*Men whose minds  
are on "tip-toe"*

SOME time, just note the type of men who smoke Fatimas —not only in the Army and Navy, where Fatimas lead by a big margin, but also among progressive, live-wire men, old and young, in business and the professions.

For the fact is that, besides their pleasing taste, Fatimas do deliver an *extra service* that these men appreciate, namely, Fatimas leave them feeling keen and clear-minded, while and after smoking.

Which is simply another way of saying that Fatimas afford true smoking *comfort*—they never rub a man the wrong way, even if at times he should smoke more often than usual.

It is this smoking *comfort* that has caused Fatima to be known for just what it is—a sensible cigarette.

You will find it so.

# PETER THE PENNILESS

BY OSCAR GRAEVE

ILLUSTRATED BY ARTHUR H. DOVE

THERE was a tremendous shaking and rattling of the stove. It woke Peter up. Peering blinking over the edge of the blankets, he discovered a strange figure at his stove. The figure seemed to be kneeling in an attitude of adoration before it. As a matter of fact, the man—it was a full-bodied, powerful man—was removing the ashes.

"Who are you?" asked Peter.

The man arose and bowed. He also sighed most lugubriously. "My name, m'sieu," he said, "is Philippe Beaujon."

"But what are you doing at my stove?"

"The fire, it is out."

"Yes, it is always out. But why are you rebuilding it?"

"It is my duty, m'sieu."

"What has happened to Mrs. Goebel?"

Monsieur Beaujon waved his hand. "She is gone. Mr. Goebel is gone. The young Goebel, Albert, he is gone. Mrs. Dawson fire them all out last night. An' she engage madame, my wife, an' myself to look after her 'ouse and thees studio." He sighed again. "We are the new 'ousekeepers. My wife must cook, an' I must sweep, must carry coal, must build fires, must answer the ring of the bell, must make beds—I, m'sieu, have become a slave to Mrs. Dawson's orders."

Peter by now was sitting on the edge of the bed—if one could term it a bed. In the daytime it posed as a couch hidden beneath a worn blue velvet cover and a mass of pillows of varied hues.

Monsieur Beaujon had the wood in the stove crackling merrily. He carefully shoveled on a little coal, and then, turning again to Peter, said solicitously: "Go back to bed, m'sieu, and it shall be warm in here in a leetle time. Meanwhile I shall bring your breakfast."

"I can't go back to bed—worse luck!" grumbled Peter. "I have to get dressed and go to business."

"Business?" Monsieur Beaujon lifted his eyebrows. "Is it that m'sieu is a business man, then? Naturally, I thought he was an artist." His glance traveled meaningfully around the back-yard studio.

"I wish I were an artist!" cried Peter. "No, the best I can do is to try to live like an artist. I am"—he scowled—"in the coal business."

Beaujon eyed him closely. "That is ver' good. It is a most profitable business, is it not? As for artists, ugh!"—he shrugged his shoulders—"they are always penniless: always in debt ears over head."

Peter smiled grimly. It was no unusual thing for him to be in debt "ears over head." But he did not enlighten Monsieur Beaujon on the point. It was pleasant to be considered prosperous—even by his landlady's new gentleman of all work. For Monsieur Beaujon, despite his brown overalls and his menial position, had already convinced Peter of his gentility.

BY the time Peter had taken his shower and donned his clothes Monsieur Beaujon was back again with the breakfast tray.

Peter settled down as close to the new fire as he safely could. Monsieur, with a delicate motion of wrist and fingers, removed covers and revealed a plate of buttered toast, a feathery omelet, half a grapefruit, a smoking pot of coffee. "Is there anything more m'sieu desires?" he asked, hovering over Peter like an exceedingly large and stout guardian angel.

"Nothing, Mr. Beaujon. Present my compliments to madame, your wife, and tell her the omelet is superb," said Peter with a flourish. He was exceptionally responsive to atmosphere, and Monsieur Beaujon's Gallic spirit had taken effect upon him.

As for monsieur, he bowed. "Your compliment will be like a ray of sunshine on these dark days of madame."

"Then I understand you have not always been housekeepers?" asked Peter.

Monsieur Beaujon looked reproachful. He sighed. "How could you think so—even for one small minute!" he said. Then he came very close to Peter. Into his ear he whispered: "Ah, no, indeed, m'sieu! Mon Dieu, non! We are political refugees."

"From France?"

"No, from Mexico. There I had a ranch. For miles it stretched. As far as the eye could see. There we had our own 'orses, our own automobiles, our own servants—

many, many servants. An' then the revolution come along. Villa, and his bandits. You 'ave heard of him, yes? We were compelled to flee in the dead of night with nothing. Absoluement! We had a leetle money, but—pouf!—it go. Madame sell her jewelry. I sell my watch—everything! I can find no work. I am old, fat; no one desires me. Fortunately madame is a cook exquisite. Some one send her to Mrs. Dawson. An' I am to be permitted to accompany madame if I will sweep an' carry coal an' answer the ring of the bell. I, who was born a gentleman of France! But what are we to do? We cannot starve in the street! So I place my pride in my pocket, an' we accept. So you see, m'sieu, what we have come to."

Monsieur Beaujon regarded Peter with melancholy brown eyes which were not altogether free from moisture. But Peter was too thoroughly bowled over by his story to do more than shake his head sympathetically. And presently, still sighing, monsieur withdrew.

Peter finished his breakfast that morning with an added zest. Political refugees! Mexican ranches! This was life! How happy he was that he had es-

caped at last from the humdrum state of existence which had been his in Elmhurst. It seemed incredible that a month ago he had been forced to spend practically all his time in that most commonplace of suburbs.

Shuddering, he recalled the dimly lighted streets of Elmhurst, the row upon row of little wooden houses, all painfully alike, the monotony of church festivals, of euchre parties, of lectures at the old Town Hall. Then release had come. His salary had been increased to forty dollars a week. He felt that he could live on that in New York, could live as picturesquely as he desired. And so he had shaken the dust of Elmhurst from his feet. Forever, he told himself. No more commuting on the same train, morning and evening, with the same crowd of stolid suburbanites! No more dead evenings, lonesome evenings, with only the solace of his books. His mother had wept, his father had raged. And his older sister, Amelia, had acted as if he, Peter, were going forth purposely to bring disgrace upon the family. "I'll dread picking up a newspaper in the morning," she said, "for fear of finding you've been arrested."

"Arrested for what, Amelia?"

"I wouldn't be surprised at anything," she hinted darkly.

But at last he had convinced them of his determination. "I must live my own life, free and untrammelled," he announced grandiloquently. (He had planned for a long time to use that declaration at the crucial moment.)

And those magnificent words spurred him on in his search for quarters suitable to his mood. No ordinary boarding house for him! No spick-and-span apartment building! No, he was going to have an unusual habitation or none at all. And he had found one.

By pure luck he had chanced across this studio in a back yard. In the right part of town too, near Washington Square. You entered a charming, old-fashioned red-brick house with a white doorway; you passed through the house; you came into a back-yard garden with crumbling urns, a fountain, bushes, a tree—and there, placed squarely across the back of the yard, was his studio! Three high French windows, which also served as doors, looked out upon the tiny garden.

Inside the studio there was but one large room with a bath partitioned off on one side. Half the roof was a slanting skylight. There was the large stove in one corner, the couch in another, a chest of drawers, a spreading fable, which could be converted in time of need into a settee, and several chairs.

When Peter had added some brasses and etchings, a tea table and a plant or two, he felt it was the most attractive studio in New York. What did it matter if the stove only half heated the place or that the roof leaked in heavy rainstorms or that the stone wall against which he slept gave him a frequent chill? One could not, he realized, have Romance without Rheumatism or Picturesqueness without Petty Drawbacks.

And for all of this charm and local color and unconventionality he paid sixty dollars a month—with breakfast included. It bit rather a hole into his forty dollars a week. It was really more than he could afford. But it was worth it.

"AND are you really enjoying your life now?" asked the Painter Girl. It was late afternoon, and she sat in a gracefully lounging position before the stove in Peter's studio, in one hand the cup of tea which he had just brewed for her.

Peter had met her first at the High Seas Club. It was not a nautical club. The name had been chosen because it expressed the thought that each member of the club was as free as the ocean. Peter had heard that it was the club

"How much money have you?" ... "Twenty-seven cents," he answered

# THE ADVERTISEMENT WHICH WON THE \$1,000 PRIZE

## Text of the Prize Winning Advertisement

"THE most marvelous machine can never be a person, but Thomas A. Edison, the inventive wizard, has at last mastered a human voice reproducing instrument that does not betray itself in the very presence of the artists.

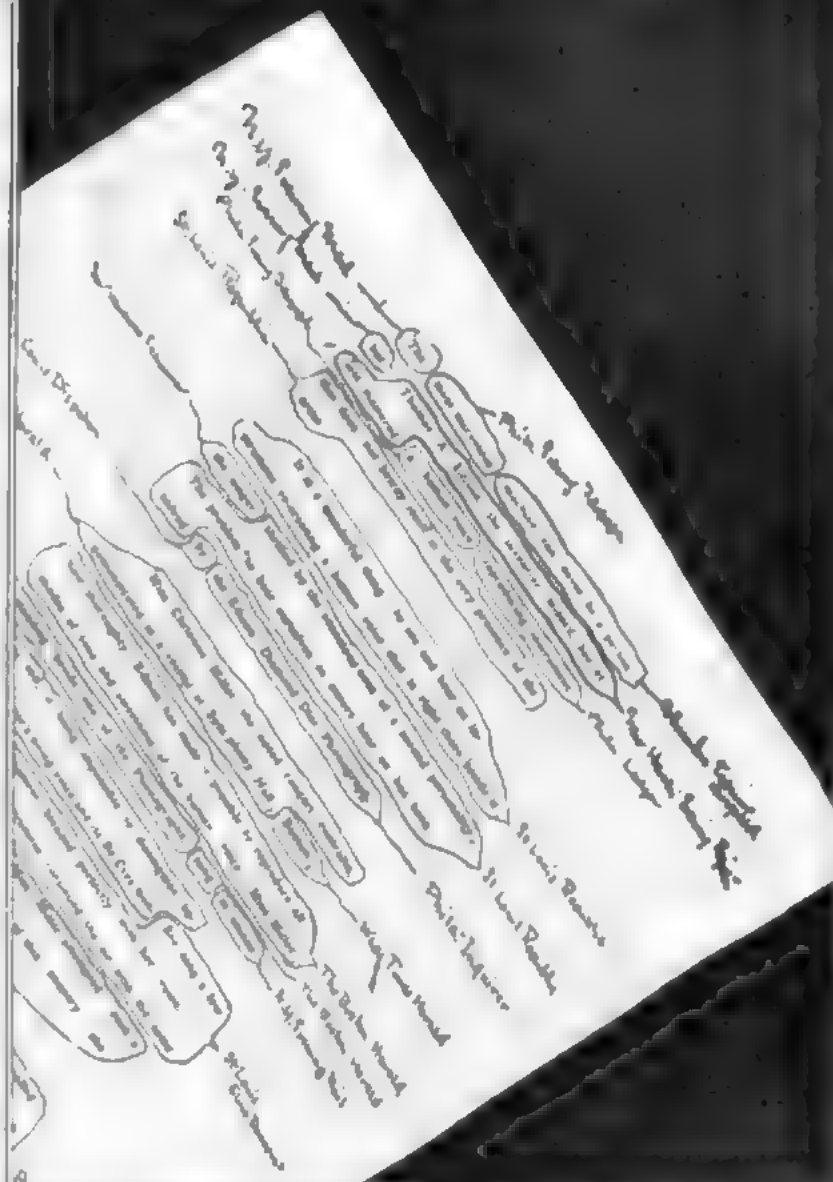

"It is a wonderful thing to see and hear an instrument Re-Creating a human voice that is right there beside it, the singer thrilled by the consciousness of a second personality. The problem 'to hear ourselves as others hear us' has been solved by the Edison Diamond Disc Phonograph.

"Miss Christine Miller, the noted concert contralto, demonstrated in a recital at Symphony Hall, Boston, how thoroughly Edison has made it possible to reproduce all shades of tone and sweetness of the human voice. Miss Miller, standing beside one of the phonographs, sang in unison with herself, it being impossible to distinguish between the singer's living voice and its Re-Creation. She sang a few bars and the instrument blended perfectly with her voice. She ceased and the instrument continued the air with the same beautiful tonal quality. Had Miss Miller attempted such a concert in Salem, in the early days of this country, she would have been hanged for a witch.

"The large audience of music-lovers sat enthralled under the spell of the wizardry which reproduced a human voice, the most delicate violin tones and the blare of a brass band with such fidelity that no one, hearing also the same music at first hand, could tell which was the real. The instrument was a stick phonograph intended solely for the home.

"Perhaps the artistic merit of Mr. Edison's invention can in no way so well be attested as by the fact that two members of the Handel and Haydn Society of Boston were present."

Earle Inley, Naugatuck, N. Y.

IT is safe to say that no such advertisement as the above has ever appeared before. The man who received \$1000 for preparing this advertisement did not write a single word of it. The words were written by representatives of various newspapers, who, after hearing a direct comparison between living artists and the New Edison's Re-Creation of their work, pronounced the Re-Creation in every case an exact counterpart of the original music. The music critics of approximately 1500 newspapers have described these remarkable comparisons and are unanimous in their favorable verdict. The prize-winning advertisement illustrated on this page is composed of extracts taken from newspaper accounts of these daring comparisons.

## The NEW EDISON

"The Phonograph with a Soul"

is positively the only sound reproducing instrument capable of sustaining the comparison described.

You owe it to yourself to hear the New Edison and to learn more about it. Our dealers will be glad to give you a complimentary concert. We shall be glad to send you the booklet "What the Critics Say," the brochure, "Music's Re-Creation," and a complimentary copy of our musical magazine "Along Broadway."

First Prize—\$1000

Earle Inley, Naugatuck, N. Y.

Second Prize—\$500

Edmond Coode, 337 Fourth Ave., Pittsburgh, Pa.

Third Prize—\$250

James P. Kelly, 118 S. Water St., Crawfordsville, Ind.

Fourth Prize—\$100

Miss Lena Wornall, 1034 W. 17th St., Des Moines, Ia.

Fifth Prize—\$50

Gordon Dives, 8th Cannon Ave., N. D. C., Montreal

Ten Prizes of \$10 Each

Mrs. Florence Benson 430 N. Broadway Ave., Los Angeles

James G. Benson 513 Washington St., Olympia, Wash.

Miss Katherine Cant 1203 Second Ave., Rock Island, Ill.

Harold H. Herold 56 Lewis St., Naperville, Ill.

Mrs. Ray Korgan 407 Cass Blvd., Lorain, Ohio.

Alphonse Kirchner 234 E. 3d St., Brooklyn, N. Y.

Miss Vale Loughrey 444 N. Market St., Oskosh, Wis.

Mr. A. E. Peterson Thorndore, Ala.

Miss Katherine Satchell 419 Sterling Pl., Madison, W. Va.

Josephine A. Sherran 33 Cape St., Fitchburg, Mass.

Edison Re-Creations should not be played and cannot be played properly on any other instrument. If they could be, the manufacturers who seek to profit by Mr. Edison's research work would be able to make tone test comparisons, such as we have made with the New Edison before two million music lovers.

to join if you wanted to meet interesting people with unusual ideas. And he had met a number of such people there. But although the Painter Girl was one of them, he was a little bit disappointed in her. She was very pretty, but she was not a bit unconventional. On the contrary, she was most practical and even a shade proxy. She seemed to think it was a fine thing for a man to build up a large fortune for himself as his employer. Mr. Sturgis, had done. Whereas Peter knew that money in itself was nothing. One should look higher than that. Why, to be wealthy was to be smug, self-satisfied, complacent. To have money seemed almost a disgrace to Peter.

The Painter Girl, however, was friendly and amusing. Also, of course, she did paint, although from her demeanor you would never have guessed it. Peter sometimes thought that her success in selling her pictures had spoiled her, commercialized her.

And now she asked him if he really enjoyed his new life of freedom! What a question! This, after he had told her, in some detail, how stifled he had been in Elmhurst, how the middle-class respectability of the place had smothered him, how he had finally broken away despite the most astonishing handicaps.

"I told them I must live my own life free and untrammelled!" he exclaimed, at the end of his narrative.

"I suppose it seems curious to me," said the Painter Girl, "because I've never had a home to break away from. And so often I've missed not having one. My father died before I was born, and my mother when I was ten. I was left with a little money, but it was used up in getting an education. By the time I was twenty I discovered I'd have to pitch in and make my own living. Imagine trying to make your living by painting pictures, which seemed to be about the only thing I could do. Of course now I can sell almost anything I paint. But at first it was pretty tough work. I'll never forget some of those first days I spent alone in New York. Holidays—how I dreaded them! Oh, they were fierce! Wait till you've spent Christmas Day alone in New York with hardly any money and not a soul who gives a darn about you. After you've done that once or twice you won't be so bitter against a family and the way a family ties you down."

"But mine is a suburban family with suburban ideas!" protested Peter.

The girl leaned forward, her chin in her hand. "How old are you, Peter?" she asked.

"I'm twenty-five. Why?"

"I thought you were about sixteen. I'm the same age as you, Peter, and there's about twenty years difference between us."

"Have some more tea?" asked Peter gruffly. He had to admit that the girl looked very lovely sitting there in the firelight, her eyes a little wistful, her young lips drooping, but he was discovering that he liked her less every minute.

It was with relief that he saw her go a few minutes later and he was glad to have Monsieur Beaujon take her place. Incongruous as it may seem, it was the Painter Girl who reminded Peter that it was a workaday world where one lived by doing odious work in connection with a coal business, and it was Monsieur Beaujon who represented the world of romance where exciting things—revolutions, midnight flights—took place. The deference which monsieur showed him, the respect with which he addressed him—these too were very pleasant to Peter.

"I have come to see if your fire is keeping up, m'sieu," he said, and he busied himself for a minute with the coal scuttle and the shovel.

Peter had been in the habit of tipping Mrs. Dawson's former housekeeper, who looked after his fire, cleaned his room, and brought him breakfast. But so far he had been afraid to tip Monsieur Beaujon. Monsieur was such an obviously superior person. But perchance if the tip were large enough—? Peter drew out two dollars instead of the customary one. Awkwardly he held the bill to Beaujon. "A little present," he mumbled.

Monsieur Beaujon's eye glittered. He drew himself up straight. He stood as if he were a soldier at attention. "M'sieu! I am a gentleman!" he uttered rebukingly.

Peter crumpled the bill back into his pocket. "Pardon me," he said. He was thoroughly crushed.

**M**ONSIEUR BEAUJON, as it turned out, did not take the offering of the tip very much to heart. He did not remain offended, as Peter feared he might. The very next night, suave and smiling, he

came in to consult Peter in regard to a matter of business.

Beaujon had a habit of stealing in on Peter unawares. On his toes he would creep through the back yard, silently open one of the French windows, and, gazing in, his head tilted, take an observation of the studio, as it were, before entering. Peter found this manner of his at times a little disconcerting.

Closing the window gently behind him, in a low voice Beaujon asked: "May I consult with you one minute?"

"Certainly," said Peter, and offered him a cigarette. He wanted Monsieur Beaujon to realize that he, Peter, recognized the gentleman beneath the brown overalls.

"I have an opportunity to recover my ranch," whispered Beaujon—he always whispered when he spoke of his ranch.

"Yes?"

"But first I must pay the taxes upon it. I have disposed of madame's jewels; she had a few trinkets left, but I am still lacking sixteen dollars. I was wondering, m'sieu, if you could lend me the sixteen dollars—oh, not for more than a day or two."

Peter was humiliated. He knew that he had little more than three dollars in his pockets and, outside of his pockets, he had nothing at all. His meager savings had all gone into the furnishings of the studio.

It was with a bitter sense of shame that he confessed to Monsieur Beaujon that he had not the money. Monsieur shrugged his shoulders. "Ah, well," he sighed, "it is but a trifle! And yet perhaps it separates me from the utmost wealth."

He said it with an air of proud reserve, but Peter could see how his shoulders sagged. It was outrageous that Peter did not have the money. He cursed his poverty. And

then suddenly, struck with a possible solution, he cried: "Look here, Beaujon! Can you wait till Friday? I'll have money on Friday. I can let you have it then." (Each Friday Peter was handed his forty dollars in a neat yellow envelope.)

**M**ONSIEUR'S face brightened. "Without a doubt the Commission will be willing to wait until Friday."

"Very well. I'll let you have it on Friday then," said Peter, much gratified. The Commission! It had a fine ring! He couldn't imagine what sort of a commission it was, but he felt it was an exceptionally pleasant commission to wait until Friday for its sixteen dollars.

Monsieur Beaujon began to spout his gratitude. "I am so thankful to you, m'sieu. You are of a fine generosity and of a heart sympathetic. Some day I may be able to repay you handsomely. You shall

visit my ranch in that most beautiful State of Coahuila. I shall give you a horse for yourself. All day you shall ride over the mesa. Everything I have shall be yours."

"Perhaps I could get a month's vacation next summer," said Peter hopefully.

"A month? Non, non, m'sieu. You shall stay six months, a year, two years. You shall find it a life most fascinating."

"But how will you recover your ranch, Beaujon, even if you do pay your taxes? You said the revolutionists chased you off. I've read in the papers that they're still powerful down there. Will they let you return?"

Monsieur Beaujon peered carefully into each corner of the studio as if fearing that even here an eavesdropper might be lurking. Then again he whispered—shielding his words with the broad cup of his palm: "It is with the revolutionists I am dealing."

**A**T Christmas Peter did feel a trifle forlorn. He remembered the Painter Girl's words about Christmas Day alone in New York, and he realized that, after all, there might be some justification for her common sense. Rather wistfully he remembered the snow falling white and gentle in Elmhurst and dark figures, bundle-laden, hurrying through the dim whiteness. He thought of the red glow of the lamp in his mother's sitting room and the Christmas tree his mother had always insisted upon having, hung with silver and gold tinsel, with the pear-shaped flames of red and green candles. But Peter decked his studio in holly and the green of pine and balsam, bought little cakes, brewed a punch, and invited the Painter Girl and half a dozen other acquaintances of his High Seas Club in for a party.

Only the Painter Girl gave Peter a present. It was a muffler which she had knitted herself. With it was a card, "To help keep the shorn lamb warm." She handed it to him shyly. And Peter felt a little flame of gratitude for her springing up in his heart. Then when he read the card the flame promptly gave a gasp and died.

Christmas week passed and the New Year arrived. With its coming Peter had hoped for an increase in salary. Instead he received something quite different. Mr. Sturgis gave him a lecture.

"What's the matter with you, Peter?" he asked, puffing a little—he was a stout, well-dressed, well-fed individual. "What have you been doing with yourself lately? I raised your salary last summer because you were giving my affairs such careful attention. I thought that at last I had a secretary to whom I could intrust important matters. But yesterday you forgot to mail that check to the Monongahela people, and two weeks ago you lost that important letter of mine for the Power Plant Company. Your head seems to be in the clouds these days."

Peter was apologetic. He wished that he could say: "I have other things to think about, Mr. Sturgis. I have been caught in a web of romance. I have been trying to recover a property in Mexico worth hundreds of thousands of dollars. And business, after all, is not as important as life, as ideas, as the joy of living picturesquely." But he knew he was in no

"M'sieu! I am a gentleman!"

There was a tremendous shaking and rattling of the stove. It woke Peter up

**TORBENSEN Drive** ■  
made to last. Every owner gets a **GOLD BOND GUARANTEE** that the I-Beam axle and spindles will last as long as the truck, and the internal gears at least two years.

## I-Beams—the standard load carriers—

The patented, forged-steel I-Beam carries *all* the load. The driving parts are confined entirely to *driving*.

The strength and light weight of the I-Beam makes Torbensen Drive long-lasting and economical.

Driving at the Wheel and near the Rim gives great driving leverage—great pulling power.

For years, I-Beams have been the standard load-carriers in every branch of mechanical engineering because they are lighter for their strength than any other known structure.

Long ago motor truck engineers adopted the I-Beam as standard for *front* axles because it makes trucks stronger, lighter and longer wearing—and because it reduces wear on front tires.

Admittedly, I-Beams would have been standard for *rear* axles also, but mechanical obstacles made them almost impossible to use with ordinary drives—although their use would naturally have made *all* rear axles stronger and lighter.

Torbensen Internal Gear Drive carries the load on a *patented*,

forged-steel I-Beam. No other rear axle drive has or can have this I-Beam load-carrier. This I-Beam makes Torbensen Drive stronger than any other types and almost cuts the weight in two.

This has resulted in a great increase in rear tire mileage and emphatic reductions in repair costs, gasoline and oil—all matters of record.

The leadership of internal gear drive, over other types, is thoroughly established. Torbensen Drive is the acknowledged leader of all internal gear drives—and this explanation of the mechanical superiority of the I-Beam indicates clearly why this is so.

## There Are Guns That Send Out Joys

Grains Like These Go in Them

There are guns in our mills which boom every minute, to send out airy grain foods which taste like bubbled nuts.

Whole grains of rice or wheat go in them. Or pellets of hominy. And they come out airy, flaky tidbits, eight times former size.

That's how Puffed Grains are made—by Prof. Anderson's process. Their flavor comes through an hour

of toasting in a fearful heat. Their flimsy texture comes through steam explosion. A hundred million food cells in each kernel are thus blown to pieces.

### Why This Bubble Form?

Many people think we do this to make fascinating morsels. To make grain foods savory, thin and flimsy so they fairly melt away. To make them food confections.

But a college professor—a scientist—invented this strange process. And the only object was to fit whole grains to easily digest.

Ordinary cooking, baking or toasting breaks part of the food cells in grain. But our method alone breaks them all.

So these are the ideal grain foods. Every granule is fitted for digestion. Every atom feeds.

That's why these three grains—which can be puffed—should be largely served in puffed form. That is their most delightful form. It is their hygienic form. Served at any time—at meals or between meals—they avoid any tax on the stomach.

If you knew Puffed Grains as experts know them you would serve them many times as often. There is nothing like them—nothing in grain food so attractive, nothing so perfectly prepared.

Grains Like These Come Out

**Puffed Rice    Corn Puffs    Puffed Wheat**  
Each 15c Except in Far West

Crisp and Butter for Eating Dry

Mix With Berries

Serve with sugar and cream. Use like oatmeal in some equity, making an as good as rice cream. Use as cereal in your soup.

Float in Milk

For luncheons or suppers float in bowls of milk. For hungry children after school, add a little butter. Let them eat the grains like sifted nuts.

position to say this. Besides, he liked Mr. Sturgis. He even admired him. For a successful business man he considered Mr. Sturgis a jolly good sort. Mr. Sturgis, Peter had observed, knew something himself about the joy of living. He was a bachelor and more than once had taken Peter out to dinner and the theatre. And such dinners! Mr. Sturgis, glancing wisely at the menu had ordered things of which Peter had never even heard. In addition, there was a glow, an animation, about Mr. Sturgis that was very warming, that was exceptionally hard to resist.

"You're not in love, are you?" asked Mr. Sturgis.

For a moment the Painter Girl's face flashed before Peter's eyes—why it was hers especially he could not understand—but most decidedly he was not in love, and he told Mr. Sturgis so. The latter looked at him kindly and dismissed him with: "Well, buck up, my boy, and get down to business!"

Peter was exceedingly sorry he had not received the expected raise in salary. He was sorry not chiefly on his own account. He was sorry on Monsieur Beaujon's account. Monsieur needed money so badly. He was always on the point of recovering his ranch in Mexico and always just failing in its recovery because of the lack of a few miserable dollars. First it was the taxes that had to be paid, then he had to redeem the papers—what papers were not clear to Peter, but he decided they were the title papers to the estate. It seemed that Monsieur Beaujon had given them as guaranty for a loan to some grasping person who would not relinquish them until his loan was repaid. Without the papers, monsieur explained, he could do nothing. With them he could raise money on the ranch; he might even be able to sell it to some Chicago beef baron.

Peter helped Beaujon all that he could and much more than he should. He was genuinely sorry for Beaujon. You see, Peter had really led a sheltered life in Elmhurst. He had not come into contact with any cases of acute poverty or privation. His sympathies had never been hardened by exposure. He was soft and sentimental. The sorrows of Monsieur Beaujon took an acute hold upon his imagination. Never had anyone, Peter thought, received such welkups from adversity as the French gentleman forced by circumstances to do Mrs. Dawson's chores. Peter was also sorry for madame, who made such delicious omelets. Madame was not French. She was an Irish-American, and she seemed much in awe of her large, round husband. She was obviously his inferior in birth.

And monsieur told Peter such thrilling stories of his life in Mexico. He told how, in his absence, the bandits had descended upon his homestead, had entered his house, had demanded food and money. Then, enraged because of madame's delay, one of them had fired upon her. Fortunately, he did not hit her. Madame had been forced to crawl beneath a table. Monsieur Beaujon, returning, had heard the shot, had whipped up his horse, had arrived just in time to save madame. With the aid of one faithful servant, he had put the bandits—there were six of them—to flight.

SUCH stories (there were more of them) made a profound impression upon Peter. How could he doubt a man who had been through such brave adventures?

Monsieur, too, flattered young Peter. He pampered him. Often, in the evening, he brought him a bowl of pudding or a piece of cake. Once he brought him a glass of champagne.

"Mrs. Dawson, she had a grand party to-night," he explained. "I save thee for you. Some day, m'sieu, who knows? we shall have champagne of our own to drink. We shall not be compelled to steal it from other people's tables. In Mexico—a sigh—"I use' to import it direct from France by the case."

And when Peter got rheumatism in one shoulder from sleeping against the stone wall of the studio, Monsieur Beaujon massaged it until the rheumatism was routed. Peter could not overlook these favors. Each was small in itself, but there were many of them.

Then, one evening in February, Monsieur Beaujon came to Peter in despair. He threw himself into a chair and buried his face in his hands. "All is lost!" he cried. "And I, Philippe Beaujon, am the most miserable of men!"

"What's the matter now?" asked Peter.

"This, our last refuge, we must leave. We have bowed ourselves to the very

dust; we have borne uncomplaining the demands of that 'horrible Mrs. Dawson—and now we are compelled to leave!"

"Why?"

"Madame, my wife, is to have a baby," said Philippe. "She can no longer go on working here."

Peter blushed furiously; but he also felt his very heart run soft with sympathy. "What under the sun will you do?" he asked.

BEAUJON threw his hands toward heaven. "I do not know. We starve. We go to the poorhouse."

"You can't do that."

"What else can we do? If only I had a little money, we could take a little apartment somewhere until madame is herself again. But I have nothing."

"Nor have I," said Peter, quite truthfully.

"How much money do you pay for this cold, this mis-erable studio?" asked Beaujon, casting a malevolent glance around the rather charming although frequently chilly room.

"Sixty dollars a month—with breakfast."

"If you could pay that to us, if we took a little apartment and you came to live with us, we could get along very nicely on that sixty dollar a month."

"Oh, I can't do that!" said Peter with a sinking feeling that he could not do it, that ultimately Monsieur Beaujon would persuade him to do it.

"Madame is quite well enough to hot after one, to cook delicious little dishes for one, m'sieu. But she cannot do all that the ogre Dawson demands."

"But wouldn't it"—Peter blushed again—"wouldn't it be an awkward time to have a young man around?"

"Non, non, non!" protested monsieur vehemently. "We shall have our own rooms; you shall have yours. There will be no embarrassment. I do not understand these feelings, m'sieu, for I am French, but I can assure you that they will be respected. You will need to see madame. I shall look after you. An' after a time, if madame is not able to prepare your breakfast for you, I shall prepare it. I too am a cook exquisite. Let not m'sieu worry himself on these points."

"But where can we go?" asked Peter weakly. The sinking sensation had increased. He had almost gone below the surface by now.

"I shall look for a place," said monsieur. "You leave that to me. Breathe not a word of it to a soul. Spik to me one until I have the plan perfected."

Before long monsieur did have his plan perfected. He found an apartment vacant two blocks away. It was a somber apartment over a saloon; for that reason its rent was not excessive. Monsieur Beaujon dragged Peter around there with great secrecy one evening, and showed him how the two front rooms were admirably adapted to his, m'sieu's convenience, while the two rear rooms, with the kitchen, would answer for Beaujon's and madame's use. He pointed out the long hall which separated the two suites. "It is as if it were made for us!" he exclaimed rapturously, and then in his emotion, forgetting his dignity for a moment, he poked Peter in the ribs. "You see, your delicacy will be spared, m'sieu. There will be even no little baby's cries to annoy you, as we shall be as happy here as pigs in blossoms."

Peter had one stormy scene with his landlady, Mrs. Dawson. But, fortunately, she did not know that he was running away with her housekeeper, Madame and Monsieur Beaujon. Peter took care also not to enlighten her in that respect.

"Why, you can't leave me here in the midst of winter with the place of my hands unrented!" cried Mrs. Dawson indignantly.

"It's not fit to live in during cold weather," Peter assured her earnestly and sadly. "The roof leaks, and the stove goes out at night, and it's a beastly frigid that I got rheumatism"—all of which was true, although it had never worried Peter before.

As a matter of fact, he left the studio with regret. He had become attached to the strange little place. And he was rather dubious about the somber apartment over the saloon. Certainly, it was not picturesque; at least, not in the way the studio was. Its picturesqueness belonged to a different school.

"THE rooms look fairly nice," said the Painter Girl, on a visit of inspection to Peter's new apartment. "but I don't trust that friend of yours, Monsieur Beaujon. Here I do my best

to protect you from the harpies of the High Seas Club, and then you deliberately fall into the clutches of this adventurer down on his luck. I'm convinced that's just what he is."

As usual, thought Peter, she had selected the most unpleasant thing to say. He felt very fine and noble about helping the Beaujons. And when he told Mary (which was the Painter Girl's real name) about the child, he had expected that she would agree for once that he had done the right thing, the splendid thing, in a big, self-sacrificing way. He had been a little hesitant about telling Mary of the baby; while he believed ardently that frankness was essential and prudery was vile, when he came to speak to her about madame's condition he had been woefully embarrassed. Mary, however, took it calmly and in the most matter-of-fact way. She had been almost unpardonably flippant about it. "I don't believe that Mrs. Dawson set them adrift at all. I know Estelle Dawson, and she's a peach. She's one of the dearest people I know. Beaujon just wanted you to move around here so that he could sponge on you uninterrupted, and because it's easier than working for Estelle. It just needed the child to make this old melodrama complete—the papers, the old homestead in New England—"

"In Mexico," corrected Peter.

"Well, in Mexico, then. What's the difference? All the rest of the stale, threadbare ingredients are there."

"There's no use in discussing it with you, Mary," asserted Peter loftily. "You don't understand. I've always led a jellish life. Here was an opportunity at last for me to do something for a fellow being—something that would save him from the utmost misery. I've done it, and you ridicule the whole thing."

There was a painful silence during which they did not look at each other. Presently the Painter Girl said: "You don't approve of me much, do you, Peter?"

"I approve of you, Mary," he answered stiffly, "but you don't understand me."

She smiled a little sadly. "Oh, I understand you. Perhaps I understand you too well. Sometimes I worry about you. I'm awfully afraid, my dear, that you're going to be all cut up and bruised in this new life of freedom of yours. Oh, but there! I didn't come around to give you a lecture. I hate good advice just as much as I imagine you do. But I like you, Peter. I'm sorry you don't like me better than you do."

For a minute Peter had an unaccountable impulse to get close to her, to take her in his arms as if she were the one who was cut up and bruised. But how ridiculous that impulse was! While he wondered at it, it passed. The Painter Girl arose and held out her hand with: "Good-by, Peter. Promise me one thing. If anything does happen, if you do get smashed up a bit, come around and talk it over with me, won't you?"

IN due time the baby was born. Monsieur engaged a private room in a hospital (at Peter's expense), and one evening madame was taken there. Monsieur spent a most agitated two days. There was no question of his sincerity in this. Never once during those two days did he mention the child. But he did bother Peter a great deal. He didn't like to stay alone.

If Peter were sitting in his front room, Beaujon would enter diffidently and ask: "Do you mind, m'sieu, if I sit here with you a little? I shall be very quiet."

But he never sat long. Peter heard him prowling about the apartment; heard him go out the front door, come in again—unceasingly.

The second night he asked Peter to sit up with him. "I cannot sleep. M'sieu, will you sacrifice yourself for me? I have six bottles of beer which we can drink to stop our thoughts."

Peter sat in the kitchen and drank his beer. There was only one chair and Beaujon occupied that. Peter swung his legs from the washtub.

"It is at such times we think of our sins, n'est-ce pas, m'sieu? I should like to pray, but I am afraid. I have many sins, m'sieu. The good God would laugh and turn his face away if he discovered me, Philippe Beaujon, praying." He sat there perspiring profusely, mopping his forehead with a ragged and soiled handkerchief.

At three o'clock Peter became so sleepy that monsieur persuaded him to go to bed. At five he was awakened.

Monsieur was shaking him violently. His voice was broken with thankfulness. "I've heard from the hospital. Everything is all right. Ah, sometimes, God is good even to a sinner."

And, in a remarkably short time, madame was back in the apartment again with a little red squirming thing which Monsieur Beaujon insisted proudly upon showing Peter. "It is my first-born!" he exclaimed. "Ah, to think that he should come to us when we have nothing!"

IN March Peter decided to give a dinner party. He had paid monsieur his sixty dollars for his lodgings and, even so, by a miracle, he found that he had sixteen dollars left with pay day but two days off.

"Madame is quite well enough to prepare you something delicious," Monsieur Beaujon assured him.

Peter looked over his wardrobe and realized anew in what a deplorable condition it was. His suits were shiny, his underwear in rags, he had to perform the most careful maneuvering each week with his laundry in order to be able to wear decently clean linen. Nevertheless he was set upon having a dinner party. He needed clothes badly, but what clothes could you buy with sixteen dollars? On the other hand, one could give a fairly elaborate dinner with that sum. And this was to be a very smart dinner party. He planned to invite Mrs. Dever, the fashionable widow, who had entertained him often; he would also invite Miss Agnew, Mrs. Dever's cousin, who was fully as fashionable as Mrs. Dever herself. The necessary fourth would be—and here is where the real purpose of Peter's dinner party betrayed itself—the fourth would be Mr. Sturgis. For Mr. Sturgis had been a bit grim with Peter of late. He would placate Mr. Sturgis with his dinner party. He would overwhelm him with his fashionable friends. He would show him what an exceptional young man he had for a private secretary.

There were, of course, many difficulties to be overcome. Madame's kitchen utensils were of the sketchiest nature. Peter's sitting-room table was too small. Of proper crockery and silverware there was none. One could not give a dinner party with three spoons, two knives, a tea strainer, and a fork.

But monsieur, who had entered with great enthusiasm into the plan, solved all difficulties by going to an Italian restaurant in the neighborhood and borrowing, for a modest stipend, everything required. He returned in triumph, bearing on his own broad shoulders a large round table.

The invited guests accepted gracefully—well, perhaps, Mr. Sturgis's acceptance was not so graceful. "So you're giving dinner parties in your apartment now?" he remarked. "Well, young man, I'll come around chiefly to see what you are up to."

The time was set for Friday evening—for very special reasons it was set for that evening. For Peter's sixteen dollars had long since passed into the hungry maw of Monsieur Beaujon. The latter had assured him it would be ample. Later he declared it was not nearly enough. "Things, they are up out of sight this winter!" he explained. "Mushrooms are a dollar a pound."

"Why do we have to have mushrooms?" asked Peter.

Monsieur looked reproachful. "You said you wanted everything of the best—that there was to be a ver' special dinner party. Madame and I have planned everything to be most exquisite. Mushrooms are a necessity."

So, on Friday evening, wine was still to be bought and an ice from Prevost's around in Sixth Avenue. "An' nuts an' olives an' confections of chocolat," insisted Monsieur Beaujon. But Peter rebelled at nuts and olives and chocolates.

Then, Friday morning, Miss Agnew telephoned and said she was sorry, she was awfully sorry, she wouldn't have missed it for the world, but it was impossible for her to come. She had contracted a severe cold, and the doctor said she must, she absolutely must, go to bed and stay there.

"Go to the devil for all I care," Peter said to himself, and then, with sudden hope of calling the party off, he asked: "Is Mrs. Dever coming?"

"Oh, yes, she's coming."

The list of Peter's fashionable friends was a very limited one. In the emergency, rather reluctantly, he telephoned the Painter Girl.

"We're going to wear evening clothes, Mary," he said, "so look your best."

## The Tom Wye

-the story of a new Jacket  
that gives warmth without bulk

HAVE you seen the new Tom Wye? You'll want one as soon as you see it. Men everywhere are wearing this smartly tailored knit jacket for motoring, for sports and for general business purposes. Business men wear it under their coats and find that it gives warmth without bulk. Traveling men like it because it folds into small space and comes out without a wrinkle. It is tailored from finely knitted cloth and can be worn in countless places where you would not wear a sweater.

### Knitted by the Tom Wye stitch

This stitch gives the fabric its special close, firm texture. Yet the fabric is so elastic that it will spring back into shape if stretched.

The yarn used in the Tom Wye is pure double combed Australian worsted wool: the only wool that will stand hard wear and hold its elasticity. This worsted wool gives real warmth and sheds fog and dew.

The jacket is carefully tailored. Shoulder seam stays in place; buttonholes will not stretch; front lies flat; no bulging under the arms. Has four convenient military pockets. Made in 12 colors. Sizes 34 to 46. Prices, \$12.50 with sleeves, \$11 without sleeves.

Also made in three colors as Service Jacket for army and navy men. This model has a collar neck that ends at collar button and so does not interfere with the fit of the blouse.

The Tom Wye is carried in fine stores. Or address

**BARNES KNITTING CORPORATION NEW YORK**  
DOUGLASS BARNES, President  
303 FIFTH AVENUE AT 31ST STREET  
MANUFACTURED BY  
**WYE KNITTING MILLS**  
WINCHENDON MASSACHUSETTS

This reinforced shoulder seam on the under side of the jacket prevents the shoulder from pulling.

# Have You Ever Owned a Good Fountain Pen?

Avoid writing troubles with the always dependable CONKLIN. Its superiority is proven by the following facts:

- it's the original self-filler and still the leader, with 2,000,000 satisfied users.
  - it is the only pen having the famous "Crescent-Filler."
  - it has the strongest and simplest filling device.
  - it will not leak, blot nor drop ink.
  - it will not "halk"—writes at the first stroke.
  - it will not scratch—pen action is smooth and easy.
  - it will not roll off the desk—"Crescent-Filler" prevents it.
  - it's backed by the strongest and broadest guarantee in the fountain pen field.
  - there's a Conklin point to suit every style of handwriting.
- sold by leading stationers, jewelers, druggists and department stores at \$2.50, \$3.00, \$4.00, \$5.00 and up.

Try one today—and you'll never be without your CONKLIN.

## PENNSYLVANIA Quality LAWN MOWERS

Ask the Gardener—he knows! Knows that blades have to be constantly sharpened to cut easily and clean—dull blades drag and chop. He demands a fine tool steel to hold the edge. An exclusive feature of "PENNSYLVANIA" Quality Lawn Mowers is that all blades are of crucible tool steel (oil-hardened and water-tempered) with self-sharpening action.

PENNSYLVANIA LAWN MOWER WORKS, 1627 N. Twenty-Third St., Philadelphia

Sold by Hardware Dealers and Seed-men

FREE—A booklet, "How to Care for Your Lawn," sent on request.

"It's rather short notice," grumbled Mary. "Who disappointed you, Peter?" "Oh, be a dear, and come," he implored.

"All right." And Mary did look her best. She swept Peter off his feet. She wore a green dress of soft silk shimmering with silver. Her brown hair was dressed high on her head, showing flashes of gold. Black-jet earrings gave her a worldly and sophisticated appearance. She quite outshone the fashionable Mrs. Dever.

The dinner was an unqualified success. Monsieur Beaujon, in mournful silence, waited on them with an expert touch. The only drawback was Mr. Sturgis. Not that he didn't enjoy his dinner. It was very apparent that he enjoyed it. "Why, I've never tasted such food, Peter," he said. But he was constantly looking surprised, suspicious, curious. He almost acted as if he thought Peter had no business giving such a special dinner party. He looked at Peter sometimes as if Peter were a defaulting cashier absconding with his funds. And, besides, he paid altogether too much attention to the Painter Girl. As for her, she encouraged him. It might almost have been called a flirtation. Peter was annoyed because he was forced to look after Mrs. Dever, and he wanted to gaze at the Painter Girl. He felt that he would be content if he could sit there and do nothing but gaze at the Painter Girl all evening. She bewildered him. She astonished him. He had never seen such a transformation. In her shimmering silk and silver, like shaved ice poured over green crème de menthe, she fairly dazzled him. And he had never heard her talk such nonsense. She kept Mr. Sturgis chuckling the whole evening.

THE next morning Mr. Sturgis called Peter into his office. He waved him to a chair. "Sit down," he said. "We've got to have a little talk."

"Didn't you enjoy my dinner?" asked Peter.

"Yes, I did, damn it!" he said, color-mingled. "That's what makes it hard for me to say what I'm going to say."

At that, Peter decided to ask no more questions, but to listen attentively.

"I saw last night what is the matter with you, Peter. You're trying to hit the high spots too hard and too often. And it's shown in your work lately. You've been neglecting things, my boy, even after that last talk I gave you."

"What do you want me to do?" asked Peter.

"I want you to change your habits. I want you to give up your apartment and go back to Elmhurst for a time. Get your feet on the ground again. Be a regular human being once more. You can't get away with this society stuff you're trying to pull. You're not old enough nor have you money enough to give dinner parties, to entertain rich widows."

"And if I refuse to go back to Elmhurst, Mr. Sturgis?"

Mr. Sturgis waved his hand. "Well, as you are, as you have been the last few months, you're not worth a cent to me. Perhaps the sooner you realize it the better."

Peter was very white—very white and dignified, although he gulped once or twice. "That means I'm—fired?" he asked.

"Peter, don't be a fool!" cried Sturgis. "You don't have to quit in this way. Do as I say. Go back to Elmhurst to your own folks. Pull yourself together. You'll be all right in a little while."

"No, I can't," said Peter. "I can't go back. I can't leave the Beaujons in the lurch."

"Can't leave who?"

"Can't leave some friends of mine."

Mr. Sturgis's face darkened. His fist came down on the desk resoundingly. "All right!" he cried. "We're through."

Peter arose and stumbled toward the door. But before he passed out, Sturgis called after him: "Wait a minute! There's another solution I'll consider. Marry that green-and-silver girl. She's all right. She's got a head on her shoulders. Marry her, and the job's still yours."

"Do you think it would be fair for me to marry her just to hold my job?" asked Peter, facing Sturgis squarely, his shoulders back. "Do you think I'd do that—even if she'd have me, which she wouldn't."

"Well, maybe it wouldn't be fair," Mr. Sturgis admitted gently.

ON that same day, in the evening, Monsieur Beaujon came to Peter with a new scheme regarding his ranch.

"cattle on my ranch," he said, "but first I must pay a certain man here in New York forty dollars."

"Yes?" said Peter, apathetically. "Could you let me have the forty dollars for a few days, m'sieu? As soon as the cattle are sold I shall repay you the money and all else I have borrowed from you."

"Beaujon, you know I haven't a cent!" cried Peter. "I'd let you have it if I had it, but it's impossible."

"That wealthy M'sieu Sturgis, who came here an' eat so much of our exquisite dinner, will he not lend you the money?"

"Lend me the money! Why, he's just fired me."

"Fired you? You are no longer working for him, m'sieu?"

"No longer," admitted Peter.

"All right then, m'sieu. If you will not let me have this money, you shall have to take the consequences."

MONSIEUR BEAUJON moved away with head erect. It was the nearest to a quarrel that Peter and his faithful servant had ever come.

Peter spent the entire next day in looking for a new position. New positions, he found, were not so easily obtained. He visited a number of his acquaintances; none knew of any position such as Peter desired.

He returned home in the afternoon, weary and depressed, to find the apartment singularly deserted. There was not even the tiny wail of the infant. The wail had been so continuous that Peter had become indifferent to it. Tonight he missed it by its very absence. He opened the door into the hall and called to Monsieur Beaujon. There was no answer. He called to madame. Still no answer. He went back to investigate. The Beaujons were gone! There was no doubt of it. The little furniture they owned had disappeared.

Peter, unreasonably, was glad. At last he was rid of his charges. At last he was free. He could even go back to Mr. Sturgis—but, no, that also meant going back to Elmhurst!

Back in his own sitting room he now found a note addressed to him in Beaujon's flourishing hand:

*Mon enfant: We have fled, and you shall never see us again. You are of such an innocence that it was a pity to despoil you. If it had not been I was desperate, I would not have had the heart. So sorry I feel for you that some day if I am able I shall repay you everything.*  
PHILIPPE BEAUJON.

Peter sat down soberly in a chair. The first relief at their departure had gone. Now he was downcast, humiliated. And heart-broken! He had been exploited, cheated, robbed. And he had been fond of the Beaujons. He had felt deeply for them. He had made their sorrows his own. And always his intentions had been of the best. Never after this, he felt truly, would he be the same again. Something in his faith in human nature had gone never to return. "Why couldn't they have been honest with me?" he cried aloud. "I'd have helped them just the same—to the last penny I'd have helped them."

THERE was a resounding knock on the door. A burly individual badly in need of a shave stood there. "I've come for the rent," he shouted. "It's the last day, remember."

"Isn't the rent paid?" asked Peter mildly.

"Ain't it paid? Ain't it paid?" repeated the other mockingly. "You know well enough it ain't paid—not for two months. An' if you don't pay to-night, out you go! I got the dispossession notice wit' me."

"But I didn't rent the apartment," said Peter. "It was Mr. Beaujon who rented it. I'm a lodger with him. I paid him regularly."

"That French guy told me you'd pay it. Where is he?"

"I don't know. He's gone."

"Say, you can't stall me that way, young fellow. Pay up or get out."

"I'll have to get out, then," said Peter. "I'm penniless."

After the burly individual had gone, Peter sat down with his sorrow again. He was dazed. He was utterly miserable. He was helpless. And while he sat there came other knocks on the door. The butcher wanted to be paid, the grocer, the man who delivered the milk.

"My God!" said Peter.

It was almost automatically that he found himself going around to the Painter Girl's apartment. Fortunately she was home. And Peter poured his

(Continued on page 30)

# Why Franklin Sales Increased Last Year 135% against the 12% Increase of all Other Fine Cars

How far do you  
go to the  
gallon?

Average of FRANKLIN Owners, Ordinary Conditions.

At what point do  
you invest in  
another set?

**10,203 Miles to a Set of Tires**  
Average of FRANKLIN Owners, over a period of 5 years

How much does  
your car  
use?

**800 Miles to a Gallon of Oil**  
Average, FRANKLIN Owners

No water cooled  
car can do  
this.

**100 Mile Non-Stop, Low-Gear Run**  
Test by 116 Cars, Sept. 24, 1914

No one else talks  
this feature.  
Why?

**84.42 Power delivered to Rear Wheels**  
Test by Worcester Polytechnic Institute, 1914

**H**ERE, publicly placed, are the records of the Franklin Scientific Light Weight Car. They are reduced to their simplest form; their full significance may be gathered at a glance. They constitute *actual facts*,—not futile assurances; *history*—not prophecy; *performance*—not promises.

These records explain at once why sales of the Franklin Car increased last year 135%, compared to the 12% increase of all other fine cars.

Waste is under indictment in this country. The spirit of the times calls for constructive, *efficient* economy. The economy which will impair neither your activities—nor the Nation's resources. Applied to motor cars, this spirit has crystallized

into the blunt demand:—Does your car deliver Service without Waste?

The Franklin Car has answered—and the people of this country have heard the answer.

For it is an absolute fact that if all cars were as efficient as the Franklin, America would save *Four Hundred Million Gallons* of gasoline and \$102,000,000 worth of tires every year.

It is significant that the Franklin is still advancing—solving cold weather starting—getting big results even from low grade gasoline—minimizing care and adjustments—bringing tire mileage to a still higher level and reflecting advance style in body design. These are Franklin features worth your immediate inspection—for they have a direct bearing on your motoring satisfaction in 1918.

**NON-BURN**  
ASBESTOS  
BRAKE LINING  
*for your car*

## The Service You Get from a Brake Lining Depends on the Grade of Asbestos the Maker Puts In It

**T**HE danger you run in buying just brake lining lies in the fact that you take the asbestos in it for granted.

True, there is asbestos in all linings, but it varies greatly in strength and quality. From the huge tonnage annually dug from the Johns-Manville Mines, only the choice asbestos fibre is set aside for brake lining service.

That is why Non-Burn contains the best asbestos fibre—and the reason why it does not vary. Say Non-Burn when you re-order insist on it and you will get 100% asbestos taken by the maker from his own mines selected with experience and care woven into the safest, most economical brake lining material yet known.

**When you think of Asbestos you think of Johns-Manville**

wretched story—all of it—into her ears: How Mr. Sturgis had fired him; how the Baujens had deserted him with a hundred debts left unpaid; how he was forced to vacate his apartment that very night! Never once did the Painter Girl have the ill grace to say: "I told you so." Peter found that he liked the Painter Girl very much indeed; in a world which was tumbling about his ears she was the only substantiality he could find.

And she lost no time. She dragged Peter around to Sixth Avenue and routed out an old expressman. The latter was reluctant to do any work at that hour of the night, but Mary had a way with expressmen. At last he consented. "We've got to save your things," she said to Peter. "I'll pay the expressman if you're broke, and you can pay me back when you get it."

"But where can I send the things?" "I can crowd them into my apartment temporarily," she said cheerfully.

Later Peter stood there amid the litter of his belongings. He was still dazed and helpless. He held out his hand to Mary. "Good night, dear," he said, "and thanks for what you've done for me."

"Where are you going now, Peter?"

"I don't know."

"How much money have you?"

He examined the loose change in his pocket. He had paid one or two of the bills which the tradesmen had presented. "Twenty-seven cents," he answered.

The Painter Girl glanced at the clock. "It's almost twelve. You can't go out at this hour without a cent. You'll have to stay here. I'll fix up the couch for you in my sitting room, and you'll be fairly comfortable."

"Oh, but, Mary, I can't stay in your apartment, all night. It wouldn't be proper," said Peter, who in the past had condemned Mary for her conventionality.

"Shucks!" said the Painter Girl. "What's the difference? Don't talk rot at this hour."

So Peter stayed.

After Mary had fixed the couch for

him she stood a little shyly at the "Good night, Peter," she said.

"Good night, Mary, you—you are"

**P**ETER awoke the next morning in a much happier state of mind. His troubles had almost as if his troubles had completely vanished. He felt exhilarated and confident.

And Mary had a delightful breakfast ready for him. In her tiny dining room they sat at the breakfast table opposite each other.

"What are your plans now?" asked him.

The reality of the question on Peter's spirits a bit. "I suppose I have to return to Elmhurst," he answered.

"Peter, you won't do anything of the kind. It's all right for you to go to Elmhurst. But not now! You've got to go back there simply because you've failed—simply because you have no job, and no place to live. You've got to fight this out. You've got to make a man of yourself. Then you can go back."

Peter sat back in his chair and regarded her with admiring eyes. It was a wonder she was! Suddenly he realized that he didn't want to go to Elmhurst, he didn't want to go anywhere. He wanted to stay with the Painter Girl—always!

"I wish I were a success now, every minute!" he cried. "I wish I had a job. For if I had, dear, I'd like to marry you. You're what I need—more than anything else in the world."

"Is this a proposal, Peter?" she asked lightly, but her voice trembled.

"Yes, it is," said Peter.

"Oh, Peter, I don't know what to say. I want to marry you or not," she said. "You're such an idiot. But you certainly should have some one to marry after you, and I suppose I'll have to be the one."

"Good heavens, Mary! I forced myself to claim Peter. 'I have a job,' Sturgis told me that if I married I could have my old position back."

"Yes, I know," said Mary. "But me that too."

## Sailorman Born

Continued from page 16

their completion by an acrid odor before Captain Mason recalled himself to the present and hastily snatched them smoking from the oven. They ate in silence. After supper the captain put on his jacket and hard hat, took his stick, and curtly commanded Jack to wash up the dishes. Then he went out. Nothing could more fully have signified a catastrophe, for each evening since Jack came home from his final voyage the father had always ended the evening meal by a brusque, hearty: "I'll wash up. Clear out with you!"

**T**HE captain briskly made his way to Mary Chase's home, a cottage farther up the hill, held brief intercourse with Mr. Chase, a man of few words and a large income, asked for Mary, and was informed she had gone downtown to the library.

Thither the old man made his way and found her among the shelves, apparently deep in selecting a new novel.

She looked up at him when he awkwardly stood beside her, blushed faintly, and said: "After another book of piracy?"

Captain Mason thought he detected a symptom of relenting in this and took heart. "Jack came home and told me," he said simply. "Of course you and I've had our little joke all along. You know I want you to marry the boy. I've only thought he was a little too easy about it—didn't, so to speak, take the proper interest in the matter. I wanted to stir him up."

"I stirred him up," she said quietly. "When I came to think the whole thing over it struck me how perfectly right you were. Jack is rather commonplace, isn't he? He doesn't strike a girl's imagination, does he? The more I reflected the more clearly I saw I couldn't really be interested in a young man who worked on a salary and had no higher ambition than to own a home (on the installment plan) and ask for a raise every other Christmas. How well you know life! and women, captain! I never can thank you enough for saving me from marrying Jack. It's too bad too. He's so good-looking. And his family have been so respectable too, haven't they? (Of course you were a black sheep and went a pirate. Probably you blame yourself for Jack's turning out this way.)"

This she said in the face of love and earth. Captain Mason stared at the innumerable backs of volumes of which presumably contained the story of a couple in love, lifted his head to the yellow ceiling, and then Mary Chase's level gaze. "You're making fun," he said desperately.

"I might if I thought it worthwhile," she answered. "Now that you've said it, it is funny. And you see the old man."

The old master mariner read in cloudless eyes something other than a man less experienced in skiffing could have done. This frank and girl-maiden, with all her girlish eagerness of a wooing, the blossoming woman had decked her profounder feelings with the light fantasy of jest and had turned into a dark and mysterious personage, untender, cruel, and old. Captain Mason sighed.

"I thought maybe there had been a mistake," he remarked.

Miss Chase laughed. "Oh, no, I made it quite plain. I'll read all papers with such interest to see if Jack will do. I'm sure he'll be a captain's uniform soon, and knock men down with a handspike at night before gales and heaving typhoons and finding a delightful in every port. For of course it's right to sea, now that I'm not a way."

"But you told him you were not of him for not going and fighting his country," the captain puzzled.

"I was only putting your case," she responded calmly. "I used to do my share in undressing you said I'd done. I've done that do your share."

He stared at her, strangely by her youthful splendor and she. He shook his head, mute expression of a recognition of the insoluble of womankind. Then he accepted the challenge in her eyes. "We'll see," he said, and departed.

**H**E found his son seated by the stove and sunk in despondent. "I've been thinking things over," the old man said cautiously. "You are a very fine woman. It's as if a full moon that she doesn't find expected in you. Girls have a way of making the best of matters that tempers fetch adrift and then"

the ship offhand. Marriage is a ticklish business, and a man usually goes ahead blind and beats up against wind and tide willy-nilly, saying to himself tide and wind will change. But a woman will trim her sails only so much; then she 'bouts ship and gives over the voyage. Unless"—he added as an afterthought—"she finds she really loves the man."

Young Mason lifted a white face.

"Or finds she doesn't," he rasped.

His father refused the emendation. "They never find out that till it's too late," he remarked sagaciously. "They're built that way. Born experimenters. Now you made a mistake, as I see it," he went on slowly. "Women like an upstanding, two-fisted man who doesn't give a cuss for anybody or anything and makes good that way. Working and going to church and the library and being a fine young chap all the ladies trust is all right. Earning a home is all right, and staying home of evenings and being polite and respectful. But once in every man's life he ought to smash something, for the sake of the girl he loves. Just once. To make her sure he c'n kick the whole business overboard if it doesn't suit him."

CAPTAIN MASON filled his pipe carefully and lit it. A few puffs, and he comfortably resumed: "Your mother used to tell me a girl could stand only so much window shopping. And when a girl suddenly turns and blows an Irishman's hurricane out of a clear sky she's got to the point where she's decided it's time to find out what's behind her young man's savings-bank book. I dunno but what any girl worth while mightn't sooner or later set a man adrift just to see what he'll do and where he'll fetch up."

The young man made no response for a moment. Then he burst out: "Between the two of you I've been made a fool of. First, you're always at me for not staying at sea and being a filthy mate with a dozen roughs under him; then Mary has been for the other thing—sticking to business and saving money and making a place for myself here. All right!"

Captain Mason digested this with irritating lack of excitement.

"I've said my say," he remarked presently. "Of course, if you don't think it worth while to make an effort to get Mary for a wife—well, it mightn't come to anything anyway. I'm naturally different from you. When I wanted anything I got it. I didn't fuss too much over the details."

"Your whole notion is that I ought to be at sea on a rotten ship," Jack returned. "You've got Mary to think I'm a mollycoddle, and it tickles you to think I'm up against it because I did the decent thing and refused to muck around with a lot of sailors."

"A pot calling the stove names," said the captain curtly. "And a pot is made to do its work on a stove. A pot in a parlor, a kettle in a music room, and a sailorman born in a bookkeeper's cage are all alike. They don't fit, and somebody is going to find it out and move 'em. You're a pot. Get back to your stove."

"I'm not a sailorman!" the other protested. "I hate the sea! I would never get along anyway! Never again!"

CAPTAIN MASON rose and knocked out his pipe. "All right. Stick to your books and your pen and your hundred a month. There's a bark in the river just in from Hongkong to load wheat for Liverpool. She's a scandalous sight, and the skipper's fair crazy. His mate quit him after reading all about the submarines in the papers the pilot brought aboard, and the crew'll quit tomorrow." The old man jammed his hat on his head. "There isn't a man left on the coast to take the mate's job and get that wheat to England. Not an American man. And she's an American bark." He went toward the door. "The Mason family has gone to seed—garden seed. Be a primrose, my son, and deck a lady fair. I'm going down to sign on as mate of that bark. D—n it! There was always a Mason handy in a pinch up till now. I'm seventy years old, and my eyes aren't so good. But, anyway, I've got real insides, insides like a man." The captain's eyes blinked weakly. "And your mother showed me I had 'em when she put it to me fair and square to forget her or come back master of my own ship."

His son was on his feet, incredulous. "You don't mean it!" he said. "Sign on that old bark? You're crazy! Why, they're getting all the sailing ships. The Government won't even insure them."

**Is Your Home CHEERFUL?**

**D**O your family and guests enjoy the freshness of white radiant rooms?

Do you feel the satisfaction that comes from knowing that your home is immaculately fresh and beautiful?

If your woodwork and furniture are to look right and wear right, they must be *enameled*.

But ordinary enamel will not do.

For perfect *whiteness* and *permanency*, you must use Enamolin.

Indoors—Enamolin is practically indestructible. Outdoors—it wears for years.

It will not peel, chip or crack.

Wash it like china. Soap or sapolio merely renew its freshness.

As for economy—Enamolin costs *less* to use. Long after ordinary paint or enamel are worn and need renewing, Enamolin's fresh whiteness still delights the eye.

NAMLAC FLOOR FINISH will make your floors handsome and keep them so. It is a clear varnish which really protects hardwood, painted and linoleum-covered floors.

Of course, NAMLAC Floor Finish is "water-proof, mar-proof and scratch-proof."

More than that, it gives a finish that is worthy of Enamined rooms.

## Ali Baba and the Forty Thieves

Have you ever read their fascinating story? Do you know the "Thousand and One Nights," that wonderful series of Arabian stories which Dr. Eliot calls "one of the great story-books of the world"? Among the millions of volumes in the world, there are only a few really great story-books, just as there are only a few permanently great histories, biographies, poems and essays.

To know these few great books is to be well-read. To miss them is to miss one of the richest joys in life.

A remarkable free booklet has been printed that tells about these few great books. To receive your copy merely clip the coupon. It tells how Dr. Eliot of Harvard conceived the plan of sifting out of all the books in the world just the few truly great ones—the few that make a man really well-read—and so arranging them that their reading is made a pleasure. These few wonderful books have become famous as the

## HARVARD CLASSICS

Dr. Eliot's Five-Foot Shelf of Books  
Now Sold at an Amazingly Low Price

Fifty volumes, 418 works, the books that cultivated men refer to in their talk, the books that contain the essentials of a liberal education.

One hundred thousand successful men are finding that the free booklet pictured below opened a new world to them. It taught them the joy of being well-read; and how to attain it without waste of money or time. Merely ask for your copy.

### Ten Thousand Hours of Pleasure

Can you imagine any greater pleasure than to read the great story-books of the world with Dr. Eliot, to see the great plays, hear the great orators, meet the great men of all history? He offers you that opportunity, and no other pleasure can yield returns so valuable. For he promises you that at the end of your hours of pleasure you will have "the essentials of a liberal education."

"I believe that the faithful and considerate reading of these books," he says, "will give any man the essentials of a liberal education, even though he can devote to them but fifteen minutes a day."

## The Free Booklet Tells The Story

### CLIP THE COUPON

P. F. COLLIER & SON  
416 W. 134th Street  
New York City

By mail and entirely free, please send me the valuable little booklet with Dr. Eliot's own story of the Five-Foot Shelf.

In it Dr. Eliot tells how he searched the literature of the world to pick out the books the Twentieth Century Man should know.

No matter how small or how great your library, how little or how much time you have to read, you should have this free booklet.

"The little booklet was worth everything to me," says one man. "It opened the door of a new world of pleasure."

There is a copy free for every Collier reader. To receive your copy clip the coupon.

Mr. Petterson said only this afternoon in my hearing that he wouldn't trust a pound of our pack on a sailing vessel! Anyway, you're too old."

"Too old?" rasped the captain. "Too old? A Mason is never too old to take a ship to sea or bring her to port." His fire died. "Anyway, there's no one else. That bark has got to sail."

SOMETHING that had long been hidden under the sedulously varnished surface of the well-trained clerk began to show in the son's attitude and expression. His slender figure seemed at once a little tenser and a little easier; his white hands were gripped, his feet spread apart to balance him, his brows lowered over his eyes.

"You see, she's got to be discharged and ready to receive the new cargo within six days," the captain went on monotonously. "The tug won't take her up the river the way she's manned. She ought to be ready for sea in twelve days, over the bar in thirteen, and down to the trades in twenty."

"And you'll have to lick a rotten crew into shape!" jeered young Mason. His father cocked one eye at the roughness of his tone. "You may have been a good man in your day, dad, but you aren't up to keeping house on a modern bark with a gang of poor lubbers and a skipper afraid for his life. It's distinctly a job for a man who's ready to run the ship single-handed. Why, that man Howell has lost his nerve already!"

"What do you know about that bark and her skipper?" demanded old Mason, hand on the door knob.

"I knew him when he was in the *Bessarabia*," his son snapped. "He's neither proper sailorman nor good scout. Believe me, if you want to see that grain landed in Liverpool you'd better see he has a real mate. The fellow who quit told me this afternoon that he wouldn't stick an hour with such a man, with his diddling and daddling and taking in sail o' nights and consulting the glass and fearing his sextant wasn't properly corrected and his chronometers were on the blink. Huh! Too old, dad!"

"Am I?" snorted the captain fiercely. "I'm a better man than my son, anyway. You wouldn't dare even tackle the job!"

The knob rasped under his hand. "Me dare?" said his son curtly. "You make me tired—you and your thinking I'm a poor kid with no sense and no science. Why, I c'n fetch that old *Panamint* bark up the river, discharge her and have her ready for sea before you'd rightly get your name signed. I've a good notion to—"

"Notions!" croaked the captain. "Notions! Save them for your own job. You'd a notion you'll be raised next Christmas. You'd a notion you'd get Mary Chase to marry you. You'd a notion the sea was no place for a fine figure of a man like you are. Stop ashore. There's a man's work to be done."

The door opened and the fresh, salt breath of the sea roared in and cleared the room of everything but its own tang. Father bent to the blast and son lifted face to it, inhaled deeply, with quivering nostrils. From the dark sky above came the dull resonance of the bar, thundering across its miles of shoals in leaping foam and upume. The old man bent his head lower to his breast, beaten down by the rising gale. The lamp flared up and went out. He felt a powerful hand on his arm, a deep voice in his ear: "No weather for you, sir! That bark'll need another hook in the mud to hold her. I'll be aboard in fifteen minutes."

Captain Mason was brushed aside and left alone. He slowly retired in the doorway, closed the door, and lit the lamp again; very quietly he filled and lit his pipe. He seated himself in his usual chair. Then he rose agilely.

"I d—d near forgot to wash up," he muttered.

IT was two weeks later that Mary Chase, swinging down the hill in the twilight, looked up and caught Captain Mason's eye. Her involuntary, almost imperceptible hesitation, causing her to stumble slightly on the steep declivity, brought a husky murmur from the old man. She nodded briskly, laughed, and was about to go on when the murmur rose to a distinct call of "Mary!"

"Yes, captain?"

The old man leaned over the edge of the porch and went laboriously on: "The *Panamint* sailed last night, ma'am."

"The *Panamint*!" she repeated blankly. "Was that one of your ships?"

The captain leaned back in embarrassment. "No," he muttered. "I just thought—it's nothing!"

Later he went in and lit the lamp and washed the luncheon dishes. He heated no supper. Then he settled himself heavily in his chair to smoke the evening away. He had barely seated himself when a knock at the front door brought him unsteadily to his feet.

"Who c'n that be?" he muttered to himself. "No—no news—1—y-r?"

He opened the door and Mary Chase stepped in. She was deeply excited, though her voice was calm as she said: "I am a stupid! Not to know that the *Panamint* is Jack's ship. I thought I'd just drop in and see what the news was from him."

Captain Mason ushered her into a room she had never seen before, the kitchen. With the air of a man displaying peculiar and carefully guarded treasures, he indicated a chair with a sweep of his gnarled hand. "That's where he sat, ma'am. Sit down."

Miss Chase obeyed quietly, and the old man with hasty sentences tried to give her time to recover herself, for he saw that she was on the point of tears.

"Yes, he and I always sat here a moment after supper," he told her. "Before he went out for the evening, if so be he was due to go out. I washed up when he was gone and then smoked a pipe like I was doing just now. Funny you didn't know of his joining the *Panamint*. He went as chief mate of her to Liverpool. The captain was tickled to death to get a man like him, especially these days when sailormen are scarce and the submarines are busy."

"Jack never came to see me before he went," she said quietly.

The captain excused this with great earnestness. The bark had loaded in Portland, come down the river by night, and put to sea in the morning. There had been no opportunity.

They sat silent a long while. Then Mary Chase rose. "Did Jack—did he leave any message?"

Captain Mason met her glance boldly, with a flourish. "He'll bring his own message back to you," he said.

IT was three months later that the captain and Miss Chase exchanged more than greetings again. The old man was stamping along the street with his eyes fixed on vacancy, a fresh newspaper clutched in his hand, when she stopped him.

"They tell me the—the *Panamint* was blown up by a submarine," Miss Chase said.

"It's in the paper," he replied dully.

She plucked it out of his grasp and quickly scanned the headlines till her eyes caught the item halfway down a column:

"LONDON—The Admiralty to-day confirmed the reported torpedoing of the American bark *Panamint*. The American vessel gave battle with small arms and was finally saved from total destruction by an Allied destroyer. The chief officer and six hands are missing."

"Is that all?" she whispered. "No later news—of his being saved?"

Captain Mason met her tearless eyes and shook his head. Passers-by, after one glance at their attitudes, a hasty stare at their faces, gave them room; they stood absolutely alone and remote midway of traffic, their world gone on.

The next evening the old man stood over the kitchen sink washing the supper dishes. His face was gray as the rag he used so slowly and awkwardly. Now and then he looked upward from his job as if his wearied eyes sought to see through the dusk of the little room into a finer air. He was not even aroused by a knocking at the door till it became hesitating and died away. Then he went and opened it.

"I was cutting my roses this afternoon," said Miss Chase in a level tone. "I thought you might like some."

"Come in," responded the old man. He closed the door and threw open another which gave into a room she had never seen. It was Jack Mason's room, she knew. It had been freshly cleaned up, and was now lighted by a couple of old-fashioned brass-bowled lamps which illuminated the white, smooth bed, the case with a neat row of books, the small, square desk with a few articles on it, and a line of hooks from which swung brushed, sleek clothes.

"I just set the boy's name down with the rest, ma'am," the captain said.

"The rest? What rest?" she asked.

"The rest of the Masons," he replied, and pointed to a huge chart that hung on the wall in the glare of the lamps.

Quickly she neared the great sheet and peered at it. It was an old, out-of-date chart of the world, stained and worn. It was crisscrossed by wavering lines; straight, firm lines; heavy curves.

and thin tracings that seemed to have been made doubtfully, without any definite notion in mind as to direction or destination. And at the end of each of these lines she observed a cross, distinct and graphic, set down singly; some were along the skirts of continents, some marked a nameless estuary or struck into significance an obscure reef; others were merely afloat in the blank expanse of ocean. Each cross had a name and date written by it. She looked more closely, read some of the brief inscriptions, each written in a hand and ink different from the others:

Jonathan + Mason, Apr. 2, 1806.

Jno. Mason + Sep'r, 1825.

David Mason, Sr. + 5th Jan., 1840.

Rob't Mason + Dec. 20, 1866.

"Who are these?" she demanded.

"The Masons who died at sea," he replied.

She glanced at him fearfully and then back at the chart. Slowly, reluctantly, her eyes traveled to the western coast of North America. A slender red line started halfway up and threaded its way steadily down into the South Pacific, around Cape Horn, out into the Atlantic. It seemed to grow more tenuous, more wavering, as if the hand that drew it lost courage. But her eyes did not lose it, followed it up league by league till it stopped off the shores of Spain, with a fresh cross drawn blackly at its close. The girl looked at the new pole of her frozen world:

John + Mason, Jan. 4, 1917.

She read and reread the little inscription. Then she turned her still face to the captain.

"You got the news?" she whispered. He tremblingly opened and handed her a slip of paper. "Cablegram," he croaked. "From captain of the Panamint."

The message, brief, yet summing up many lives, read thus:

LONDON, 17, 195a.

NEW YORK, 16, 11.18p.

PILOTS ASTORIA:

Mason chief officer wounded ynnfro after hours fighting. Barque towed Madeira british destroyer Mamon and six crew not picked up. Notify Mary Chase. HOWELL.

"You see," said the captain huskily, "that the boy said your name to Captain Howell."

Without tears and in a stillness above which the far Pacific surges throbbed otund and rhythmic, the two of them stared into the invisible, seeing a boyish figure on a blood-splashed, tilting deck, surrounded by men tramping to boats, shadowed by the torn fabric of a great sail. With the ear of longing they caught the name on his pallid lips, the whispered name that had been caught up out of the sea and repeated letter by letter across the leagues till it sounded in the room where he had lived.

**LIVED!** His father reached his shaking hand out to the dresser, and because he would never be able to articulate his feelings again sought to finish at once the business that twisted his heart.

"Here's his savings-bank book," he said in a dry voice. He picked it up and leaned his gray head backward better to see the writing in it. The girl's luminous eyes enveloped him in a piteous and steady gaze. The old man read aloud, as if he made out the figures with difficulty:

"February 8, thirteen-fifty; February 23, twelve-fifty; March 7, fifteen dollars, and March 25—"

"Oh!" she sobbed.

"A total saving up to—up to the day he sailed of two hundred and sixty-seven dollars and seventy-five cents," went on Captain Mason inexorably. "It's in the bank drawing 4½ per cent compounded quarterly, just as he figured. He intended the money to pay for—"

"Oh!" the girl whispered chokingly. Captain Mason lowered the book and cast his grim old eyes on her howled head. The record of Jack Mason's pitiful ambitions dropped to the floor. With a gesture of resignation and of triumph the father went to the wall and took down the chart. He rolled it up slowly. Then he thrust the long cylinder into Mary Chase's hand.

"He was the last of the Masons," he croaked. "He asked Howell to notify you. Here's the message he meant you to have: he was a sailorman—born."

They left the room once more to solitude. Forgotten on the floor the bank book lay holding its record open, proclaiming that as yet now generations to come shall reap—with interest compounded quarterly at 4½ per cent.

# Williams' PATENTED Holder Top Shaving Stick

The Holder Top—  
A top for the box and  
a holder for the fingers

**THE** only purpose of the Holder Top is to add convenience to a shaving necessity. Thousands of men would use Williams' Shaving Soap if they had to hold it with a forked stick. It's that kind of shaving soap. No amount of inconvenience in applying it outweighs the comfort, economy and effectiveness of its softening, soothing, lasting lather. When you realize that Williams' Shaving Soap is *that* good, then you begin to appreciate what a real luxury Williams' Shaving Soap is when applied with the convenient metal Holder Top.

## Four forms of Williams' Shaving Soaps

Send 20c. in stamps for trial sizes of the four forms shown here. Then decide which you prefer. Or send 6c. in stamps for any one.

The J. B. WILLIAMS COMPANY  
Dept. A, Glenshaw, Conn.

After the shave or the bath you will enjoy the comforting touch of Williams' Tale Powder. Send 4c. for a trial size of the perfume you prefer—Violet, Carnation, English Lily or Rose.

## The WEST of the WESTERNERS

A great empire stretches for 1800 miles along the Pacific from Canada to Mexico.

Great, thriving, prosperous cities, broad, fertile valleys, frowning mountain ranges covered with valuable forests and locking within themselves vast stores of rich mineral deposits—all these comprise the Great Pacific West, peopled by Westerners and governed by Western ideals.

This is the territory of *Sunset Magazine*—the Pacific Monthly.

*Sunset Magazine* is written and edited by Westerners—men who know the West and who hold their fingers on the pulse of Western life. Clean, fresh and wholesome, brimful of facts and good fiction—*Sunset Magazine* dedicates itself to the ideal, "The West for Westerners."

## Why Does God Permit Wars?

Thousands ask themselves this question. As never before in our generation men and women seek light and guidance. Those who stay at home to watch, and ponder, and perhaps weep, long for an insight into the meaning of God's will. We have need of all the comfort and help we can get.

Endowed for that purpose, this Society offers to send you, without cost or obligation other than 5 cents for mailing, Emanuel Swedenborg's "Divine Providence", a book that shows the way to a clearer understanding of God's purposes.

American Swedenborg Printing and Publishing Society, Room 15, 3 W. 29th St., New York

Note the interesting HARVARD CLASSICS Advertisement on another page of this issue of COLLIER'S. It has a message for you.

## Running Water Hard-Soft-Hot-Cold

V & K Systems will supply water under pressure for bath, laundry and kitchen. Will sprinkle the lawn and garden, water the stock, wash the dishes and protect from fire.

Every convenience, every luxury, every labor-saving utility that find their source in pure, fresh water, are provided economically by V & K Water Supply Systems.

V & K Water System builders have been making progress for 35 years. They have been pioneers in every worth while development in the industry.

Only V & K Systems are so true and giving perfect service.

The V & K line includes water motors for city homes, canvas line and electric systems for estates, farms, greenhouses, hot pools and public buildings.

**Send for this FREE Book**

A report on "The Water War" will be sent free on request. It contains the complete story of V & K systems. It is a book that will show you the way to a better life. It is a book that will show you the way to a better life. It is a book that will show you the way to a better life.

Get your money's worth by ordering a book about V & K Systems.

## THE TRUE MERITS OF "A LEGITIMATE BUSINESS"

BY FREDERICK LANDIS

**L**IQUOR, in convention assembled, has been highly resolved that it is "as legitimate as any other business": "Legitimate," according to Webster, is "authorized; real; genuine; not false; not counterfeit; not spurious."

Liquor does not mean "authorized." It disdains authority, and yet everybody knows that it is "authorized"—everybody from the child who is hungry to the man who is mad. Liquor means that as a business it is real. Well, then, if booze is a real business, when can a family recover damages from it if one of that family be injured while liquorized? Can a widow get damages from a grocer if her husband expires because of eating too many dried apples? If a saloon is as "real" a business as a meat market or a clothing store, why is it not unlawful to sell mutton chops to a minor or pants to a habitual wearer of pants? How many men lose their jobs because they cannot control their appetites for underwear? How many are riding the coal-car bumpers because they are the victims of soda water? How many divorces are granted because men squander their wages for French-fried potatoes? How many sneak into the back doors of shoe stores? How many chew cloves to conceal the fact that they have just bought a new stovepipe and demand that it be brought up the alley, in the dark of the moon, labeled something else? Why do landlords charge this "business" higher rent than any other business, except prostitution, its little scarlet sister? Why do chambers of commerce never mention saloons among the advantages of cities which they seek to advance? Why do they not vote subsidies to distilleries? It must be that this booze business is too "genuine" altogether.

Dr. Harvey W. Wiley states that three-fourths of the liquor in this country is adulterated. Otherwise it is not "counterfeit." If "not spurious," why is booze selling forbidden near churches, schools, and institutions? Why does government everywhere sting it with taxation and shackle it with restrictions?

Judge Lacey of the Detroit Juvenile Court stated that out of sixteen hundred cases before him in one year, every single case originated in liquor! The New York Society for the Prevention of Cruelty to Children has reported that the neglect, suffering, and grosser forms of cruelty to children are largely due to the immoderate use of intoxicants.

The Michigan Legislature appointed a commission to study feeble-mindedness, epilepsy, insanity, and other conditions of mental defectiveness, and this commission reported among other things:

"No thorough study of its [alcohol's] influence could warrant any other conclusion than that it is the most active influence present in our social life for the production of poverty, criminality, and physical and nervous degeneracy."

### "Legitimate" Business

**A**LL in all, this "business" is a great deal like raising violets, only different. The Plenary Council of the Catholic Church calls upon Catholics engaged in the saloon business to get out of it as soon as possible. Ninety per cent of the railroads, 80 per cent of the trades, 79 per cent of the manufacturers, and 72 per cent of the farmers discriminate against this "legitimate" business. The doctors and pharmacists brand alcohol as a fraud; the National Convention of Locomotive Engineers declares for prohibition and so does the National Convention of Allenists and Neurologists and the National Convention of Nurses, and so does the investigating committee of the Socialist party, while the convicts of different States petition legislatures

to pass prohibition laws. This is as bad enough, but with the convicts it is base ingratitude. All they are then owe to liquor!

In these efforts to obtain legitimate liquor has been pathetically handicapped because its various factions are hanging smallpox signs upon one another. The brewers say that the distillers are poisonous, and the distillers retort that the brewers are hypocrites; the wholesalers insist that the retailers are lawbreakers, and the retailers say that the wholesalers are outlaws. It is only fair to add that, for the first time in their lives, all of them tell the truth.

### Corkscrew or Trinitrotoluol?

**A**ND the consumer, who thinks that booze is just as legitimate as any other business? He would not be shocked if he should see his wife come out of a dry-goods store putting on a pair of gloves, but what if he should behold her emerging from his favorite barroom with a beer glass in one hand and a pig's foot in the other? If the consumer's son should come home, a high-school diploma in his hand and the light of countless to-morrows in his eyes, and exclaim: "I can have a job with the railroad or with the brewery!"—how long would it take that consumer to tell his boy which place to take? Or if that son were going out into the world and the consumer went with him to the station carrying his valise, and stood there in silence, looking at his boy, feeling old and cold and all alone—and then the engine whistled and the consumer gripped the lad's hand and looked clear down into his soul and thought of the fight before him—that consumer had only time to warn that boy to avoid one thing, what one thing would he warn him to avoid?

Does the greatest liquor dealer in the world think his business is legitimate? If he should die to-night, and should take farewell of all his possessions—his kennels and his prosecuting attorneys, his books and his perjurers, his yacht and his jury fixers, his newspapers and his lobbyists, his magazines and his morgues, his stables and his shambles, his paintings and his prostitutes, his statues and his statemen, his pennons loudly given and his fortunes plundered in silence, his sunken gardens and his sunken graves, his summer home, his winter home, and all the want and war between them—would the greatest liquor dealer in the world regret that he must leave these priceless treasures here above?

If he should think of the tasks undone, the boys ruined, the girls unbought, the children unstarved, the babies untainted, the lawyers untried, the politicians unbought, the hearts unbroken, the intellects undestroyed, the fathers unchanged—would the greatest liquor dealer in the world sorrow that he could not finish his work? If his offspring should dance around to deathbed—paupers, epileptics, thieves, madmen, murderers—a cloud of them whirling round him like pestilential vapors—would it cool the fevered brow of the greatest liquor dealer in the world to think that his children were going with him to judgment? And then, if he should feel the chill of the great iceberg, and see the shadow of the Eternal Reaper on the wall, while all receded and the world turned gray, then slowly rising on his stiffening arms lifting his glassy eyes to the white temple of a Justice he cannot buy—the greatest liquor dealer in the world could speak, would he request his executor to erect a million-dollar marble corkscrew above his grave, or would he command him to place some tons of trinitrotoluol beneath that "legitimate business" and blow it all to hell?

# McNUTT

NUTT is one of those men who have crowded a lifetime into the first thirty years. McNutt has been a prospector in the West, a deputy sheriff, a lumberman, a hard-rock miner, an actor, a writer, a dock hand, a seaman, and a story writer. He used to write for his own amusement. His friends urged him to turn to magazine writing, insisting that he was just as good as those that printed. You know how wiser men feel about things? McNutt always insisted that his stories weren't good enough to print, and that ended it. He wrote a novelette that Mrs. McNutt thought was the best novelette she had ever read. They were talking it over on a train out West, running the bank of the Missouri River. McNutt had the manuscript in her hand as she talked. McNutt finally told her he was outvoted. He seized the script and threw it out of the window into the coffee-colored waters of the river. That was the last of the novelette, but Mrs. McNutt was so disappointed that McNutt had to write her a story to take the place of the one he had destroyed. Mrs. McNutt read it and said nothing. She put it in an envelope addressed to an editor and mailed it. The answer was a letter. McNutt has been writing for the maga-

zines ever since. His first story in *COLLIER'S* was published about five years ago under the title of "Nerve."

McNutt is a two-fisted person, with the build of an all-Western tackle or a middleweight prize fighter—one of those men with a handshake that makes you wince. Of course he couldn't keep out of the war. But he had a limp that prevented him from entering the army.

He went out to Yaphank to look things over one day last September and liked them so well that he just had to tell people about them. He came into

our office with an article—a hip-hip-hoorah, ta-ra-ra-boom-de-ay article such as we had hoped somebody would write about the new National Army but didn't really expect. You remember it—"A New Idea and a New Army." He has been writing these articles ever since, as everybody who reads *COLLIER'S* knows. McNutt made the circuit of the country—Boston to Petersburg, Va., out through Illinois and Kansas, to his old stamping grounds on the Pacific Coast. When he had done that there was nothing to do, of course, but send him abroad, to see what it's like in our camps over there.

McNutt sailed a month ago to-day, and he will be along in a few weeks with a story about what he has seen of the American army in France.

## Real Back-to-the-Land Movement

A preacher out in Missouri who succeeded in resuscitating the life of a church through the federation of a group of rural churches is a real community center appeals to us as a prime mover in the "back to the farm" propaganda. The dispatches give his name as Mr. Green, unadorned by title or just a plain "Mister." These also state that his church is called the Harmony Church and that it is located near Maryville, Nodaway County, Mo. When he was sent by the Methodist conference president to take charge of a country church some years ago, and a church without any audience and surrounded on all sides by the wilderness of the same vitality. Mr. Green conceived the idea of federating churches, and bringing the city country. In six years his Harmony district of twenty-three and a half square miles has been transformed. Country roads of that district are now boulevards, with concrete cul-

verts and arched bridges. A high school has been running for three years, conducted by a corps of teachers in the church building, where the boys and girls are taught Latin and algebra, but cooking, canning, soils, grains, horses, and cattle are also in the curriculum. The State University recognizes the work of this school.

The greatest farm experts in the United States come to lecture to the Harmony folks. The young people have their athletics on the church grounds the year round, and the desire to go to the city is removed; they have all that the city can offer. Ninety per cent of the homes in the Harmony district are modern.

Instead of the spiritual life of this community being stultified, the very opposite is true. The country people, who used to sigh for the return of the good old days when they had crowds, have seen them return with compound interest. One of Mr. Green's epigrams is:

"The country people can have any good thing they are willing to pay for."

## Where Are You Going, Congress?

Continued from page 3

sought of Mr. Borland, who arose the next morning:

BORLAND—Mr. Speaker, I prefer to wait until next Tuesday, after the publication of the Journal, I may be able to address the House for thirty minutes.

SPEAKER—On what subject?

BORLAND—It is the one hundredth anniversary of the application for Statehood.

sought of all the inconsequential news, newspaper clippings, and the like which are read into the nearly every morning after the publication of the Journal. I thought of it as touching and sometimes interesting. "On the Horse," with its sub-title "Why God Created the Horse," "The Troubadour and the Horse," "The Mythology," "The First Veritable Horse," which a member delivered in January and which occupies the first pages of the Congressional Record. But this is war, gentlemen. Mr. Shackelford of Missouri has his mind to it and says:

"Much criticism is still being made . . . because we did not go to war upon the sinking of the *Lusitania*. . . All of these questions have gone into the past and can have no bearing upon the vital issues of the day. . . Indeed, the one thing that has made the ultimate defeat of Germany certain was the great crop of this country in 1917." (To have waited for another great crop would have made victory doubly sure!) "Had our farmer boys" (always in Congress "soldier boys" or "farmer boys") "been called to training camps two or three years sooner, an insufficient supply" (of crops or training camps?) "would have compelled England, France, and Italy to have quit the fight. . . It is true that our slogan was 'He kept us out of war'. . . These questions have all been swallowed up in the voracious yesterday and have no connection with the living, burning problems of to-day. . . In the performance of our task we need the sympathy of the people and the guiding hand of God." That is correct.

"In the Senate there is less of this

**The BLADE ITSELF**

For cash, immediate. The Simple Plan. All you need is \$5 commission to pay. Absolutely no obligation. **FREE**

**SIMPLEX, Dept. 100, 117 Broadway, New York**

summer we were called pro-German and bullied unmercifully. This winter any independence of thought or action is laid to despicable party treachery or despicable party loyalty, depending upon which side of the Senate you are. And our constituents pile on the requests too."

Down in the Cantonment Division of the War Department a senator appeared not long ago with a device.

"A constituent of mine sent this to me," he said. "He thought maybe you could use a lot of them. Of course—"

The officer replied: "We will look it over and let him know."

At the door the senator turned. "And, by the way, when you write to him just say I brought this to you personally. Thank you." He paused and then laughed nervously. "This is fine business for a senator of the United States!"

The officer who told me was full of sympathy for the senator. "Don't tell his name," he said. "Why, he brought it down in his hand—a little sample of a patent barn-door catch!"

#### The Restoration of Congress

AFTER all, however, it is not the pressure of petty business which hampers the efficiency of Congress.

The real reason behind a supine Congress and behind deterioration in the quality of members is the breakdown of the American party system. For several years the greatest difficulty has been experienced in keeping up issues between the two party machines. While the country and the world have been dividing into a "liberal" and a "conservative" line-up, horizontally, the old parties have been divided as much as possible on a few feeble or petty vertical distinctions. And these distinctions were so feeble and petty and now are so hopelessly swallowed up by the war that a man can know his own party home not by its exterior, or even by trying his key in the door, but only by those whom he meets in the front hall.

"It is like a race riot in Cuba," says some one. "It starts with the blacks against the whites and ends when both sides are pale brown."

Gone are State rights; gone the tariff, perhaps forever; gone sectionalism; gone the question of how much we would stand from Germany; gone the question of preparedness. Little by little distinctions have slipped away, and the war has swept away the remains.

There is nothing to attract sizable men to Congress in such a situation while the party lines are still propped up by fictitious nonsense. There is nothing inspiring about leadership in parties which stand for little short of nothing. Hughes tried it. Above all, there is certain to be a further deterioration if it becomes plain that Congress is only to be the errand boy of the executive branch of the government.

#### The restoration of Congress!

That is an issue for the issueless Republican party to use in a campaign against an issueless Democratic party—provided, of course, that a legislative branch of government is considered necessary to make democracy safe for the world.

#### EXPIRATION DATE

Be sure to notice the date beneath your name and address on the wrapper. It shows how long your subscription has yet to run. Unless renewed, names are promptly removed from the mailing list at expiration.

**"My right has been driven in, my left has been driven in—consequently with all that I have left in my center I now will attack."**

**FOCH**

**THAT** is the terse report that General Foch sent to Joffre at the crucial moment of the battle of the Marne. Told that his troops were worn out by the three days of continuous fighting, "Tired?" he cried. "So are the Germans. Attack!" And attack they did in gallant style. He drew together all his exhausted divisions, all his reserves, and at the very moment when the enemy thought him routed he snatched against the Prussian Guard in a violent, desperate effort. He broke into its lines and crushed it, won the battle of the Marne—and saved Paris.

**How much do you know of this brilliant leader?**

Do you know that he is everywhere considered one of the greatest tacticians the world has ever known?

Do you know that it was he who saved the channel ports of Calais and Dunkirk to the French and thus made possible the uninterrupted passage of men and supplies from England?

Do you know that he was the man who took in hand the Italian defense just at the moment when the German drive was at its height and not only saved Venice, but changed almost certain defeat into glorious victory?

**THE STORY OF THE GREAT WAR—**

gives a detailed account of these exploits as well as of the whole history of the war. You can read in it of the heroic stand of the French and British before Paris; how the French at Verdun said, "They shall not pass!" and closed that gateway to German victory; how the Canadians met the great German War Machine with a wall of flesh and blood and stemmed the tide of invasion at the historic battle of Ypres; how our navy, by American ingenuity and American marksmanship, turned the scales against the treacherous U-boat; how our men are beating the German at his own game in the trenches of Lorraine and helping to drive him back beyond the Rhine from the battle fields of Picardy.

Send for the free booklet describing the war.

**P. F. Collier & Son, 416 West 13th Street, New York, N. Y.**

Please send me free booklet describing "The Story of the Great War," showing samples of the paper used, the size of the pages and the clear readable type, and give me full information about the plan of subscription.

## W. L. DOUGLAS

"THE SHOE THAT HOLDS ITS SHAPE"

**\$3 \$3.50 \$4 \$4.50 \$5 \$6 \$7 & \$8**

W. L. Douglas name and the retail price is stamped on the bottom of every pair of shoes before they leave the factory. The value is guaranteed and the wearer protected against high prices for inferior shoes. You can save money by wearing W. L. Douglas shoes. The best known shoes in the world.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York. They are always worth the price paid for them.

**CAUTION:** Before you buy be sure W. L. Douglas name and the retail price is stamped on the bottom and the inside top feeling. This is your only protection against high prices for inferior shoes. **BEWARE OF IMITATIONS.**

Sold by over 9000 shoe dealers and 103 W. L. Douglas stores. If not convenient to call at W. L. Douglas store, ask your local dealer for them. Take no other marks. Write for booklet, showing how to order shoes by mail, postage free.

W. L. DOUGLAS  
183 Spring St., Brockton, Mass.

**BOYS SHOES**  
Best in the World  
\$3 \$2.50 \$2

While "bound out" at the age of 11, W. L. Douglas was frequently required to haul leather and other materials in a wheelbarrow a distance of about two miles. On one occasion he was stopped by a charcoal man who was so blackened up he did not recognize him. It proved to be a relative who reported to his mother the tasks, far beyond his strength, given W. L. Douglas to perform and he was finally permitted to return home.

## The Thoughts of Hindenburg

Continued from page 13

Russia! Quite true! We had forgotten Russia for the moment. Why? Of course we'll do the right thing for Russia. Now what would you propose? We stand ready to consider any intelligent and well-meaning plan for those poor folks. Let us enter into a peace conference at once, and we shall discuss Russia along with the others."

If need be, we must even bewail the dreadful Russian problem. We must say that we have an elephant on our hands. We must say that Russia is a nightmare, and that we want aid in banishing it. This will be very easy, of course, for we shall have a bad mess at best in Russia; and we can release many true stories with a little dressing up that will confirm our account.

On the success of this move hangs the destiny of the German Empire. For if we can begin the peace conference before the Yankees strike hard behind our lines, we surely can divide and conquer.

Here is how it will work out in the rough: The minute the newspapers and our own wireless service publish the fact that we stand ready to concede all reasonable demands of the western Allies, great masses of men in England, France, and Italy will instantly demand that an armistice be declared and the conference begun. A few leaders who scent our strategy will protest, but they will all be called Chauvinists and Jingoists and other convenient names which fools use when they have no clear argument. Now, keeping careful check on the calendar, let us see what will happen after the conference starts, say, in the late spring or early summer of 1919.

By that time we shall have a firm grasp upon European Russia and possibly western Siberia—in all an empire larger than the United States and fully as rich in oil, minerals, timber, and farm lands; and filled with a simple-minded and docile folk. We shall have absolute control of the Black Sea, the Caucasus, and Turkey. And we shall be feeding our home folk out of the Ukraine then.

By that time the English and French and Italians will be sick of war and war debts and war hunger; their resources will be at a lower ebb than ever, because the ship shortage will have been overcome—if at all—too short a time to have made much of an effect upon the masses of the people.

By that time the United States will have just begun to comprehend what the war really is. They will have read a few real casualty lists. They will have felt the pinch of war taxes. The drain on farm labor and on machinery will have made itself known everywhere. And many of them will begin to wonder what they are going to get out of it all. Also many others will begin to fear the radical changes in business and government that war always brings; and they will be saying what reactionaries and conservatives everywhere else are saying: "Maybe it would be wiser to end the war in a hurry and save the established order of Things as They Used to Be." Another large group will want to talk peace terms, while we Germans are offering liberal terms, because they will want a slice of pie for America—say, in South America, in the form of the complete withdrawal of German competition there.

Very well! The armistice will come, probably not immediately on our request, but within two or three months, and after much wrangling in the Allied lands. But this armistice will be an armistice of war. It will not be a business armistice. The instant it begins we shall throw an extra half million men quietly into Russia. Not soldiers! Just machinists and farm managers and lumbermen and railway workers! We shall distribute them evenly up and down the land. And we shall carefully place them in positions of power and responsibility. They will study Russian at night and make friends with their neighbors by day, while they work.

The peace conference begins. The Yankees will, of course, demand that they be admitted, and we shall rejoice to receive them. For we shall proceed to trap them in their own rhetoric.

They will repeat their battlecry about making the world safe for democracy. And we shall reply: "That is a pleasant sound. Now let us get down to

brass tacks. Just what do you propose to do? Do you maintain that each every race or national group wishes to rule itself shall be permitted to? Serbia? Finland? Ireland? The Philippines? Mohammedan Iraq? Egypt? Now let us consider each these cases on its merits. For it is not so easy. You Yankees confuse. Were there not several Southern States that wished to rule themselves and control their own destinies? And did not fight them to a finish to prevent their doing this? Did you not put that a region larger than Germany in France that wanted to be free back right to be free in your eyes? If you not please work out your theory of democracy? We are much interested in it, and might be persuaded to give it a try. Only we must know what it is."

The poor Yankees! They will be to arguing. And, as they have a theory, but only a lot of fine phrases and fine ideals, they will let us have them debating for a year or more. Meanwhile we shall debate with England and France and Italy. And we shall present our claims alone in one year.

Meanwhile our Germans in Russia will have put the place in order. After the peace conference has dragged on to the summer of 1920, as it will, we shall not care what the western Allies do.

If they want to go on arguing to which races may rule themselves and which may not, all right! If they say that the Ukraine and Great Russia must be given full autonomy, we shall say all right! We shall take six months to work out a plan for freeing them politically. We shall suggest a referendum of Ukrainians and Great Russians at any time the Allies suggest. We shall urge the working men of the various lands to hold separate conferences and discuss all the questions; and thus we shall further divide the interests of each country eternally.

I suspect that this will prolong the peace conference until the winter of 1920-21. And by that time all the muzhiks will be prosperous, selling wheat and pigs to us at high prices, riding in trains that run on time, paying no more bribes to every bureau and policeman, and loving their German neighbor who has put their house in order. Let there be a referendum. We shall manage it as easily as the Yankees manage an election in Columbus, Ohio.

And if the Yankees in their stubbornness say: "No referendum! We must clear out of Russia," we shall reply by trying to persuade England, France, Belgium, and Italy to accept all that each wishes for herself and the crazy North American idealists hang. We shall say: "The Yankees are not bound by your alliance, and you are not bound to be dragged down to ruin by their mad theories. Sign up now and all will be forgiven."

If they will not, then we shall pretend to surrender all Russia. We shall withdraw all soldiers from the land, and the Russians will proceed to elect their own governors—mostly Germans as usual! We shall then resume negotiations in the west, and shall naturally withdraw the very liberal concessions we previously made. This will carry the peace conference past 1920. And through all the eighteen months or two years of the conference, the Allies will be marking time at home while we are completing the peaceful penetration of all Russia.

Perhaps—who knows?—after two years of such negotiations, we shall be able to laugh in the face of even the Yankees. We may even be able to send all Russia behind us—to send ten thousand battle planes against New York.

THESE are no prophecies. They are the thoughts of Hindenburg. If they are thoughts which may become true if we do not recognize them and counter them. But how counter them? Will a drive on the western front? Never! Only ten thousand battle planes over Essen, Düsseldorf, Bremen, Stuttgart, and Berlin will defeat the cunning psychology of the Allies. Every day's delay in such a drive advances the Teutonization of defeated Russia. And the Teutonizing of Russia, for two or three years, would world ruin.

*Certain-teed* is a conservation product because it is made from waste rags and asphalt, materials not needed to win the war.

The great *Certain-teed* production goes on with increasing volume, helping rather than hindering our Country's program.

Gigantic quantities of *Certain-teed* are made annually, a part of which is sheltering our army here and abroad.

*Certain-teed* is also doing its bit for millions of property owners. It cuts down their roofing investment, and adds to the service they get from their roofs.

For factories, office buildings, warehouses, hotels, stores, garages, farm buildings, etc., it is a most efficient roof—clean, sanitary, weatherproof, rust proof and spark proof. It is not affected by fumes, gases or the hottest sun.

Its first cost is small, laying cost low, and upkeep cost practically nothing. It is guaranteed 5, 10 or 15 years, according to thickness. Sold by best dealers, everywhere.

Conserve your own resources as well as your Country's by using *Certain-teed* Roofing.

# The Oliver Typewriter

**Now  
\$49**

## A \$2,000,000 GUARANTEE

**That This \$49 Typewriter Was \$100**

## The Sales Policy Alone Is Changed, Not the Machine

*The Oliver Nine—the latest and best model—will be sent direct from the factory to you upon approval. Five days free trial. No money down. No salesman need influence you. Be your own salesman and save \$51. Over a year to pay. Mail the coupon now.*

This is the time when patriotic American industries must encourage *intelligent* economy by eliminating waste. New economic adjustments are inevitable.

So March 1, 1917, we announced The Oliver Typewriter Company's revolutionary plans. We no longer have an expensive sales force of 15,000 salesmen and agents, nor costly offices in 50 cities. The entire facilities of the company are devoted exclusively to the production and distribution of Oliver Typewriters.

### Price Cut In Two

By eliminating these terrific and mounting expenses, we reduced the price of the Oliver Nine from the standard level of \$100 to \$49. This means that you save \$51 per machine. This is not philanthropy on our part. While our plan saves you much, it also saves for us.

There was nothing more wasteful in the whole realm of business than our old ways of selling typewriters. Who wants to continue them? Wouldn't you rather pocket 50 per cent for yourself?

### The Identical Model

The Oliver Typewriter Company gives this guarantee: The Oliver Nine we now sell direct is the exact machine—our latest and best model—which until March 1, 1917, was \$100.

This announcement deals only with a change in sales policy.

The Oliver Typewriter Company is at the height of its success. With its huge financial resources it determined to place the typewriter industry on a different basis. This, you admit, is in harmony with the economic trend.

### A World Favorite

This Oliver Nine is a twenty-year development. It is the finest, the costliest, the most successful model that we have ever built.

More than that, it is the best typewriter, in fifty ways, that anybody ever turned out. If any typewriter in the world is worth \$100, it is this Oliver Nine.

It is the same commercial machine purchased by the United States Steel Corporation, the National City Bank of New York, Montgomery Ward & Co., the Otis Elevator Company, the Pennsylvania Railroad and other leading businesses. Over 600,000 have been sold.

### Simplified Selling

Our new plan is extremely simple. It makes it possible for the consumer to deal direct with the producer.

You may order from this advertisement by using the coupon below. We don't ask a penny down on deposit.

**THE OLIVER TYPEWRITER COMPANY**  
1025 Oliver Typewriter Bldg., CHICAGO, ILL.

**OVER 600,000 SOLD**

When the typewriter arrives, put it to every test—use it as you would your own. If you decide to keep it, you have more than a year to pay for it. Our terms are \$3.00 per month. You are under no obligation to keep it. We will even refund transportation charges if you return it.

Or if you wish additional information, mail coupon for our proposition in detail. We immediately send you our de luxe catalog and all information which you would formerly obtain from a typewriter salesman.

### 10 Cents a Day

In making our terms of \$3.00 a month—the equivalent of 10 cents a day—it is now possible for everyone to own a typewriter. To own it for 50 per cent less than any other standard machine.

Regardless of price, do not spend one cent upon any typewriter—whether new, second hand or rebuilt—do not even rent a machine until you have investigated thoroughly our proposition.

Remember, we offer here one of the most durable, one of the greatest, one of the most successful typewriters ever built. If anyone ever builds a better, it will be Oliver.

### Don't Pay \$100

Why now pay the extra tax of \$51 when you may obtain a brand new Oliver Nine—a world favorite—for \$49?

Cut out the wasteful methods and order direct from this advertisement.

Or send for our remarkable book entitled, "The High Cost of Typewriters—The Reason and the Remedy." You will not be placed under the slightest obligation.

NOTE CAREFULLY. This coupon will bring you either the Oliver Nine for free trial or further information. Check carefully which you wish.

SHIPWORKER: "I'M WITH YOU, BOY!"

# THE 343 STAYS UP

BY JAMES B. CONNOLLY

COLLIER'S STAFF CORRESPONDENT

THE 343 had performed her duty, seen a small convoy on her own account to a point well on toward a large port, and was returning to this naval base here. She was in no great rush, and it happened to be smooth water, which is a rare thing up this way this time of the year; so she stopped for a little gun practice, which she very much needed.

The sea was smooth enough to allow the gun crews to take it easy around deck while securing things after practice. There was no more thought than usual of U-boats. Nobody would have been surprised if one popped up—it was a coast where they had been regularly operating—but no one was particularly expecting one. Destroyers are bad medicine if you do not get to them quickly, and lately the U-boats had seemed to care more to get merchant ships, but destroyers' lookouts were not loafing on their job on that account.

The 343 had cleaned up pretty well after her target practice. A few gunners' mates were still coddling their pet guns. Apart from that the ship was going along about her business and, because of the smooth sea, making pleasant work of it.

## The Leaping Torpedo

NOBODY saw any periscope—seeing a periscope is sometimes a matter of luck. When it stays up it is easy enough, but when they are porpoising, shooting it up and down, you have to be looking right at it almost. What the 343 saw first was the wake of a torpedo which was coming on at what seemed a forty-knot clip for the waist of the ship.

The commander of the 343 was on the bridge at the time and saw the wake almost with the cry of the lookout. The wake was then pretty handy to the ship, and the torpedo itself would be fifty feet or so ahead of its wake. There was no getting away from it then. The only hope left was to take it somewhere else than amidships. If it struck amidships, where the engines and boiler compartments were, they might as well call it Taps for all hands. So the commander put the wheel hard left, to take it on his quarter, where it would do less damage and where there was also a chance that it would pass under her.

Torpedoes generally strike twelve to fifteen feet under water, but just before this one made the 343 it breached—came to the surface of the water but still coming on at a fast clip. It was unusual. And spectacular! The sun shone on the torpedo's polished sides as it leaped from the water. The next instant it struck the 343 above her water line and pretty well aft.

Quite a few on her deck saw it make that leap, and they all sort of half curled up waiting for the jar to come. But the resulting explosion was nothing tremendous, so officers and men say—so adding a few more data to U-boat history. The bark of one of their own little four-inch guns was more impressive. There was a flame and an upshooting cloud of black smoke, almost immediately followed by another double explosion, that of their own depth charges, which were exploded by the concussion. Those who had any thoughts about it were sure that if the torpedo did not get them the depth charges would.

When they went to look they found that about thirty feet of the after end of the ship had been blown clean off. The torpedo had hit them on the side, and the wreckage was hanging from the starboard quarter. Only the base of the after gun was left; they never did see any of the rest of it. The gunner's mate, one of those men who love to keep a gun in shape, was swabbing it out at the time, and they never saw anything of him again.

## "One More and I'd 'a' Got Her"

THE chief petty officers' quarters were farthest aft on the ship. The bulkhead to their compartment was blown in, leaving the inside of the ship wide open to sea and sun. Fourteen men were in there at the time, lounging around or in their bunks. They all escaped alive. Some of them were bruised and all were shaken up, but they made the deck. They do not know how, but they did. The nearest hatchway for most of them to the deck was closed with tumbling wreckage, so they know they must have gone up the other hatch.

One man, taking a nap in the cot bunk farthest aft, had a part of the bulkhead blown past him. It cut off a corner of his bunk and broke one of his legs and blew him into the passageway. Lapping in the passageway, he sprained his other ankle. He is not quite sure how he made the deck without help, but he did, and he says he beat some of them to it at that.

The man working on the after gun with the gunner's mate who was blown up saw the shining torpedo leaping in the sun and heading straight for his part of the ship. If he did not do something, he knew he was in for it, so he leaped high and far as a man could without much chance for a run. The explosion came while he was in the air on his second high jump. All he remembers happening to him after that was an ocean of water flowing over him and he not minding it at all. When he came to, about a dozen feet farther forward than where he started his high jumping, the doctor looked him over for broken bones, but did not find any. "I guess," he said to the doctor, "that I must be holding the record now for being about as near to an exploding torpedo and getting away with it as anybody in the world, don't you think, sir?"

The two propeller shafts were still sticking out astern. One was naked and shining as a sword blade in the sun, but a propeller was still in place on the other shaft. Spotting that propeller, the skipper ordered the engines turned. To their delight, the shaft revolved; the ship began to move: no record-breaking pace, but—God love the builder of a good little ship—the propeller was making revolutions. The wreckage hanging from her quarter acted as a hard-over rudder, and so, instead of going straight ahead, she began to go round in circles.

She continued to make circles, and her officers and men stood to stations and waited for what next would happen. Destroyer people have it that there are grades of U-boat commanders—some have good nerve, some are pretty ordinary.

The U-boat man who attacks a destroyer is a good one—will bear watching—so what they expected was to see the U-boat come up and finish the job. If she did come up and at the right place for a broadside shot, then the 343 was in for a bad time. So they waited, some thinking one thing and some another,

but all agreeing that the odds were against them. The U-boat did show again. They saw her conning tower slipping through the water at about 1,500 yards. The commander of the 343 was ready for her, in so far as he could be ready with his poor little cripple. Crews were at gun stations, and that conning tower had hardly got above the surface when two of the 343's guns were cutting loose. They could bring no more to bear. They got in four shots, the fourth one pretty handy. But no more. She submerged—to the discouragement of one earnest gun pointer. He leaned against the breach of his little four-inch to say: "One more and I'd 'a' got her. Bet you me next month's pay that I get her if she shows for two shots again."

She did not show again, which, however, did not end their troubles. They could steam in circles, but that was not getting them anywhere. Not so many miles away was one of the roughest little shores in the world—the kind where green seas pile up against rocky cliffs—and the tide would not always be in their favor. A bad enough place in the smoothest of weather, while by the looks of things soon—wind and sea making—wh—p—pp!

## Calling for Volunteers

IT was about two in the afternoon that they were torpedoed; by dark they were on their way before white-capped seas to the shore. Their radio gear had come safe through the attack, and all this time they had been sending out S. O. S. calls, but it was not a popular coast with merchant ships. The U-boats had been pretty active thereabout, and it was not on any main sea route. There was always the chance that some warships would be somewhere near.

For one hour, two hours, three, four, five, six hours they drifted. It was midnight when a British mine sweeper bore down and hailed. By then they could hear the high sea breaking on the rocks abeam. The Britisher steamed close up, got the word across the wind, and tried to pass a "messenger"—a light line that is—across to the 343. They did not make it. They tried again and again, but no use. The skipper of the Britisher hailed that he would try to get a boat over. They could hear him calling for volunteers. He got the volunteers and, without being able to see the details of it in the dark, the 343's people knew what was happening. They were making a lee of the British ship so as to get the boat over. But the boat was swashing in and out—up on a sea and then bang! in against the side of the ship. Tough work. Even if their own lives had not been depending on it, the 343's people would have been praying for that boat to get safely away.

They managed at last to get the boat away from the side of the mine sweeper, and in time, pitching down on the rollers, made out to heave a line aboard the 343. And on the deck of the 343 they were right there to grab it and bend it on to a hawser. Fine. Off went the Britisher, after she had taken her boat aboard, tugging heartily. She tugged too heartily for the length and size of the hawser. It parted. They did it all over again—the lowering of the boat in the rough sea, the passing of the line, the bending on of the bigger line, the parting of the hawser. Wouldn't that test a man's faith in his good luck? The 343 thought so. Once more try it. All right. They did. And once more it parted, but this time it held long enough to cheer them with the thought that they were perhaps far enough away from the shore to be safe till daylight.

## Guarding the Code Book

THEY were safe till daylight. And at daylight a British sloop of war came along with a real big hawser and gave them a real tow. The destroyer was towed to our naval base. A group of us were steaming out to sea the morning she was being towed in. Our fellows would have liked to turn out to give her a little cheer, but there was business on our own account on courses leading away from the harbor, so we had to wait until our return to port after a cruise to have a look at her.

She was in dry dock and the most smashed-up object that a destroyer outfit had surveyed in many years. The wonder

They never saw anything of him again

Torpedoes generally strike twelve to fifteen feet under water, but just before this one made the 343 it breached—came to the surface of the water

was how she ever stayed up long enough to make port. That gaping after end open to sea and sky, and the bare propeller shaft sticking out from the insides of her—she sure did look as if she needed nursing, and they were certainly a lucky bunch to get home.

All hands were sorry for the poor fellow who was killed—the wonder was that there had been only one. However, tragedy and comedy often bunk together! Men who come back from stiff adventure always like to tell of the funny side of it.

All these ships carry code books. The instructions to all ships are to get rid of the code books whenever there is any likelihood of capture. The code books are bound in thick leaden covers. They are kept in a steel chest, and altogether they weigh—I do not know, but some say they weigh 150, some say 200 pounds. After the 343 was torpedoed one ensign grabbed up the code-book chest, tossed it on his shoulder, and waltzed out of the wardroom passage and on to the deck with it. When the danger of capture was over our young ensign hooked his fingers into the chest handles to waltz back with it; but nothing doing. He could not lift it from the deck. It took two of them to carry it back, and they did not trip lightly down the passageway with it.

After the 343 made port the injured were handed

over to the sick bay of the flagship. There were two of them who must have been pretty handy to the storm center of the explosion—it took two young surgeons all of one day picking the guncotton out of their backs.

There was one man who knows how he got away. When the doctors looked him over they found the print of a perfect circle on the fleshiest part of his body. It was so deeply pressed in that the blue and yellow flesh bulged out all around from it. The doctors said it must have been made by a washbasin being blown against him as he ran up the ladder to the deck. The man himself said it was nothing so light and soft as a washbasin. It was the water cooler, and he did not run up any ladder to any deck—he was blown up.

II—

THE destroyer people have great faith in the durability of their little ships. They are slim built, and not much thicker in the plates than seven pages of the Sunday paper, but maybe that is their safety. There is no getting a fair wallop at them. They evade the issue. One man compared them to a hot-water bottle. Try to swat a loaded hot-water bottle. What happens? When you poke it in one place, doesn't it come bulging out in another to make up for it? Sure it does.

How do you account for that one—not the 343—which had her stern cut off so that the men in the after compartment leaned out and chinned themselves up to the deck from the outside? And how do you account for the way they come bouncing along at better than twenty knots in a gale of wind and a rough sea and nothing happening to them? Get shook up—yes, but they come home, don't they? They sure do. Maybe it's luck; maybe it's the way they're thrown together—loose and limber.

Whatever it is, they are dashing in and out of here on their job of conveying merchant ships and hunting U-boats. They expect to get their bumps, and they do; but so long as they get an even break they are not kicking. The chart-house gang on the 343 say they are satisfied that they got an even break. If she did not fill her little three-straight, then nobody ever did get any cards in the draw. They are sticking a new stern on to the 343. When they get it well glued on she is going out again. Maybe that same U-boat—you can't always tell, some people have luck—maybe that same U-boat will come drifting her way again. And if they see her first—oh, boy!

This is the seventh of a series of articles written from Europe by Mr. Connolly. The eighth will appear in an early issue.

## ADVENTURES WITH THE CRUMBLING RUSSIAN ARMY BY ARTHUR RUHL—PART TWO

COLLIER'S STAFF CORRESPONDENT

THERE was lots of sun in Kamenets, as in all this little Russian country, and the white stucco houses blazed out against dark-green shade. Through it wound a deep, precipitous gorge, to both sides of which the sleepy old town clung, and at the bottom of this gorge a muddy little river, the Smotrich, spotted with soldiers, swimming and washing their clothes, ran down to the Dniester. And the gorge, and the old walls climbing out of it, and the blazing sun and shade seemed foreign after the endless Russian plain, and made one think of Italy or southern France.

It is the kind of sun and country that the Turks, who have exquisite taste in some things, like to live in—you will find the same hot white walls, and cool, green shade along the Bosphorus, only more so—and the Turks, indeed, used to live here and have left some of their old walls and towers as they have all over this southwest Russian border country. And when a regiment of Russian soldiers came shuffling down through the sun and dust, past these old walls, it took me back to Constantinople and the summer of 1915, when the English were still pounding at the Dardanelles, and the new levies, booming their melancholy songs, used to wind under the dusty cedars, below Eyoub, along the Golden Horn.

Kamenets has been almost within earshot of the fighting since the beginning of the war, and once it came so close that the Austrian gunners, feeling round for the range, did nip a cupola from one of the old Catholic churches. When I came down from the front farther north, described in the preceding article, to spend a few days with the Third Caucasus Corps, it was crowded with every sort of fish in the Russian army waters. There were slant-eyed Turkomans and slim-waisted Cossacks, there were "death battalions" going to the front and deserters coming away from it, committeemen of the new revolutionary régime and martinets from the old one, and a more or less continuous procession of guns and wagon trains and motor trucks. And in the midst of this jumble were even some French flying men.

The Russian flying service had not been very good, and quite unable to keep pace with the constant changes of the west front, where something new in machines or tactics is being discovered almost daily. A Russian acquaintance of mine, back from the Dvinsk front, told of a letter they had received from the German flyers opposite them after one of the Russian flyers had been shot down, in which the Germans said that he was a hero merely to risk himself in such an antiquated machine. The French, in addition to helping their ally with cannon and ammunition, and several very complete hospital units, sent last summer an elaborate aviation section—the flyers themselves, up to the minute in the fighting-flying of the west front, patrol and fighting airplanes, photographic apparatus, and all the mechanics, tents, motor trucks, and other material necessary to keep the section going.

### Creatures from Another World

THEIR coming to Kamenets Podolsk and the setting up of their camp on the edge of the town, and the tricks they did by way of introducing themselves, up in the sky above the city roofs, must have been almost as much of an adventure for the natives as the coming of the British flyers to Mesopotamia. Soldiers and peasants and children crowded about the camp as if it were a circus, and all their work went on against the most irrelevant background. That first day, for instance, as they were warming up their machines and calling out to each other, in their quick, nervous French, a peasant funeral procession came trailing across the field—the priest, and men carrying the holy banners, in front, then the open coffin borne on four shoulders, with the pinched white face open to the sky, and behind the mourners and friends, weeping and wailing their burial songs.

Meanwhile, swift scout planes roared up from the stubble and, circling a few times, swooped back to earth, scattering the soldiers, as if they were some gigantic birds of prey. Two of the Frenchmen went

up just to show me what they could do. They played about in the sky as porpoises play in tropical water—did all sorts of loops and turns, dived straight down at us and up again, and then, way up in the blue, the machines gave a sort of lazy sigh, as it were, and slowly fell, rolling sidewise, end over end—turning the barrel, "faire le tonneau," as they say.

They seemed—especially after my days of wading through littered stations and stewing on packed trains—like creatures from another world. When they did not fly in the air, the Frenchmen flew along the ground in high-powered motor cars—one could scarcely fancy them walking. Everything they did was quick and fluid. Even their talk, with the quick, upward inflection at the end of every phrase, was different—they didn't talk so much as twitter, so to speak, with something of the unpremeditated art of birds. It was delightful to see their young captain light a cigarette and with a polite "Au revoir!" tell the man who was to follow him on patrol duty that he would find him at three o'clock over Scula (some 40 or 50 miles away) on the 3,500-meter level!

The Frenchmen did their reconnaissances in the morning, generally, in order to have the sun at their backs, and the enemy flew in the afternoon for the same reason. They met now and then, nevertheless, and, according to west-front custom, attacked at once. The same young captain came in one evening with a story of how he had met a boche, attacked, and at the third shot jammed his machine gun so that he had to do a quick turn and run for it. The Germans were using at present, he said, a stationary engine with which they could dive faster than the French. The German custom was, therefore, to get above and shoot coming down. The French, on the other hand, tried to get above and behind, dive, and come up underneath and fire while the enemy plane was overhead in front.

"One shot'll do it," he said, "for either of you if you get the right spot. 'There's only an instant to work in, and you pump as fast as you can as you go by."

Behind the houses, on a space of hard, swept earth, the women would be winnowing wheat holding a sieve over their heads

In the hot little walled-in valley, behind the Turkish fort, just above the Austrian lines, Russian soldiers were roasting green corn

Every kind of social difference was merged in these light-blue uniforms. The young captain had a name honorably known in French army history, and he himself had served in both cavalry and infantry before going into flying. He was handsome, and well-made, and he thought and talked as lightly as he flew. Politics, plays, and poetry, gas engines or *petites femmes*—he and his associates skimmed from one to the other with the same quick touch and go. One smooth, quiet little officer, who had to do with transport and "paper" work, was in peace times one of the proprietors of a well-known Paris department store. Another, a tall, languid youth, who spoke English English and had the air of being born a little tired, was, the captain explained, "very old family, very rich, and all that sort of thing." Still another, a bright-eyed, athletic, jolly fellow, full of "pep," who seemed somehow more like an American, had been a mechanic. "Splendid man," the captain said; "skillful, always cheerful, and absolutely fearless—one of the best men we have." Their mess, wherever they were, always had a certain touch of French elegance. They had wine, and light, unsoldierlike things, like *parade* omelets, and contrived, in some mysterious fashion, to have pears and melons when nobody else had any.

#### Like a Clock Run Down

THERE were a dozen or so corps and division headquarters within motoring distance of Kamenets, and the summer garden on the hill above the river, where people dined these summer evenings and listened to the band, was full of soldiers and the little tea rooms along the main street crowded with officers in every kind of uniform, delighted merely to get away from camp, and gush over innumerable glasses of Russian tea. One could forget very easily in these places the demoralization at the front.

I was sitting one evening with a Russian attached, because of his knowledge of French, to the French Escadrille. Neither flyer nor fighting man, he was rather submerged among the Frenchmen, although he had, as a matter of fact, the rank of captain. As we sat there a tall young man entered in Cossack uniform. Straight as an arrow, with his long wasp-like waist and slender chain belt of Caucasus silver, his silver dagger and curved sword, he was something to see. And it is difficult to describe, to anyone who had not experienced the disorder along the Russian front, how almost thrilling it was to have this hawk-eyed prince, with a glance over the café and punctilious bows to the other officers, step at once

to our table and, clicking his spurs, stand at salute until my unassuming companion, who was, it appeared, the ranking officer in the room, should bow and give him permission to sit down.

With one of the American military observers and his interpreter, a young guard officer, retired from active duty after being wounded, I had already visited several front-line positions farther north, and now, with the Third Caucasus Corps as our headquarters, we visited several more in the neighborhood of Kamenets Podolsk. The machinery was all there—one passed through the usual stages from corps to division, to Regimental Headquarters, and so out to the first-line trenches.

Observation balloons floated here and there; there were men in the trenches, artillery in the woods behind them, a more or less regular crack of snipers' rifles, and from time to time a shell went milling speedily overhead to send back a low boom somewhere in the distance. The younger officers, who took us through the front lines, were plain-spoken, workmanlike fellows, who talked the usual shop talk of positions, strength opposed to them, ground lost or gained, with the businesslike air of those to whom it all meant something.

So far as their own little units were concerned, it often, of course, did mean a good deal, and although the front as a whole might have stopped, like a clock run down, yet some of its wheels always kept going, and every here and there the personality of some officer, or of a few companies of men, made a difference, and there would be trench raids and local fighting. Artillery and cavalry units showed, as a rule, less decrease in morale, partly because their officers had often been superior in the beginning, and partly because their losses had been less. The infantry units were often, from top to bottom, almost entirely new men. But even over the best a moral sickness had fallen, a sort of blight that fatal question: "Why are we doing this? What does it all mean?"

#### Into the Dniester Country

THE country itself, splendid, rolling billows of farm land—all "black earth" country—the villages with their thatched roofs and homestead walls, freshly plastered, when the housewife was thrifty, with a coat of new clay, and the people in them, be-

came almost more interesting than the army. Behind the houses, on a space of hard, swept earth, the women would be winnowing wheat—already pounded out with a flail or crude hand-power thresher—holding a sieve over their heads just as women must have done in Bible times, and shaking it so that the clean grain hopped over the edge and the chaff blew off on the wind. Sometimes we lunched inside these peasant houses—a smoothly swept dirt floor, tiny windows, an icon in the corner, a few lithographs of saints,

The commander of the Third Caucasus Corps. The old officer facing him at the right is "a typical general of artillery"

and a little homemade brick-and-clay oven with various shelves and cubby-holes, to keep things warm in. The flies swarmed like bees. One had fairly to scrape them off. It would have been the simplest thing in the world to screen the little windows or cover them with mosquito netting, but Russians of all classes, possibly because of the short summers, rarely bother about such things. I mentioned flies to a colonel who was entertaining us one day, and he laughed and told of a "Swat the fly" order somebody had sent out—"as if they didn't have enough things to worry about besides that!"

From the Third Caucasus Corps we went out to positions on the lower Zbrucz, where, from the ruins of an old Turkish fortress, nicked a bit by the shell fire of a week before, we pecked down to a village across the river which the Austrians were supposed to be holding. In the hot little walled-in valley, behind the Turkish fort, Russian soldiers were roasting green corn, and a queer, peaceful sort of bombardment of some distant chaussee went on from time to time from a lone cannon in a cornfield.

Farther south, out beyond the old town of Khotin on the Dniester, there had been real fighting only a few days before, and the cottages were charred and the road full of shell holes. The Austrians had invited the Turks to come up and help take Khotin, and also Kamenets Podolsk, which their ancestors had taken some three centuries before, and a Turkish division—"good fighters," the Russians said—had obediently complied. But the Russians had beaten them back nevertheless, and there seemed to be, in this neighborhood, a certain amount of go-ahead spirit among the men. The general of division himself took us out—an officer, young for his rank, who strode vigorously along on foot and jumped the ditches. Squads of men were cleaning up the vil-

The coming of the French Escadrille, up to the minute in fighting-flying, was as much of an adventure for the natives of Kamenets Podolsk as that of the British flyers to Mesopotamia

A peasant funeral procession came trailing across the field—the priest, and men carrying the holy banners, in front, then the open coffin borne on four shoulders, with the pinched white face open to the sky, and behind the mourners and friends, weeping and wailing their burial songs

lages and road, and every time we approached one had an instant of embarrassed questioning—"What will they do? Will they salute or not? And if so, just how willingly?" Each time the young general, looking very confident, and stiffening the informality of his greeting with a little military terseness, would call out: "Good morning, comrades!" ("Zdravstvuyte, tovarishi!"), and each time the soldiers, looking, it seemed, just a bit conscious, called back briskly enough their "Zdrav zhe laem!"

Officers at a division headquarters near Kamenets and the author (third from the right in the next to the top row)

A battery somewhere over to the right was lazily pegging away and shells bursting on the horizon a couple of miles off—practicing barrage, the general said—but the enemy were not in sight; indeed, one could scarcely feel them. The sun was wilting hot, in the wheat peasant girls were binding sheaves, and all about was the smell and feel of the generous summer. One thought of homes and the harvest and peaceful life. Gone completely was that thrilling tension, that indescribable electric bite, which one feels on the west front, or indeed the instant one crosses the Channel and sets foot in France—that cumulative something, which sweeps the individual along without question, as if it were in the very nature of things.

If the division commander felt this, he gave no sign, but kept pluckily to his part. Holding up the map, he pointed out where we were, where they had been before the last action, the village he had pushed up and taken—"it only cost us 125 men." Our young guardsman raised his eyebrows and nodded with a polite professional smile. "Cheap enough!" he said. Over to the right, across the plain, was a clump of trees, a farmhouse and windmill. The general hoped to push over and take that soon. It would, as we could see by a glance at the map, very decidedly smooth out his line.

#### Something Called a Line

IT is difficult to describe the curious unreality of these words, there in the fragrant morning, in those quiet, sun-drenched fields. Nothing threatened us out in front; nothing seemed to support us from behind. All that sense of being in something that can't be turned back or stopped, of having the eyes of the world on you, was as far away as the moon. It seemed as if nobody were watching us, as if, whether or not we pushed across

the intervening space to that windmill and clump of trees, it would never be known or make the slightest difference to anyone.

Just why, one could imagine the peasant soldiers thinking, because some one in a white house, five or ten miles in the rear, says so, should we try to take that farmhouse over there? For three years they had been doing nothing that could seem to most of them useful. Every smell in the air and look of the ripe wheat was calling them back to fields of their own, where they were needed—and the short Russian summer was going. They could not go forward in the Czar's name because there was no Czar. There was no longer any flag, nor even any Russia. In the name of what reality were they to cross that mile or so of quiet prairie and very likely be killed, simply that it might not cost more than 125 men—would be, in fact, quite a bargain—and straighten out something called a line?

#### The Slav Character

WE drove back across the Dniester, and into Bessarabia, and stopped several times outside orchard fences for plums—the whole country was full of the purple plums which could only be had in boxes back in Arctic Petrograd. Once a man came out and helped shake his own trees. How much were his plums? He laughed in true Russian style—"Nothing at all, comrades!" he said—"Nitchero, tovarishi!"

The Third Caucasus Corps Headquarters, to which we returned each evening, was in one of those semidilapidated country estates not uncommon in Russia. The place had been started, apparently, on rather a magnificent scale and never finished. There was one tree-lined allée, with a marble Venus as fine as you please, and there was a Diana off by herself with no apparent reason for being there and no trees at all. A stairway which might have done for some provincial courthouse at home led up to the high first story, and yet stucco had never been spread as yet over about half of the bare bricks. I remarked to the corps commander at dinner that one couldn't quite tell whether the house was not yet completed or was beginning to fall into ruin.

"It's often that way with us," he smiled; "you find both things at the same time!"

He was what we call in English—translating

rather freely—a prince; a capable-appearing, polished officer who spoke in short, soldierlike phrases, with plenty of self-possession and decidedly to the point. Of the work of a correspondent, he said it was undoubtedly interesting, but one was only a spectator. He spoke of his own people with the usual Russian frankness and self-criticism.

"Time is worth nothing with us," he said, "not a kopeck!" As for the condition of the railroads—"Doesn't it take rather a different sort of mind altogether to run railroads well? Our men are still very undeveloped along some lines. There is in the Slav character a lack of hardness and practicality—something feminine."

At the table with us was a grizzled old fellow with long, drooping, houndlike ears, and kindly, wise, blue eyes—very simple and dependable-looking. "A type," smiled the corps commander; "that's a typical general of artillery, a splendid old fellow—you'll find many of them in the Russian army."

We rode one morning up through the hills where the barefooted peasants in their embroidered white linen, pattering along, single file, beside the road, made one think of tropical America, and had dinner with a division headquarters staff in a big country house, with a white pillared portico. The band played outside the open window, and the men sang the Cossack song of welcome, "Allah verdie"; there were sword dances and speeches all round. A hard-fisted old Cossack colonel said that the Cossacks had always been free and knew how to behave as free men. We spoke too, and tried clumsily, through an interpreter, to say that America was with them. The general at whose left I sat talked frankly. They were on their own frontier now, and possibly the troops would stand here—there was no hope that they would advance beyond it. For two weeks now things had been holding their own—nobody could tell what would happen next. He suddenly made a gesture which seemed to dispose of the whole matter. "C'est fini!" he said.

#### Not Even a "Sink You"

THE American attaché wanted to settle down in a headquarters like this and study division organization in detail, but I felt that it was time for me to begin the slow journey north again. There was no headquarters motor free that evening, and our young guardsman guide, who wanted a change of scene, rode into Kamenets with me in a peasant's cart. It was a beautiful starlit night, with just a touch of autumn in the air, and a cool, musty perfume, breathing up from (Continued on page 32)

A queer, peaceful sort of bombardment of some distant chaussee went on from time to time from a lone cannon in a cornfield—one of the Russian positions on the lower Zbrucz

## In the Balance

**N**O thoughtful American who has the future of his country at heart can read the news from France in these days without a feeling of the deepest apprehension. The ferocity and power of the German attack seem undiminished after nearly four years of terrible warfare. The tenacious courage of the Allied troops and our own sprinkling of American soldiers is beyond all praise. We can only hope and pray that their endurance will withstand the present and future onslaughts until the time comes when they can turn and strike back.

COLLIER'S has expressed the belief that the ring around Germany will not part even if the Allies are divided, the French driven beyond Paris, and the British forced back on the Channel ports. But it would be folly to pretend that such an event would not be a disaster of appalling magnitude. We do not believe it is probable that the Germans can accomplish even this much, now or later. But if they should, the people of this country must face the future possibilities without blinking. They must ask themselves what would happen, not merely if the armies of the Allies should be beaten, but if they should be destroyed or captured, if France should be subjugated and the British forced to retire to their island and depend upon their navy for its safety.

What would be the position of the United States? The calamity is almost unthinkable. The moral and material forces behind the Allies are too great, in all human probability, to be destroyed. But in such a crisis as the present one we must be ready to face any emergency. The Allies are bound together by an agreement not to consent to a separate peace, and we are under moral obligation to stand by them to the end. But the written or implied obligations of a subjugated nation are of no worth. Russia also was a party to this agreement, and Russia is now, in part at least, in alliance with the Central European Powers. We should make no mistake about it. If France were conquered and England crippled, Germany could turn to us, the richest of all powers. The least to be expected would be a demand for an indemnity that would cause the world to reflect on the moderation of BISMARCK when he exacted \$1,000,000,000 from France. We would not give in without a fight, but we would need all our strength to stand off a German navy that, we may be sure, has greatly increased in numbers and power since the war commenced. And the final battle for human freedom might be fought within hearing of the people of our Atlantic Coast.

We repeat that the calamity is almost beyond belief. We discuss the possibility simply to bring home to our readers the fact that the line of intrepid men in France and the sailors who patrol the Atlantic lanes or stand on guard in the North Sea night and day are protecting the actual physical safety of this country. They are guarding our liberty, our lives and our property, and the well-being of future generations of Americans. The people of the United States have been generous and eager in their support of the war. But they have a tendency to regard it as something remote from their own national welfare. No good can come from making them downhearted, but they should steel their souls with the knowledge that the war is not merely for the abstract principle of making the world safe for democracy, but for the pressing and practical necessity of making democracy secure in their own land. For it is as certain as anything can be that if Germany overwhelms the Allied armies, this country will never again see the days of peace and plenty that it has enjoyed in the past. It must stand armed to the teeth for generations to come, never knowing when the blow will be delivered by the enemy of civilization.

## The Soldier's Income Tax

**T**HE income tax falls very heavily on some of the men in our army and navy. The tax which must be paid next month is a tax on income received during 1917. In the case of a soldier or sailor who has no bank balance and no income-bearing property, it must come out of his Government pay. Thus a man who earned a high salary in 1917 and spent it will find it utterly impossible to meet his income-tax payment unless he happens to be able to borrow the money. Surely the rest of us can afford to remit the income taxes of salaried men who are in this predicament. Congress might very well make a distinction between the man in service who earned

May 4, 1918

all he spent in 1917 and the man in service who enjoyed a large income from real estate or stocks. We do not need the income taxes of men who will have to give up their small pay as sailors or soldiers for months in order to obey the present law.

## The High Cost of Sailing

**A**MAN who left a perfectly good job at \$35 a week in order to join the navy at about that much a month has written us an interesting letter. He says:

One of the "Regulations for the Government of the Navy" (navy regulations, as you probably know, are written into the "law of the land") stipulates that an allowance of \$60 be made to each enlisted man upon his entrance into service for the purchase of an outfit and clothing.

This regulation, setting \$60 as the sum necessary to clothe a man, has been in force for years. Recruiting officers have used it as a basis in making the oft-repeated assertion that a bluejacket's clothes cost him nothing. This may have been true at one time. Possibly it was once practicable to stretch the \$60 allowance over a period of four years. But it is not true now.

Right now, in the month of April, 1918, when the press reports the overwhelming success of the Third Liberty Loan, when the Treasury Department is stating that the returns from the income and excess-profits taxes will exceed by a billion the fondest hopes of conservative estimators—now, when there seems to be so much money available for Government needs, it is costing every man enlisting in the navy anywhere from \$40 to \$70 out of his pay to procure his initial MINIMUM outfit. In other words, the clothes that he must have, drawn from the navy stores, not only eat up the \$60 he is allowed, but also require nearly that much in addition.

The trouble is, of course, that the cost of shoes and blouses and salt-water soap and blankets has advanced faster than the navy regulations. Our correspondent thinks this condition should be remedied immediately. We agree with him.

## "The American Effort"

**L**ET the carping critics who assert that America's military effort has meant very little to the Allies thus far in the war study the Paris "Temps" for March 13, the day after Secretary BAKER'S arrival in France. This is the communiqué they will read in the "Temps": "The tax on theatre tickets gave last month the sum of 1,214,000 francs instead of 629,000 francs in February, 1917."

## Milwaukee

COLLIER'S is glad to print the following letter from a good citizen of the patriotic city of Milwaukee:

EDITOR COLLIER'S WEEKLY:

Dear Sir—In view of the unfavorable comments on Milwaukee's status as an American city, recently made in the public press of the country, it may prove both timely and interesting on the part of a publication like your own to look us over at a closer range and tell the whole truth.

We are confident that such an inquiry would not only be in the interest of American fair play, but also serve the great cause in which the nation is now engaged. As a preliminary we present the following:

### MILWAUKEE'S WAR-AID SUBSCRIPTIONS

	Allotment	Subscribed	Over-subscribed
First Liberty Loan.....	\$14,000,000	\$17,000,000	\$3,000,000
Second Liberty Loan.....	25,000,000	33,000,000	8,000,000
Red Cross War Fund.....	500,000	780,000	280,000
Y. M. C. A. and Y. W. C. A. War Funds.....	105,000	187,000	22,000
Red Cross Memberships...	100,000	162,000	62,000
K. of C.....	100,000	133,000	33,000
Total.....	\$39,865,000	\$51,262,000	\$11,397,000

These figures speak more eloquently and convincingly than a volume of explanations. If editors and writers have unwittingly given credence to misrepresentation, they will no doubt stand ready to exploit the truth with equal readiness.

If you should deem the subject of sufficient interest from the standpoint of publicity, send a correspondent to look us over. We hold our heads high and defy anyone who questions our patriotism.

Milwaukee is a generous city, a loyal city, and to the core an American city.

Yours very truly,  
WM. GEORGE BRUCE,  
General Secretary, Milwaukee Association of Commerce.

And, indeed, the citizens of Milwaukee have no need to quote figures to be able to hold their heads high and defy anyone who questions their patriotism. We hope the Association of Commerce will not think the rest of the country suspects Milwaukee because of the acts of a few wrong-headed men like VICTOR BERGER. We well know how small is their minority among the representative citizens of that community, including those of German extraction.

## *What the Enemy Knows*

BY two types of superpatriots the patience of the country has been, and will be, tried. The red-faced gentlemen in and out of Congress who are always demanding that the people be told the worst, even if there is no worst to tell, are a nuisance and a drag. But they are less mischievous than the advocate of hush for heaven's sake, the man who would stifle criticism for fear of conveying information to the enemy. Like the police power of the Government in peace times, and like charity, this caution against rendering aid and comfort to the enemy can be made to cover a multitude of sins. For every American citizen in and out of Congress this question of public criticism in war time presents a problem of conscience and judgment. The essence of it is simple. It means a balancing of gain through telling the truth to the people of this country against the loss involved in letting the enemy know. It is a question which must be answered on the merits of the individual case.

From the beginning the great majority of the American people, and certainly a great majority of the American press, have been impatient with the Old Sleuth policy which expresses itself in Atlantic Ports and Somewhere in Staten Island and similar rigmorole. But, after all, the harm done is largely to the temper of editors and readers. A harder case was presented when the War Department decided to suppress the home addresses of our casualties in France. There again the loss was in the anxiety caused to the parents and remoter relatives of our men abroad; against that we were willing to accept General MARCH's statement that there were counterbalancing reasons, military and otherwise. After all, the infliction of possibly unnecessary pain on American fathers and mothers did not vitally affect the conduct of the war.

It is quite a different matter when conscientious criticism is directed against failures and delays in the prosecution of the war. Here situations are bound to arise when it is necessary to speak out, no matter to what comfort of the enemy. HINDENBURG will very soon find out by the lack of pressure or lack of resistance which he encounters. Under a rigorous policy of hush, it is the enemy who knows and the American people alone who do not know.

## *Footing for Uncle Sam's Pack Mules*

THE war is teaching us what can be done with automobiles, and this whole country is going ahead to put better roads under their tires. If present plans are carried out, 1918 will see over \$250,000,000 spent on our highways, a total more than 80 per cent above the previous high mark. Despite the war scarcity of capital, Texas is going to put \$25,000,000 into improved roads this year, as compared with \$5,000,000 last year. Arkansas has gone up from \$4,000,000 to \$12,000,000. In Oklahoma, Tulsa County (the center of the oil region) is spending \$1,750,000 on weatherproof highways. Iowa is duplicating last year's investment of \$15,000,000. Iowa can certainly afford it, the way the price of corn keeps soaring, and thirty millions of real money ought to take the slithers and sludges out of some of the main trails through the corn belt at least. The rest of the country is not lagging very far behind the Middle West in this matter, for railway blockades and embargoes on needed freight have convinced most of us that transportation is not a luxury even when gasoline is burned to obtain it. UNCLE SAM has to get in and out of his cantonments, shipyards, training camps, arsenals, and warehouses, and is putting up his share of the costs. Of course there are some belated brothers who cannot see the sense of such improvement, as witness that odd bill introduced in the New York Legislature to forbid five-ton Government trucks from using certain State highways; but these curios only illustrate the general progress. Most of us know that the automobile can pull its share of the load in our war and are willing to give it a chance. The Kaiser is about the only one who really wants bad roads in our U. S. A.

## *Work, Light, and Coal*

WHEN turning off electricity around the shop in order to save coal, be sure you are not cutting down on work accomplished. The only real way to save coal in this war is by getting the best possible use out of it. Better lighting in our factories means more war work done in the same time, less waste of raw materials, and fewer accidents. Every factory that is now enlisted in our national cause should have a full equipment of the best possible lamps and

reflectors, and should keep them clean. (Use white paint and clean the windows also, and let in every bit of daylight, the only effective substitute for electricity.) Burglars are said to operate well in the dark, but very few good mechanics have that knack. These facts are all familiar enough. The illuminating engineers worked out the figures to prove their case some years ago, and have been hammering it in ever since, but not all of us realize the full importance of it even yet. Just about every sort of manufacturing that we need to carry on our war is done by seeing, and most of it under artificial light. A great many otherwise capable factory men are so intent on the technical processes of production itself that they have not learned what seems so obvious a lesson. The war is a good time to put American industry in the sunshine, both natural and artificial. Any coal saved by not doing so will be altogether too utterly costly.

## *There Are Seasons*

THIS country has already had some schooling in the effects of price fixing and will have more. We are gradually learning how it confuses the economic compass for both producers and users; how it multiplies rules and red tape and necessitates the incessant nursing care of bureaucratic regulation at every step if anything like the normal process of business is to continue. Anyone who wants to see how price fixing really works can get an idea by studying some of these popular-priced chains of restaurants. They keep to their fixed prices regardless. Eggs may be thirty cents a dozen or sixty-five; grapefruit may be out of season or thick as onions in Bermuda; potatoes may be scarce or superfluous—it is all the same to the score card. Anyone who has ever seen a farm knows that this is not nature's way of feeding us. The human race lives by crops, not by allotted rations. Half the joy of gastronomic life is in having plenty of the things that are plentiful at the time they are best suited for food. If you have ever picked strawberries, or caught fish, or made maple sugar, or gotten in the apples, or helped in the labors of hog-killing time, you know that sense of effort rewarded, or plenty achieved, which crowns the actual feast. City people, cut off from earth and sea by their pavements, should be guided to their provender by lower prices for the plentiful foods and by higher prices for the scarcer sorts. Menu charges fixed through the year throw the whole process out of line and prevent any natural adjustment between supply and demand. The flow of food to restaurant patrons is strained through a system of storers and traders whose interest is to handle rather less stuff at rather higher rates. This dislocation means less to eat and more waste. For real food conservation we would do well to get back to the seasons, and the restaurants could help. Seasons will continue whatever we do.

## *On Reading and Rereading*

WE'VE just been rereading "Vanity Fair," in the cheap "Everyman" edition for which the late WHITELAW REID wrote an introduction. Mr. REID tells how THACKERAY pointed out his house in Young Street, London, to FIELDS, the Boston publisher, saying: "Down on your knees—for here 'Vanity Fair' was penned; and I will go down with you, for I have a high opinion of that little production myself."

We like the story, for we find no objection to an author knowing a great book when he sees it, even though it came out of his own head and heart. But it interests us that Mr. REID should add: "At first neither the publisher nor the public agreed with Thackeray about his 'little production.' Colburn, in fact, refused it outright, even for his magazine."

The implication seems to be that the book publishers of seventy years ago were discriminating enough, but almost any yarn was good enough for serial publication. However that may have been, nothing like that holds water to-day. It's comparatively easy to find a publisher for any reasonably well-written novel—but a magazine publisher is another proposition. COLLIER's receives two or three short stories nearly every week which it finds worth printing a few weeks later on, but it is a good many months since we have seen a novel which we've thought deserved publication week in, week out, until the whole of it had been brought before our million. Which is, perhaps, only another way of saying that the Thackerays of this world are few and far between: a truth you had already suspected, gentle and discriminating reader.

May 4, 1918

# THE MAN WHO COST \$50,000

BY WALTER PRICHARD EATON

ILLUSTRATED BY PHILIP LYFORD

CONOVER had brought him to lunch at the downtown club where some hundreds of us daily gather and continue to talk business while we eat. He looked nothing but a boy, but he wore the jaunty, well-fitting uniform of a Canadian lieutenant, and he limped when he came into the dining room.

"Yes," said Conover, over his shoulder, to some question—"wounded at Loos—shell fragment ripped the tendons. He's going back, though."

Uniforms were common enough in the club, but they were mostly worn by men who had seen service at Plattsburg and Camp Upton, and Conover's young Canadian was a bit of a curiosity. Finding him sitting with his host in one of the clubrooms after luncheon, an open box of cigarettes in front of him, one after another of the broker's acquaintances stopped to be introduced, and to ask those fool questions the civilian always wants to ask.

The youngster answered them all cheerfully. No, he didn't in the least mind talking about it. Oh, it wasn't so horrible after you got used to it. No, you didn't hear the guns—only when they stopped; and that was lucky too, because if a beggar ever did get to hearing 'em, why, then he didn't sleep, and pretty soon he went bughouse. The mud was worse than the guns—mud, mud, mud! Sure, he was going back—only place to be. He was going to see the job through.

He lit another cigarette from the butt of the last one. I noticed how boyish his face was, in the pause, and how his hand was steady, though he'd been over the top, and was but now healing up from the ripping open he got. He had the true temperament for the soldier, I thought—it was all a bit of a lark for him, and I fancied his nostrils expanding as he drew near the boom of the guns. He was one of those Canadians from the great Northwest, still close to the romance of the pioneer and adventurer.

Now he was explaining barrage fire, and the listening group were leaning a little forward in their chairs—all but old Bowker, with his gray, pointed beard, his beady, blue eyes, and his long, slender cigar which he always seemed to sip rather than puff.

Bowker was sitting back in a big leather armchair, his eyes narrowed, sipping his cigar at methodical intervals and thinking, for all you could tell, about his South American credits or his shipbuilding contracts or his Ming pottery, quite as much as about the young Canadian's talk. A leading figure on the Street, old Bowker—a power in the financial world. Some say he cultivates the enigmatic pose, like a poker player. But though his eyes wander, they never slumber. I saw them come back more than once, not to the lieutenant's face, but to his fingers, holding the cigarette and yellowed by the smoke.

"YOU can do stunts with a barrage, like a garden hose," the Canadian was saying. "It's that accurate. A battery commander gets a telephone

call at 3 a. m. to put five high explosives on Square N. 39. He gets up cussin', looks at his chart, sights for Square 39—it's all a matter of mathematics; he does it with a pocket flash, maybe—and sends his five shells rippin' silk through the rain. Then he goes back and hits the alfalfa again. He don't know why he fired 'em, or what they landed on, but he knows they landed on Square 39, and there was something or somebody there at 3 a. m. the boss wanted to wake up. If fifty batteries were all playin' shells on Square 39, for an hour, there probably wouldn't be many Fritzes left to wake up. Speakin' of harrages, an English company near us pulled off a good one—"

Here he lit another cigarette, while we waited.

"Shows you what you can do," he went on, jamming the butt down into the ash tray. "It was all because a guy they called Toodles got pinked in a raid, and nobody knew it till they were back in their own trench, with the Fritzes buzzin' like hornets after you've poked a scythe into the nest. There was Toodles, out in No Man's Land, halfway across to the barbed wire, and his hand toward them movin'—they could see when there was daylight, tryin' to signal 'em he was still alive, without pipin' Fritz off to the fact. God, but they were mad! They'd

have been sore anyhow, of course, but it hein' Toodles got their goat something horrible."

"Why, was he a company favorite?" Tom Morris asked.

"He was more'n that—he could sing!" the Canadian replied. "He could sing, and he could tell stories, and make a noise like a balky self-starter, and do a clog, and play the piccolo, and wake up good-natured. Oh, I guess he was a wonder, all right! Any company that's got a man like that in it's got something you can't get from home in a Christmas packet. Anyhow, when this bunch saw Toodles out there by a shell hole, and his hand movin', they just went up in the air and told the major they were goin' back after him.

"Of course the major put the nix on that—it was a sure slaughter now before they could get twenty feet, with the other guys waked up and spittin' lead. Their second lieutenant told me about it when I got there. He said the company was dancin' up and down in the trench, fightin' for the periscopes and proposin' all kinds of crazy schemes. Then somebody found Toodles's piccolo, and held it up, and they were all for goin' over the top again after him—"

"How'd he get such an absurd name as Toodles?" asked Morris, interrupting again.

"You can search me," the Canadian replied. "I asked the lieutenant that same question, but he didn't know. A guy gets a name in the trenches just as a boy gets one in school—nobody knows how; he may get called all sorts o' names, but none of 'em sticks till one comes along that just somehow seems to fit, and he's never anything else after that. I s'pose Toodles was a funny nut, doin' Charlie Chaplin steps in the mud to make the men laugh, and stuff like that. But search me—that was all anybody called him, anyhow. Well, the men began to talk about things he'd done, and songs he sang 'em, and the more they talked the madder they got, and then somebody blew a little toot on Toodles's piccolo, and somebody cursed him out and told him to shut up, and the major got to thinkin' hard about things too, and took a squint himself through the periscope—just a little short one, for he saw that hand move, and pulled his eye away, and said, quick and sharp: "I call for volunteers to go out and get him!"

"That sounds like the old-fashioned war we used to read about," James Brewster remarked. "An uncle of mine volunteered to go after a wounded officer at Fredericksburg, and—"

Nobody appeared greatly interested in Brewster's uncle. We were all watching the Canadian light another cigarette.

"Of course," he went on, "the whole damn company volunteered, crowdin' up around the major with a yell old Fritz might have heard. The major picked out just one man, a little feller, too, he was, only stocky and strong. But it was because he had judgment the major picked him. He had a bean, and used it, and he was cool, and took

"The guy who was after Toodles went over the top on his belly"

his time. The English are like that—when they are like that. Well, anyhow, this guy was picked, and he peered for action while the major did some telephonin'. Back there behind the ridge, hid in bushes, down in holes, under trees, were the batteries, and the major told 'em to play the hose on the opposite trench and in front of it. He did some more telephonin', to have the hose played on both sides too. This guy that was goin' over hadn't much more'n got his bothersome equipment off when the music began. Out beyond where Toodles lay, and to either side, the shells began to land. The mud and dirt were flyin', the smoke puffed and rolled, shrapnel was pepperin' into Fritzie's eyes, and there was hell generally."

"I suppose the boches couldn't see through this barrage?" somebody put in.

"Oh, they could see, if they wanted to take a chance on lookin', only not so well, of course. But I guess there weren't many of 'em lookin'. They were lyin' low, waitin' for the racket to stop and the attack to follow. But it didn't stop. It kept right on like merry hell, and the guy who was after Toodles went over the top on his belly and began his little trip of a hundred and fifty feet."

"Was that all he had to go?" Tom Morris exclaimed.

"Well, it didn't look much more'n that. Anyhow, it was far enough, with a dozen machine guns lyin' low on the other side, and Fritzie beginnin' to drop a few shells on the English trench, just by way of keepin' up the conversation," the young lieutenant said, good-naturedly. "This guy took his time about it too. Did any of you men ever see one of those plays where there's a big horse race or something offstage, and some guy in the company climbs a fence and hollers down to the rest what's happenin'?"

"Yes, I have," two or three answered, a bit surprised at this break in the narrative.

"I saw 'Quo Vadis' once," Jim Peterson said. "I was lured by the posters of the bullfight and when I got there I found it took place in the wings, and was only described to the audience by some character who seemed much excited, probably by the spectacle of a stage hand chewing tobacco."

"That's the dope!" the Canadian laughed. "Me too! There was a play came to Edmonton with three-acts of a great horse race, and the race was run somewhere back of Row Z, with the stage folks pointin' out over the snare drum and yellin': 'Go it, Gunfire!' Well, if you've got that idea, you can keep a line on what happened in that English trench. It was a funny-lookin' place when I got there—my captain couldn't get it straight what the rumpus was about—kept thinkin' he'd missed out somehow on an order to attack, which would have made him sick, so he sent me around. 'Course they told him over the wire what it was, but he didn't more'n half believe 'em. He's one of those chaps you folks in the States call, what is it?—from Missouri. Well, I came up the support ditch without a challenge, and there was the whole bunch of 'em, muddy as sin, their backs to me, crowded around the men at the peepers, or climbin' up to look over the sand-bags, and the officers goin' up and down with their swaggers, whackin' 'em when they tried to look over, and everybody swearin' and yellin' and excited as hell. I'll never forget one big husky. He had half a Charlie Chaplin weddin' cake in his hand, and he'd take a bite and then yell: 'Gawd, will 'e get 'im back to Blighty—Gawd, will 'e ever get 'im back to Blighty?' and the crumbs would fly out of his mouth. Then he'd take another bite, and yell again, and another shower of crumbs. He didn't know what he was doin'."

"What on earth is a Charlie Chaplin wedding cake?" somebody interposed.

"Hard-luck, of course," the lieutenant answered. "Well, as I said, it was some drama goin' on out there. They put me wise, and let me have a squint. First, all I could see was flyin' dirt, and a body close by. Then I got the range on Toodles, in the middle, with the barrage fallin' just beyond him—just plumb desolation, and two dead men. But I squinted long enough, before somebody grabbed my collar and pulled me off the peep, to see the body close by on its belly give a little wriggle, and go forward a foot. If you hadn't been watchin' specially for that, though, you'd never guess he moved."

"Did he go all the way on his belly?" asked Jim Peterson.

"Sure, he did. Talk about your Indian stuff—he was playin' dead most of the time. He'd lie for two or three minutes without movin' a muscle, and then he'd just slowly, inch by inch, wriggle ahead till a puff of smoke or dirt between him and Fritzie gave him a chance to drop into a crater or something. He went so slow that Fritzie wouldn't remember just where he'd been the last time, and think him a stiff. If they'd got wise to what he was, of course, they'd have drilled him full of holes."

"And how long did this take?" Tom Morris asked.

"They told me he'd been over fifteen minutes before I showed up. It was another forty-five by my watch before the men at the peepers gave a yell we knew meant he'd got there. But, believe me,

it seemed all mornin'! I got as excited as anybody in the company, and stuck around, after I'd managed to report back by phone. He came slippin' up from a shell hole just behind Toodles, like a lazy snake, after he'd been invisible for five minutes. Then he just lay there, still, for what seemed hours, and hell bustin' open all around him, and I suppose he was whisperin' things in Toodles's ear that was good to hear, if the poor devil was still conscious."

THE boy stopped for a moment, not to light a cigarette, but to look off past old Bowker (who was still sipping his cigar), as if his eyes saw the picture and his ears heard the thunder of the barrage. He looked just then curiously like a man who was homesick!

"And how did he get him back?" somebody asked.

"That was the stunt, all right!" said the boy. "He deserved his cross, if he got one—I dunno whether he did or not. Anyhow, he hitched up to Toodles, on his back now, and facin' the same way. Then he worked one leg down on either side of Toodles's shoulders, got his hands under his armpits, and pulled the poor devil up on to his own stomach and chest. You see, he lay now so the soles of his boots faced Fritzie's trench, and his own face was hidden by Toodles's head and shoulders. The two of 'em looked more or less like one body. He'd draw up his legs a little, dig in his heels, and push, pullin' Toodles along at the same time. That would move 'em both the distance he'd drawn his legs up. Then he'd lie still a while, so's the enemy wouldn't notice he'd moved. Do you get the men of his own company, hangin' over the guy with the peeper, yellin' for news, and not knowin' each time he stopped whether he was hit or not? And the shells screamin' overhead, and merry hell roarin' out there beyond and around him?"

The narrator's face was bright with excitement. The scene was vivid to him, without a doubt, and the circle of men about him, in their comfortable leather chairs, leaned forward still further, some with knit brows. Even old Bowker neglected to sip his cigar, and had to strike a match, much to his disgust, for the cigar tasted stale, so that he presently threw it away and lit a fresh one.

"And did he get him back?" cried Peterson.

"How long did it take?" demanded Tom Morris.

"Sure, he got him back," the Canadian continued. "He was just one hour and a half on the return trip. When his shoulders got near the top of the trench, discipline went to hell, and a dozen hands grabbed 'em both, and pulled 'em over. They had two stretchers waitin', but they only needed one. He didn't have a hit. They got Toodles back to the dressin' station on the double-quick, and saved his life, and the major did some more telephonin', and a blessed silence came over the scene so sudden it hurt. Fritzie is still waitin' for that attack. And what do you think the guy said when he could hear himself think, and they'd stopped cheerin' him and grabbin' his paw?"

"What?" we prompted.

"Why, he bellyached because he'd worn the seat out of his breeches!"

There was a general laugh, not without a note in it of relieved tension; then silence for a long moment.

THE silence was broken by a voice from the deep leather chair where Bowker reclined, sipping his fresh cigar.

"You say that barrage lasted two hours and a half?" he asked.

We all turned instinctively toward him, with the deference due to a man of his financial standing.

"Yes, sir," said the Canadian, also dropping into the deferential attitude, with his "sir," quite instinctively, though he could not have had the faintest idea who Bowker was.

"And that represented how many shells, do you suppose?"

"Oh, God knows," the lieutenant replied, unable to be deferential for long. "A lot. You see, the batteries were goin' on both sides too."

"But in round numbers," the bland, soft voice continued, "what do you reckon that bombardment cost?"

"I'm not in the artillery, but I'd say not a penny less than fifty thousand dollars," the officer answered. "Call it fifty thousand, and I guess you'd not be far wrong."

"What I'm getting at is," Bowker said, permitting a smile to creep over his pale face, with the little purplish-pink veins under his eyes, "that

Toodles cost the British Government fifty thousand dollars. It's a way of estimating the value of a man."

"It's a hell of a way!" the young lieutenant broke out hotly. "If it had cost two hundred and fifty thousand, do you think the major wouldn't have given the order? You make me sick!"

A blaze flared up for an instant in old Bowker's eyes. People didn't speak to him that way! But the Canadian's eyes never fell before his, and he let the smile come back as he rose with much dignity and prepared to depart.

"Nevertheless," he said as he bowed slightly to include all the group, "it is a way." Then he went out.

The young officer glared after him, and the atmos-

"The major did some more telephonin'!"

phere was disturbed and tense. We all thought suddenly of our waiting offices, and likewise rose, shaking hands with the lieutenant, and departing. I went down into Wall Street with Peterson and Morris.

"I don't blame him for getting mad," Tom said, "but, darn it all, I wanted to ask that very question myself—what the barrage cost, I mean."

"Me too," said Peterson, looking rather sheepish. I gazed reflectively across the street to the portico of the National City Bank, to avert my face.

"So did I," I confessed.

"It must be a natural question, then—I'll bet anybody would ask it," Tom persisted.

"They would," said I. "That's the trouble with the world."

I took the elevator to my office, trying to get my mind back on the problem of extracting blood from a certain stone once denominated the L. P. Parker Printing and Lithographing Company, and now wrecked by a crooked official who had tried to play the market and got stung. But I kept seeing Toodles out there between the trenches, his poor hand gesturing feebly to his friends in token that he lived, and the Tommy creeping toward him on his belly, in the mud and battle smoke, and I kept hearing the soft, bland voice of old Bowker saying: "How much do you reckon that bombardment cost?" If Conover brings any more Canadians to lunch, I shall not hang around. It's bad business!

**T**HIS war has enlisted many animals besides the horse. In the victorious British campaign in Palestine, for instance, many of the troops rode camels. The French use burros to carry ammunition and supplies into the trenches. The one in the picture is wearing a gas mask. White mice are doing their bit too, being used by the British to detect gas leakage in submarines. At the bottom of the page is shown the grave of a French carrier pigeon. The epitaph written by his human comrades reads: "Here lies Auguste, military pigeon; the ace of the army." The Italian dog you see is not dead. He is dog-tired.

# MOBILIZING

© International Film Service

**L**EAVING the camel corps, we see more French pack burros—"trench skylarks." The Germans make extensive use of carrier pigeons, and even give them gas-proof cages. Besides acting as pack animals and Red Cross aids, dogs make efficient messengers. The colle shown does duty between a British outpost and the commander's headquarters. Last comes the mongoose, which, as everyone knows who has read "Ricky Ticky Tavy," is almost as fond of rats as he is of snakes. Many mongeese, or mongooses—or whatever the plural is—were used as rat catchers in the campaign against the Turks.

# Make this Chart your guide

## Look for it on your dealer's wall

EVERY time you stop for oil you face a question which is vital to the life of your car.

What will the dealer pour into your oil reservoir? Will it be just "oil"—or will it be the correct lubricant for your engine?

The better type of dealer and garage man now realizes that something like 50% of all engine troubles are due to incorrect lubrication.

He realizes, too, that scientific lubrication is a problem for specialists. And since the dealer has neither time nor equipment for studying this intricate subject he draws on the experience of a recognized authority.

That is why the large Chart of Recommendations, issued by the Vacuum Oil Company, is now fastened to the walls of thousands of supply shops and garages.

When you ask one of these dealers for "oil", he notes the make of your car—and the year's model. He runs his finger down the Chart (shown above in miniature) until he finds

your car's make and model. Then he supplies you with the grade of Gargoyl Mobiloils specified for your car by the Chart. This oil will effectually seal your piston rings against power-waste, gasoline-waste and oil-waste.

\* \* \*

THE Vacuum Oil Company for 50 years have specialized in scientific lubrication. Today their world-wide leadership in lubrication matters is unquestioned in scientific circles. For years their Chart of Recommendations has been recognized as the scientific guide to correct automobile lubrication.

In keeping this Chart up to date, each new model of every automobile is carefully analyzed. This work involves lengthy and painstaking engineering study by the Vacuum Oil Company's Board of Engineers. The recommendations of this Chart are proven correct by repeated practical tests.

But nothing has given dealers such faith in this Chart as their experience with the oils themselves. For no one knows better than the dealer how difficult it is to secure efficient lubrication and how much efficient lubrication means.

Write for 64-page booklet containing complete discussion of your lubrication problems, list of troubles with remedies and complete Chart of Recommendations for Automobiles, Motorcycles, Tractors and Motor-boat Engines.

# Mobiloils

*A grade for each type of motor*

In buying Gargoyl Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyl on the container. If the dealer has not the grade specified for your car, he can easily secure it for you.

VACUUM OIL COMPANY, New York, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world

Domestic Branches: Detroit, Boston, Kansas City, Kan., New York, Chicago, Philadelphia, Indianapolis, Minneapolis, Pittsburgh, Des Moines

## Correct Automobile Lubrication

**Explanation:** The four grades of Gargoyl Mobiloils, for engine lubrication, purified to remove free carbon, are:

- Gargoyl Mobiloil "A"
- Gargoyl Mobiloil "B"
- Gargoyl Mobiloil "C"
- Gargoyl Mobiloil "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyl Mobiloil that should be used. For example, "A" means Gargoyl Mobiloil "A," "Arctic" means Gargoyl Mobiloil "Arctic," etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

This Chart is compiled by the Vacuum Oil Company's Board of Engineers and represents our professional advice on Correct Automobile Lubrication.

# CONQUERING WOUND INFECTION

SOME REMARKABLE ACHIEVEMENTS IN SURGERY AND CHEMOTHERAPY

BY ROBERT G. SKERRETT

"AND you bring that from America? Pardon me if I laugh!"

In this fashion a prominent member of the Surgical Society of France two years ago greeted derisively an account of what Dr. Carrel was doing at his hospital at Compiègne, a few miles back from the western front. To-day, thanks to Carrel's courage and tireless efforts, an acknowledged revolution has been wrought in the treatment of infected wounds.

The War Demonstration Hospital of the Rockefeller Institute, built a few months back in New York City, is a vital and thrilling testimonial to what Alexis Carrel and a coterie of technicians achieved "over there." The purpose of the hospital is primarily to qualify our military surgeons for the work in Europe—and here, when the inevitable tide of wounded sets in. Through the application of the discoveries of Doctors Carrel and Dakin, and the contributive labors of their associates, injuries are healing to-day that have heretofore stubbornly remained inflamed or suppurating; healthy cuticle is forming upon raw places that have been angry and painful for months—seemingly incurable; skin grafts are taking where the nuclei of new cuticle have been unable to obtain a vital footing; and transplanted bone is making up for structural losses and becoming an integral part of its adopted setting.

The fields of France and Belgium have been made fruitful through long periods of intensive cultivation—the fundamental result of abundant fertilizing; therefore the earth literally teems with micro-organisms that find lodgment through mud or dust upon the garments and bodies of the fighting men. It is only needful for a bit of shell, a bullet, or some other injuring instrument to carry the bacilli right into the raw tissues. After a few hours a small colony of germs so started becomes a densely populated city of millions of bacteria.

## Carrel's Battle with Bacilli

DR. CARREL'S problem, as he faced it in 1914, was threefold: first, to arrest the propagation of bacilli; next, to reduce them to a minimum in the quickest time; and, when successful in rendering the injuries surgically sterile, to bring their surfaces together to effect complete healing. Most of his professional brethren believed the knife to be the only recourse. They thought he was pursuing the unattainable. But he was keenly aware of the need of bodily and vital salvage: not only should life be conserved, but every useful limb kept whole if practicable.

The first thing necessary was a germicide which would kill any and all bacilli. After painstaking research, this was found by Doctors H. D. Dakin and Maurice Daufresne in hypochlorite of soda, a modified product of the ordinary chloride of lime. Hypochlorite of soda, apart from its antiseptic powers, has the peculiar property of quickly separating and dissolving dead tissues, etc., in an injury. By this action it destroys the lodging places of bacteria. A satisfactory way of applying it had to be devised. Though simple in form, the method adopted is one of the niceties of the treatment.

By means of rubber tubing attached to a glass reservoir, held at a suitable height above the patient, the antiseptic liquid is fed from time to time afresh down into the injury. If the wound have numerous recesses, perforated branch tubes carry the germicide to every part of it; and thus a supply of the hypochlorite is maintained in proper quantity and at a strength sufficient to battle effectively with the germs throughout the sterilizing period. The antiseptic has no curative properties, but by

The area of the injury which forms the basis for the normal healing curve is carefully ascertained by a planimeter

eradicating bacilli it leaves nature to carry on untrammelled her work of repair. When a wound has been sterilized in a surgical sense it is safe to bring the raw surfaces together to promote union. This epoch-making departure in surgery is seen now in its perfected form at the War Demonstration Hospital, the present Mecca of our military surgeons.

Why was Dr. Carrel opposed by his professional confrères? To put it broadly, they were unfamiliar with the peculiarities of microbial activity in war wounds. Dr. Carrel discovered that bacilli remain on the surfaces of injuries and do not for a fairly protracted period penetrate the tissues deeply. This delay in "digging in" gave him the chance to battle decisively with his microscopic foes. He proved that the surgeon's first task in the case of deep wounds, when the patient's condition permitted, was to open them up courageously and, as far as possible, to bare the entire tract of the damaged region. The next thing was to remove blood clots, dead tissues, detached splinters of bone, and all foreign substances about which or in which germs would otherwise find breeding places. The work of the knife, if properly executed, could be easily repaired once the injury was sterilized. This unhesitating use of the scalpel as an adjunct to sterilization was something of a departure. To-day, so-called surface wounds, despite their infected state when reaching the hospital, can be sterilized in the course of twenty-four hours! Irregular and deep wounds, even when complicated by fractured bones—a condition so common at the battle fronts—are made surgically sterile often in the course of five or six days; by surgically ster-

There are extremely severe wounds that cannot be closed until twelve, twenty, and possibly thirty days; but it should be borne in mind that then a degree of salvage is effected that would be quite impossible but for the helpful work of the antiseptic and strict adherence to the prescribed technique. The only other solution would be amputation. Where amputation is now practiced because of extensive damage due to gunfire, etc., by which so much substance is destroyed as to cut off vital circulation, it is no uncommon thing to see men so hurt walking around on artificial legs within from four to six weeks after their admission to hospitals employing the Carrel-Dakin treatment!

## Mathematically Correct

SO far chemistry and surgery have seemed to be the essential factors in this method of treating infected wounds; but mathematics and the microscope play also important parts. In 1908 Dr. Carrel discovered that a fixed relation exists between the size of a wound and the speed of its repair. He found that the healing process followed a fairly definite course. His investigations ended for the time being at that point; but since the outbreak of war his studies have brought his original revelation of ten years ago to a finished climax.

Captain Le Comte du Noüy, a youthful Parisian physicist, joined forces with Dr. Carrel at Compiègne, and there worked out an algebraic formula by which it is possible to predict the day of final healing and the rate of repair of an uninfected wound, provided the injury can be accurately measured at the start. He made it practicable thus to prepare a comparative or "control curve" upon a sheet of paper ruled off in uniform blocks—the lines in one direction indicating successive days and those in the other direction marking a scale of square centimeters, square centimeters being the unit of measurement used in recording the wound surface. The curve shows what would happen in a normal wound, healing aseptically, on a normal man.

To measure the hurt a thin sheet of sterilized celluloid is laid over the injury and the outline traced in India ink. This drawing is then transferred to paper and the area carefully ascertained by a planimeter. This initial measurement forms the basis for the curve of normal healing. Every four days following, another tracing is made and the area again determined. If this figure, for the day in question, does not coincide with the control curve for that day, the difference indicates that the wound

is not healing normally; and the amount of the variation is a fairly close index of the extent of infection, which is the real cause for the abnormal condition. The physician must act agreeably to this warning and correct his treatment accordingly.

Another check is a bacteriological examination of the injury made every two days. Samples are taken from the parts of the wound likeliest to be infected, and from these "smears" are prepared on thin glass slides, fixed by being exposed to a flame, and then stained so as to make the bacteria more distinct. By means of the microscope the number of bacilli is counted in every field of 1.9 millimeters and the result charted. When the average number

of bacteria in five or ten fields of the microscope is found not to exceed one germ, the wound is ready for closing. The surgeon no longer speculates as to the condition of the injury; he does not rely upon mere visual inspection; he has positive means which tell him to a certainty

(Continued on page 20)

A class of U. S. Army surgeons at the War Demonstration Hospital of the Rockefeller Institute, where they are receiving instruction in the Carrel-Dakin treatment. Dr. Carrel in the center

ile is meant the presence of so few bacilli that the wound can be closed without fear of fever or reinfection. In many cases of deep wounds, involving compound fracture and suppuration, they can be sterilized sufficiently for closing within the astonishingly brief span of twelve days!

THE NEW

# THE SECRET OF THE FRAME HOUSE

BY WADSWORTH CAMP

ILLUSTRATED BY FREDERIC DORN STEELE

GARTH for a long time stared at the pallid features of the dead man. Abruptly his interest quickened. Between the thumb and forefinger of the clenched left hand, which drooped from the side of the bed, a speck of white protruded. The detective stooped swiftly. The hand, he saw, secreted a rough sheet of paper. He drew it free, smoothed the crumpled surface, and with a vast incredulity read the line scrawled across it:

*Don't think it's suicide. I've been killed—*

There was no more. Until that moment Garth had conceived no doubt of the man's self-destruction. The bullet had entered the left side of the breast. The revolver lay on the counterpane within an inch of the right hand whose fingers remained crooked. The position of the body did not suggest the reception or the resistance of an attack. In the room no souvenir of struggle survived. The inspector, in fact, while assigning his most adroit detective to the case, had assumed an air of apology.

"Nothing doing these days," he had grumbled. "City must be turning pure, Garth. Anyway, I got to give it something for its money. Run up and take a look at this suicide. Seems Taylor was a recluse. Alone with his mother-in-law and the servants. Wife's in California. Suppose you had other plans, but I don't see why the city should pay you to talk moonshine to Nora."

Garth had flushed without any defense, for it was no secret that he loved the inspector's daughter, who so far had failed to give him the answer he craved. So he had come resentfully, without interest, and here was this amazing message from the dead man. Its wording, indeed, offered the irrational impression of having been written after death.

Garth thought rapidly. Granted its accusation, the note must have been scrawled between the firing of the shot and the moment of Taylor's death. But a murderer, arranging this appearance of suicide, would have given Taylor no opportunity. On the other hand, the theory that Taylor had written the note before killing himself, perhaps to direct suspicion to some innocent person, broke down before the brief wording, its patent incompleteness. One possibility remained. Garth could imagine no motive, but another person might have prepared the strange message.

A number of books littered the reading table at the side of the bed. Garth examined them eagerly. He found a blank page torn from one—the sheet which Taylor had clenched in his fingers? In another was Taylor's signature. When Garth had compared it with the message on the crumpled paper no doubt remained. Taylor himself had written those obscure and provocative words.

Garth found the pencil on the floor beneath the bed, as if it might have rolled there when Taylor had dropped it. The place at the moment had nothing else to offer him beyond an abnormally large array in the bathroom of bottles containing for the most part stimulants and sedatives. They merely strengthened, by suggesting that Taylor was an invalid, his appearance of suicide.

THE coroner and Taylor's doctor, who came together, only added to the puzzle. The coroner declared unreservedly for suicide, and, in reply to Garth's anxious question, swore that no measurable time could have elapsed between the firing of the shot, which had pierced the heart, and Taylor's death. The physician was satisfied even after Garth confidentially had shown him the note.

"Mr. Taylor," he said then, "understood he had an incurable trouble. Everyone knows that his wife, whom he worshiped, had practically left him by going to California for so long. It may have appealed to a grim sense of humor, not unusual with chronic invalids, to puzzle us with that absurdly worded note. I might tell you, too, that Mr. Taylor for some time had had a fear that he might go out of his head. Perpetually he questioned me about insanity, and wanted to know what treatment I would give him if his mind went."

Garth, however, when they had left, walked to the library on the lower floor and telephoned headquarters. The inspector agreed that the case held a mystery which must be solved.

Garth entered the embrasure of a high colonial window. The early winter night was already thick above the world. The huge room was too dark. There was a morbid feeling about the house. He had noticed that coming in, for the place had offered one of those contrasts familiar to New York, where antique cars still rattle over monotonous subways. The Taylor home was a large, colonial frame farmhouse which had eventually been crowded by the modern and extravagant dwellings of a fashionable uptown district. In spite of its generous furnishings it projected even to this successful, materialistic detective a heavy air of the past, melancholy, disturbing.

Garth sighed. He had made up his mind. The best way to get at the truth was to accept for the present the dead man's message at its face value. He turned on the single light above the desk in the center of the room. He arranged a chair so that the glare would search its occupant. He sat opposite in the shadow and pressed a button. Almost at once he heard dragging footsteps in the hall, then a timid rapping at the door. The door opened slowly. A bent old man in livery shuffled across the threshold. It was the servant who had admitted Garth on his arrival a few minutes earlier. The detective indicated the chair on which the light fell.

"Sit down there, please."

As the old man obeyed, his limbs shook with a sort of palsy. From his sallow and sunken face, restless, bloodshot eyes gleamed.

"I understand from the doctor," Garth began, "that you are McDonald, Mr. Taylor's trusted servant. The coroner says death occurred last night or early this morning. Tell me why you didn't find the body until nearly four o'clock this afternoon."

The old servant bent forward, placing the palm of his hand against his ear:

"Eh? Eh?"

In a higher key Garth repeated his question. McDonald answered in tremulous tones, clearing his throat from time to time as he explained that because of his master's bad health his orders had been never to disturb him except in cases of emergency. He drew a telegram from his pocket, passing it across to Garth.

"Mrs. Taylor is on her way home from California. I don't think Mr. Taylor knew just what connection

she would make at Chicago, but he expected her to-morrow. That telegram, sent from the train at Albany, says she will be in this afternoon on the Western express. I thought it my duty to disturb him and get him up to welcome her, for he was very fond of her, sir. It will be cruel hard for her to find such a welcome as this."

"Then," Garth said, "you heard no shot?"

McDonald indicated his ears. Garth tugged at his watch chain. "I must know," he said, "more about the conditions in this house last night."

He had spoken softly, musingly, yet the man, who had displayed the symptoms of radical deafness, glanced up, asking without hesitation: "You don't suspect anything out of the way, sir?"

Garth studied him narrowly. "I want to know why the shot wasn't heard. You were here and Mr. Taylor's mother-in-law. Who else?"

The bony hand snapped to McDonald's ear again. "Eh? Eh?"

"Speak up," Garth said impatiently. "Who was in the house besides yourself and Mrs. Taylor's mother?"

"The cook, Clara, sir—only the cook, Clara."

"You're sure?"

"Absolutely, sir. Who else should there be? We've been short of servants lately."

GARTH dismissed him, instructing him to send Mrs. Taylor's mother. While he waited he stared from the window again, jerking savagely at his watch ribbon. From McDonald he had received a sharp impression of secretiveness. He hadn't cared to arouse the servant's suspicions. Through strategy he might more surely learn whatever the old man had held back.

Garth swung around with a quick intake of breath. He had heard no one enter. Through the obscurity, accented rather than diminished by the circular patch of light around the chair, he could see no one. Yet almost with a sense of vibration there had

"She ran up those stairs, and I could see through the banisters..."

# TOLIVER

## PUNCTURE-PROOF TUBES

### Defying Puncture Hazards

Running over nails, glass, tacks, barbed wire—*running over anything*—Toliver Puncture-Proof Tubes will carry you safely and **WITHOUT PUNCTURE TROUBLES** for at least 5,000 miles—*guaranteed puncture insurance*.

Tolivers do away with "tire worry" and add a *new joy to motoring*.

Going without puncture protection now is not only useless and expensive - *it's a downright waste*.

You can get along without this kind of protection if you wish, but when you **DO** have a puncture and have to get down on your knees to tug and wrestle and pound at a tire—**THEN** you'd be willing to pay almost any reasonable amount to get out of the work and to **SAVE** the delay.

Toliver Puncture-Proof Tubes are "guaranteed 5,000 miles without a puncture or a new Tube free."

Think what this guarantee means. No argument, no quibbling, no beating around the bush—a **BRAND NEW Tube FREE** if any Toliver ever fails to give you *at least 5,000 miles of Service Without a Puncture*—and this Guarantee is vulcanized right into every genuine Toliver Tube—for your protection. It is our **PLEDGE OF UNFAILING PERFORMANCE**.

Tolivers are made of pure rubber, extra strong and cannot get brittle and crack—no matter how hot the weather. They are inflated with air and put in the tires in the usual way. They hold air indefinitely and keep your tires from getting soft and rim-cutting. This alone is a big saving.

You can have this same enjoyment—Tolivers cost but little more than ordinary tubes—and when figured on a dollars and cents basis, the final saving in money alone is well worth while—to say nothing of the *relief from nerve-straining annoyances*.

30 x 3	\$4.35	31 x 4	\$4.80	34 x 4	\$7.35
30 x 3 1/4	5.35	32 x 4	6.95	35 x 4 1/2	9.20
32 x 3 1/4	5.50	33 x 4	7.15	37 x 5	11.00

(Made in all sizes)

If your dealer doesn't yet stock them send your order to us and we'll ship direct to you. Terms cash or C. O. D. Express prepaid to you if cash in full accompanies order.

#### Toliver 6,000 and 4,000 Mile Tires

are ideal running mates for Toliver Puncture-Proof Tubes—a double insurance against tire troubles of ALL kinds. You'll get *better* service at *less* cost with Tolivers.

*Send for our latest Tube and Tire catalog*—it will tell you some facts about Tubes and Tires that may surprise you—and *it will certainly save you mileage money*.

**DEALERS:** Over 1800 successful dealers are now stocking Toliver Tubes and Tires—we need more of the right kind of men to represent us. Write for our splendid money-making proposition. There's no time to lose—we grant exclusive territory and it's going fast.

**The Toliver Tube & Tire Co.** Main Offices: 622 Toliver Bldg., Denver  
Pacific Coast Branch, 1303-4 South Figueroa, Los Angeles

reached him through the somber atmosphere of the old house an assurance that he was no longer alone, that he was watched from the shadows. Impulsively he called out: "Who's that?"

He stepped to the desk so that he could see the portion of the room beyond the light. It was empty. Garth, as such things go, had no nerves, but through his bewilderment a vague uneasiness crept.

He sprang back, turning. A clear, girlish laugh had ripped through the dusk. A high girlish voice had challenged him. "Here I am! Hide and seek with the policeman?"

He saw, half hidden in the folds of the curtain at the side of the embrasure in which he had stood, a figure, indistinct, clothed evidently in black. He took it for granted McDonald had sent the girl, Clara, first.

"I wanted Mr. Taylor's mother-in-law," he said. "No matter. Come here, and let me remind you that humor is out of place in a house of death."

Nevertheless, the pleasant laugh rippled again. Slowly the dark figure detached itself from the shadows and settled in the chair while Garth watched, his uneasiness drifting into a blank unbelief. He couldn't accept the girlish laughter, the high, coquettish voice as having come from the gray, witchlike hag whom the light now exposed mercilessly.

"I am Mr. Taylor's mother-in-law," she said laughingly. "Everybody's surprised because I'm so youthful. My daughter's coming home this afternoon. That's why I'm so happy. They wouldn't let me go West with her, but when one's as advanced as I, young people don't bother much."

GARTH experienced a quick sympathy, yet behind the mental deterioration of extreme old age something useful might lurk.

"You slept in the front part of the house last night," he tried. "You probably heard the shot."

She shook her head. Her sunken mouth twitched in a smile a trifle sly. "Once I drop off, it would take a cannonade to wake me up."

For no apparent reason her youthful and atrocious laugh rippled again.

"Please," Garth said gently. "Mr. Taylor—"

"At my age," she broke in, "you say when a younger person dies: 'Ha, ha! I stole a march on that one.'"

She arose and with a curious absence of sound moved toward the door. "I must go now. I am knitting a sweater. It was for my son-in-law. Now that he's put himself out of the way, it might fit you."

The door closed behind her slender figure, and Garth fugged at his watch ribbon, wondering. Her actions had been too determined, her last words too studied. They had seemed to hold a threat. Was she as senile as she appeared, or had she tried to throw sand in his eyes?

He rang and sent for the cook, Clara, unaware that a new and significant surprise awaited him in this dreary room. The girl, when she came, was young, and, in a coarse mold, pretty. When she had sat down the light disclosed a tremulousness as pronounced as McDonald's. Before Garth could question

The old servant bent forward, placing the palm of his hand against his ear

her she burst out hysterically: "I am going to leave this house. I was going to leave to-day anyway."

Garth pitched his voice in a cold, even note: "For the present you'll stay. Mr. Taylor didn't kill himself. He was murdered."

She covered her face with her hands, shivering. "I didn't kill him. I didn't—"

"But," Garth snapped, "you know who did."

She shook her head with stubborn vehemence.

"I don't know anything," she answered, "except that I must leave this house."

"Why? Because you think the old lady's crazy, and she frightens you? I want to know about that."

As Clara lowered her hands the increased fear, rather than the tears in her eyes, held Garth. She shook her head again.

"I've only been here a week. I haven't seen much of her. She's only been to meals once or twice, and then she's scarcely said a word."

She glanced about the room with its small-paned windows, its deep embrasures, its shallow ceiling.

"It isn't that," she whispered. "It's because the house is full of queer things. The servants all felt it. They talked about spirits and left. Five have come and gone in the week I've been here. But I've never been superstitious, and I didn't hear anything until last night."

Garth stirred. "What did you hear? When was it?"

"About midnight," she answered tensely. "I had had company in the kitchen until then, so I was alone downstairs. McDonald had told me before he went to bed to make sure the last thing that the library fire was all right. I had looked at it and had put the

lender up and was just leaving the room when I heard this sound—like moans, sir. I—I've never heard such suffering."

She shuddered. "It was like a voice from the grave—like somebody trying to get out of the grave."

"But you heard no shot?"

"No, sir."

Garth spoke tolerantly. "These sounds must have come from upstairs. You've forgotten that Mr. Taylor was an invalid."

She cried out angrily. "It wasn't like a man's or a woman's voice, and I can't tell where it came from. I tell you it was like—a dead voice."

"You failed to trace it, of course," Garth said. "Describe to me what you did."

"I ran to the kitchen," she answered, "but, as I told you, there was no one there. McDonald had gone to bed, and so had his daughter."

Garth stooped swiftly forward and grasped her arm. "What's that you're saying? His daughter? You mean to tell me McDonald has a daughter and she was in the house last night?"

She shrank from his excited gesture. "Yes. He asked me not to tell you, but I'm frightened. I don't want to get in trouble. She's the housekeeper. She engages all the servants and runs the house."

"Then where is she now?"

"She must have gone out early this morning, sir, for I haven't seen

her all day. I wanted to be fair. I've only been waiting for her to come back so I could tell her I was leaving."

"Send McDonald back to me," Garth said, "unless he's left the house too."

The butler had deliberately lied to shield his daughter, and had asked secrecy of this girl. And all this talk of spirits and of cries! It was turning out an interesting case after all—possibly an abnormal one. Moreover, he was getting somewhere with it.

MCDONALD slipped in. He was more agitated than before. His face was distorted. His tongue moistened his lips thirstily. Against his will Garth applied the method he knew would bring the quickest result with such a man. He grasped the stoop shoulders. He shouted: "Why did you lie when I asked you who was in the house at the time of the murder?"

"Eh? Eh?" the old man quavered.

"You're not as deaf as that. Where's your daughter now?"

"My ears!" the old servant whined. "I can't hear."

"All right!" Garth shouted. "If you want to go to the lockup and your daughter too, stay as deaf as you please."

He wasn't prepared for the revolting success that came to him. McDonald clutched at one of the window curtains and hid his twitching face in its folds, while sobs, difficult and sickening, tore from his throat, shaking his bent shoulders.

"God knows! I haven't seen her since I went to bed last night. I thought she'd gone out." He glanced up, his face grimacing. "Don't you think she did it. Don't you think—"

(Continued on page 24)

"There she was, a black thing, bending over him like—like a vampire!"

## What a can of Valspar did—

"I took a few days off last week. Spent them with a can of Valspar varnish and a brush, the whole thing costing me only a few dollars. What happened these extracts from my diary show:

"*Thursday*—Valsparred the front door this morning. Found it easy to use Valspar. In the afternoon tackled the dining-table. Wonderful result! Valspar is certainly great stuff.

"*Friday*—Big rain-storm woke me up in the night. Thought 'there goes my Valsparred front door.' But this morning I discovered that rain doesn't affect Valspar a particle. Today I Valsparred the hall and stairway, and the linoleum on the kitchen-floor. Valsparing is really great fun.

"*Saturday*—Had heart failure at breakfast time when the maid upset a cup of boiling-hot coffee on the dining-table. But—did it faze Valspar? It did not! Evidently Valspar is fool-proof. Wound up the week-end by Valsparing some of the woodwork and the baby-carriage.

"*Sunday*—Took the baby out for an airing. Met some women friends and they said 'Oh! doesn't it look cunnin' in its new carriage!' But it wasn't a new carriage: Valspar did it."

You can easily make your home look spic-and-span, fresh and new, with Valspar.

Valspar is the wonderful water-proof varnish. Even boiling water can't turn it white.

Valspar dries dust-free in two hours and hard in twenty-four.

Valspar protects and preserves all kinds of woodwork. It's the varnish for every place where varnish should be used.

### VALENTINE'S Val-Enamel

An American product vastly superior to the finest imported enamels. It starts white and stays white. A small quantity covers a great deal of surface, enabling the painter to furnish a superior job at a reasonable cost. It is washable. For dining-room, living-room or bedroom, for kitchen, pantry or bathroom, for interior or exterior work, use Val-Enamel. Ask the Valspar dealer for it.

## The Secret of the Frame House

Continued from page 23

"First of all," Garth said, "I want her picture."

"I haven't any," McDonald cried.

But Garth hadn't missed the man's instinctive gesture toward his watch pocket. Then, whether he actually knew anything or not, he suspected his daughter and sought to protect her. Against his protests Garth took the watch and, as he had foreseen, found a photograph in the case. The picture was not of a young woman, but the face was still attractive in an uncompromising fashion. It was this hardness, this determination about the picture that made Garth decide that the original, under sufficient provocation, would be capable of killing.

"For her sake and yours, McDonald," he said, "answer one thing truthfully. Did she fancy herself any more than a superior servant? Had she formed for Mr. Taylor any silly attachment?"

McDonald's reply was quick and assured: "To Mr. Taylor she was only a trusted servant, sir, and she knew her place."

The whirring of a motor suggested that an automobile had drawn up before the house. Garth slipped the photograph in his pocket.

"If that is Mrs. Taylor arriving," he said, with an uncomfortable desire to shirk the next few minutes, "the news of her husband's death might come easier from you."

"I telephoned Mr. Reed," McDonald said. "He's an old friend of hers and Mr. Taylor's. I told him about the telegram, and he's probably met her and brought her home."

"I will be here," Garth said, "if she wishes to speak to me."

HE heard McDonald open and close the front door. Then the widow entered, followed by a young man with an abundance of dark hair curling over a low forehead and shading eyes a trifle too deep-set. But at first Garth saw only the woman, and he marveled that one so young and lovely in an ethereal sense should have been mated to the elderly invalid upstairs. As he looked, it suddenly occurred to him that Reed, since he had lost Taylor as a friend, might crave more than friendship from the widow.

She sank on a divan. Even in the shadows her heavy black hair and the dark-gray traveling dress she wore heightened the weary pallor of her face. Had her eyes held tears, they would have been easier to meet, for the shock was there, dry and unrelieved.

"It is dreadful to come home this way," she said. "Dreadful! I had never dreamed of his doing such a thing."

"It is by no means certain," Garth said gently, "that he killed himself. There is a curious situation in this house. McDonald's daughter, the housekeeper, for instance, has not been seen since a short time before the crime."

Her lips twitched a little. He fancied hope in her eyes.

"If I could only cry!" she said. "At any rate that would be better for his memory, wouldn't it? You suspect this woman?"

"If you are able," Garth said, "I would like you to tell me something about her."

"I have never seen her," she answered. "She came after I went West. McDonald had a good deal of influence over Mr. Taylor. My husband and I never quite trusted him. There's no use. You might as well know the truth about Mr. Taylor and me. You've probably heard. We were never quite happy. He was so much older. We never quite belonged to each other. But that is all. It isn't true, all this gossip that I went West for a divorce, and I don't believe he was the man to kill himself. If there has been a crime against him, I want the world to know it. I want his memory clean."

QUICKLY the man Reed touched her shoulder. For the first time since entering the room he spoke. His voice possessed a peculiar, aggressive resonance.

"Helen, you shouldn't take too seriously this detective's suspicion that he was murdered."

Garth motioned him to silence.

"At such a time," he said to Mrs. Taylor, "I dislike to bother you, but I'd like to ask one or two questions. Your mother? Her mind?"

He caught a flash of pain across her white face.

"She has always been peculiar," she

answered, "but she isn't out of her head, if that's what you mean. I've always thought it a habit of hers to hide her real thoughts behind apparent absurdities."

"I had wondered about that," Garth said with satisfaction. "One more thing. There has been talk among the servants of spirits, or moans."

She shivered. "I know nothing of such things," she said, "except that the house is unbearable. That is one reason I decided on this long visit, why I shrank from coming home."

"Unbearable?" Garth helped her out.

"Old, moldy, and depressing. My husband, I think, believed in it a little. I've heard him and my mother talk about a figure in black who sometimes walked. I laughed at that, and I laughed when they heard moans. You see, the way often cries in the narrow space between us and the high wall of the next house. I've never liked it here. It depresses me too much. That's all."

"Thanks," Garth said. "You will want time to accustom yourself. Reassured I will do everything I can to get the truth."

"You must," she said tensely; "don't hesitate to disturb me if I can be of any use."

As they went out the resonance of Reed's undertone reached Garth.

"Helen, you are giving this man's suspicion too much weight. He seems to have no evidence."

After the door had closed Garth telephoned the inspector, suggesting that the house be guarded in order that he might have McDonald, Clara, and the old lady at hand. "I'll give instructions," the throaty rumble of the inspector came back, "to arrest anyone who tries to make a get-away."

Garth hurried to the kitchen. The night was nearly complete there, but as he entered, he caught a swift, silent movement from the servants' stairs. He walked to the entrance. "I thought so."

The girl Clara shrank from him in the shadows. She wore a hat and cloak. She carried a hand bag.

"If you don't want yourself locked up, charged with murder, take those things off," Garth said. "From this moment the house is watched, and anyone trying to leave will be arrested."

The girl commenced to cry again.

"I am afraid," she sobbed—"afraid."

Garth turned on the light.

"Take me," he directed her, "to the room occupied by the housekeeper."

SHAKEN and apprehensive, Clara led him to a room at the head of the stairs, which, Garth found, had a second door opening into the upper hall of the front portion of the house. The room displayed a taste seldom found among servants. His examination of it from the first spurred Garth's curiosity. The bed had been occupied last night, but to all appearances for only a brief period, since the blankets and sheets were little disturbed. Some clothing and a pair of shoes lay at one side, and clothing, shoes, and hats were neatly arranged in the closet, but nowhere could he find a dressing gown or a pair of bedroom slippers. Clara, moreover, could not recall having seen the housekeeper wear any hat or clothes other than those in the closet. If McDonald's daughter had fled in slippers and dressing gown, it was strange she hadn't been heard of long ago. It became increasingly clear to him that the woman remained hidden in the house. It should be easy enough to find her. He would search every corner for the one whose brain, he was now convinced, harbored the solution of the mystery. But on the lower floor he found no trace. He paused in the lower hall, intending to ring for McDonald to guide him through the rest of his task.

All at once his hand, which he had raised to the bell, hesitated. He braced himself against the wall. Through the heavy atmosphere a stifled groan had reached him, followed by a difficult, dragging sound. But as he sprang on the stairs he knew he hadn't heard the cause of Clara's fright, for the groan had sufficiently defined itself as having come from a man.

In the upper hall there was no light beyond the glow sifting through the stair well. It was enough to show Garth a dark form huddled at the foot of the stairs leading to the third story. He ran over and stooped. "McDonald! What's the matter? Are you hurt?"

## Prolongs life of old buildings

The first purpose of IDEAL-AMERICAN heating is to put greatest comfort in a building at least burning of fuel. The second purpose of IDEAL-AMERICAN outfits is that they become a permanent investment, because they prolong the life of an old building or bring a 15 percent higher rental, which in 50 years of use will several times repay the first cost of the outfit.

## AMERICAN & IDEAL RADIATORS & BOILERS

These outfits have saved thousands of tons of coal this winter.

You can economize greatly by burning cheaper grades of fuels, for IDEAL Boilers burn all kinds of hard and soft coal, wood, lignite, pea coal, buckwheat, run-of-mine, screenings, gas, oil, coke, etc.

Don't wait for the rush of Fall to put in IDEAL heating

The exact and scientific proportions in the construction of an IDEAL boiler, make it a heat producer unequaled by any other device. IDEAL fire pots will hold fuel charges to last 24 hours and the delicate adjustment now possible with the IDEAL draft control gives a regulation of the heat that keeps exact step with the demands of the weather.

Easily put in all old buildings

Cottages, residences, stores, hotels, theatres, churches, schools, clubs, hospitals, greenhouses, etc., are readily equipped and served with heat at the minimum cost. Phone your dealer today for an estimate on IDEAL-AMERICAN heating for your building. Send for catalog "Ideal Heating" full of valuable hints and illustrations.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for hot water and heating at cost of few dollars per fuel per season. Temperature will light, keep an IDEAL. Register—no more gas used! Write for booklet.

The silence of the house was heavier, more secretive than before.

At last, in response to Garth's efforts, a whimpering came from McDonald's throat. The heap against the wall struggled impotently to rise. Garth recalled the medicines in Taylor's bathroom and started down the hall. The unintelligible whimpering increased. Garth went on, aware that the black, huddled figure crawled after him with the amazing and unreasonable courage of a wounded animal.

He snapped on the light and ran to Taylor's bathroom, where he poured a stimulant into a glass. As he stepped back to the bedroom he faced Taylor's body on which the light shone with peculiar reflections. They gave to the pallid face the quality of a sneer. But it was only in connection with another radical difference at the bed that that illusion arrested Garth, and sent a chill racing along his nerves. For on the counterpane, as near the crooked fingers as the revolver lay, now rested a long and ugly kitchen knife.

WITH a graver fear the detective glanced at the door to the hall. McDonald had dragged himself that far. He raised his trembling hand, stretching it toward the bed in a gesture. It seemed to Garth, of impossible accusation. Then the crouched figure toppled and fell across the threshold, while from somewhere beyond the door a high girlish laugh rippled.

Garth sprang forward and knelt by the old man, reluctant to search for what he expected to find. There it was at the back of the coat, a jagged tear whose edges were stained, showing where the knife had penetrated the shoulder. The wound didn't look deep or dangerous, and in his unconsciousness McDonald breathed regularly. So Garth hurried back to the bed and examined the weapon. There was no ambiguity about the red stains on the blade. The knife, resting close to the dead hand, had wounded McDonald, who had seemed to accuse the still form whose note projected the impression of having been written after death.

Garth smothered his morbid thoughts. McDonald's daughter was the living force, probably at large in this house, that he wanted to chain. If she were guilty of the earlier crime, she had sufficient motive for this attempt to keep the old man silent. She could have got such a knife from the kitchen. So, for that matter, could Clara. But the eccentric had laughed. Was that merely coincidence? Garth ran across the hall and listened at her door with an increasing excitement. He heard the running of water, regularly interrupted, as if by hands being cleansed under an open faucet. He tried the door and found it unlocked. He entered, staring at the daring indifference of the old woman who stepped from the bathroom, calmly drying her hands on a towel.

"Come in, policeman," she said in her high, girlish voice. "Don't suffer in the black hall."

"Let me have that towel," he cried.

Without hesitation she offered him the piece of linen. It showed no stains, nor were there stains to be found about the washbasin, but the slab of marble in which it was set was damp as if it had just now been carefully cleaned. She watched, her wrinkled face set in an expression of contempt. "What are you up to? Think if I wanted to do anything wrong I'd let you find me out?"

"Then you know," he said, "what happened out there in the hall. I heard you laugh."

She started. Her voice was lower. At last it was as old as herself.

"Things always happen out there. It is crowded with the people who have lived in this house before us—unhappy and angry people. Often I have seen and heard the black thing out there. I would never laugh at her."

AGAIN the doubt of her senility attacked him. "You can't impress me with that," he said harshly. "I am talking about McDonald. He was stabbed a few minutes ago."

She laughed foolishly. "Horrid old man! But why should I want to see him stabbed?"

He watched her closely. "I saw you strike him. You didn't have enough strength to send the blow home."

The assurance of her voice increased his doubt. Whatever her mental state, she was at least purposeful. "You need glasses, policeman. Don't neglect your eyes. You have only one pair."

He felt himself against a blank wall, and there was McDonald to think of.

## "Wasn't it lucky we had ham for dinner!"

"We invited the Huntingtons for dinner, and they never appeared till bedtime!"

"Their motor broke down, of course—miles from a telephone or anything."

"I was sorry about dinner. Tom Huntington is so fond of baked ham that we had one especially for him."

"But in a few minutes Mary and I had thin-sliced sandwiches ready

and steaming coffee, and Tom said if there was one thing he liked better than baked ham it was ham sandwiches!"

"That's because it was Swift's Premium! Now that we have a whole ham only on special occasions, since signing the food pledge, I'm always particular to get a Swift's Premium Ham—it has such a wonderful, sweet flavor."

Swift & Company, U. S. A.

## Swift's Premium Ham

## Look for the Big Red One

When you need a pure, high-grade oil for lubricating any light mechanism, for cleaning and polishing veneered and varnished surfaces, for preventing rust or tarnish on metal surfaces—go to any good store and ask for 3-in-One.

Look for the big red ONE on the label. This trade mark, famous a quarter-century, appears on every bottle and can.

## 3-in-One

The High Quality Oil for Home and Office

Try 3-in-One for oiling typewriters, all office mechanisms, bicycles, guns, automatic tools, sewing machines, locks, hinges. For cleaning and polishing fine furniture—for making your own dustless dust-cloths and polish mop. For preventing rust or tarnish on gas ranges, stoves, bathroom fixtures, tools, knives.

Self-shavers: Use 3-in-One on your razor blades before and after shaving and they won't "pull." Motorists: 3-in-One stops spring squeaks, oils any magnetos just right, cleans and polishes car body and windshield. Ford owners: Try 3-in-One on the distributor—makes cranking much easier.

Sold throughout the civilized world. In U. S. A. and possessions, also in 150 foreign countries.

FREE Ask your dealer for a free sample of 3-in-One Oil and 3-in-One Grease. Both free.

"Why Every American Should Know" is the title of an extremely interesting booklet of 12 pages describing our great War history. It contains many valuable battle maps and photographs. Do you want a copy FREE and when delivered? If so, drop a line to P. V. Collier & Co., 116 W. 15th St., New York City.

ly manifestations of some abnormal criminality. I have to work on physical lines. The black figure ought to prove that the woman is actually hidden here. The knife on Taylor's bed means that the murderer was in the room this evening. McDonald's gesture, instead of accusing, probably tried to tell me that; tried to warn me, perhaps, that the murderer would return again to the body. I didn't tell Reed the truth. I am going to that room about which nearly everything centers. Before the night is over it may explain to me what McDonald tried to say. There, at any rate, my mind should be more receptive to that flash of intuition which I need to make some theory fit this mystery. Since the house is clearly dangerous, Nora, I want you to go home."

Her laugh was uncomfortable, but Garth recognized its determined quality. "I'll see it through, thanks," she said. "I want this sense of suffering destroyed. I want—you don't know how anxious I am—to see the case put on a physical basis. I'll watch with you."

SINCE he failed to alter her determination, he sent her upstairs to make sure no one was spying, for he wished their entrance to the room of death to remain a secret. She beckoned him from the head of the stairs, and he went up, and they entered the black room.

Garth closed the door and snapped his light on. Immediately strange reflections played again over the face of the dead man. Its sneering expression seemed to follow Garth as he moved about, searching in the closets and the bathroom, looking behind each piece of furniture. Meantime Nora waited, for the moment stripped of her familiar confidence. She watched the dead man rather than Garth. The knife and the revolver, close to the cold and motionless hand, appeared to fascinate her.

"No one!" Garth whispered. "No evidence, beyond the knife, that anyone has been here unlawfully!"

He removed the cushions from a lounge and arranged them in a window recess. He seated himself with Nora there. He drew the curtains so that they would be thoroughly concealed from anyone entering the room. Then he snapped off the light.

The vigil, Garth realized nearly at once, would not be comfortable. Nora's obvious tenseness encouraged him to morbid fancies, to formidable premonitions. The heavy black silence of the decaying house became more oppressive. The near presence of the soulless thing on the bed, which had yielded to him the puzzling note, seemed through the night capable of a malicious and unique activity. Garth, in spite of himself, became expectant of some abnormal and impossible movement in the room. Nora, he knew, listened with him. Once she whispered: "Haven't you a feeling there is some one here who laughs at us?"

The old woman's atrocious mirth came back to him. "Hush! It is better even not to whisper."

THE minutes loitered. The silence grew thicker, the presence of Taylor's body more oppressive. Then suddenly through the night Garth became finally aware of a movement in the room, and at first it seemed to be in keeping with the supernatural fears Nora had imposed on him.

He aroused himself. He commenced to reason. He had not heard the door open or close, but the intruder must have entered that way. Again his ears caught a sly scraping movement as of one walking stealthily, and the sound was nearer—between the window recess and the bed. Garth thrust his revolver and his lamp through the narrow opening between the curtains and pressed the control. There was no more shuffling. Nora averted closer. The light resolved all of Garth's doubts. He became efficient again. For, while there was a ghoul-like quality about the picture his lamp had suddenly illuminated, the figure bending over the body was sufficiently human. In this position, however, because of the dressing gown and the slippers, its sex remained undefined; but Garth, remembering his examination of the housekeeper's room, thought he knew.

Yet he couldn't understand what the creature was doing. One hand had partly drawn from beneath the mattress what appeared to be a long and wide piece of jet-black cloth.

"Game's up!" Garth said. "I've got you. Turn around and let me have a look at your pretty face." The bent shoulders twitched. "Come!" Garth continued harshly. "You're no ghost. You can't evaporate before our eyes again."

Then, with a gesture of repulsion,

## Selden Trucks Will Help Win the War

**NOW** is the time when all industries MUST aid the government in every way possible TO WIN THE WAR—NOW when the ranks of labor have been thinned by the drafting of man power into military service—NOW when the freight terminals are congested with thousands of freight cars standing on the tracks waiting to be unloaded so their cargoes may be taken away and delivered.

To move this congested freight away from the terminals is the problem that confronts us to-day.

But man power is scarce.

Release the excess labor employed in your business. Employ motor trucks to do the same work with fewer men—to move your freight away from the terminals as fast as it arrives and to make your deliveries in less time—with greater satisfaction to your customers—at a lower cost and, therefore, with greater profit to you.

Relieve the railroads from short hauls up to 50 or 100 miles or more. Give them a chance to handle the long hauls on schedule time.

Install big, powerful SELDEN TRUCKS to do the job. They will bear the heavy burdens of war-time congestion without strain and continue to render profitable service for years after WE WIN THE WAR.

Massive construction—colossal strength—gigantic motive power—abundant speed in operation—proven power of endurance, with sufficient energy in reserve—these "In-Built Qualities" of SELDEN TRUCKS give them the vitality to work under high pressure indefinitely without weakening.

There are six Worm and Internal Drive models of One to Five Ton capacity in the Selden Line. Write for full information.

the hand let the piece of black cloth fall. It trailed across the floor, one end still caught beneath the mattress. Slowly the figure turned until a profile cut against the shaft of light. Nora cried out her surprise. Garth sprang erect, covering with his revolver, not McDonald's daughter, but the friend of Taylor and his wife, the man Reed.

The shock of discovery stripped Reed of his control. He glanced once at the dead man, then sank in a chair by the bed.

"Don't send me to the death house!" he groaned. "I couldn't stand that. I won't stand that."

"You killed Taylor so you might marry his wife?" Garth shot at him. The head jerked back and forth.

"Fortunately you did a rotten job with McDonald," Garth said. "Where's his daughter? I don't get that."

Reed shrank farther into the chair. "I won't answer. You can't make me say any more."

Garth stooped, lifted the black cloth, and drew it from the bed, beneath the mattress of which it had patently been hidden. As he held it up it fell in folds to the floor, and he saw it had sleeves and was a long garment without shape. But it recalled the black figure that had vanished from the attic. He ran his lamp over the gown. In spite of the coarse, tough material, it was torn here and there, and on the right-hand sleeve there were blood stains. That was why the gown had been hidden in the easiest place, the first place at hand. That undoubtedly explained Reed's daring intention to get the gown and destroy it before the body should be moved and this evidence discovered. Garth glanced at the man, who still shook, a picture of broken nerves, at the side of the bed. And Garth's hand, holding the telltale gown, commenced to tremble too, for it had offered him a solution of everything. He had no time for analysis. Already there were stirrings outside. Their voices and Nora's cry had aroused the others in the house.

"Don't you see it, Nora?" he cried. "And it wasn't intuition. The truth has stared at us from the first, but we wouldn't open our eyes."

"I see nothing," Nora said, "except that his motive was common enough, cheap enough."

"You don't understand," Garth smiled. He stepped to the hall, where he met Mrs. Taylor coming from her room.

"What is it?" she asked. Garth shrank from telling her the truth. "I know who murdered your husband," he answered gently.

"Who?" But the opening of her mother's door interrupted her. The old woman appeared, her eyes wild, her hands shaking. "What's the matter out here? Helen! What's happened?"

"I want to examine your room a little closer," he said. "I wondered at the start that there was so much furniture in it, and I'll wager there are things hidden beneath the bed and back of that large screen. I know now, too, that it wasn't you who washed your hands this afternoon. I know that you fooled me with a clean towel while the person who had struck McDonald slipped through the communicating door from your bathroom."

She screamed to stop him. She placed her slender body against the panels of the door. She stretched her arms to either side, forming a barrier he didn't care to pass. She commenced to laugh again, but there were tears in her eyes, and he saw that all along her laughter had been grief. Still without time to analyze, he received from the old lady a perfect corroboration. He whispered to Nora, instructing her to bring the policeman from the front door.

"We may have difficult violence on our hands," he warned her.

**WITHOUT** waiting to question, Nora ran down the stairs. Mrs. Taylor came closer, asking the question her mother had interrupted.

"Who is it? Why do you speak to my mother like this? Not she—"

"He caught me, Helen," Reed said with dry lips.

She flung up her hands. "What do you mean? Oh, my God! What do you mean?"

The policeman came briskly up. Nora followed him, her eyes wide and uncertain.

"Everything is accounted for," Garth said to the policeman. "Make your arrest."

Reed stepped forward, offering himself.

"I admire you, Reed," Garth said, "but your devotion can't do any more for her. Mrs. Taylor, I don't want you

to get excited. This man must take you—just a form, you know—for the murder of your husband and for the attack on McDonald."

The violent rage Garth had feared flamed in her eyes. "I did kill him. He kept me locked up for more than two months because I didn't love him."

She commenced to struggle in the grasp of the policeman. Abruptly she went limp and her efforts ceased. Garth nodded with satisfaction.

"That's better. She's fainted. Carry her to her room. We'll have a doctor right away to go downtown with her."

Reed touched his arm timidly. His husky voice was scarcely audible.

"I understand now. Once or twice this afternoon I've wondered, but she told me that Taylor had lied, that he had never been to California, that he had kept her a prisoner here because in his sick, morbid way he was jealous of me. In any case I would have done anything to help her over the next day or two, for you must understand I loved her very deeply and for a long time—"

Garth turned away because he didn't care to see the man's tears.

**LATER** the humility of Nora's interest amused Garth. He told her frankly how the pivotal pieces of the puzzle had been within reach long before Reed had tried in Mrs. Taylor's service to recover and destroy the telltale black gown.

"Those sedatives in Taylor's bathroom," he said, "the man's perpetual questioning of his doctor about the symptoms and the treatment of a sanity, the moans which frightened the other servants without affecting Mr. McDonald or his daughter, the old lady's exaggeration of her eccentricities to draw my attention from Mrs. Taylor—any of these clues ought to have reminded us, Nora, of the hundreds of similar cases in New York of fond relatives who, through a mistaken pride, hide and treat in their own homes real cases of mental disorder."

He scarcely needed to outline for her the picture, filled in by the old lady, of that black hour the night before in the melancholy house when Mrs. Taylor had tricked McDonald's daughter—a competent trained nurse—had escaped from the attic sickroom, and had got the revolver. Garth saw that Nora, too, could fancy Taylor's panic and self-reproach as he lay sick and helpless in bed, knowing his wife was free, foreseeing inevitably much the sort of thing that had happened, trying, when it was too late to confess his mistake to warn the authorities that his wife was at large and, possibly, dangerous.

"But she didn't give him time to write enough," Garth said. "She followed too quickly her ruling impulse to punish the man she blamed for her tragic situation. Moreover, the realization of what she had done, as is common in such cases, returned her to approximate sanity; suggested, even without her mother's prompting, Taylor's California blind as a road from her dreadful dilemma. And McDonald's daughter, through her fright and a promise of money, could be persuaded to avoid arousing her father or Clara, to throw on one of Mrs. Taylor's dresses, to hurry with her to Albany. Evidently the girl lost her nerve, for she was to have come back as if nothing had happened. She was to have taken care of Mrs. Taylor. Eventually she was to have placed her in a sanatorium, explaining her breakdown, as well as any present peculiarities, naturally enough through the shock of her husband's suicide. It was McDonald's demands to know what had happened to his daughter that made Mrs. Taylor turn on him finally. If he had been able to spot then, I think he would have broken faith with his dead master and told us the truth about her condition."

"Is there any hope for her?" Nora asked.

"I've talked with the doctor," Garth answered. "He says that the stupor in which she threw us off the track when we caught her crying over McDonald, and her failure to lose complete control of herself when she was arrested, indicated that her trouble was curable. It seems to have been brought on by her intolerable life in this gloomy house with an invalid whom she didn't love, while her affection for Reed increased hopelessly. Her illness was broken by such periods of apparent sanity as she had last night and to day. I rather think Reed and she may be happy yet."

Nora smiled wistfully.

"Then," she said slowly, "I almost wish we had kept Taylor's secret better than he did himself."

## "America's Leading Furriers"

## You, Too, May Wear a Silver Fox

**T**HE Silver Fox—the most treasured Spring and Summer fur in Fashion's closet—you can buy now from this collection as low as \$100 a skin.

In addition to our regular assortment, the most magnificent and complete in the country, we have been fortunate enough to secure at an unheard of low price a splendid collection of the highest quality skins—pronounced by connoisseurs to be the finest ever offered by a furrier in America.

For \$500 you can now buy a Silver Fox which ordinarily would be cheap at \$900.

For \$1,000, a Silver Fox so beautiful that even the Czarina would have been envious—which ordinarily would be a rare offering at \$1,500.

While we could make a much greater profit, we desire our customers to share in the advantages of the special purchase.

We are also showing the new, small Sable Scarfs, worn this Spring with tailored suits in both Hudson Bay and Russian Sables.

## Wound Infection

Continued from page 17

when the hurt can be sutured. He is not now disturbed by the disquieting mental query: Will reinfection follow closing?

The method evolved by Dr. Carrel and his coworkers makes it possible to determine precisely the relative value of germicidal agencies, and their comparative performances can be shown graphically. It was while assembling data of this sort that the X-ray was discovered to possess imperfect sterilizing powers—quite contrary to the accepted belief. From these researches was produced a germicidal preparation of chloramines, known to the medical fraternity as Chloramine-T paste. This can be carried by the soldier and applied as part of his first-aid dressing or used by the doctors at the field hospitals. In this way infection is dealt with promptly and the subsequent treatment at the base hospitals simplified and shortened.

### Spreading the Knowledge

**D**R. CARREL states positively that there should be no pus in a properly managed hospital. He is convinced that most of the amputations due to infection can be avoided; that blood poisoning can generally be prevented; and that the length of treatment can be reduced to one-third of that required where antiseptics is not practiced. He says that even a mild infection prolongs recovery and retards healing anywhere from 25 to 35 per cent! Not only that, but infection means pain—pain that should not exist if the wound be promptly sterilized.

Dr. Alexis Carrel is one of the most modest of men, and this is strikingly evidenced by his insistence at all times that credit be given generously to those that have worked with him. He does not claim to have developed anything new in principle in surgical procedure; his professional confrères have known of hypochlorite of soda for decades; and the irrigation is not, in itself, a novelty. Yet, by taking infinite pains, by drawing upon a peculiarly rich fund of laboratory experience, Dr. Carrel has so utilized his native genius as to co-ordinate all of these factors and thus, in effect, virtually to revolutionize the treatment of infected wounds.

The Rockefeller Institute for Medical Research has recognized that there are many hundreds of surgeons who cannot attend the course at the War Demonstration Hospital and also that from time to time at the front some nicety of technique may escape the recollection of the hard-pressed doctor. Therefore it has had prepared an elaborate educational film, illustrating every vital phase of the Carrel method, and reproductions of it will be made available to all military hospitals as well as to kindred civil institutions. Our medical men at the front, and those at home with similar problems, will have at hand a means of refreshing their memories or instructing their fellows—a means that will settle instantly any doubtful or disputed point. With each picture is a concise and ample explanatory text. The movies are thus to help save both limb and life.

### In Peace as Well as War

**S**OME of our great industrial concerns have already profited by this improved method of treating wounds. In this fashion the lessons of the battle front are being brought into everyday life with a likelihood of being applied broadly with consequences of incalculable good. Indeed, the virtues of this treatment have been put to convincing tests here in numerous cases of appendicitis, peritonitis, abscesses, burns, etc., and the rate of recovery has been astonishing. It must be remembered that many of the marvels of modern surgery, successful operations in themselves, have all too frequently failed of their purpose because of the subtle workings of microorganisms. Dr. Carrel shows us how effectively his technique can combat these insidious bacilli and crown operative skill with the added glory of a cure.

We should be heartened by the fact that our military medical staffs are going to be able to work both here and abroad as a unit armed as never before to minimize the ravages of conflict. The curtain fire of chemistry will rout out the microscopic enemy and drive him into the open where he can be dealt with decisively. Curative surgery will achieve its marvels despite the initial destructive work of shot and shell.

THE OHIO SUSPENDER CO.  
Mansfield, Ohio

evacuated behind the French army which advanced in the Department of the Somme. All the inhabitants now retreated, with the munition depots, beyond the range of the enemy's artillery.

One night in July, when the British attacked Ypres, several thousand gas shells fell on Armentières. While factories were still burning in the rushed town, women blinded and spitting blood were dying. The ambulances carried away the last vanquished pinners, torn with wounds or burned with poison.

The town is deserted now. The only noise in its houses is that of shutters, shaken by the wind, flapping against broken windows. The fluttering of torn curtains gives the effect of a street lunging with white flags.

In the heaps of masonry left by the fire a skeleton framework of metal remains in the middle of the blackened plaster. The twisted iron cage of a staircase stands erect in the ruins of a house demolished by fire. The houses of the rich have fallen on those of the poor. The humility of suffering pervades this fallen town. The workmen's dwellings, all built to resemble one another, like slices off the same loaf, vary now. Those that have been hit show the clear red color of the brick. Those that burned show large shadows above the openings through which the fire passed. The shock and the flames have dyed in red and black the dull stonework of the tiny, war-changed houses, bearing the mark of the shells.

Notices posted up in places through which the troops pass read:

#### HAVE YOU GOT YOUR GAS MASK READY?

For every soldier who traverses the town must have his gas mask tucked under his chin like a baby's bib, so that he has only to raise it to cover his mouth.

#### Their Crosses Stand

THE war is ancient history in this region which has known it from its first days. Metal plates bearing the words "Drinking Water" have become oxidized and are hardly readable. The rust of war years already devours them.

In the streets where workmen's steps have resounded for so long a great silence now reigns, broken only by the intermittent booming of the cannon. The gunner makes the first breach in the house, the rain and the wind carry on the work of destruction. The daily struggle to fill up the holes in the stonework has now ceased; at first the householder, with dauntless determination, picked up, immediately after the crash and amid the odor of the shell, what had fallen, and took material from ruined houses to repair the one in which he kept on living. It is easy to see where the hand of man has continued the work of repair and where Labor has struggled against War. This evacuated town is now delivered up to the cannon and to the winds of heaven, and it will suffer as much by being deserted through a rainy winter as it has suffered by bombardment.

Behind the workmen's houses, their gardens now overgrown with grass, lies the British cemetery with its rows of white crosses. Amid the ruins of the town it evokes the image of infantry standing foursquare in the midst of tumult. The first graves were dug at the end of the field, the last adjoin the road. Could the dead rise up where their crosses stand they would form a dense, deep regiment.

This place is the last in the town where labor does not cease. At the end of the field, crossed by graveled paths, a shelter made of sandbags is used by the gravediggers when the shells seek to strike the dead again.

#### Like a Burnt-Out Star

THE most distressing effect of this town is caused, not by ruin, which can be repaired, but by the vast solitude. The crowds fleeing before the detonation of the cannon, the cries for help from cellars, were less painful than is this region, shrouded in solitude as it is to-day, like a victim of some ancient cataclysm. The formidable noise of the cannon comes sometimes as a relief, by the indication it gives that there are still living men near by.

For those parts of the town where no road leads to the battle lines are as deserted as a burnt-out star.

Out of 25,000 inhabitants there remain a hundred sworn guardians who keep watch over the factories. A gang of soldiers loading a lorry in front of a spinning factory break the immense solitude. One of the men who lives in the ruins directs their work. He says:

"The looms are to be removed and set up again in Normandy, where beer at a penny a glass is not to be had. Our workmen are already there. We should have still continued here. There is nothing wrong with the machines. But they won't let us. In another two months all the looms will be working."

The factory rings with the hammers of the men who are taking down the machinery. The loaded lorry takes the Ervingham Road, covered with linen which disguises it from the German balloons, twelve of which show on the sky line. A shell, bursting at some distance from the road, speeds up the lorry. Across the bombarded region obstinate Labor is retiring. They are taking away the looms, the cylinders, the web: interrupted on the morning of the great gas attack—which will be resumed. *Everything is displaced; nothing is vanquished.*

For six hundred years war has been the portion of the good workmen of the cotton districts of Flanders. Over this plain have passed the stubborn Englishmen of the Hundred Years' War, the destroying Huguenots, beggars in shoes greased with holy oil, imperial troops marching to the life. But none of these has conquered the Labor of the Looms. Armentières, long-suffering town of the old battle country, has always known the pillaging soldier, the torch, and the massacre. The German army has inflicted poison upon it. But the wind of the plain will again bring the low murmur of the wheat and the lemonlike odor of the flax steeped in the Lys. Thou shalt be born again, Laboring One.

#### Until They Die

TO the fire and destruction of 1339, 1382, 1506, 1645, add 1917. Patience, Valiant Worker, thy defeat marks but an instant in the ages. To ennoble the Spirit of Labor, which alone is the savior of the world, the blood of thy workwomen, undaunted by war, has stained the earth—mixed with that of the soldiers. Over the same spot the assiduous spinners will again march toward their rescued looms. The masonry of this town may be broken down; there remain the climate favorable to its native work, the river which flows there and the quality of its waters, the millenary track of its roads, that

# MOSLER VESUVIUS PLUG

Quality makes it  
"The  
Indestructible  
Plug"  
Guaranteed to  
outlast the Motor

"A veritable ribbon of flame is produced by the miniature electrodes of the Vesuvius." —A. R. MOSLER

The continuous, powerful sparks emitted by the Vesuvius plug secure the energetic ignition that means greatest engine efficiency.

Motors with Vesuvius plugs in the cylinders start and pick up quicker, run smoother and develop maximum power.

Buy them anywhere at the standard price \$1.00. (Vesuvius Mica Tractor Plug, \$2.00.)

"Mosler In Spark Plugs" written by A. R. Mosler—enthusiastic and convincing problems sent from. Tells the right plug for all motors. Address:

A. R. MOSLER & CO.  
New York, N. Y.

Also manufacturers of Split Fire  
(patented) Spark Plugs, and  
Superior Quality  
Plug Cords.

see, he said, how things were at the Stavka—the officers were of one mind; they had plenty of reliable troops; two divisions equally loyal were on their way to Petrograd. He gave me copies of the various Kornilov proclamations, the circulation of which had been forbidden in Petrograd. One was a long and apparently circumstantial account of the whole affair; another, perhaps the most picturesque, an appeal to the Cossacks—Kornilov himself was the son of a Cossack father and a Turkoman peasant mother, as his addresses did not neglect to state—calling on each group of his "beloved fellow villagers" by name—"You, free and untamed sons of the quiet Don; of the lovely Kuban; of the boisterous Terek," and so on.

The officer suggested, apologetically, that if I were going to Petrograd at once, perhaps I might take some of the proclamations with me, but later said that it would be better not to try, as they might get me into trouble. He seemed astonished when I said that, as I was leaving Kiev the day before, the Cadets had declared for the Provisional Government. Messages of all sorts were coming in by telegraph and military wireless, among them one from the Southwest Army, which I had just left, announcing that they were with Kornilov. A foreign attaché, whom I met in the street, contributed the news that the Polish troops were "neutral" for the present, but there "was no doubt where they stood." There was no doubt, indeed, where the sympathies of all the foreign attachés stood. The northbound train from Kiev, the next day, came in with Kornilov's posters pasted on its sides. In short, up to the moment I left the Stavka on Wednesday afternoon of that momentous week, the Kornilov uprising seemed to be a going concern, with every chance of success.

## The Counter-Revolution

SO strong was this impression in Mogilev that it seemed best to get as soon as possible to Petrograd where the center of action would probably be, but we had not traveled far northward next day before we ran into a different air. Every station platform was crowded with soldiers, all talking at once, wondering where they were at, and at Vitebsk, in the early evening, Government officers went through the train demanding passes, and as soon as they saw mine, on the Great Headquarters paper—something that a few days before would have taken one almost anywhere—they put me under arrest. I omitted the roars usual in such cases, but the young officer said that he was a Kerensky man and had orders to arrest everyone coming from the Stavka. I was put into a room with several others, and after a wait of a quarter of an hour another officer stuck his head in the door and, asking where the American was, told me there was just time to get my luggage together and catch the train again.

We did not go far that night, and learned in the morning that Government troops had torn up the line to keep Kornilov's men from getting to Petrograd, and that we must make a long detour by way of Novgorod, and go in on the Moscow track. At the first station at which I got out to look round

# W. L. DOUGLAS

"THE SHOE THAT HOLDS ITS SHAPE"

\$3 \$3.50 \$4 \$4.50 \$5 \$6 \$7 & \$8

W. L. Douglas name and the retail price is stamped on the bottom of every pair of shoes before they leave the factory. The value is guaranteed and the wearer protected against high prices for inferior shoes. You can save money by wearing W. L. Douglas shoes. The best known shoes in the world.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. MAY 4, 1918

*Can you give yourself  
fifteen minutes a day?*

You owe it to yourself to make of yourself the broadest-minded, the most interesting and progressive person possible. Are you doing it?

Think of your average day—eight hours on the job, an hour going to and fro, ten hours for meals and sleep—leaving five hours of leisure. Now take *one-twentieth* of this leisure period, *fifteen minutes a day*. Doesn't that seem an absurdly small time to devote to mental stimulus and improvement?

Yet when the man who has been Harvard's president for 40 years says that by earnestly devoting but fifteen minutes a day to a set of books he has selected, one can acquire the liberal outlook and the accumulation of necessary facts which a university aims to give, his words demand most serious consideration, do they not? This set of books is

## The HARVARD CLASSICS

*Dr. Eliot's Five-Foot Shelf*

You have here the essential literature of the world—the great works of history, politics, drama, poetry, science, which a twentieth century man or woman must know to be well read. These books are not alone for those who have missed a college education. The college graduate will find them equally invaluable. They are for the individual and for the home, especially the home full of growing ambitious youngsters. Each of the 400 complete masterpieces has a brilliant introduction by a

College Professor, many of these more valuable than whole books of criticism. The set is provided with an unique Reader's Guide and Index so that every moment devoted to these volumes counts. One of America's most successful men recently gave as his chief maxim of success: "Read good books and think, and then read some more." "The Harvard Classics" are the books you can read and re-read and are those that make you think. May we tell YOU more about them?

### THIS BOOK—FREE

Sixty pages, fully illustrated—containing Dr. Eliot's own fascinating story of how the "Harvard Classics" idea originated, and a valuable Guide to Books. We would like everyone interested in his own development and success to get this free book. Do you want

there was a Kerensky poster surrounded by soldiers, the few who could read reading aloud to the others. "Where are you going?" it began. "Whom are you going to obey? Who is this man Kornilov?" A little farther on, as we were swallowing glasses of hot tea, in a station buffet, a French officer, bound for Kiev, said that Petrograd was quiet when he left it and all necessary measures had been taken to keep Kornilov's troops out of the town.

It rained all that day, and through the rain, as we edged slowly along, tramped various bodies of troops. They were wandering along the country roads as if lost, and very likely they were. When we finally reached Petrograd, twenty-four hours late, instead of civil war there was nothing at all, and my friends assured me that not only was the counter-revolution over already, but that it had been over even while I was in Mogilev! "They didn't know it," I insisted, but they were convinced, and told how they had driven out to see the "battle" when the "Savage Division" approached and had seen the two sides begin to talk, and that was the end of it.

As a matter of fact, it was the end of it. Kornilov, failing to get the support on which he had undoubtedly counted, gave himself up. General Krimov, who commanded the troops sent to Petrograd, had a talk with Kerensky and a few moments later shot himself. And within a few days most of the pleasant officers, who had clicked their heels and been hospitable during my days on the southwest front, were under arrest, and soldier committees, who had seized their commanders, were wiring in from all over Russia asking what they should do with them.

The immediate result of this curious and deplorable adventure was still further to demoralize the army, widen the gap between hostile factions, and, in general, to tear open wounds which showed some signs of healing. Every officer was now suspected, in addition to his other crimes, real or supposed, of plotting against the revolution. Kerensky, who had been drifting farther "Right," as the summer went on—be-

coming more and more "sensible," some would say—was now practically compelled to turn about and defend a felon and traitor the man with whom it seemed, he might have cooperated, and with whom, indeed, he had worked up to a certain point. For, according to Minister of War Savinkov, he had asked that a cavalry corps be sent to Petrograd to handle possible Bolshevik outbreaks—just such trouble as to come a couple of months later. The moderate liberals, on the other hand, Cadets, of the Miliukov type, who at the recent Moscow Conference showed sympathy of spirit with the officers, sat on their side of the chamber, and thus by implication given a certain backing to Kornilov, were now included by their radical critics among the counter-revolutionists. There is no doubt that many, probably most, of the Cadets, however much they may be disapproved of government by military dictatorship, privately regretted, at the moment, the failure of Kornilov.

#### Enter—the Bolsheriki

It seemed that the Provisional Government had no recourse but to elect Kornilov, yet day after day went by and nothing happened. Kerensky appeared at the Democratic Conference, which assembled presently, and gave an explanation which explained nothing, but was full of noisy declamation as well stage-managed. The delegates applauded, as it seemed, less acts than the actor, ended by giving him a sort of ovation. There were unanswerable questions, and even hisses and hostile noise, but the performance was generally reported as a triumph.

It was enough so, at any rate, to suggest that things might drift on as they were until the Constitutional Convention. They did drift for a time, and then came the sudden explosion of the Bolsheviks. Kerensky disappeared, the ministers were locked up in the fortress of Peter and Paul, and the Russian "revolution" entered a new stage.

Mr. Ruhl's next article will be about Finland.

### A WHALER'S CONFESSION

BY HARRY KEMP

Three long years a-sailing, three long years a-whaling,

Kicking through the ice floes, caught in calm or gale,

Lost in flat Sargasso seas, cursing at the prickly heat,

Going months without a sight of another sail.

I've learned to hate the Mate, and I've always cursed the Captain

I hate the bally Bosun, and all the bally crew;

And, sometimes, in the night watch, the long and starry night watch,

Queer thoughts have run wild in my head—I've even hated you!

You, that have been my shipmate for fifteen years of sailing,

From Peru to Vladivostok, from England to Japan—

Which shows how months of sailing, when even pals go whaling,

Can get upon the bally nerves of any bally man. . . .

I'm glad our nose points homeward, points home again to Bristol

I'm glad for Kate, who's waiting, far down a little lane:

I'll sign her for a long cruise, a longer cruise than this one,

And seal the bargain like a man, before I sail again.

Yes, I will still go sailing; yes, I will still go whaling:

I've done a lot of thinking along o' love and hate.

For signing on a woman's a cruise that lasts a lifetime—

And I'd rather hate a hundred crews than take to hating Kate!

Three long years of whaling—yes, a lifetime sailing,

Kicking through the ice floes, caught in calm or gale,

Lost in flat Sargasso seas, cursing at the prickly heat,

Going months without a sight of another sail!

# ANNOUNCEMENT

OUR Government has requested that we put at the disposal of the War Department our entire output of the "makings"—"BULL" DURHAM tobacco.

And we have complied—fully, gladly. For whatever the Government wants, whatever it needs, it must have from us and from you fully and with a generous heart.

We have been sending immense quantities of "Bull" to our men at the front, and at the same time trying to supply consumers at home. But now we are asked to give *all* our output:—36,000,000 sacks, 2,000,000 lbs., 100 carloads of "BULL" Durham every month.

This call means more than just huge figures to me and I know it will mean more than figures to the hundreds of thousands of men everywhere in the country who "roll their own" and who look upon that little muslin sack of good old "Bull" as a personal, everyday necessity.

It means that the Government has found that *our fighting men need the "makings"*.

But, if "Bull" is a necessity to you, here, in the peaceful pursuit of your daily life, how much greater its necessity to those splendid Americans who have gone to fight for you—to *win* this war for you.

I know that you will think of them as I do—only of them. I know there will not be a single complaint. I know that you will give up your share of "Bull", however long you have enjoyed it, however close it is to you, as you will give up anything you have if it is made clear to you that our forces over there need it.

That the Government has requested the whole output of "Bull", the night and day output of all of our factories, must make this absolute need clear to you.

And I know that you will not forget the little muslin sack—gone for the present on its mission of hope and inspiration to our boys in the trenches.

"Bull" will come back, with ribbons of honor. Have no fear.

## *Gail Borden's Code —the Keystone of an Industry*

Pure milk, next to pure water, is the one essential to life that your home, in common with every other home, can least afford to be without.

Purity in milk is so important, and the health of a community depends so largely upon the milk used, that now, state and municipal laws govern sanitary conditions at the source of production and at places where milk is sold.

Upon the Borden Sanitary Code, formulated more than sixty years ago, all subsequent protective milk regulations have been based.

That code, inauspicious and humble as was its beginning, expressed Gail Borden's idea. And later generations, long after Gail Borden had put his code into operation, recognized its elements as essential in preventing disease and sickness, and vitally important in saving the lives of thousands of infants.

The Borden Sanitary Code—itsself stricter than most enacted milk-protecting legislation—made possible the realization of Gail Borden's great vision: To enable all the world to be supplied with milk in safe, usable, nutritious forms.

The Borden Sanitary Code is the keystone upon which an institution, world-wide in its scope, has been built. Adhering strictly to the spirit of the code the forms in which safe and nutritious milk can be obtained are grouped as Borden's Milk Products. Individually they are known as Borden's Eagle Brand, Borden's Evaporated Milk and Borden's Malted Milk.

The Borden name on the container is an assurance of the quality and purity of the contents.

# WHERE ARE THE AIRPLANES?

BY MARK SULLIVAN

to which it is entitled. . . . The majority report is a blanket indictment; . . . the minority report is a sweeping defense. . . . After reading the majority and minority reports of the Senate committee, most people must find themselves in a greater state of bewilderment than ever."

After getting only disappointment from the senators and the newspapers, let us go to the experts—the business men, technical men, and engineers who are close to the heart of the subject.

On one day the newspapers contained two authoritative utterances from men of this class. One, an official of the Curtiss company, was violently critical of the Aircraft Board. He said that our army could have had 1,000 war planes in battle on the 1st of April, but had not. He said that his company could have produced 4,000 planes by the 1st of next July, but will not be able to because of delays chargeable to the Aircraft Production Board.

On the same day Henry Ford said:

"All of this talk about the aircraft division of the Government falling down in its work is all wrong. Department heads are working out a mammoth proposition, and they will be successful. I know what is being done in the aircraft division of the Government right now. You can tell the people for me that the aircraft department will live up to the expectation of the American people and of the Allies. They are doing things, big things, and it is only a matter of a little more time when they will show the public that what was considered impossible has been accomplished."

With all these contradictions, what is the truth of the case?

It may not be possible to come to a final judgment as sharp as the difference between black and white; but it is possible to clear the ground and state the elements of the case in a way that will leave the people at least a little more fully instructed.

## German "Influence" or "Graft"

FIRST, let us clear away some of the nonsense that has befogged the real trouble. Much of the news given out during the uproar laid emphasis on "German influence"—German intrigue among high officials, German plots among manufacturers, German spies in the factories, sabotage committed or inspired by Germans. The "Providence Journal" contributed a lot of this. Borglum also dealt largely in it. "Teutonic retarding influences," he called it. But he wasn't able to put his finger on anything that a court or committee could take account of. The fact is you run into this sort of talk everywhere. A man takes you off into a quiet corner of the hotel lobby and whispers: "How much do you know about Colonel Deeds?"

You tell him that you have met Colonel Deeds only casually, and that you merely know him as a member of the Aircraft Production Board, with a history of successful manufacture in the automobile line.

Then the caller reveals his important information. It consists of the assertion that Colonel Deeds is a German, with implications that he is in

the pay of the German Government for services which consist in retarding our airplane output. The alleged evidence, if you listen long enough to hear it, consists solely of an assertion that Colonel Deeds has camouflaged his name, that the real name is not "Deeds," but Dietz.

The next time you meet Colonel Deeds you make humorous allusion to the incident, and Colonel Deeds says yes, he has heard it, and he believes that probably there is something in it, although he has never been able to run it down. The name has been spelled "Deeds" for four generations, but he thinks it probable that originally it was spelled "Dietz."

This sort of thing is not merely frequent but typical. I can't recall how many persons I have heard engaged in serious discussion of the implications alleged to be involved in the fact that the middle D in Secretary Baker's name stands for Diehl, that his wife's maiden name was Leopold, and his mother's maiden name Dukehart. All this is pretty disgusting. There is a good deal of available material for a debate as to whether Newton D. Baker is the best man now living in the United States to be Secretary of War at this particular time, but none of it has anything to do with his wife's name.

Another bit of nonsense, which should be quickly and decisively dismissed by anyone who wishes seriously to get at the heart of the trouble, is the talk of graft. Borglum's report was colored with this suspicion. That was one of the things that made his report unconvincing. In any serious investigation graft is a charge which should either be proved or else not mentioned. The Senate majority report hinted at profiteering. Profiteering is something less than graft. There is some profiteering in this war, and some time that subject will bear a good deal of talking about. For the purposes of this article it is enough to say that, if there has been any profiteering in the production of aircraft, it has been less than in other areas of war work. For present purposes it may be accepted as the verdict of all who looked into the airplane situation that nothing was uncovered which reflected on the moral integrity of any person affected. The members of the Aircraft Production Board are good men, able men, and honest men.

## False Hopes

HAVING dismissed the mare's nests, let us, just as a matter of clearing the ground, take up the less important of the charges against the Aircraft Board. One of the indictments against the board is that its members led the public and the Allies into false hope. And they certainly did. They first adopted a military censorship which forbade anybody to give out any information except themselves, and then they proceeded, through their own press agents, to give out inspired and exalted state-

ments, appetizing hints and flamboyant predictions which, in the light of results, are disagreeable to look back upon. They gave out statements, sometimes directly and sometimes by inspiration, that the aircraft work was "a whale of a success"—the quotation is literal. On June 8 of last year Colonel Deeds said: "If we start immediately, we can put 10,000 aviators on the French front by this time next year, and win the war." Of course that was no

more blamable than any other excess of optimism in the expression of a hope. But Secretary Baker's official statement of last February 21, that "the first American-built battle planes are en route to France, nearly five months ahead of schedule," was perilously close to giving a misleading impression of existing conditions. Anybody who thinks it would be worth while can go over the files of the newspapers for the past year and gather an array of flamboyant utterances from the Aircraft Board, official and unofficial, direct and

WASHINGTON, D. C.—Eleven members of the United States Senate, composing the Committee on Military Affairs, spent several weeks hearing testimony as to whether or not the aircraft work of the United States is as it should be. They had access to every bit of information, secret or public. They had power to summon, and did summon, all the officials and outside experts who could contribute any facts or judgments considered to be essential. At the completion of the investigation the majority, composed of all the Republicans and three of the Democrats, reported that things are very bad indeed.

"The production of Liberty motors to date is gravely disappointing. . . . The production of combat planes for the United States for use in actual warfare has thus far been a substantial failure."

On the other hand, a minority of the committee, composed of three Democrats, reported that:

"On the whole, the record of the Signal Corps [which has charge of the aircraft work] is one of which every American can be justly proud. In the face of unparalleled difficulties it is accomplishing an unparalleled task with characteristic American energy, capacity, patriotism, and enthusiasm."

## Who Was Right?

WITH two such directly contradictory reports, what is the public to conclude? The public is very serious about this matter; it is earnest, almost prayerful, in its wish to support the Administration; the country wants to have confidence in Mr. Wilson, his Cabinet members, and other appointees, and the progress of their disposal of the people's resources. In such a mood the public is troubled by rumors, newspaper articles, and headlines. It would like to get a clear and final judgment. In that wish the work of the Senate committee doesn't help very much. It leaves a troubled and questioning people exactly where it was.

The best of the newspapers don't seem able to give the people any conclusion more definite than the Senate's. The truth is, the newspapers, after going as far as they are able to go in the direction of getting the facts and forming a judgment, are in just about the same troubled state of mind as the public. They are not able to come to any conclusion in which they have confidence, or which they can ask the public to accept with confidence. The New York "World" has a corps of Washington correspondents which is certainly one of the largest and ablest in the capital. And the "World's" correspondents, both in Washington and throughout the country, have devoted especial attention to this aircraft question. But at the close of the Senate investigation the "World" was only able to say of the two contradictory reports:

"Neither gives the country the information

Rolling out an almost completed machine to test the motor

inspired, such as would make the board look ridiculous in the light of present facts. But there isn't any use in going into all this now. Recriminations don't win wars. What is needed is a forward-looking program.

(But some time somebody ought to look into this whole matter of the employment of official press agents. So many newspaper men have been absorbed by official, semiofficial, and unofficial organizations and persons in Washington that the supply of good newspaper men—men responsible to the public only and free to write critically—is not as large as the need. An official or an organization, in employing a press agent, will ordinarily pay a much higher salary than is the custom among newspapers, and many of the good men are withdrawn from their true function. It is gravely to be doubted whether the employment of press agents is a proper use of public money. However, that is all merely incidental to the aircraft situation.)

### The Military Mind

SOME of the trouble undoubtedly has been due to what can be suggested by the term "the military mind," the disposition of some officers to accept nothing until it has been incorporated somehow into the army, to take toward civilian business men, inventors, and engineers an attitude which is occasionally hostile and frequently unsympathetic. The officer whose personal contacts have been exclusively military is accustomed to two classes of men, those who rank above him and give orders, and those who rank below him and take orders. In relations less fixed and less clearly indexed, the military mind is ill at ease and at sea. One civilian engineer who has been occupying a high place in Washington since the war began told of being urged to accept the rank and uniform of a colonel, "so that he would fit into the organization," as they put it. "I thought it over," he said; "I would really have liked to take it. I would have had a good deal of pride in it, and it would have been nice for my children. But I decided not to take it. After all, to get the work done efficiently and fast is the main thing; and if I had a uniform on, it would obviously be impossible, when the occasion came, to tell a major general he was a damfool, or make him wait outside my office door until I had finished more important business with a lieutenant."

One of the civilians who was asked by the President to investigate this airplane situation, the first time he encountered the military mind, burst out in a tirade which, in the words of a bystander, "almost caused the old general to maul his buttons." "The trouble with Washington," he said, "is too much authority without ability, and too much ability without authority. You military men want to absorb everything into your organization. If Isaac Newton came along here, you wouldn't do business with him until he put a uniform on; and you would resist the law of gravity until it was formally adopted as a military ordinance."

As is the way with epigrams, this contains both less than the truth and more than the truth. It merely suggests a certain amount of the atmosphere of Washington. "The military mind" has had something to do with the airplane trouble, but, as we shall see, that part of the trouble has been only minor.

Where the military mind did its worst was in the factory. A military mind in a factory is much more deadly than a bull in a china shop. One of the chief benefits of the reorganization now going on is that

Above—U.S. Aircraft Production Board. Col. Deeds in center, Howard E. Coffin, chairman of the board, at right end of table; next is Brig. Gen. George O. Squier. Below—Simultaneous boring of five airplane propellers in an American factory

the army will come to a stop some distance outside the factory door. Factory production will be a separate function, wholly in control of factory men. During the first year the army had control right through the factory, and some of the results were rather appalling. One factory owner said that after the original design for the Liberty motor was in his shops he received 529 telegraphic orders for changes—orders such as this: "Numbers 432, 433, 434, 435, and 436 ordered replaced by Numbers 11,456, 11,457, 11,458, 11,459, and 11,460. Scrap all finished and unfinished material of original numbers and await new drawings and specifications."

Of course this sort of thing was inherent in the original decision of policy. Instead of going ahead with such motor models as were already in existence, and perfecting the Liberty motor as a laboratory matter, in a single factory segregated for laboratory purposes, the Aircraft Board was using all the factories as laboratories. But this will be discussed later. The collision of the military mind and the factory mind, with the military mind in authority, was a minor phase of fundamental policy. It caused a good deal of the trouble, but is now cured.

### Unmentioned Achievements

WHAT, then, are the fundamental things that go to the heart of the question whether or not the Aircraft Board has done well? And that is a large question. The members of the board had a big job. There was almost nothing to start with, and in one year they built an organization which, measured in financial operations, would be nearly equal to building the United States Steel Corporation from the ground up. They have done a lot of things which were not even mentioned in the recent uproar. Nothing was said of their creation, from a start of nothing, of an aviation corps which is as large to-day as the whole United States army was a year ago. Nothing was said of the laying out of the immense aviation schools. Nothing was said of their reorganization in this country of the lost art of castor-bean raising and castor-oil milling, which involved the importation of seeds from India and the planting of a hundred thousand acres in Texas. Previous to the publication of Mr. Wolff's article in *COLLIER'S* for April 20

almost nothing had been said of the organization of a legion of men to bring spruce out of the remote forests of the Pacific Coast. All the discussion hung on the number and quality of motors and planes produced.

### Quantity Production

WHEN the war broke out, and when the men charged with aircraft production surveyed the problem, they found a situation which was, so far as the United States was concerned, completely zero. The slate was clean before them; they were bound by no precedent; they were given \$440,000,000, and they could do what they pleased. There were a hundred plans they could adopt, and their first job was to choose one plan. They did choose one plan, and the great consideration now is whether or not the plan they chose was the best one. That first decision of policy was fundamental.

The plan they chose to adopt was what is called "American quantity production." The easiest way to describe what is meant by American quantity production is to say that the conspicuous example of it is the Ford car. American quantity production consists first of all in the adoption of a single model, then every part of that model is completely standardized so that it can be produced in large quantities by machinery. You start at one end of the factory with the raw material; the material flows along a fixed route through machine after machine, and emerges at the other end of the factory a completed product. The central idea is the maximum of machine work and the minimum of handwork. When this system is perfected, it results in a volume of output impossible otherwise. To make clear the distinction between American quantity production and the European method, one example will help. Assume that a one-inch bolt is to go into a one-inch hole; the European method is to make the bolt and the hole exactly the same size; then the bolt is taken by a workman who with a file laboriously grinds it down by hand until it will slip into the hole. The American method of quantity production is to make the bolt about one-thousandth of an inch smaller than the hole, so that it will slip in without handwork. The purpose is to make one tool which will rapidly cut the holes and another tool which will rapidly make the bolts. When this method is perfect, the product can be turned out with enormous speed, but the preparation for such a system involves time—and it is precisely that time which has been used up during the past year and which has resulted in the delay of which we now hear so much. The system of American quantity production will produce a huge quantity of planes at the end of a prolonged period of preparation. But the element which existed in the present situation was the need of some planes in a short time. And that element was of necessity neglected when the system of American quantity production was adopted.

### Where Are the 1918 Models?

I HAVE said that out of all the possible plans the members of the Aircraft Board were able to choose one. The fact is they could have chosen two. And it was their choice of one, instead of two, that is at the heart of their present trouble. They could have—and in the judgment of fair critics they ought to have—adopted two plans, and carried them along together. They ought to have adopted the plan they did adopt, of ultimate quantity production, on a large scale, of a highly stand- (Continued on page 34)

# THE NEW AMERICA

BY OWEN JOHNSON

IF one can divest oneself of the personal tragedy of the war and perceive it with the distant view of history, which, like the eye of the airplane, assembles detached units into the significance of unified masses, the impression is of harmonious multitudes. Yesterday a million men of varying characteristics and clashing opinions were diffused in farm and village, in the howls of the earth, in the smoke of furnaces and the strident confusion of cities—Anglo-Saxon, Latin, Slav, Semite, Scandinavian—and we perceived but a confusion of accents, customs, and tendencies. To-day this multitude has taken rank, moves in rhythm and discipline, and we perceive a type, a will, and an ideal collectively significant of America. But preeminently the clarifying blast of war discloses the mass, the momentum, and the direction of ideas. Wherever we look, whether abroad or at home, we are met with the shock of ideas. The military struggle has become a test of the sanity, of the steadiness, of the faith in sacrifice, of two irreconcilably opposed points of view: the sovereignty of the individual and the sovereignty of the state. Internally we are readjusting our estimates as we perceive the strength and tendencies of certain organized ideas. We recognize that in a decade, in the economic scale, a revolutionary transposition has occurred. In the struggle for existence the solidarity of the wage earners has raised them above the great educated middle class—the preacher, the teacher, the clerk. We recognize the organized intentions of a great semiforeign body moving toward that conception of extreme socialism which aims to raze the foundations of government to erect a new experiment. We perceive great masses of immigrants, obstinate or friendly, solidified in traditions that are not American. Institutions; philosophies; religions; doctrines, political and social, are being laid bare by the surgical test of war, to discover either the health or the malignant threat which lies beneath the surface. This anxious process of self-examination which is going on is philosophic, intellectual, or instinctive as men are old, middle-aged, or young.

## The Tragic Generation

AS a people, we are ruled by men from thirty-five to fifty. At thirty a man is still apologetic for his youth; at fifty he is already resisting the relegating pressure of those who are newer to the struggle for preeminence. What we call middle age is intellectually a great drifting desert of doubt. It is that period when man, facing the shortening horizon, arrives at the barrier of reality. What he has hoped for will not come. It is a period of readjustment. In it he rebels at the causes which have turned him from his destiny. He rebels against the pursuing generation, which comes leaping over paths his feet have plodded out. He rebels against these younger men, of no more talents than his own, who may outstrip him because, with greater fortune, they have passed unawares those blind alleys on the road to success down which he has spent so much of the precious store of years.

He questions everything. He experiences new temptations. He wrestles with his belief. If he has faith, he doubts. If he is agnostic, he wonders. He is conscious of the passing of ardent impulses. His enthusiasms are no longer blind. He is suspicious of the younger generation knocking at the door, and on the passing generation he looks with impatience. In times of peace this collective mentality which is supreme may exercise a certain necessary restraint on the too-rapid course of public experiment, but in time of war the salvation of the country lies not in it.

When from this period of ferment and revolt man passes into that final period, the philosophic acceptance of life; when the intellectual conflict has given place to a twilight contemplation; when in the mellowness of his experience he returns to the consoling memory of distant things, he returns with impulsive sympathy to that ardent onward sweep of youth against which in his middle age he so often set his face in bitterness. In a new fecundity of impersonal ideas, he comprehends youth's unfettered aspirations, its incredulity of limitations, its boundless capacity for sacrifice, its gay loyalty to the idea which has stirred its emotions. In this war nothing is more striking than this alliance of the old and the young. Old men lead with ardor where young men gravely perform.
